A FINISHED MUSICAL EDUCATION.

THE NEW ENGLAND Conservatory, Boston,
Employing **75 Eminent Professors.** Has a reputation unequaled for furnishing a **COMPLETE MUSICAL EDUCATION** at merely nominal rates, combined with **RARE** collateral advantages. Fall term opens Sept. 22d. For prospectus address E. TOURJEE, Music Hall, Boston, Mass.

$3 Printing Press
Prints cards labels &c. (Self-inker $5) 12 larger sizes For business or pleasure, young or old. Do your own advertising and printing. Catalogue of presses, type, cards, &c., for 2 stamps. **Kelsey & Co. Meriden, Conn**

CURE BY ABSORPTION.

"SAPANULE,"

Nature's Remedy applied by a Natural Method.

This justly celebrated lotion is pronounced by all who have used it to be of wonderful inductive power, as well as full of healing.

Physicians of all schools recommend it as an external remedy, safe to use and of great value.

Inflammation cannot exist where it is applied.

Never fails to relieve pain, from whatever cause.

Cures Wounds, Bruises, Sprains, Burns or Scalds, Neuralgia, Rheumatism, Lame Back, Headache, Piles, Boils, Erysipelas, Contracted Cords, etc.

Removes all soreness from Bunions, Chilblains and Corns, curing them.

When used in sponge or foot baths, it at once relieves all pain and soreness of body, limbs or feet.

"SAPANULE"

SOLD BY ALL DRUGGISTS.

Ask your druggist to get it for you if not on hand.

PINT AND QUART BOTTLES, 50C. AND $1.

FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, SEPTEMBER 13, 1879.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE TRUE KEY-NOTE.

WE had expected that the dangers and the fallacies of the Greenback agitation in Ohio and elsewhere would be placed in a clear light when Mr. Secretary Schurz came to discuss the "financial issue" in its present aspects and bearings. With his thorough mastery of the subject in its statistical details, with his sound views of public economy, and with his unrivaled clearness of exposition, he has been able to discuss the question with a thoroughness which leaves no important point untouched and no hiding-place of error unscrutinized.

Addressing himself primarily to the financial vagaries inculcated by General Ewing, the candidate of the Democrats in Ohio, he shows that the views and aspirations of that gentleman involve a practical subversion of what has heretofore been the most fundamental doctrine of the Democracy. If there is anything for which the Democrats of the past and present have professed a strong repugnance it is the centralizing tendencies which they have ascribed to the old Whig and the modern Republican parties. And yet, in apparent oblivion of this hereditary Democratic principle, the Democrats of Ohio are found contending to-day for a centralizing doctrine in regard to the currency from which the boldest advocate of "Hamiltonian Federalism" would have shrunk in dismay. Inasmuch as the power to control the currency affects the general prosperity of the country, Mr. Ewing holds that it should be lodged in Congress, the legislative embodiment of the public will and national sovereignty. In his own words, he holds that

> "The welfare of the people demands that this power to expand or contract the currency, to raise and lower values, to give prosperity or inflict distress, shall not be committed to the hands of private individuals or corporations, and, least of all, to corporations representing the holders of public and private debts, whose wealth is increased by every fall of prices and diminished by every rise. It should be exercised by the Government alone, in such manner as shall give to the debtors, tax payers, and industrial classes the assurance of justly-established and simple values."

Mr. Schurz demonstrates that this doctrine is the very abnegation of all that is most typical of Democratic principle in the former days of political contention, and in so doing proves himself to be a better Democrat than the men who are now following the lead of false prophets into the worship of strange gods. We have ourselves remarked on the strange illogic of the soft-money Democrats who, in the last and the present Congress, were found railing at Secretary Sherman with one breath, and with another insisting that he should be the omnipotent cashier of a monstrous national bank, absorbing and disbursing at his administrative discretion the currency of the nation! And when to this consideration is added the fact that the volume of the currency is to be determined by the will of the dominant majority in Congress, and that that will is to be ascertained by King Caucus, the logical Democrat can fully appreciate the justice of Secretary Schurz's language when he declares that "never did the extremest Whig in his boldest dreams conceive so monstrous an accumulation of governmental power as General Ewing claims" for the Federal authority at Washington. That any Democrat who is familiar with the record made by his party in the days of Jackson, and who supposes himself to be an opponent of centralization, should be found supporting the dogmas of General Ewing, can be explained only at the expense of his intelligence or his sincerity. And in so saying we impute no motives but simply collate facts of history which are known and read of all men. No one will see this truth more clearly than the misguided Democrat of the West when the present infatuation under which he rests shall have spent its blinding force.

And if Mr. Schurz has placed the hard-money Democrats under obligations by teaching their late associates what be the first principles of the Democratic creed, it remains to be said that he also has a useful screed of doctrine for the Republicans who are more anxious to serve the turn of their party than the welfare of the country in the present financial battle. He is obviously more eager to enlighten opinion than to gain votes. Instead of seeing in the greenback agitation a source of political capital, to be turned to the temporary advantage of the Republican Party while leaving the root of the evil imbedded in the subsoil of our politics, he seeks to exterminate it "root and branch." It is to this view that we have constantly directed the attention of our readers, with an emphasis and iteration of phrase which may have seemed monotonous. We are, therefore, pleased to find that Mr. Schurz, casting his eyes beyond the exigencies of a mere local and temporary political contest, is bent on guiding the judgment of the people towards a radical reform of the currency. There is no uncertain sound in *his* key note, and it is for the purpose of expressing our entire concurrence in his views, and of reaffirming our own on this point, that we invite the attention of our readers to the following extract from his Cincinnati speech:

> "The constant and mischievous agitation of the Ohio school of Democrats for the destruction of the national bank currency and the substitution of greenbacks may serve one good purpose. It will at last convince every sensible man that, as long as such a Government paper currency exists, the agitation for an expansion of that currency will never cease to disturb the public mind, to threaten the maintenance of specie payments, to endanger the public credit, and to undermine that foundation upon which alone the business of the country can safely stand—a sound monetary system. It will at last convince even that class of well-meaning men who, although in favor of honest money, have been affected by that sentimental idolatry of the greenback which has confused so many minds, that, after all, under our Constitution, as in every well-regulated policy, it is not a legitimate function of the Government to be a bank of issue; that in the public interest it is necessary to take the volume of the currency out of politics; that it is the business of Government to coin real money, and not to print notes; to see that the coin struck in the mints be of the standard value; to prevent and punish counterfeiting; to regulate the banking system by law, so as to make it safe; to act as a bank controller, so as to keep it safe; and, as for the rest, to let currency and trade, in their relations, take care of themselves, without arbitrarily interfering with either."

We entirely agree with a Democratic contemporary in Pennsylvania that the party which is first to adopt these thoroughgoing and sound principles of finance will be the first to secure an important vantage-ground in the political contests of the near and the distant future. Whether the Democrats of the West shall return to this historic position of their party and join hands upon it with their brethren of the East, or whether, availing themselves of the Western and Southern Democratic defection, the Republicans shall be left to advance and occupy the higher ground, remains to be decided by the current events and by the courage with which party leaders shall follow the logical tendencies of the best opinion in both the historical parties of the country. For who can doubt that the *best opinion* in both the Democratic and Republican parties points in the direction indicated by Mr. Schurz.

THE BUSINESS REVIVAL.

THE indications of a genuine business revival multiply on every hand. All branches of industry, as shown in the reports we have published from time to time, share in the recovery. In manufacturing centres it is especially apparent. Prominent manufacturers of certain kinds of goods inform us that they are driven night and day, employing double gangs of operatives, and that the demand shows no signs of abatement. In New England the print cloth works show steadily increasing production, and new establishments are in contemplation; the woolen mills at some points are running over time; the shoe manufacture is brisker than it has been for years; the paper trade is much more active than it was one year ago; and, generally, the report from all quarters and every branch of trade is full of encouragement. In the West, the signs of returning prosperity are no less conspicuous, while in the States like Pennsylvania, where the iron industry is prominent, business is fairly "booming." The Philadelphia *Record* states that fully 20,000 more persons are employed in that city to-day than at this time last year, and there is still an active demand for workmen, especially in the iron and machinery works, the foundries, rolling mills, and hydraulic works, all of which are full of orders. In the cotton mills a greater number of operatives are employed than for several years, and this in spite of the fact that the recent decline in the price of cotton has entailed considerable loss upon many mill-owners. The *Record* adds to its general review of the business situation the following statements:

> "The condition of the clothing and shoe manufacturing industries exceeds the most sanguine anticipations of the far-seeing ones in those trades. The shops are filled with operatives, and many are working extra time far into the night. What is known as the small or under-clothing trade, which has grown to immense dimensions of late years, and which gives employment to thousands of women, is active to an extent never before experienced. The brick-making trade, which has been dull for some time, has received a sudden boom. Workmen are at a premium, wages and the cost of material have advanced, and many contractors who took orders a couple of months ago for future delivery declare that they are actually delivering at a loss.
>
> "No inconsiderable portion of the business revival is attributed to the increased demand from foreign markets. Liberal orders for cotton goods from South America and other sources have been received in this city during the past week. The shoe export trade is also increasing. Two large orders from Paris, a similar number from Australia, one from Honolulu and two from South America, have been received by one tool establishment within a few days.
>
> "All through the State the workingmen are in high glee over the revival in the iron industry. Secretary Swank, of the American Iron and Steel Association, says that there are no idle men in the iron districts. Other authorities assert that the supply of labor is not equal to the demand. During the stagnant times which have just passed away hundreds of skilled workmen have gone West and applied their muscle to the cultivation of the soil. As a result, now that the furnaces and mills are again starting up, the familiar faces of the workmen who occupied cottages around the mills are missing, and the operators are compelled to scour the State to obtain competent hands."

The exhibit here presented of the business condition of the Keystone State applies, more or less directly, to the situation in all the manufacturing States. With labor thus generally employed, capital earning remunerative returns, the soil pouring abundant crops into our garners, and our finances adjusted to sound condition, we may well look to the future with confidence and complacency.

PERSONALITIES IN JOURNALISM.

THE recent tragedy in San Francisco, in which a newspaper proprietor shot a reverend candidate for political honors, illustrates, very strikingly, the fierceness and intensity which characterize all public discussions and all controversies over public questions on the Pacific Coast. But it emphasizes also, very forcibly, the pernicious tendencies and influence of personalities in journalism, and the perils which must menace the social order so long as the Press shall permit itself to be a vehicle of defamation, scandal and abuse. Grave and indefensible as the offense of De Young certainly was, it was in its original form no more so than that of which hundreds of journalists are guilty in every political canvass. He attacked with the grossest personalities a candidate for political honors; so do they. He dragged every accessible muck-heap for filth with which to spatter the grave of one of that candidate's immediate ancestors; scores of political editors do the same in the white heats of every partisan conflict. Indeed, it may be said with truth, that one chief reason why so many men of the highest character, who are jealous of their good names, refuse to have anything whatever to do with politics and public office, to the obvious detriment of the public service, is to be found in their conviction that fair and manly treatment at the hands of purely partisan journals is impossible. They know that, once assuming prominence, their motives will be misconstrued, their aims misrepresented, and their reputations and their lives either torn into shreds or blackened beyond recognition by malignant and unscrupulous party organs, and they are unwilling to pay for the bauble of office a price so utterly disproportioned to its value.

It is easy to see that this tendency towards personalities amounts to a reversal of the true ends and just methods of enlightened journalism. Every man, in whatever sphere of life, may justly claim the right to stand, unchallenged, on his own character and record, and upon those of nobody else. That character and that record — every man's life, as Emerson says, being full of judgment days—are fairly subject to honest and conscientious criticism. If they do not afford a reasonable guarantee of fidelity to principle, and integrity and purity in the discharge of duties, public or private, it is right and legitimate, in the interest of the public, that the fact should be established. But when criticism invades the sanctities of the domestic circle, or penetrates the arcana of private life, it degenerates into license, and license is never compatible with the highest social ends. Nor is there any real justice in that rule of criticism which denies the efficacy of penitence for faults and refuses to condone the errors of youth when supplemented by a pure and upright manhood. Many a man whose character at twenty is deficient in essential moral qualities is at forty a model of every Christian virtue—robust and vigorous in every element and fibre of his moral nature. Why should such a one be denied the use and advantage of the moral capital he has, by patient combat with evil tendencies, put into his life? Why, in a broader sense, should any man—a candidate for office especially—be held responsible for the reputed misdoings of dead and buried ancestors? Whether Reverend Kalloch's paternal ancestor was, or was not, a man of stainless life, is a matter with which the people of San Francisco have nothing whatever to do; it is not the father but the son who is on trial at the bar of public opinion and undergoing the crucial test of public scrutiny, and the popular concern is with him alone and exclusively. To admit the principle upon which De Young attempts to justify his offense would be to doom thousands of pure and noble men to walk in perpetual shadow because some sort of eclipse had rested, at some time or other upon a remote forerunner in the family line. And what would become of all human growth and development if that were to be the rule and standard of the world's judgment? What possible encouragement, under such a law of estimates, would there be for any man to struggle upwards from untoward conditions to higher planes of motive and action?

The San Francisco tragedy will not be altogether evil if it shall serve to deepen and intensify the sentiment of hostility to personalities in journalism, and beget, on the part of the better class of newspapers, more resolute and vigorous efforts for the elevation of the character and purification of the tone of the Press of the country. The ghouls who ransack the graves of the dead for food to appease their brutal appetites; the editorial buccaneers who are never content except when they can ravage and lay waste some honorable reputation which stands as a perpetual rebuke of their own mendacity; the newspaper cutthroats and highwaymen who thrust and wound and kill by innuendo, invective and defamation—all these must be driven from the walks of journalism if journalism is to retain its rightful influence and fill its rightful office as the educator of the people and the conservator of the public morals and the public order. The thief who steals our treasure we degrade with chain and ball and put in prison; the brute who is guilty of cruelty to the dumb animals who serve us we subject to heavy penalties; the midnight assassin who robs and then coolly murders his unconscious victim we hang upon the gallows. Why should the man who plunders his fellow of an honest reputation, dishonors him in the eyes of his generation, and dooms him to the contempt of posterity—doing all in mere reckless indifference or with malicious intent, or that some petty partisan advantage may be attained—why should such an offender against every principle of candor, justice and fair play be held as less deserving of censure and punishment than these whom the law brands with outlawry or worse?

COUNT ANDRASSY'S CAREER.

POLITICS has its romances as well as do love and war. An interesting book might be written about the vicissitudes of political careers. Sudden flights from obscurity to power, like that of Cincinnatus; sudden falls from the summit of authority to nothingness, like that of Wolsey; the traitor of to-day to-morrow's Emperor, the conspirator of to-day to-morrow's Premier—such events have again and again occurred in the world's political history. When we scan the reigning statesmanship of Europe in our own time, we perceive more than one instance of the romantic metamorphoses which the whirligig of time, or the fate of events, have effected in the lives of public characters. The Jew novelist and dandy, Disraeli, wields the destinies of the British Empire; the Jew-descended son of a country attorney, Gambetta, is the leading figure in the French Republic; men once convicted of treason sit high in the councils of Spain.

Not less striking has been the career of Count Andrassy, who has for some years been the Chancellor of the Austro-Hungarian Empire, and who now retires from that highest office to which an Austrian subject can aspire in the prime of life and the fullness of his intellectual and physical powers. Thirty years ago Count Andrassy was a fugitive from his native land, branded as a traitor; and the very sovereign whose intimate confidence he has recently enjoyed had signed a proclamation setting a price upon his head, whether taken alive or dead. Andrassy was a Hungarian of noble birth, liberal education and wealthy estate; but with all the ardor of twenty-five he plunged headlong into the Magyar revolt, which shook Francis Joseph's throne almost as soon as he had seated himself upon it. Like Kossuth and Zempleu, Andrassy was hotly resolved to achieve freedom for Hungary or die in the attempt. The collapse of the revolution drove him, an outcast, far from the scene of his gallant but abortive attempt, and for many years after he ate the bread of exile in a distant land. Unlike Kossuth, however, Andrassy did not believe that he should best serve his country by remaining aloof for ever in sulky self-martyrdom. He therefore returned, after the amnesty, to take his seat in the Hungarian Diet. The concessions to that country by the Emperor after the disastrous war of 1866 thoroughly reconciled Andrassy to the Hapsburg régime, and the following year saw him Prime Minister of the trans-Leithan kingdom. His Premiership was marked by many able reforms, and by the reconstruction of the relations between Hungary and the Empire of which it was a part on a new and constitutional basis; and so signal was his success as a statesman that in 1871, when Count Von Beust was transferred from the Chancellorship to the Austrian Embassy at London, Count Andrassy was selected as his successor.

For eight years this once doomed rebel has administered the affairs of the dual

Digitized by Google

Empire—affairs more difficult, perhaps, than those of any other European Government—with an ability so conspicuous and successful, that men with one accord speak of him in the same breath with Bismarck, Beaconsfield and Gortschakoff. He has been, indeed, one of the four great court-compellers of his age; one of that illustrious quartet who, sitting at the green baize table at Berlin, settled the politics of Europe without the arbitrament of war. Indeed, in certain respects, Count Andrassy has wielded a larger influence over the settlement of European complications than either of the other three Premiers with whom he is so often classed and compared. It was he who drew up the famous Andrassy note, which was the basis of the Constantinople Conference of 1876, and which, it may be said, foreshadowed the entire succeeding policy of united Europe on the Eastern Question. He is credited with having drawn up the draft of what became the Berlin Memorandum, and several of the most vital articles of the Berlin Treaty were his handiwork. Count Andrassy was really, throughout the negotiations of the past three years, the man who defined on each occasion the European policy which has been pursued. Within his own Empire he had obstacles to contend with even graver than the susceptibilities of Gortschakoff, the craft of Bismarck, or the suspicious caution of Beaconsfield; for within Austria were two powerful parties, each pulling in oppositedirections, and Andrassy was forced to side against the party which comprised his own countrymen, the Hungarians. Throughout, his policy has been, as to foreign affairs, to maintain the position of the Austrian Empire as a first-class Power, and to protect it from the possibility of assault; and as to internal affairs, to conciliate and unite the interests and loyalty of the many antagonistic races into which the subjects of Francis Joseph are divided. He was shrewd enough to hold aloof from a French alliance in 1870, which would probably have been fatal to the Austrian Empire; and in spite of Hungarian clamor, he had the sense to refrain from interfering, on behalf of the Turks, in the war of 1877. He saw that, for the Austrians to occupy Bosnia was a necessary evil; but he only did this after he had at Berlin secured the general acquiescence of the Powers.

It may be fairly said that Count Andrassy leaves the dual Empire far stronger, more prosperous, more united and more free than he found it; and this is glory enough for any statesman. He has guided it through many perilous shoals and quicksands; he has preserved it from many formidable dangers; and he has fully sustained its position as the political equal in Europe of Germany, England and Russia. At the age of fifty-six, it may be surmised that Count Andrassy's public career is not yet at an end. If he has found it best to retire from the strifes and perplexities of power, it is probably only for a time. The services of such a man are sure to be needed again; but if his retirement should prove final, Andrassy may rest content with a fame which rivals that of the greatest European statesmen of the present century. Certainly no Austrian statesman, since Kaunitz, has made such a mark upon the records of his time; and Austria is a country less fertile in really great statesmen than almost any other in Europe.

FOREIGN EVENTS.

FRANCIS JOSEPH is desirous of retaining the services of Count Andrassy, but the latter persists in his withdrawal, and will probably be succeeded by Baron Haymerle, the present Austrian Ambassador at Rome. The three-fold ministerial crisis in Austria was accelerated by a quarrel between Count Andrassy and Count Bylandt-Rheidt, the jovial Minister of War. The former was for occupying Novi-Bazar with 5,000 men, according to the text of the convention. The War Minister opposed on the grounds of insufficiency. Prince Bismarck is credited in Vienna with having eagely foreseen Count Andrassy's fall. That, say the quidnuncs, is the reason why the German Chancellor has attempted reconciliation with the Vatican, to nip any possible reacting Catholic League with its headquarters on the banks of the Danube in the bud. Andrassy has paid a visit to Bismarck, and between them it is expected the future Austro-Hungarian policy will be elaborated. Hungary is in a volcanic condition, and the "asperities" show every sign of coming to the front. There are indications, too, of a serious disturbance of the relations of Russia and Germany; but the personal relations of Emperor William and the Czar are said to remain friendly.

England and France, having settled their little difficulties over the Egyptian question, have taken the Khédive's finances in hand. The Khédive does not object to the English Commissioner, but he swears by the beard of the Prophet that he will not permit a single piastre to pass through the fingers of the Frenchman. This was the ex-Khédive's little game to a card. How history does repeat itself! England and France are also cogitating the nursing of the "sick man" financially; but that "awfully stupid" Greek question requires solution before any pull can be made on the purse-strings of the Commander of the Faithful. At a recent sitting of the Turco-Greek Commission the Turks announced that the Porte accepts the line of frontier indicated by the protocols of the Berlin Congress. It is probable Turkey will come to an arrangement on all points at issue, but reserve the question of Janina for the decision of the International Delimitation Commission.

Lord Chelmsford has returned from Zululand to receive hollow praise for his hollow victory achieved by his hollow square. He has had a spasmodic recognition, and is being damned by faint praise. Lieutenant Carey is *not* to receive the decoration for valor, although its bestowal upon him would be but of a piece with the entire shameful business. Sir Garnet Wolseley has his work cut out for him, and work of a nature that can bear for him nothing but a crop of gibes, flouts, sneers and calumnies. A guerrilla-war is a maddening war—slow, murderous, cruel and bloody. Chelmsford's legacy is a shirt of Nessus.

At a special meeting of the Imperial Council at St. Petersburg it has been decided to expend five millions of roubles in improving the ports of the Baltic, so as to enable Russia to meet the charges in the German tariff by the transfer to Libau and other Russian ports of the goods which now pass through Germany to Europe. Any excuse, however thin, for strengthening her maritime arm pleases your land-taxed Russian. His dream is a fleet, and a clean sweep of the waters washing his seaboard. The Emperor Alexander is said to be very much broken in spirit. His traveling plans are continually altered, owing to the fears by which he is haunted. People observe that whenever he leaves the capital for Zarskoje Silo, he does not use the railway, but the carriage, lest some mischievous hands should prepare an "accident." Whenever he must use the railroad, his train is accompanied by three other trains, two in front and one behind. So Queen Victoria does not take a trip to Balmoral without the most extraordinary precautions being taken on the part of the railway officials.

Prince Jerome Napoleon is at Trouville, and his conversations at the glittering watering-place have been compressed into manifestoes. "Plon Plon" is personally opposed to a *coup d'état*, that goes without saying, and firmly believes that the Imperial eagle will yet float over the Tuileries. He awaits a reaction of public opinion—a reaction that will be the direct outcome of radical violence. In the meantime, like "Le Petit Corporal" at St. Helena, he will fold his arms and await events. Sagacious Prince Micawber.

Bulgaria and Roumelia are having it out on the subject of headgear. All devout worshipers of the Prophet wear the fez, and the wearing the fez denotes the true believer. On the other hand, the donning of the Bulgarian kalpak indicates the wearer's decided aversion to Mecca and mosque. In Bulgaria, the Dobrudscha and New Serbia the fez has totally disappeared, and it is going out of fashion in Bosnia, Eastern Roumelia, Thessaly and Epirus. The fez manufacturers in Vienna are howling like dervishes over the decrease in their importations, 600,000—while the kalpak manufacturers are chuckling from Bosnia to Epirus. The question to-day in Bulgaria and Roumelia is, "Who's your hatter?"

The labor troubles in Great Britain continue, and emigration as a means of relief is generally discussed. Eighty farmers have just sailed from Liverpool for this country, bringing with them considerable capital which they propose to invest in land. In Sheffield the workingmen have already taken steps to promote the emigration of surplus labor.—The announcement is made that a special French representative will be sent to greet the Emperor William of Germany on his approaching visit to Metz.—The arrangements for the marriage of King Alfonso are in progress. It is hinted that the marriage will be signalized by the conclusion of an arrangement with Don Carlos, on whom it is proposed to confer the title of Infanta, with a large allowance, upon condition that he renounces all claim to the throne of Spain.—There is an intimation that the French Government, at the next session of the Legislative Chambers, will demand power to banish any members of the old reigning families who agitate against the Republic.—The Government has declared itself ready to appoint Special Commissioners to act in concert with American Commissioners for negotiating a treaty of commerce between France and the United States.

SOMETHING should be done to put a stop to the emptying of pauper immigrants upon our shores by the agents of foreign Governments. Within the last fortnight a score of immigrants, sent out by an agent of the British Government, have been "unloaded" at this port in an absolutely penniless condition, their maintenance being made, temporarily at least, a charge upon the Emigration Commission. There can be no possible excuse for this unneighborly practice, and if it shall continue relief should be sought in a national law on immigration. We are a hospitable people, but we cannot afford to maintain the paupers and criminals of other countries.

THE great popularity which Coney Island has acquired as a Summer resort since its natural advantages have been properly developed has induced a company of capitalists to undertake the "improvement" of Rockaway Beach on the same scale of magnificence. To that end a tract of beach property comprising 1,650 acres is to be laid out and built upon at once, and supplied with railroad facilities, so that by the opening of the next Summer season a seaside watering-place, with all the attractions and accessories which experience can suggest or money secure, will be within thirty minutes' ride of New York. The capitalists interested in the enterprise announce that they will invest $5,000,000, if necessary, to make the scheme a success.

IN a letter to the *World* newspaper, Rear-Admiral Ammen states that General Grant has expressed his willingness to accept the Presidency of an American company to construct an interoceanic canal. The ex-President is known to have taken a special interest in bringing about the necessary surveys and satisfying himself as to the results obtained and as to the sufficiency of our information in relation to all of the routes supposed to be practicable; he has, according to Admiral Ammen, a full and minute knowledge of the advantages and difficulties attending the construction of the canal, considered as a commercial question, wherever it may be located; and his connection with a purely American enterprise would no doubt prove eminently advantageous to its interests.

SINCE the first of January last, twenty-one fire insurance companies of this State, representing a capital of four millions of dollars, have withdrawn from business. During the same period, twenty-five companies in other States, representing about the same amount of capital, have abandoned the field. The causes producing this mortality were the excessive expenses of the companies, the disastrous competition of the stronger institutions, and the ruinous cutting of rates to secure business. The *Commercial Bulletin*, of this city, says that the business of the first six months of the year "netted an average loss of about nineteen per cent. With this margin against them, the companies have no easy task before them to bring things out even at the end of the year. A few may succeed in doing this, but the great majority are certain to come short."

SO IT appears that the "reform" Cabinet, pledged solemnly to abstain from all interference in politics, is not quite consistent with its professions. In a recent interview, Secretary Schurz is alleged to have said that he had urged Secretary Sherman to enter the field as a candidate for the Presidential nomination in order to "kill off Grant," and then added, that "since Sherman consented he had been working for him in every way possible." This is certainly a curious revelation of Cabinet intrigue, and it will strike the country as scarcely reputable, to say the least of it, that an original and conspicuous supporter of reform in the civil service, who has repeatedly denounced the participation of public officials in active politics as an unpardonable presumption, should be pulling wires from his office in Washington to "kill off" one man and promote the fortunes of another intimately associated with him in the public administration.

IT is gratifying to observe that the more influential partisan journals in the South are speaking in strong terms of denunciation concerning the recent assassination at Yazoo, in Mississippi. The Vicksburg *Herald*, a prominent Democratic journal, condemns the shooting of Mr. Dixon in the most emphatic language, and the Louisville *Courier-Journal* says: "The people of Mississippi cannot afford, and the people of the South cannot afford, to have the people of Mississippi silently submit to a bloody violation of the law—and enough and mad enough for the community immediately concerned, but reaching, in its consequences, the whole Southern country." These expressions show that violent methods of political argument do not command the approval of the best class of the Southern people, and this fact affords solid ground for encouragement as to the future of that section.

THE *Herald* has recently exposed, in a series of vigorous articles, the extent and disastrous effects of the "dumping nuisance" in the harbor of New York, for which the Police Commissioners are primarily responsible. It shows from the statements of pilots and others that this practice has resulted in the filling of channels and the creation of shoals, which constitute a serious obstruction to navigation; the channel in one case being reduced in three years from a depth of 54 to 26 feet by the garbage accumulations deposited by the authorities at a point where the tides floated them inward instead of washing them out to sea. According to the statement of an inspector, 250 tons of ashes are every day thrown into the river and harbor by steamboats, tugs and barges, and it is very easy to see that unless this practice is stopped the harbor must suffer immense injury, and our commerce be very seriously affected. The health and attractiveness of the shores of the harbor and its outlying resorts are already endangered by the nuisance, and in this fact the authorities may find another reason for at once reforming their policy in this matter. The *Herald* is entitled to the thanks of the entire community for its enterprise in disclosing and calling attention to the imminence of the danger which menaces us from this quarter.

NEWS OF THE WEEK

Domestic

GENERAL J. B. HOOD died of yellow fever at New Orleans, August 30th.

THE 150th anniversary of the incorporation of the town of Bedford, Mass., was celebrated August 27th.

UP to July 31st there have been granted 24,779 arrearages of pension claims, aggregating $12,630,996 41.

A LINE of fast mail steamers between St. Louis and New Orleans is to be established in December next.

THE yellow fever continues its ravages in Memphis, but the number of new cases shows a slight daily diminution.

AT a Lacrosse tournament at Newport, R. I., August 28th, the championship of America was won by the Boston Club.

CAREFUL estimates of experienced observers place the Spring wheat crop of the Northwest at about 137,850,000 bushels.

THE work of inspecting the tenement houses of this city is making satisfactory progress. During last week 1,864 houses were inspected.

CASTLE THUNDER, at Richmond, Va., a prison-house during the war, has been destroyed by fire; it was used as a tobacco manufactory.

WESTON and Rowell, the pedestrians, arrived at this port, August 27th, the former bringing the Astley belt which the latter carried away a few months ago.

THE Louisiana Republicans will hold a State Convention at New Orleans October 20th. The Democratic State Convention will be held in Baton Rouge October 6th.

A PATENT was last week issued from the United States Patent Office to Thomas A. Edison for the electric lighting apparatus on which he has been experimenting for some time.

THE Grand Jury of Dauphin County, Pa., have indicted four persons for having offered bribes to members of the Legislature for their votes for the Pittsburg Riot Claim Bill.

THE ceremonies attending the unveiling of Wilson McDonald's statue of the late General George A. Custer took place at West Point on August 30th, and were of an imposing character.

THE Tammany Hall Democratic General Committee have issued an address, arraigning Governor Robinson and declaring that those whom they represent will not support his re-election.

IN his examination last week, before the Assembly Railroad Committee, President Jewett of the Erie Railway Company, testified that his salary as Receiver and President amounted to $65,000 a year.

THE New York Greenback State Convention, held at Utica last week, nominated Harris Lewis for Governor, Dr. J. M. Wieting for Lieutenant-Governor, and P. K. McCann, of the *Irish World*, for Secretary of State.

THE Oneida Community has formally abandoned the system known as "complex marriage." Hereafter the Community will consist of two classes of members, celibates and the married, who will act upon the principle of monogamy.

TWO United States naval officials sailed from this port last week for Alexandria, Egypt, to bring to this country the obelisk called Cleopatra's Needle, the sister to the one that was recently set up on the Thames Embankment, London.

THE centennial celebration of the battle of Newtown took place on the battle-ground, four miles east of Elmira, where a monument has been erected, August 29th. There was a fine parade, with addresses by eminent gentlemen. On the previous evening a historical address was delivered by Hon. Erastus Brooks.

SECRETARY MCCRARY has made a report on the case of ex-Surgeon General Hammond, recommending that the finding and sentence of the court-martial which convicted him of corruption and falsehood be set aside, and Dr Hammond be placed on the retired list of the Army, without back, present or future pay or allowance.

EX-JUDGE JOHN DIKEMAN, an old resident of Brooklyn, and the oldest member of the Kings County Bar, died August 24th; Ex United States Senator John C. Ten Eyck, of New Jersey, died August 25th, aged sixty-five years. Among other deaths during the last week were those of Stephen Hyatt, a widely-known New York business man, aged sixty-six years; Hon. William A. Duer, a once prominent lawyer and politician of this city, and for a term United States Minister to Chili, aged seventy-four years; Rev. Dr. Nathaniel Cornwall, a popular clergyman and theological writer, of this city, aged sixty-seven; and James Lawrence Worth, President of the National Park Bank, New York.

Foreign.

ONE thousand cotton operatives have struck in Glasgow.

TWELVE Nihilists have been executed in Russia during the past year.

THERE were ninety-five deaths from yellow fever in Havana, week before last.

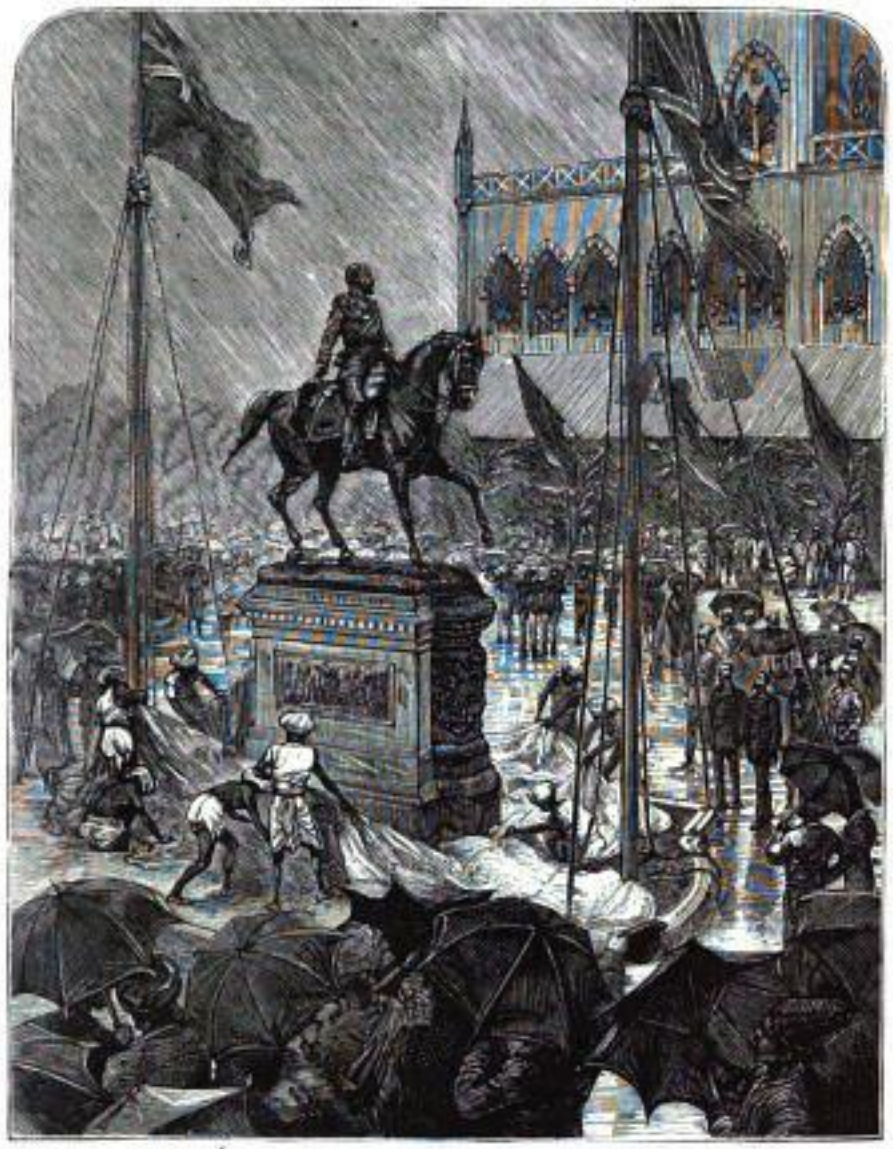
GAMBETTA is reported as disposed to appeal to the French masses in favor of the Ferry Educational Bill.

THE Quebec Legislature has refused to pass any Supply Bills unless the Governor-General dismisses his Ministry.

IN consequence of the failure of the crops famines are threatened in parts of Ireland and Persia, and the farmers are suffering great losses in England, Austria and Servia.

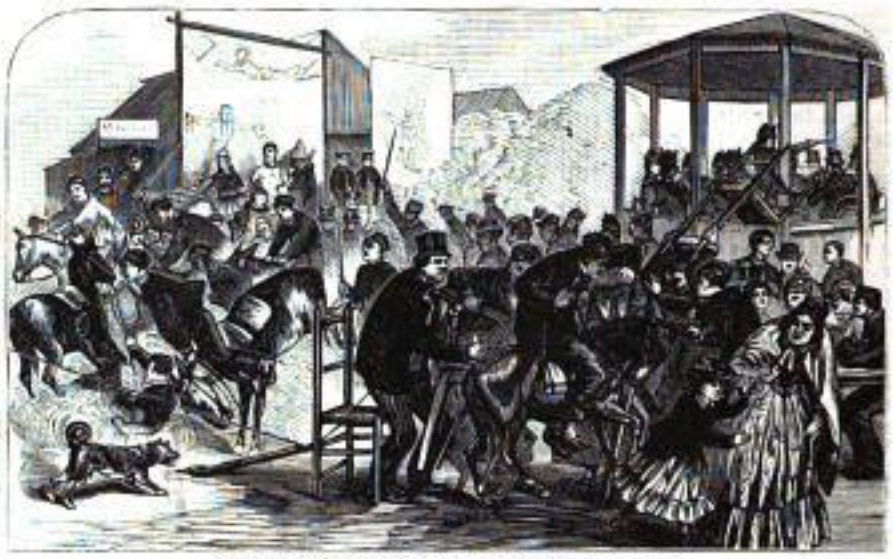
A DISPATCH from Sir Garnet Wolseley, dated August 12th, says the prospects of peace in Zululand are improving. The principal chiefs say they will come in and submit.

A RENEWAL of the floods is reported from various parts of England and Wales. Reports of the harvest are daily more deplorable. At several places there has been thirty hours' continuous rain.



A YOKOHAMA dispatch, under date of August 25th, says the steamer *Nordenskjöld*, supposed to be the store-ship for the Nordenskjold Arctic expedition, has been totally lost. The crew were saved.

ANOTHER uprising is reported in Cuba, and an army convoy has been captured by a small band of Cuban patriots while on the road from Manzanillo to Bayamo. Thirty thousand dollars in gold coin, 60,000 cartridges, 500 rifles, and a large quantity of clothing, provisions, etc., fell into the hands of the Cubans.



A DISPATCH from Santiago, the capital of Chili, dated July 31st, says serious riots have occurred in that city in consequence of the popular discontent at the conduct of the war. Two persons are said to have been killed in a conflict with the troops and several wounded. It is reported that the Chilian President has fled, but the entire story lacks confirmation.

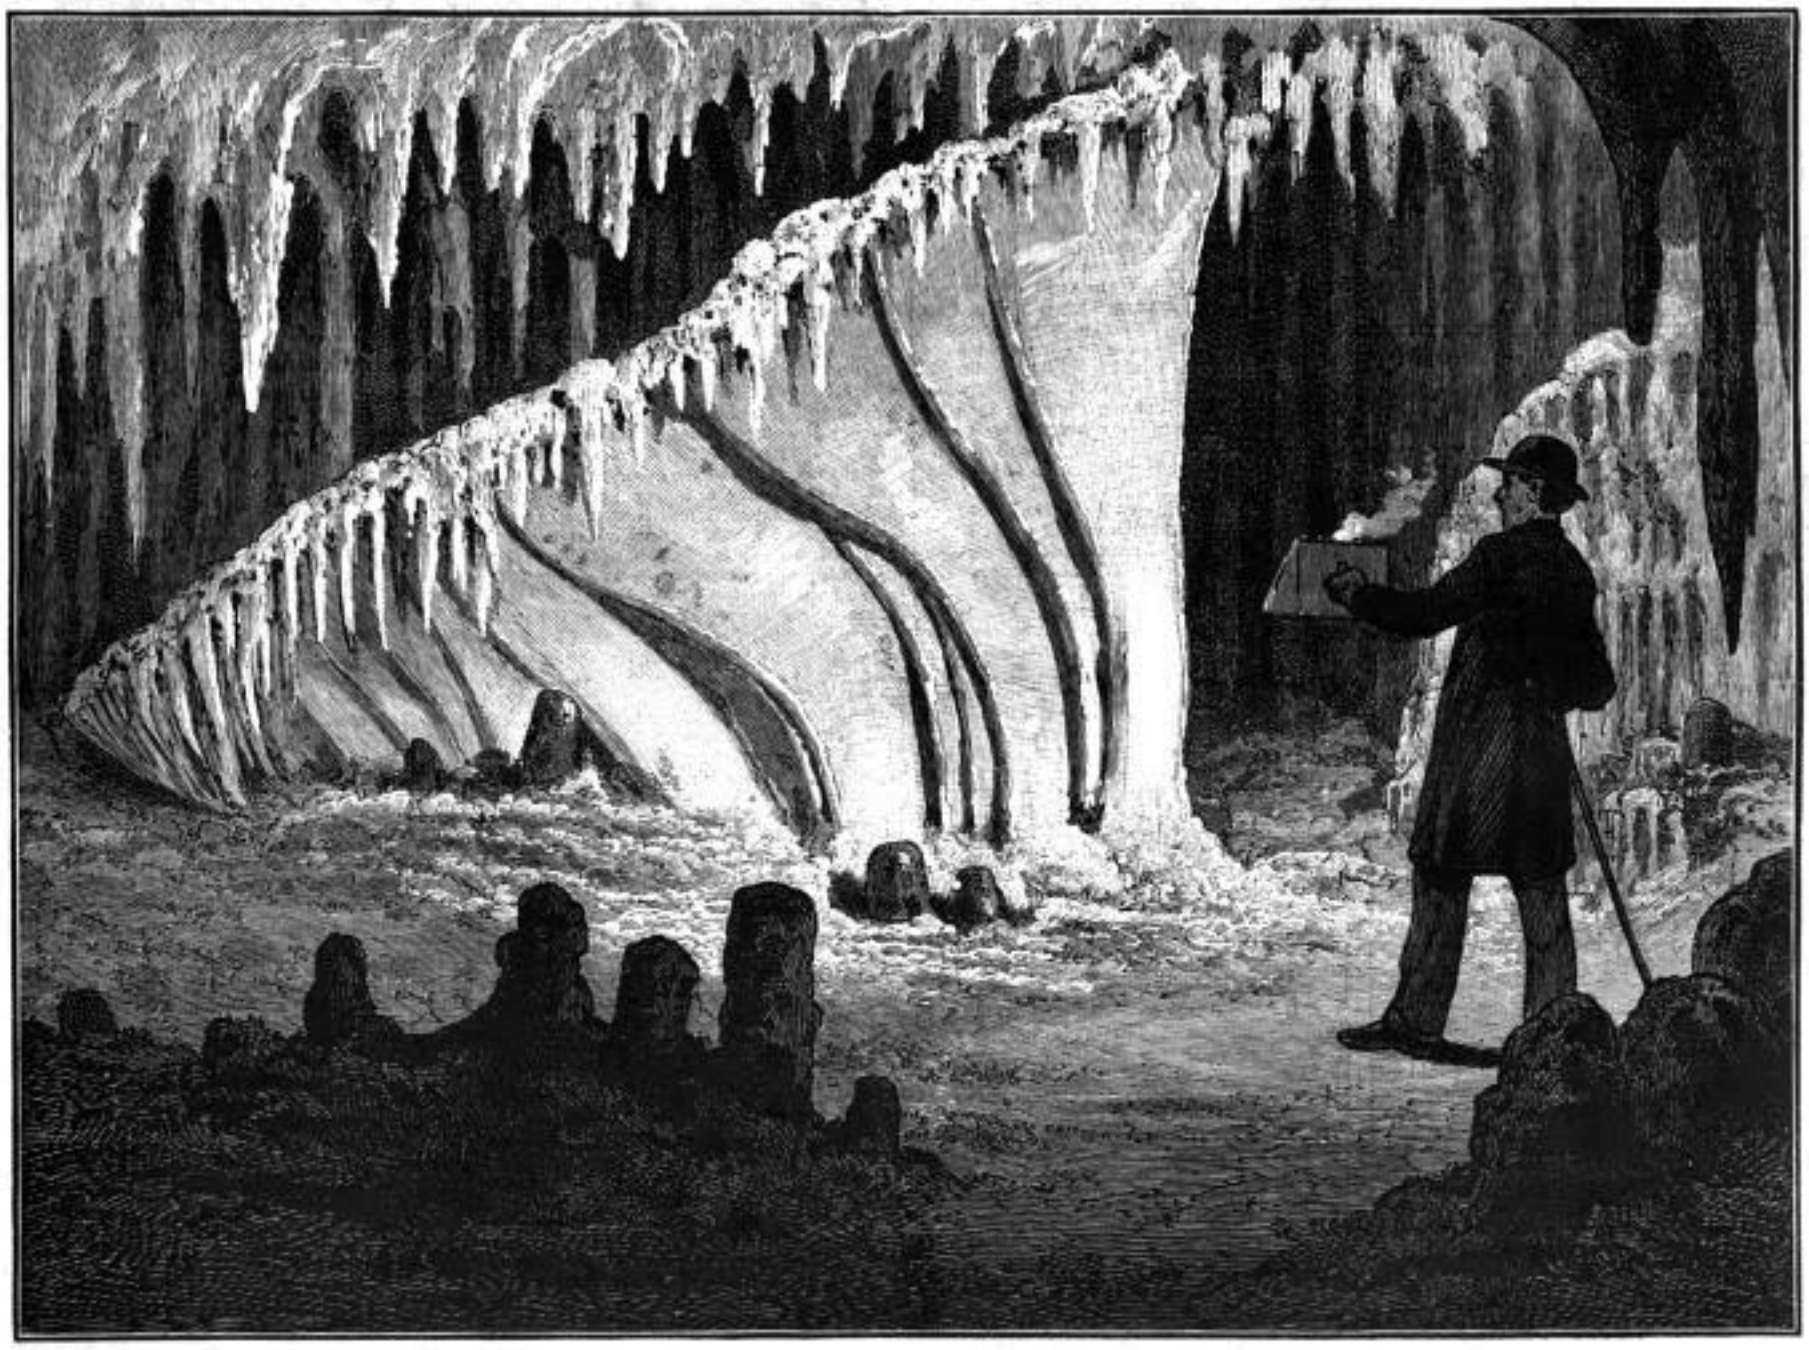
THE WONDERS OF LURAY CAVE.

FREQUENT mention has been made in this paper of the strange spectacles seen in the famous cavern at Luray, Page County, Va., in connection with many exceedingly striking engravings. Although the cave has been opened to the public but a little over a year, geologists, antiquarians and travelers generally have assigned fanciful names to countless formations, and a directory of the attractions of this subterranean wonderland would read like a guide to some of those weird places seen and traversed only in the hours of pleasant dreams. There are, for instance, Muddy Lake, the Valley of Death, Fairy Spring, the Elfin Ramble, Pluto's Chasm, the Elysium, Proserpine's Pillar, Oberon's Grot, Titania's Vail, the Saracen's Tent, the Giant's Hall, the Bridal Chamber, the wonderful Organ with fifty-six pipes, the Empress and Sultana Columns, the Naiad's Bath, with the majestic Double Column rising from its centre; the Coral Cascade, the Theatre, and Pavilion. Do not these suggest an aggregation of the great things in all the delightful fairy and mythological stories of long ago? Then, too, there are curious formations, like the one shown this week, which a lively imagination may christen with any number of names. Holding the engraving some distance from the eye, it will not be long before the reader can see the outline of a huge steamship, the sharp prow resting upon the rocks, the stem nearly submerged. Huge rock-fingers have broken in the hull, the exposed ribs have been twisted by the storms, and in its exposed helplessness, the waters have dashed over the frame, giving the gunwale a heavy fringing of sparkling icicles. In this view it might be imagined that the vessel had been blown into a huge cavern and there wrecked. The ingenuity of the reader will doubtless be sufficiently fertile to assign other objects to this shape. Whether viewed as a remarkable stalactitic formation, or as a puzzle picture, the engraving possesses the elements of an engrossing interest.

HON. ORAN M. ROBERTS.

GOVERNOR ORAN MILO ROBERTS, of Tyler, Smith County, Texas, was born in Laurens District, South Carolina, July 11th, 1815, and when quite young his family moved to Alabama, where he was educated. He graduated at the University of Alabama, at Tuscaloosa, in 1836, and moved to Texas in 1841, settling in the eastern part of the State, where he has since resided. He was District Attorney of his District in 1844-45, having been appointed by Governor Houston; appointed District Judge in 1846 by Governor Henderson, and continued on the District Bench until 1851. Upon the death of Hon. Abner S. Lipscomb, Associate Judge of the Supreme Court, in 1856, Governor Roberts was nominated by the Bar of the City of Austin to the vacancy, notwithstanding up to that time he had never been west of the Brazos River, and, consequently, was personally unknown at the capital. His nomination was seconded by the Bar of Ellis and of other counties in northern and eastern Texas, and he was elected. In 1861, while still Associate Justice of the Supreme Court, Governor Roberts was elected, from Smith County, a member of the Constitutional (Secession) Convention, of which he was made President by acclamation. In 1862 he resigned his seat on the Supreme Bench and entered the Confederate Army, and was elected Colonel of the Eleventh Texas Infantry, with which he served, in the Trans-Mississippi Department, in "Walker's Division," during the greater part of the campaigns of that corps in Arkansas and Louisiana. In 1864, and while still with his command, Governor Roberts was elected Chief Justice of the Supreme Court of the State, to fill the vacancy occasioned by the death of Hon. Royall T. Wheeler. After the close of the war, he returned to his home in Smith County, and resumed the practice of his profession; was elected a member of the Constitutional Convention of 1866, and made chairman of the Judiciary Committee of that body, which was composed of some of the ablest representative men of the State. On the 24th of August, in the same year, he was elected by the Legislature a United States Senator for the unexpired term ending March 4th, 1869, his colleague, elected at the same time, being the venerable ex-President David G. Burnett, now deceased. They were not, however, permitted to take their seats in Congress, the "Reconstruction Act" having become a law, and the seceding States remanded to military rule. From 1868 to 1870 Governor Roberts was a Professor in the Law School at Gilmer, Upshur County, still practicing his profession.

In 1874, upon the accession to power of a Democratic State administration, he was reappointed by Governor Coke to his former position of Chief Justice of the Supreme Court, and was elected to the same position by the people, under the new Constitution, February 15th, 1876, which office he filled until nominated for Governor by the Democratic State Convention in July, 1878, receiving a unanimous vote of the Convention, after the withdrawal of all the other candidates. Thereupon he resigned his position as Chief Justice, to take effect October 1st, and was elected Governor, November 5th, 1878, receiving 158,302 votes against 55,000 votes cast for W. H. Hamman, Greenback nominee, and 23,412 votes cast for A. Banning Norton, Republican nominee.



Governor Roberts is now in his sixty-fourth year, is full six feet high, weighs about 160 pounds, and in vigorous health, and with an intellect as clear as it was when he was thirty. He possesses a thoroughly trained legal mind, and enters upon the duties of his office with the entire confidence of the people of his State.

TEXAS.—THE HON. ORAN MILO ROBERTS, GOVERNOR OF THE STATE.—FROM A PHOTO. BY H. R. MARKS.

EUROPE'S NEXT WAR.

THE continued concentration of large bodies of troops in the north of Italy, and especially towards the Austrian frontier, is beginning to be viewed with suspicion in Austria, and to be much commented upon by the Austrian newspapers. From a table lately published in Vienna it appears that, while Austria has only 9,500 infantry, 940 cavalry, 1,400 field artillery, 700 garrison artillery and 200 engineers, or altogether a force of 12,740 men, quartered in the neighborhood of her Italian frontier, Italy, on the other hand, has now assembled 49,700 infantry, 10,360 cavalry, 7,200 field artillery, 2,700 garrison artillery and 3,750 engineers, or a total force of 73,710 men of all arms of the service near the Austrian frontier, the four fortresses forming the famous quadrilateral being especially strongly garrisoned. It is also well known that much attention has been lately given by the Italian military authorities to perfecting the organization of the so-called Alpine troops—the force which, permanently quartered in the mountains on the northern frontier of Italy, would, in the event of the latter country becoming involved in hostilities with either of her neighbors on the north, be called upon to cover the mobilization and concentration of the Italian forces or act as an advanced guard to any forward movement made by them in the prosecution of an offensive campaign. All the units of this Alpine force are always kept on a war footing, and arrangements have been lately made which are designed to insure that the several battalions and batteries shall be ready to take the field at the shortest possible notice. As the Italia Irredenta party in Italy is daily becoming more clamorous, it is not surprising that the strength of the armed forces in the north of Italy should excite some uneasiness in Austria, although it is generally believed in the latter country that, unless aided by allies, the Italian army would be altogether unable to cope with that of Austria.

PARTING.

LEAN down and kiss me, oh, my love, my own!
The day is near when thy fond heart will miss me,
When o'er my low, green bed with bitter moan
Thou wilt lean down, but cannot clasp or kiss me.

How strange it is that I, so loving thee
And knowing we must part, perchance to-morrow,
Can comfort find, thinking how great will be
Thy lonely desolation and thy sorrow,

And then, and then, oh, mine own other part!
Why should I grudge thee some surcease of weeping?
Why can I not rejoice that in thy heart
Sweet love will bloom again when I am sleeping?

Nay—make no promise. I would place no ban
Upon thy future, even wouldst thou let me;
Thou hast most truly loved me, like a man,
And, like a man, thou wilt forget me.

Why should I care, so near the infinite—
Why should I care that thou wilt cease to miss me?
Ah, God, these earthly ties are knit so tight!
Quick, quick, lean lower, oh, my love and kiss me.

LOVE IS ENOUGH.

CHAPTER I.

"IDA, will you give me that book? No, not that one—'Browning's Poems,' I mean. Do you remember our wager?"

"That I could not learn a poem of Browning's in a day?"

"No; that you would initiate Will into Browning's common sense view of things—that is, after you had discovered it for yourself. Now, I do not believe you have read a single poem, and you have had the book a fortnight."

"Oh, yes, I have! I have read, marked, learned, and inwardly digested one, at least, and that was enough for me. I recited it splendidly last night to Will, between the acts of 'Faust,' and he called it 'bosh,' 'sentimental twaddle,' and various other sweet and touching names, and requested that I would not spoil his enjoyment of the music by my insane gabble."

"Indeed! And the poem?"

"'Porphyria's Lover.' Marion, I will never marry."

"You don't say so!" replies Marion, laughing. "Well, considering all things—that the day is fixed, the trousseau nearly completed, and the number of guests for the breakfast determined—that decision comes a little too late."

"No, it does not," I answer, decisively. "I think I was wrong to say I would be married before I was twenty-one. After an engagement of seven years, one can afford to wait a few months longer."

"My dear Ida, you are jesting."

"I was never more serious in my life," I answer, proudly. "I don't know what has come to me lately, but I feel altogether changed; nothing contents me as it used to do. I can scarcely imagine how I have lived without any ambition, or desires, or regrets until to-day. I have never done anything useful, or good, or clever in my life; and my money has been no blessing to any one—not even to myself."

"Poor Ida!" says Marion, stopping her busy writing to clasp my hand and give me one of her sweet, loving smiles. "You are so young, so much admired and loved, that you must feel sorry if, with all your advantages and opportunities, you have done nothing towards brightening the lives or gaining the love of those among whom your existence has hitherto been passed."

"Don't misunderstand me, Marion. I hope I am not so utterly selfish; but ever since you came to us I have felt quite another life spring up in me—a desire and longing, if I may so term it, to do and be something by and through my own efforts. Perhaps it is very silly; but I cannot help it."

"You are too impatient," says Marion, tenderly. "At twenty all one's life is before one; and what a noble, useful life is before you if you choose to take it."

"Do you mean if I marry Will?" I replied, vexedly. "Because, if so, I certainly decline to take it. I have no genius for burying myself in the country and playing the part of a Lady Bountiful. I hate the country and detest a quiet life—and Will cares for nothing else."

"Ida, do not be so proud, so willful—so unjust to Will. He loves you far too well not to let you have your own way in everything."

"Ah, that shows how little you know about men, although you do write books," I answer, gayly—"for men as lovers and men as husbands are two very different classes of beings! Now, you know I am not twenty yet. Suppose I refuse to marry Will; I could join the Slade classes at the University, and devote myself altogether to art."

"And weary of it in a week," says Marion, "when you were no longer playing at it. Art in earnest does not bear trifling with."

"But you think I have talent, Marion. I heard you tell Sir Harcourt so the other day."

"You have indeed, Ida, great natural ability for painting; but you need much more energy and perseverance than I credit you with possessing in order to do anything good. Still you might gain both in time; and we could go down to some charming little place in the country, and you might study and paint direct from nature."

I do not reply to Marion; I suddenly become immersed in my own dreams. I say rightly that I am dissatisfied and unhappy. Will and I have been engaged for so many years that, until my guardian fixed our wedding-day two months hence, I never troubled myself about marrying at all. I knew that it was settled and expected that I should marry Will, because my uncle, who is dead, left us joint heirs of his property; and so, of course, we must marry.

But, until Marion came, and I entered into her full and busy world of art and literature, I never thought seriously of marrying. Lately I have often thought of it, and the more I have thought of it, the less have I liked it.

Art is just now the passion of my life, and Will does not care for pictures; he knows nothing of the modern school, and will not admire Corot. He is horticultural in his leisure hours, and takes great pride in growing the finest roses in the country.

How pleasant it would be to devote myself entirely to art, without Will in the background, to be dependent on my own ability for a livelihood as Marion is, and to be as much loved, and admired, and respected as she is! Of course, I may be loved, admired and respected as Will's wife; but that is an entirely different matter.

I cease rocking myself, and have taken up a pencil to sharpen, when a knock is heard at the door, and Will enters.

My betrothed is a good-looking, broad-shouldered fellow of two or three and twenty—I do not know his age to a year. I am convinced he is no more in love with me than I am with him. Perfect, placid indifferentism has been our state so long that it is difficult to imagine any other. I, however, have dim forebodings that never again will things run as smoothly as they have hitherto run.

Marion shakes hands with Will, and betakes herself with her writing to the next room. Will comes over to my side; and, having properly saluted me, takes a cigarette from his pocket and lights it from a box of matches on the mantelpiece.

"You don't object to smoking, Ida, do you?"

"Certainly not, I like it;" and, with infinite delight in a sudden mischievous impulse, I take the dainty Laterme out of his hand and proceed to smoke it myself.

Will watches me with speechless amazement for some moments; then his eyes light up with an instantaneous flash of anger, he shrugs his shoulders contemptuously, and leaves the room.

I smoke the cigarette to the end, for fear he should be watching me through the door; but I need not have given myself the trouble. A few moments afterwards the hall-door is banged loudly, and my hero is half-way down the street before I can rush to the window.

"Oh, Marion, it is such fun! Will has gone away in such a rage, and it's past four o'clock. Can't we have some tea?"

"In five minutes," responds Marion, faintly.

I can tell by the tone of her voice that she is mastering some difficulty; so I noiselessly stir the fire, put on the kettle, and fall into a train of musing as I watch it boil. Will is, of course, the centre of my thoughts. Poor old fellow! His look of astonishment, as I took the cigarette from him, would have been ludicrous had not the quick anger leaped into his eyes, and so elevated the ridiculous into the sublime. If Will would only fall in love with some one else, how happily matters might be settled! Some girls might care for him; he is rich, and does not bear the patent of his general stupidity upon his rather handsome person.

Ah, now, I remember, Will called for me to go with him to visit the sister of an old schoolfellow of his, who, poor girl, is living in great poverty somewhere about the wilds of Camden Town.

How stupid of me to have forgotten my engagement—a thing I pride myself upon never doing! Of course Will has gone alone. I wish I had not quarreled with him until I had seen Clare Linder. Clare—what a pretty name! Well, perhaps she would be very glad to see Will, and be very sweet, and lowly, and modest in her behavior to him; and he would compare her with me, and the comparison would be in her favor. Well, it could not be helped now. If Will should fall in love with her, or any one else, so much the better; I should then be free—free to pursue my art, without any bridegroom-elect taking upon himself to disturb my equanimity by sudden fits of jealousy or anger.

Marion's five minutes have extended to thirty; presently I hear a sigh of relief and a scrambling together of papers and manuscript. I lift the kettle off the fire and ring for the tea-things.

Marion joins me almost directly. She looks very pale, I think; I could almost be sure she has been crying, but perhaps I am mistaken. She seats herself upon a low seat by the fireplace, and leans her head against the paneled wall. For almost the first time in my life it strikes me that, even in Marion's happy, busy life, there are such things as tired moments and perhaps regrets.

"Why did Will go away?" she asks, clasping her fair hands over her knees, and looking dreamingly into the fire. Marion's hands are lovely; they are small and white as snow-blossoms, except for the habitual spots of ink upon the tips of one or two rosy nails.

"He chose to be vexed because I smoked a cigarette that he lighted for himself—that was all, I assure you. But, really, there is no end to the selfishness and caprice of men; I'm getting tired of it, I can tell you"—gradually working myself into a passion by walking excitedly up and down the room and fanning myself vigorously. "One must not smoke, nor ride in hansoms, nor attend Women's Suffrage Meetings, nor go to the theatres, nor even walk out alone after broad daylight, nor do, or say, or even think anything, without the presence or permission of some man who has kindly undertaken to vouch for one's respectability; and, as for daring to have an opinion of one's own, or to take the faintest interest in anything that compels one to cross one's own door-step, why, for all the abuse one gets, we might as well be living in the Middle Ages!"

"I thought you were rather partial to the Middle Ages!" says Marion, dreamily.

"Well, I'm not sure they were not better times to live in than the present," I answer, crossly. "At any rate, there was more room for the growth of individuality than there is to-day. People—women, I mean—were not brought up to the utterly useless, senseless lives that the marriageable maidens of modern times are expected to lead. They did a great many useful and beautiful things which it would puzzle us to-day to excel. They invented the loveliest costume in the world. They were good housewives, and understood what bravery and common sense were worth. Look at their exquisite needlework, too, in those rich tapestries that gladden our eyes by their beautiful color and quaint devices. I wonder who will rave over our Berlin wool-work three hundred years hence? Besides," I go on, as Marion does not contradict me, "there were the wars to interest one; and women in those days were not to be despised. A woman at the head of an army was by no means an uncommon thing; and of her ability to rally her drooping forces and lead them on to great and glorious victories let the poets and historians of the age testify."

"I should rather like to have seen you at the head of an army," says Marion, laughing. "Oh, I mean a Middle-Age one! You always remind me of a medieval princess I once saw in one of Walter Crane's story-books. You have just that tall, proud, gracious look about you, as though your business in life were to dispense favors and receive homage."

"I am sure I am very much obliged to you," I reply, making her an elaborate courtesy. "I should rather like to have commanded a town, or held a castle under siege, in those old days. What valor I should have inspired in the hearts of the combatants!"

"Yes; I can imagine how fierce the combat would have raged for the possession of your fair face. Still, there would have been one knight who would have outstripped the rest in deeds of daring, and so have claimed your love and hand as the reward of his valor; and the ancient princesses, having chosen a knight, were very kind and faithful to him."

I understand what Marion means, and my face flushes angrily.

"But I did not choose him—I was never asked anything about it. My consent from the very first was taken for granted, and he does not possess one qualification that might justify me in ignoring that humiliating fact."

"Not even that of fidelity to his 'fayre ladye'?"

"No; not even that. How do I know he is faithful to me? I have no proof of it. What has he done to prove his love for me? What, indeed, would he do?"

"I really cannot tell what his opinions are upon the subject," answers Marion, gravely. "But I should scarcely imagine that he would be willing to risk the perils of sea and land in some arduous, but utterly unprofitable, enterprise, after the fashion of medieval lovers, for your sweet sake; nor do I think it likely he would indulge in any romantic expression of the tender passion by which the carrying out of our police regulations might be interfered with. I am not sure whether the authorities in question would even permit an occasional serenade under your window in Harley Street, and I am convinced that, if they did, Will would never be so foolish."

"Don't be absurd, Marion! I want to talk sensibly."

"Really?"

"Yes, really. You know I cannot marry Will—it is impossible. I should hate him if I did, and nothing but trouble would come of it. I am too young to marry. I know just what it means in my case—I should go home to that stupid village, and live a life scarcely above the level of the cows and sheep on the farm. I couldn't bear it. I have a horror of it, and I will not do it—there!"

James enters with the tea-tray. James is an especial pet of mine. He is an Ashfield boy, and, despite his blue clothes and buttons, the country is well represented in his round, rubicund face. His hair has a tendency to stand straight up, and is of the color sacred to carrots; but he has a merry rolling eye, as Shakespeare terms it, and is always in a state of suppressed mirth. Every event that happens in life has a comic side to Jim; and for this ability of his to view life as a grand burlesque he is greatly to be envied.

James puts down his tray, and, as if he were delivering himself of a well-learned lesson, informs me that my uncle, Sir Harcourt, wishes to see me at once in his room, upon some important business-matter. The message sounds imperative, but it does not alarm me. My uncle, who suffers from gout, and is now helpless with an attack in his bedroom, generally sends for me half a dozen times a day, and I as generally decline to visit him, save at morning and evening. He is not a particularly agreeable old man at the best of times, and gout does not tend to make him more amiable.

"All right," I tell James. "Tell him I am coming directly."

My Mercury grins broadly, as usual, and leaves the room. I turn to Marion with the kettle in my hand.

"Shall I go?" I ask, pouring the water defiantly into the little china teapot.

"Of course you must, Ida; and try to remember, dear, that gout is not a particularly pleasant, nor yet perfectly painless, ailment."

"I know he's angry," I say, dolefully, "because he never sent me his love. I expect Aunt Dan has been complaining of me again. It's really too bad, the number of people in authority in this household."

Aunt Dan is my uncle's sister, an aged spinster, who is devoted to him, and enjoys the privilege of nursing him when he is confined to his room by attacks of the aristocratic disease he inherits from a long line of free-living ancestors.

"Dan" is the nickname my uncle bestowed upon my Aunt Hester many years ago. It is the custom of our family to bestow nicknames upon those members of its community whom it specially delighteth to honor. I rejoice in the euphonious one of "Princess."

"I think I'll go into uncle now," I say, uneasily, putting the little teapot down in the fender. "You can wait ten minutes for me, Marion; and, if I am not back by then, we shall be having a skirmish."

"Yes," answers Marion. "I'll manage to creep in by then, and give my valuable assistance in carrying off the wounded."

"This is not a time for romancing; this is the most eventful moment of my life. Suppose I tell my uncle I do not intend to marry Will—what do you think the result will be?"

Marion rises from her chair and reaches a Japanese fan to shield her from the firelight. The color has suddenly leapt into her pale face.

"You must not do it, Ida! You would regret it all your life. Besides, he loves you so very truly."

"If he loved me he would release me from this hateful bond."

"Perhaps you have never told him how bitter it is for you to bear," she replies, earnestly. "Oh, Ida, think well what you are going to do in throwing Will's love from you! He has borne so much from you because he loves you, and thinks you love him despite everything; and you seem to forget that he is as much bound by your uncle's will to marry you as you are to marry him."

"We are not bound at all, Marion—we can do as we please; and I, for one, intend taking matters into my own hands. Crying, darling! Oh, don't cry! I am not at all afraid—not the least bit in the world!"

CHAPTER II.

HALF an hour later, Marion parts the rich velvet curtains that separate my uncle's sitting-room from his bedroom, and slips quietly into the midst of the conflict.

So far my uncle has had the worst of it. He commenced the attack by demanding an account of the way in which I had squandered my last monthly allowance, and jestingly remarked that it was time I had a husband to look after me, and keep me and my affairs in order; to which I replied, with my blood boiling, that I was much obliged to him for his good wishes, but that I had no intention of putting myself or my property into the hands of a keeper, or to be responsible to him or any one else for whatever I might spend or save. Thereupon my venerable relative held forth in his usual calm, dignified manner, showed me the enormity of my ingratitude, the probable disastrous consequences of my folly; and, disregarding my frequent interruptions and declarations of independence, is quietly proceeding to overwhelm me with the information that all my income depends upon Will's marrying me, when Marion comes in.

"You are only an heiress by courtesy," my uncle is saying in his severest tones; "every penny you imagine yourself possessed of is legally your cousin's. Your Uncle Rupert's will was informal, and therefore illegal. He intended to leave you joint-heir with Will; but, owing to a flaw in the making of his will, he did not. Knowing what his intentions were with regard to yourself, your cousin insisted that you should still be the recognized joint-heir with himself. He was too generous, too manly, to let you suffer the humiliation of marrying him for his money. He would not let you be told of your poverty, nor would he permit any check to be laid upon your extravagance; and, but for your own perversity and ingratitude, you would never have known the truth from me."

I feel my face assuming a deathly pallor. I rise and try to speak, but my lips refuse to utter a sound. I clinch my fingers upon the steel chatelaine I wear at my waist until the pain of the pressure of the steel recalls me to my senses. I turn to my uncle, and laugh:

"I don't believe a word you say—it is false, altogether false; and, if it were true, I should hate him more than ever. Marion, will you tell me the truth?"

She came up to me, the dear loving girl, and put her arms about me.

"My princess," she whispers, tenderly, "do not fear; all will be well for you."

"Is it true?" I ask, indignantly.

But Marion has no time to reply to me. Aunt Dan begs us to leave the room at once, and to take no notice of anything that my uncle has said. She declares that he is very angry with me, that my behavior to him was altogether rude and unjustifiable, and therefore his words are more likely to be severe than true. But somehow I know they are true—I feel they are; and I will not be silent.

Marion leaves me with Aunt Dan, and goes up to my uncle's side; her voice sounds like sweetest music after our stormy contention.

"Sir Harcourt, you must not be angry with Ida—she has been very cruelly deceived; and she will feel her position still more keenly when she has time to reflect upon it. It would not be pleasant for her to meet Will to-day or even to-morrow. She might say things to him in her anger that she would be sorry for in after-life. Let us go away together to the old farmhouse for a little while. Mrs. Page will be so glad to have us. Let us go, dear, dear Sir Harcourt; and, away from this feverish exciting life, Ida will see things differently."

"I don't want to see things differently," I cry, wildly; "and, wherever I go, it will make no difference to me. I tell you, once for all, I will not marry Will, rich as he is"—with a sneer—"no, not if every hair of his head was strung with diamonds."

Aunt Dan bursts into a flood of tears, and Marian repeats her question:

"Sir Harcourt, may we go?"

"You may go to Jericho for all I care!" roars Sir Harcourt, a severe paroxysm of pain accomplishing in a few moments what neither anger nor resentment could do, and leaving him altogether destitute of blandness or philosophy. "A perverse penniless vixen!" But we hear no more; Aunt Dan has come to

Digitized by Google

the rescue, and we need no second invitation to leave the room.

Through the stately rooms and halls, in which I have no longer any share, Marion leads me, step by step, until we reach our own cozy suite of apartments. As we close the door and gaze into each other's faces, I throw myself upon the floor and weep passionately.

Marion does not try to comfort me or to reconcile me to my fate, nor does she look particularly grieved or sorry.

Long does she sit patiently by my side. Then, as I remain quite still, with my face buried in the sofa-cushions, she imagines I have cried myself to sleep; and, having covered me with a large woolen shawl, she leaves me to myself. During her absence I endeavor to realize what my position really is. So, after all, I have been living on Will's bounty, and squandering his money during all these long, long years. But it cannot be that I am utterly destitute; surely some trifle must remain to me, some sum of money, small indeed, but large enough to provide me with a home and daily bread! Yet my uncle called me penniless—me, who had given myself the airs of the princess they called me, and never known of what worth or value money was.

I recall my harsh, cold treatment of my betrothed, and I am overwhelmed with shame and confusion. Not only did he desire to shield me from the knowledge of my dependence upon him, but he would have married me, to give me the fortune and position the law did not permit me to inherit. How mean and bad my conduct appeared in the light of his!

If I had only known the truth weeks, months ago, how differently I should have acted! Had the knowledge come to me at Ashfield, in the dear old home, I should have recognized his goodness, his generosity, and should have thought the devotion and love of a lifetime scarcely recompense enough for such manly consideration of me. And I should have married him, and been very happy in a dullish sort of way; and never, until my dying day, should I have opposed my will to his.

Sitting muffled in the shawl, having cried myself into a state of perfect inaction, I try to trace when and where my dissatisfaction at the prospect of the marriage originated. We have been in London six months, and I have seen a great deal of society, and have had, of course, many other admirers. But it was not because I preferred another to Will that I felt the idea of marrying at all so hateful to me.

It seemed rather to be something that pervaded the social atmosphere of the best and cleverest people I knew—some kind of sentiment that betrayed itself continually in the manners and talk and literature of the set I moved amongst, blent with a desire for independence, culture, and achievement through some purely personal merit or qualification. Beauty was a good thing to possess, certainly; but beautiful women were as sand on the seashore in London, and one could not spend one's life in the contemplation of one's own charms. Rank I had not, and did not much believe in. True, I was the niece of Sir Harcourt Harcourt, and Will would inherit the title; still that was never a source of pride to me. Wealth I had in abundance; but spending money day by day in buying things you have no use for is not an enlivening amusement after a time. Somehow I grew unhappy and discontented; and one day, in Marion's presence, I found out what I wanted. It was something to do apart from the living, dressing, visiting, and flirting of every day life. I desired real hard work to do. I craved for a definite object in life.

I wanted a little of the sincere and earnest admiration that Marion so constantly received, and which was rendered to her for the work she did as one of our most charming authoresses. Beauty, wealth and love paled before the enchanting prospect of working for a livelihood; and Marion was henceforth my pattern and ideal. Yet, strange to say, without a word—only by the force and example of her useful, busy life—had the change in me been wrought. I found myself reviewing my past life with positive loathing; and directly Marion attempted to set my feet in the direction of self-help, I rushed to certain conclusions, independent alike of reason and experience, and dashed myself madly against all opposing elements. I loved painting as a child; and my natural ability, aided by the few lessons I received, enabled me to make good progress in the art, viewed only in the light of an accomplishment. Then I took it up again in deadly earnest; and seeing me so resolved to distinguish myself, Marion encouraged and assisted me. I set up a studio next to her writing-room. I joined the college in Queen Square, and the Slade classes for ladies in the evening, until at last my health gave way, and I was compelled to relinquish all night-work.

Marion tried her best to quiet and steady me, but I passed beyond her control long ago. Then the first cloud fell between Will and myself. He grudged the time I devoted to art—called it "affected rubbish" that was turning my head—objected to the house being made into a warehouse for Wardour Street furniture, laughed at my pictures, and called my medieval costumes "dowdy." I retorted pretty strongly. I have no doubt; and we never made up that quarrel.

He went away after that for a week, and I never missed him; and then we had another quarrel; and from that time we drifted further and further away from each other, until today, when I reasoned myself into the belief that we did not love each other, that we must not marry, that we had better part.

The latent feeling of power I sometimes felt—power to advance in, and love, and understand art as I never did before—was very pleasant to me; and so ambitious of success did I become, so absorbed and interested in my work, that I at last found myself looking forward with fear and dislike to the marriage planned long ago by my friends for me. If I had had Will's sympathy in my desire to live a nobler and better life than I had hitherto done, I might not have felt such distaste for the ordinary ambition of a woman's life. If my love had been a living passion, instead of a mild acquiescence in a business arrangement, it might have had another aspect; but to me marriage meant only an entire severance from the busy world of art in London, and a lifetime passed in a dull little Kentish village, with a very good and kindly fellow for my constant companion—a man who would feel that his position as a husband gave him the right to monopolize all his wife's time, and who did not know one end of a picture from the other. My experience so far of Will's domestic habits was not encouraging, one of his ideal visions of married happiness being that of a woman who devoted her evenings to fancy-work, whilst her lord and master peacefully slept beside her after dinner. I had vowed this ideal should never be reached in my case. I had resolutely snubbed him whenever he had given me the chance. I had several times challenged him to break off our engagement, and he had most good-humoredly laughed at me, and utterly refused to do so. He had not believed I did not love him. Poor, poor Will! He was old-fashioned, certainly, in his notions of what a woman should do or be; still, how good, how noble his conduct to me had been! How he had determined not to quarrel with me until the smoking of the cigarette had been too much for him, and for the first time I could remember he had looked really vexed and angry.

(To be concluded in our next.)

How we Feed the Old World.

THE freight brokers of the port of New York are in possession of facts and figures showing how the demand for American products abroad is constantly growing. From their reports it appears that the quantities of grain and breadstuffs that are being shipped from here and other Atlantic cities is perfectly enormous; that the receipts for grain at the ports of New York, Boston, Montreal, Portland, Philadelphia, Baltimore and New Orleans, for the past six weeks, have been larger than ever was known before in any part of the world for the same period, and that they are twice as much as those of last year for the same time. The visible supply of wheat, comprising the stocks in granary at the principal points of accumulation at lake and seaboard ports, and in transit by lake, rail and canals, on August 16th, amounted to 16,026,837 bushels. For the corresponding date last year the supply was 7,740,736 bushels—less than half the present supply. The export clearances for Europe from the seven ports above mentioned for eight weeks ending August 20th amount to 522,606 barrels of flour and 24,174,256 bushels of wheat. During the corresponding time last year the amounts were 172,584 barrels of flour and 13,222,287 bushels of wheat. The shipments of wheat, corn and flour from the port of New York to Great Britain by steamship alone during the four weeks ending August 23d, as compared with the same period last year, were as follows:

	Wheat, Bushels.	*Corn, Bushels.*	*Flour, Barrels and Sacks.*
1878	1,365,000	671,000	48,000
1879	1,921,000	450,000	144,000

The shipments to all parts from New York during the same period by steam and sail are as follows:

	Wheat, Bushels.	*Corn, Bushels.*	*Flour, Barrels and Sacks.*
1878	4,275,000	2,265,000	57,000
1879	7,250,000	1,850,000	190,000

The receipts of flour and grain at Philadelphia, Baltimore and Boston, as against New York, for the week ended August 9th, were for the three former ports 4,377,702 bushels, and for New York, 4,049,815 bushels. The comparative receipts of flour and grain at the ports of New York, New Orleans, Baltimore, Philadelphia, Boston, Portland and Montreal, from September 1st to August 16th, during the past four years, are as follows:

	Flour, Barrels.	*Grain, Bushels.*
1875-76	9,478,809	143,307,172
1876-77	7,871,364	122,908,221
1877-78	9,392,996	214,140,039
1878-79	10,378,435	242,124,032

The indications for the Fall are, in the opinion of prominent members of the Produce Exchange and of the statistician, Mr. E. H. Walker, that the already large fleet of grain-carrying vessels from American ports will have to be increased to double the number to accommodate the constantly growing export trade that has now acquired such enormous dimensions.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Statue of the Prince of Wales at Bombay.

THIS statue—a colossal equestrian effigy of the Prince of Wales in bronze—has been presented to the City of Bombay by Sir Albert Sassoon, C.S.I., in commemoration of the Prince's visit to India in 1875-6, and was unveiled with all due ceremony by the Governor of Bombay, Sir Richard Temple, on July 24th. The Prince is represented as a field marshal bareheaded, holding his cocked hat in his hand, the charger being modeled from an Arab horse which the Prince brought to England from India. The statue is placed on a commanding position, the site chosen being at the south end of the Fort, on the open space formed by the junction of the Rope Walk Road, the Apollo Pier Road, Forbes Street, and Rampart Row. On the pedestal, which is of granite, are two bronze reliefs, one representing the landing of the Prince at the Dockyard, and his reception by native chiefs, and the other a procession of native children with flowers on the occasion of the children's *fête* on the Esplanade. The work has cost Sir Albert Sassoon £10,000.

The Zulu Campaign.

Notwithstanding all that has been written on the subject, it is difficult for those whose experience does not extend beyond the railways and well-made roads of England to appreciate the formidable obstacles presented to travelers incumbered with baggage by such a rugged region as Natal and Zululand. Perhaps when the campaign comes to be calmly reviewed it will be found that the British troops carried too many impedimenta; at all events, it is certain that they could not honestly say, as the ragged, shoeless warriors of the first French Republic were wont to say, "With bread and steel one can get to China," for they required many things besides bread and steel; hence such scenes as that depicted by our artist. On Friday, July 4th, the British forces under Lord Chelmsford, numbering 5,000 men, attacked the Zulus near Ulundi, after an hour's fighting the Zulus, stated by prisoners as aggregating 20,000 men, fled in disorder, and were pursued by cavalry. It is believed that the Zulus were commanded by the King in person, and that after the British occupied Ulundi he fled to the North. The sword of the late Prince Imperial was recovered. This victory was supposed by Sir Garnet Wolseley, the new commander, to be the virtual end of the war, and the return to England, on August 26th, of Lord Chelmsford and Colonels Wood and Butler would seem to confirm the impression. In the illustration the portion of the British troops under command of Colonel Butler is seen at a point within fifteen miles of the Ulundi kraal, three days before the decisive attack.

The Kermess at Brussels.

The Kermess is the great Belgian popular festival, celebrated in town and country with old-time sports and noisy games that excite universal merriment. Easter Monday is given up to these sports, and Pass in both Holland and Belgium is a day of wild enjoyment. All the amusements seen in the old English fairs and some peculiar to the country, such as women trying to catch in their mouths objects suspended by strings from a long rope, or attempting, blindfolded, to strike some object, give rise to hearty shouts at their frequent failures. Our illustration depicts the confusion created by the donkey-riding at the last kermess.

New Waterworks at Nancy, France.

As stated in our last issue the City of Nancy devoted the 2d and 3d of August to the inauguration of the statue of the late M. Thiers. The first day was marked by the opening of the new waterworks, a ceremony that was witnessed by many thousand people whom the *fêtes* had attracted to the city. Our illustration represents the scene at the inauguration of the fountain erected in the Place de l'Academie, attached to the works constructed for the distribution of water throughout the city.

Fine Art Exhibition at Munich.

On the 19th of July last, Prince Leopold, in the name of King Louis of Bavaria, formally opened the International Exhibition of Fine Arts at Munich, in the presence of representatives of the royal families of Europe, the foreign ambassadors, and the *élite* of the kingdom. The contributions are placed in an elegant building erected for the purpose by order of King Louis. Professor Lindenschmitt, of the Royal Academy of Fine Arts is president of the committee, and turned the completed edifice over to the King's representative.

Ancient Remains under Temple Bar, London.

In digging for the foundations of the new buildings to be erected on the site of Messrs. Child's bank at Temple Bar, interesting bits of archæology have been discovered. After removing a rubble wall, a well-built pier with four Early English arches springing from it was found. The style of architecture is that of the thirteenth century. The masonry is of pure green sand or Surrey firestone, with Kentish rag-filling in the space above the arches. Our illustration, which is a view looking westward across the excavation, shows the pier and arches uncovered. There was also a well in one corner of the place, but its depth has not been ascertained. The back of the houses in Thanet Place, Strand, is seen in our illustration; it shows also, towards the left hand, some other arches, which belong to the building lately demolished, and which are of a date not earlier than the reign of Elizabeth. The rioters from Essex and Kent, who invaded London under the leadership of Wat Tyler and Jack Straw, in the reign of Richard II., are stated, in Stow's Annals of England, to have attacked the Temple, on account of their hatred of Sir Robert Hales, the Prior of St. John of Jerusalem, and his connection with the Templars. They pulled down the Master's house, and burnt the archives which had been kept there. It is possible that the remains which have just been brought to light may bear witness to that act of violence nearly five hundred years ago.

SIGNIFICANT STRAWS.

EAST TENNESSEE claims to have gathered the largest wheat crop it has ever had.

THE wheat crop on the great Dalrymple Farm in Minnesota this year will aggregate from 400,000 to 600,000 bushels.

SINCE the 1st of January Boston has shipped 1,054,736 cases of boots and shoes, against 841,331 cases for the same period last year.

IT is confidently believed that the imports of gold will be sufficient this year to enable us to add all our home production of the precious metals to our surplus.

IN TROY, N. Y., building improvements are uncommonly active, contracts being out for new stores, dwellings and manufactories, involving over $500,000.

THE print cloth market at Fall River continues to show increased production, being 90,500 pieces for the week ending August 23d, against 88,000 pieces the previous week.

THE Sharon (Pa.) *Eagle* says: "Both our city mills are running double turn, full blast, red hot, night and day, with sufficient orders ahead to insure steady work during the entire Summer."

THE Lochiel Iron Works, at Harrisburg, Pa., which have been idle for the past four or five years, will be started up in the near future, it is stated, to begin on an order for 20,000 tons of railroad iron.

THE Burgess Steel and Iron Works, of Portsmouth, Ohio, have not had so busy a Summer since 1873. With a working force of from 175 to 200 men, and the mill running day and night, their present orders will keep them running steadily for four months to come.

THE season's grape crop along the Hudson River will be the largest ever shipped. The vines are in vigorous condition, and the fruit is large in size. In a few places the vines have suffered from the ravages of the phylloxera, but that is the exception—not the rule.

ACCORDING to the Chicago *Times*, never before has trade been so good as this season, and in no previous year have Chicago merchants sold as many goods as thus far during 1879, and to-day the business interests of this city are in a better shape than at any previous time since the panic of 1873.

STATISTICS of the production in the South in each year from 1870 to 1878, inclusive, of cotton, sugar and tobacco, show that the crop of cotton in 1878 was about 400,000 bales larger than it was in any preceding year; the production of sugar 53,000 hogsheads larger, and the yield of tobacco greater by 12,000,000 pounds—the totals for the year being: Cotton, bales, 5,200,000; sugar, hogsheads, 212,000; tobacco, pounds, 572,000,000.

FIGURES show that the movement of population to the new farming-lands of the West is almost startling. During the year that closed with July not less than 16,000,000 acres of Government lands were taken up by homestead entries alone, and fully 14,000,000 acres of new lands were sold to settlers. It is estimated that 500,000 people settled upon the new lands in 1878, and the number for the present year promises to be even greater.

AT HOME AND ABROAD.

—A FAMINE is said to prevail among the tenant farmers in the West of Ireland.

—UNDER the last appropriation each disabled Virginia soldier will receive thirty dollars.

—IN Memphis it is considered a protection from burglars to have a yellow flag hoisted in front of a dwelling.

—THE Ultramontanes of Prussia have declined, without the fullest guarantee, to co-operate with the Conservatives at the coming elections.

—A CENSUS of Kansas, just completed, shows a population of 849,918, an increase of sixty per cent. over that of 1875, which was returned 528,437.

—ACCORDING to the new Texas code, posting a man as a coward, in a newspaper or otherwise, because he refuses to fight a duel, subjects the poster to a fine of $500 to $1,000.

—CATHOLIC women in Rome in very large numbers have signed and published a formal protest against the proposed Italian law which makes the civil marriage obligatory before the ecclesiastical.

—THE builders' strike in Bristol, England, which began in November, 1878, has at last ended by the submission of the workmen in the joiners' and carpenters' departments to the masters' terms.

—A FRENCH bark with a number of Swiss, French and Belgian colonists, well supplied with arms and ammunition, has left Flushing for New Guinea. The vessel will adopt the American flag to avoid interference.

—AS THE Russian authorities fear that disturbances may occur when Kuldja is surrendered to China, several battalions of infantry and sotnias of Cossacks, with a battery of artillery, will be dispatched to Kuldja.

—IT is stated that the English Government has refused to continue the suspension of the Contagious Diseases Act as far as it relates to Canada in the event of the embargo against American cattle coming into Canada being removed.

—THE consumption of timber for railroad ties has reached enormous dimensions. It is estimated that as we have now about 90,000 miles of railroads, the annual consumption of ties or sleepers alone is 40,000,000, or thirty years' growth of 70,000 acres.

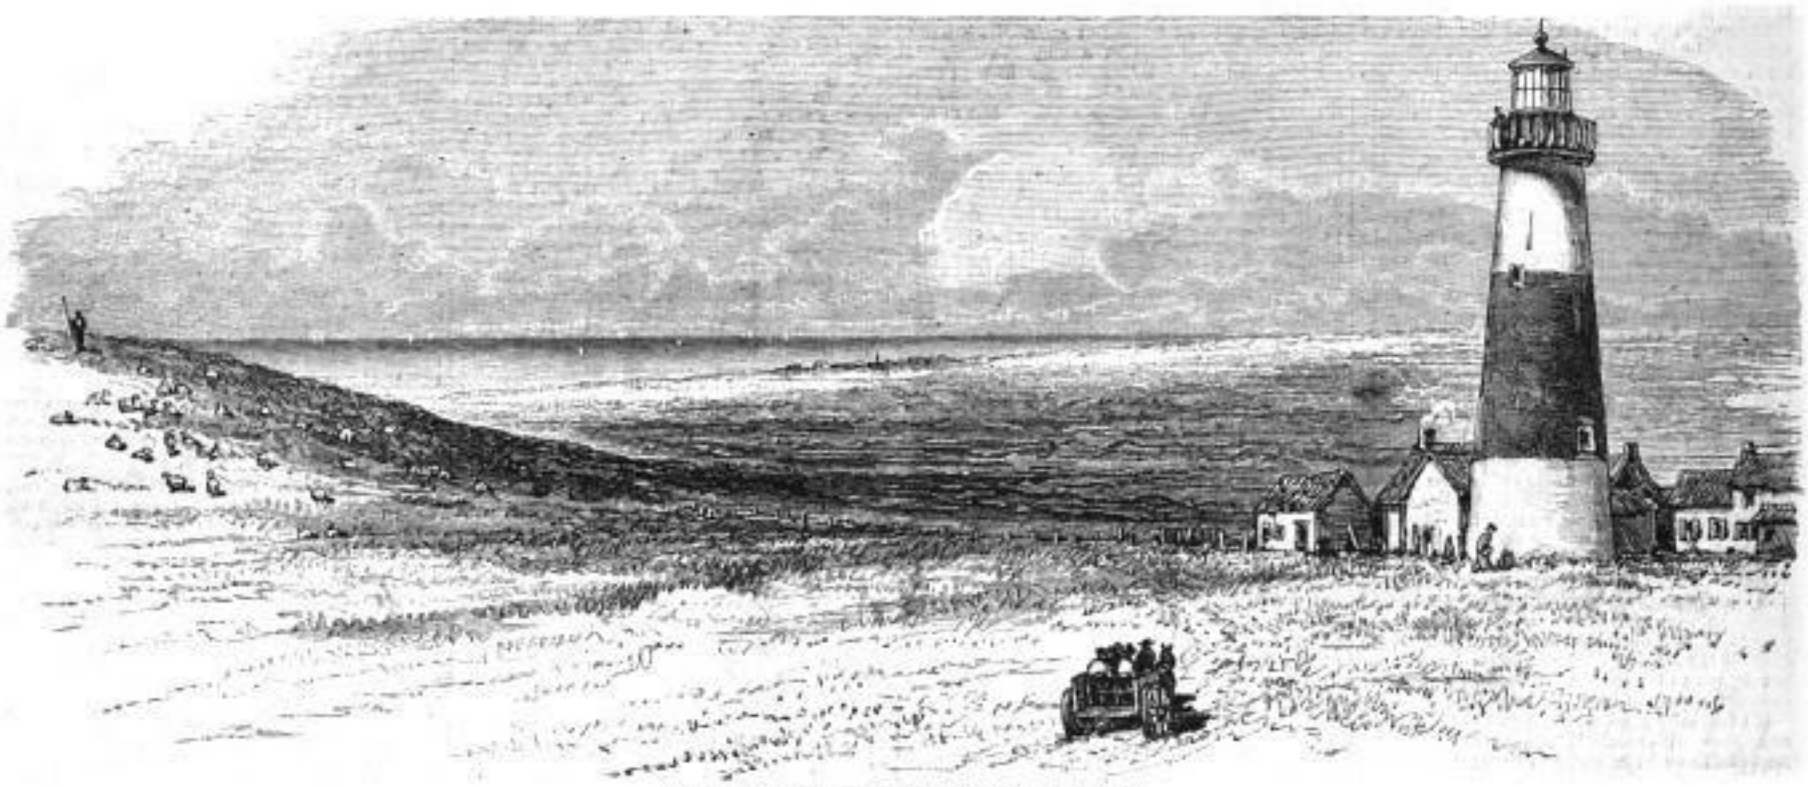
—HELEN FETHIE, the Grace Darling of the Shetland Islands, has just died at Kinghorn. She saved many a life when those on shore would not make an attempt. She received the Royal Institution medal for those feats. She ended her life as a domestic servant, and is said to have been "a simple-minded, straightforward, strictly pious woman."

—THE well-known Convict Prison at Spike Island, as well known to Americans visiting Europe, will soon be closed, as the Government intend converting the island into a fortification for the better protection of Cork Harbor. It is not expected at present that any fresh prison will be built, but the convicts now undergoing sentences of penal servitude there will be distributed among the various convict establishments.

—THE International Grain Fair opened in Vienna, August 25th. An official report states that the Austro-Hungarian wheat crop of the present year is 9,000,000 metric centals less than that of 1878, but owing to the accumulated stock of 1878, only 2,000,000 centals will have to be imported. The importation of 4,000,000 metric centals of rye will be necessary; but the oat crop is sufficient to allow a margin for export.

—THE largest bridge in Europe is now in course of construction across the Volga, in the Government of Samara, Russia, on the Siberian Railroad. During the Spring floods the river at the point of crossing is four miles wide; in the Autumn it is only 4,732 feet wide. The bridge rests on twelve piers 83 feet high, at a distance of 364 feet from each other. The cost of the structure is $3,500,000. It will be completed next year.

—MR. SCOTT, the well-known agricultural authority of Great Britain, in his annual letter reviewing the crops, estimates the outcome of the grain crops at a third less than the average, amounting to a loss of £25,000,000 to the cultivators. He says that 16,000,000 quarters of wheat, or possibly 17,000,000 quarters, will be required from abroad. Mr. Scott also estimates that the deficiency in the potato crop will cause a loss to cultivators of £15,000,000, and the deficiency in beans, peas and rye a loss of £3,000,000.



—IT is not generally known that there exists in the southern part of Arizona 1,000 Indians who subsist entirely upon what they can pick up in the way of acorns, berries, nuts, grass-seed, and a little wild game. Still, such is the case. The Wallapai Indians, including a small band of some 150 Ava-Sa-Pais, if anything, exceed 1,000 in number, and for several years have lived without aid from the Government, preferring to suffer almost anything, even starvation, rather than give up their country in the North and go on to the reservation at San Carlos.

—THE latest return of the Bank of France is the most remarkable ever issued. On the 24th of April the note issue of the bank was 2,187,000,000 francs, and the cash in hand was 2,148,000,000. There was, therefore, a reserve of more than 98½ per cent. upon the note liabilities. Moreover, the actual amount of money on hand has never been reached by any other institution in the world, and rarely or never by the Bank of France. It is close upon $429,000,000 in hard money—almost three times as much as the Bank of England reported as in its possession the same day.

—NEXT year will witness the celebration of a jubilee festival in Bavaria, for which, as far as we know, the history of the world furnishes no parallel. The fief of Bayern was granted to a Wittelsbach in the year 1180 by the Emperor of the holy Roman realm, so that a twelvemonth hence 780 years will have elapsed since the lineal ancestor of the fantastic poet king who now occupies the Bavarian throne first assumed the ducal diadem which has, within the last century, been converted into a regal crown. During the interim one Wittelsbach has succeeded another as duke, elector, or king, with unbroken regularity.

—THE War Department is about to commence a very interesting experiment in educating and civilizing young Indians of both sexes. The barracks at Carlisle, Cumberland County, Pa., have been selected as the place of trial, having the advantage of a healthful situation, distance from the frontier and most excellent surroundings. The young Indian girls will be taught, not only the rudiments of education, but how to cook and sew and how to be tidy and neat in their persons and apparel. The boys will be instructed how to read and write and maintain themselves by manual labor as farmers or artisans. When the boys and girls graduate they will be ready to carry the germs of civilization with them into the wilderness. This experiment will attract general attention, and if the female savage shall prove as amenable to training as the male has done at Hampton and elsewhere, it may be found cheaper to assist in creating good Indians than it is to keep up an army to kill bad Indians.

SUMMER LIFE AT NANTUCKET.

IN recent issues of this paper we have alluded to and pictured some of the leading attractions of a Summer residence on the quaint, old-fashioned island of Nantucket, and in brief told the story of its interesting and varying fortune. The whaling station of fifty years, with its world-famed fleet of cruisers, is slowly giving way to a

CLEARING UP FOR SUMMER VISITORS.

OLDEST HOUSE IN NANTUCKET.

transformation at the inspiration of that adventuresome, erratic, leisure-loving and purse-free being known as the American tourist; and places that year after year attract, during their idle season, the wealthy workers in large cities attain in time a reputation that is quite congenial to that vast class who are able not only to visit but to stay at one place for months. Let Fashion and Beauty pause over night in the tracks of the bachelor pioneers, and a popular Summer resort is

quite likely to spring up. Then, as in the case of Coney Island with its beach side cities, the masses will wonder why capital did not create the charming caravan-aries long ago.

Distance is conveniently annihilated. Even the White Mountains are close to our doors. Fashion, surfeited with the bewilderments of the leading resorts, seeks new fields and waters, and when the fancy is pleased Fashion rests.

It is difficult for one who has not mingled with the remnants of the old fishing families at Sconset and Polpis—who has not conversed with the oracles of Tuckenuck, Muskejet and Gravel—to understand the alarm which the proposition to construct a narrow-gauge railway along the south shore, from Surfside to Sconset, has excited. This is now under serious contemplation. The surveyors are already at work; two routes are under consideration; the cost of the shorter and more direct is estimated at $25,000, of the larger at $40,000. Parties in New York are interested in the scheme, and are said to be hopeful of success. If the stock is taken this Winter the work will be begun in the Spring and rapidly completed. The shriek of the railway-whistle will surprise the gulls, and the snort of the steam-engine will astonish the ancient mariners; but if the railway is built, the passengers who ride over it will have six or eight miles of magnificent sea-view—broader, grander and freer than anything of the kind in New England. Then, too, in the line of improvement, sensible hotels like those at Manhattan and Brighton beaches are likely to be reared within a year or two.

Such changes the old families believe will destroy the character of the island; they certainly will change it vastly, yet the crowds of Summer pleasure-seekers demand the accommodations; and are there not many bags of shekels behind the demand? So, in truth, Nantucket changes daily, and is destined to be the subject of change for years. The old landmarks are passing away; but few are now preserved. The people point with pride to the North Church, which was built in 1711, and is still in use, and the small house on Centre Street which was built as long ago as 1682; and then, reverting to the new order of things, show the visitor the monument erected as a memorial of the war, and bearing the inscription "Eternal honor to the sons of Nantucket who, by land and sea, gave their lives to preserve a United Country, 1861-1865." The Sancota Head Lighthouse, a little more than a mile from Sconset, the southeastern extremity of the island, is a local attraction very dear to the fishermen, and well it may be, as it has one of the finest Fresnal lights on the entire eastern coast.

From Sancota Head the traveler's attention will be directed to Sesacacha Pond, of pure, sweet water, abounding with fish, and he will be dolefully told how a village was built on the site of the pond in 1676, how it was peopled for 140 years, and why the last house was razed in 1820. The traveler is captivated with the Nantucket of to-day; the native lives still in the whaling excitement of two generations ago. The old and the new are brought together at every turn. The bustle of fashionable life has overmatched the bustle of a deplored business. Fishing, once followed as a profitable industry alone, is now to a great extent pursued for pleasure; or, at least, the places of the professional fishermen are being gradually taken by the amateur and city sportsmen. But with all the mutations of time, life hangs easy, the lengthening hours of the day are enjoyed by native and visitor alike to their fullest extent, and the Nantucket of marvelous whaling fame is on the inevitable drift towards the full-fledged Summer watering-place, with all the belongings that wealth, fashion and beauty demand.

BLUE EYES AND GOLDEN HAIR.

By Annie Thomas.

CHAPTER II.—(CONTINUED).

MISS BERTRAM'S invitation to her niece is couched in the kindest terms; and late as her recognition of them is, they regard her tardiness with leniency on account of the consideration she shows for them.

"I want Daisy to stay with me until I leave town in August," she writes; "and perhaps by that time my niece and I will have become so well used to each other that we may both find it pleasant for her to accompany me to the seaside." Then Miss Bertram goes on to say that though it will be better that Daisy should defer getting a regular outfit until she, Miss Bertram, can superintend the transaction herself, still a little ready money may be desirable on the occasion, and she therefore begs to inclose her sister a fifty-pound note, to be used for Daisy's benefit.

Naturally the girl is enchanted at the prospect of the change of scene and society which thus suddenly and unexpectedly opened out before her. She has borne her portion, and more than her portion, of the burden of the weary, straightened, dull home-life brightly and uncomplainingly. But she is young, and full of that rare capacity for pleasure and excitement which only belongs to heart-free, healthy youth. The thought that almost immediately she is to be given the freedom of the fashionable London life of which she has read, and faint rumors of which have reached her in the course of various stilted conversations she has held with the Miss Granvilles, delights, dazzles, almost intoxicates her. She has, like every other girl, dreamt of ballroom scenes of gayety and splendor; she has longed to hear operas and see plays and drive in the Park, and ride a gallant steed in Rotten Row; and now, by the grace of Aunt Bertram, she will be enabled to realize her dreams. Like every other properly constituted girl, too, she rejoices in the thought of the pretty dresses and dainty boots and gloves, and the fairy-like structures of lace and flowers yclept bonnets, which will shortly adorn her supple, slender figure and golden-crowned little head. But still, through the midst of all these pleasurable anticipations, there runs a vein of faint regret for all that she is leaving. She is the light of the house, the needle of the family, her mother's counselor in all the never-ending, constantly-recurring household complications, her father's confidant in his numerous times of tribulation. Tartar, too, is a serious drawback to her tasting unalloyed felicity in the idea of leaving home. The dear old dog is full of excellent feeling and good intentions; but she knows that he will not transfer his allegiance from herself to any member of her family, and that he will get into Bohemian habits of prowling about the village and picking up trifles in the way of rashly-exposed beefsteaks and shoulders of mutton, in exchange for which no coin of the realm will be given.

"And if you're chained up, your sweet temper will be spoilt, my dog," she observes to him, when she is telling him of the flight she is about to take. "Oh, Tartar, what an aunty deed it would be on Miss Bertram's part to include you in the invitation!"

She is sitting in the same reprehensible position—namely, on the gate-post at the top of the hill pasture—with the same reprehensible companion lying at her feet, as on the occasion of our first seeing her. She has been in the habit of sitting here during many hours of all the Summer days of her life. She has come here to blow the cobwebs away many a time, when family distress, which she has been powerless either to relieve or assuage, has driven her out to the open for a taste of the sweetness and light which cannot exist in a house in which poverty reigns. She has come here in hours of happy idleness, when there has been no claim upon her industrious hands or her clear little brain in the home department; come here with some beloved book, in the perusal of which she has lost all memory of the harrowing influence of the home-life of incessant contrivance and non-achievement. But she has never come here before with such an undefinable mixture of sadness and gladness in her heart as is therein this day.

There is a good deal of pathos in the majority of partings. Quite as much—and to the full quite as true—pathos in the tearing oneself away from the places as from the people who have endeared the places to us. The fact that

> "No more by thee
> My steps shall be
> For ever and for ever,"

is not a lamentable thing very often when the bare fact of leaving the brook is isolated. But it is impossible to consider the "bare fact" alone. A thousand associations—some tender, some true, some lacking the genuine ring of the metal, some sad, but all touching—well up as the hour of parting approaches. And the scenes that have many a time been pronounced uninteresting, and the life that has often been avowed to be flat, tame and unprofitable, are regretted keenly, chiefly because they are to be left.

There is a good deal of this phase of feeling in Daisy's mood this warm, sweet day in June, as she sits here looking down over the waving pastures and across the leafy woods, and sees the smoke curling up from many a chimney in the village, on whose hearth she will be missed. Then her eyes roam away to the other side of the valley, and rest upon picturesque many-gabled Glenholme; and she remembers that its owner will be home next week, and that she is going away for a visit of many months to-morrow.

"He'll think that I have forgotten him altogether when he finds that I have gone away just as he comes back, and that I've even left the dog he gave me behind me. Tartar, if you could only speak, old dog, you could tell him a few truths, couldn't you? But, perhaps, he may not care to hear them now that he's coming back to take what Mr. Lincoln calls 'his proper place in the county.'"

Somehow or other this reflection has such an effect on the young lady, before whom such a golden vista is stretching, that she takes her way home through the village dejectedly for the first time in her life. And her friends then regard her, in consequence of this unwonted aspect, more complacently than ever; for they think that it "shows such a nice feeling on Daisy's part not to be elated at the prospect of leaving them."

Her new trunks are neatly packed this night with good stores of the choicest wearing-apparel that the adjacent country town, and the unceasing efforts of two dressmakers and milliners, have been able to achieve in the time; and Daisy stands ready dressed in the hall, saying the last good-by, waiting for the wagonette from the Burnsleigh Arms to come and convey her to the railway-station seven miles off. There are a good many tears shed at the parting. Poor Mrs. Eldon looks forward with a sinking heart to the weary weeks which must elapse before she has any more efficient aid in her herculean task of trying to keep things in order than may be given her by Ethel. That Ethel is as great a darling in her way as Daisy, no one can deny; but she is a perfect mistress of the art of creating confusion and disorder. But even through the tears which blind the mother's eyes the mother perceives proudly that this eldest child of hers is as fair a flower as can ever have blossomed, no matter under what conditions of luxury, care, culture and refinement.

"Daisy will stand comparison with any of the wealthy aristocrats whom my sister worships," she says to her husband. And though he tries to be partly amused at, and partly contemptuous of, the maternal vanity, he shares his wife's pride in the glory of Daisy's beauty to its fullest extent.

In truth, though in days to come the choicest triumphs of the respective arts of Mesdames Elise and Louise may adorn Daisy's person, she will never look more lovely than she does this morning in her plain blue-cambric dress and white hat with the one blue feather. The soft cerulean tint harmonizes with the clear transparent skin and with the bright golden hair marvelously well.

"Bless you, my own!" her mother whispers when the moment for the final farewell comes. "I feel as if you would never be quite one of us again."

"And I feel a conviction that I shall come back and live and die in Burnsleigh, mamma," the girl says, feigning a cheerfulness she does not feel. Then for a minute or two she becomes a mere shuttlecock in the midst of those affectionate battledoors, her brothers and sisters; and, presently, after hugging Tartar, Daisy is gone.

It is six o'clock in the evening when she reaches the terminus, where her aunt's carriage and her aunt's maid await her. The maid has come on the mission with the very faintest interest in her heart concerning the object of it. In Miss Bertram's country-bred niece she has anticipated finding a *gauche*, ill-dressed young woman without "any style," whom she determines to "put in her proper place" at once, in order that no opposition influence to her own may be obtained over Miss Bertram. But when this perfectly self-possessed, beautiful and well-dressed young lady looks at her quietly, and directs her to "see to my luggage," Wharton, Miss Bertram's "own maid," renounces all her preconceived putting-down intentions hurriedly, and finds herself obeying the intruder instead of dictating to her.

Nevertheless, when they get into the carriage and roll away towards Wimpole Street, the "pampered menial" makes one attempt at getting the whip-hand of the "poor relation." If Daisy can only be made to feel her own insignificance at starting sufficiently for Wharton to venture to offer her advice, then will her mistress's niece be an innocuous element in the house, Wharton feels tolerably well convinced. Acting on this conviction, she says:

"What a nice thing for you, miss, to be sure, to have such a treat as this."

Daisy levels her long, sweet blue eyes at the speaker, and fixes the latter well with them before she replies.

"I don't understand you; you must tell me what you mean."

Wharton fidgets under the gaze; for all their sweetness, the blue eyes can look stern enough when occasion requires.

"I mean that it must be such a grand change for you, miss, to come up to a lady like your aunt, who lives in such style as will surprise you. I know what it is for young ladies to come away from their quiet country homes, where they never see no life nor nothing. They feel quite lost very often."

"I don't think you need trouble yourself about my feeling that, thank you," Daisy puts in, quietly.

But Wharton feels that she must accomplish her noble aim now or never, and so goes on eagerly:

"So, any little advice I can give you about what you had better get and what will please your aunt, I'm sure I shall be most happy to offer. Miss Bertram, like all the great ladies, has her moods, and I understand them, and can often give you a hint. You see, I've been used to great ladies and their ways all my life."

"And I have not," Daisy says, coolly. "I will tell my aunt what you say; and if she wishes me to put myself under the tuition of her maid I shall know what to do."

"No offense was meant, miss," the woman says, confusedly; for she feels that she has been worsted by the young lady, and imperiled her own position with the young lady's aunt.

CHAPTER III.

DAISY has been just a month in London. She has been presented, and danced at Marlborough House; she has heard Patti and Nicolini in half a dozen operas; she has been to all the best theatres; watched the polo lists at Hurlingham, and incited the champions on either side to doughty deeds for the sake of her approving smiles. She has been the belle of a dozen ballrooms, the secret of success at many of those usually dreary things, "afternoons at home," which her aunt will persist in frequenting; and altogether has approved herself the best investment Miss Bertram could possibly have made from a society point of view.

Daisy has, in fact, brought an enormous amount of grist to that mill of fashion in which Miss Bertram is so gratified at being ground. The girl, with her fresh, vigorous, happy youth and beauty, has taught the selfish, wealthy old maid some useful lessons. With her whole heart, and with all the intensity of her vigorous young body and mind, Daisy can enjoy—and does enjoy—the enjoyable. With equal whole-heartedness and intensity she spurns the most glorious and enjoyable ends, if the means by which she can attain them are not without flaw or blemish.

She has not been admirably well paraded on the boards of that great theatre, the world of fashion, for nothing, her aunt feels proudly, when Sir Bolingbroke Bray begins to haunt her path, and intrigue for invitations to houses at which he knows the Daisy will appear. But the Daisy is wofully blind to her own interests, it seems to Miss Bertram, as she remarks that Daisy's smiling, flexible lips rarely open when Sir Bolingbroke is her partner, and that if her eyes light on him by any chance there comes a look of sorrowful scorn into their depths that is very detrimental to her chances of becoming Lady Bray. "Daisy's a darling," her aunt thinks, in common with every one else; "but baronets of ancient lineage and large rent-roll do not grow on every bush." Moreover, the young man is handsome, and quite clever enough for everyday life. What can be blinding Daisy's vision that she does not see the advantages of such a match? Perhaps it may be that Daisy is in no haste to be "woo'd and married and a'," by reason of some vague, unfounded hope she may have of inheriting her aunt's property. Miss Bertram determines to rid her niece of the burden this error will be to her without delay, and to tackle the subject with spirit and determination, one morning while Daisy is waiting for the horses to come round for her to go into the Row.

The girl, who is very pretty in any and every kind of garment that the ingenuity of garment makers can devise, looks supremely well in her habit. For erectness, for ease, for having that air of being at home in her saddle without which the most daring and skillful of riders looks out of place on horseback, Daisy challenges competition with the most famous horsewomen of the day. She takes her fast-trotting little bay horse, the Knave of Hearts, through the throng at a pace which excites its admiration and in a way that does not excite its awe. It is the sight of her on horseback which has brought Sir Bolingbroke Bray to the conclusion that happiness and he will be strangers unless he throws the handkerchief to her, and she picks it up with proper humility and flattering eagerness.

"You like this riding, and the round altogether, don't you, my dear?" her aunt begins.

"Like it! I love it!" the girl replies. "You have given me so much happiness, Aunt Bertram! For this one month's joy that I've had, I can never be sufficiently grateful to you, even if I spend all the rest of my life in thanking you for this fine bit of gold that you've let into it."

Miss Bertram is almost moved from her disillusionary purpose by the ungrudging way in which Daisy pours forth her gratitude. However, the old lady nerves herself to the task by a timely remembrance of Sir Bolingbroke, the young baronet who has been touted for assiduously by the most long-sighted mammas during the whole of this and last season. The consideration that Daisy may do what is wise and well in the way of smiling upon his suit, if she imagines that unless she does so her only alternative will be to retire into the beautiful but monotonous shades of Burnsleigh, checks Miss Bertram in the good resolve to be generous which she has almost made. Accordingly she steels her sympathetic heart, and says:

"I'm glad that your visit to me has been such a pleasant one, my dear Daisy; but I can't help feeling that there has been more amiability than discretion in my conduct towards you. I have given you a taste for a manner of life that is, of course, quite dissimilar to the one you will have to lead at Burnsleigh when you go home again. Look out there at the little Knave of Hearts; see how his skin gleams in the sun. Poor child! How you will feel parting with that horse!"

"Yes, I shall feel it terribly," Daisy admits, with a short sigh; "but, anyway, Aunt Bertram, I have had the pleasure, of which no one can rob me, of having ridden him, and of having seen that he is more admired than any horse in the Row."

It occurs to Daisy, as she says this, that if her aunt's sorrow at the separation which is to ensue between horse and rider is very sincere, the way may easily be paved by Miss Bertram's gold for the Knave of Hearts taking up his residence permanently in Burnsleigh.

"He is not more admired than his rider is, I hear on all sides," Miss Bertram says, as archly as she can bring herself to speak in her anxiety. "Sir Bolingbroke was saying only yesterday——"

"Something not worth hearing, I'm sure, as he said it. Now, aunt, I'm off."

She holds her winsome face up to her aunt to be kissed, as she speaks, and the old lady takes it tenderly between her two withered, ring-weighted hands, and says:

"My dear, I wish you would think it worth while to listen to something he has to say to you. Think, Daisy; he can give his wife all, and far more than I have been able to give you of pleasure and luxury. You would like to have your own carriages, your own opera-box, your own place in society, as one of its brightest ornaments; and you would like to be in a position to help those at home, wouldn't you, Daisy? Think of what you can do for your poor broken-down father and your worried, worn-out mother. Think of the aid you might be to your brothers and sisters if you will only be wise. Wouldn't you like to have all the luxuries and the power of doing good that I've named?"

"Very much indeed."

"Then you will be wise?"

"I hope so, Aunt Bertram. As you say, mamma is a worried and worn-out woman; more shame to those who might have saved her from being either! But she has always had the strength to teach her children to try to do what is right; and if we attend to our mother's teaching, and try to do what is right, we shall surely do what is wise."

"Then you will listen when Sir Bolingbroke speaks to you, as I know he is dying to speak, Daisy?"

"Yes, I will."

"My darling sensible child! You shall have the most perfect *trousseau* of the year! You *will* listen! My dearest hopes are realized!"

Miss Bertram caresses her niece more affectionately than she has ever caressed anything, save her white Persian cat, in her life before, for she sees in that niece the future Lady Bray. Her niece responds to these caresses by saying:

"I will listen to Sir Bolingbroke when he offers me the carriages and horses and jewels and opera-box you speak of. And when he has finished, I will ask him where the woman to whom they belong of right is. Aunt Bertram, do you think I am deaf? Don't you think I have heard the story of his heartless neglect of the poor girl he married—neglect and unkindness which drove her so far wrong that he was able to divorce her? Before Sir Bolingbroke persuades me to be his wife he must drug my memory and undo the teaching of my mother's example!" And with these words on her lips, and righteous wrath against Sir Bolingbroke and all who would advocate his cause with her in her heart, Daisy Eldon goes away for her customary morning's ride.

It will be hard to renounce it all, the young blonde beauty feels, as she turns in at the Apsley House Gate, followed by her model groom, and lets the Knave of Hearts go off at that striding trot of his, which easily covers eighteen miles within the hour. The Row is very full this morning, and a hundred hats

Digitized by Google

are raised to Daisy as she winds her way skillfully through the crowd of riders, on her way down. Dozens of other acquaintances, both masculine and, feminine, are leaning against the railings and sitting upon the chairs. These bide their time patiently for a word or a bow or a nod from the young beauty, who is also reputed to be the rich Miss Bertram's heiress. Pleasure is expressed in the faces of all she knows at the sight of her, for Daisy has achieved the rare distinction of being liked by women as much as she is admired by men. She has never damaged a rival's cause by damning her with faint praise. She has never vaunted herself in any way, either by word or deed or look. She has never, in short, boasted or triumphed about herself to the depreciation of any other girl; and so she is liked and imitated and courted by all the female portion of her aunt's coterie, who are wise enough in their generation to perceive that her chances are better than their own, in spite of her having made such a late appearance on the boards of society.

(*To be continued.*)

TERRAPIN FISHING.

"BOIL your terrapin for two hours until the skin on the legs peels off; then pick the terrapin out of the shell and remove its gall-sac; then stew, by adding a quarter of a pound of butter, a taste of red pepper and the squeeze of a half-lemon; put as much water as will stew, pour in a dash of sherry, and leave the rest to nature." Thus, "Tommy" Boylan, of Guy's, in Baltimore, to the artist and the writer, and there is no better authority on terrapin from Savannah to the Patapsco River. Turtle may be fit for aldermen, but terrapin is food for princes, and a terrapin-stew might be served by Hebe to the immortal gods in high Olympus. Terrapin are caught from Savannah and Charleston up to the Patapsco River at Baltimore, while the genuine "diamond-back" is only to be found in the Upper Chesapeake and its tributaries. A diamond-back never measures less than seven inches in length on the under shell, a seven inch being known as a "Count terrapin," while anything under the length of a "count" does not count. Ten inches long and eight pounds in weight is reckoned a very large terrapin, the seven-inchers weighing, on an average, four pounds. During the season terrapins sell for $30 to $38 per dozen; while "sliders"—common river turtles, principally caught in the James River—which sell at from $5 to $8 per dozen, are passed off by skillful *restaurateurs* as genuine "diamond-backs" on unwary but ambitious guests, at a dollar and a half the dish. The male terrapin is known as the "bull," the female as the "cow," the lady being more in request on account of her thirty eggs, which are used to garnish the delectable dish.

The artist and I having consigned our lives and limbs to the custody of the darkest darkey my eyes ever alighted upon, and to the most rakety of crazy skiffs, were paddled up a small tributary of the Chesapeake Bay, situated at about six miles from Annapolis, on a terrapin-searching expedition. Having quitted the sanctuary of the boat for the more genial atmosphere of the mud, our darkey, who was armed with a long, thin pole, commenced to probe the bottom—he was wading waist-deep—or, to use the technical term, to "sound" for terrapin. His practiced sense of touch tells him when he taps terrapin, and if they are numerous he marks his prey, and returns to grab them with a net. On this occasion the "birds"—as Don Piscure love to call them, although terrapin is used as fish by the most devout Catholics in the severest of Lenten time—were plentiful, and our darkey, having put us ashore, very soon returned with a boat containing his mate, nets, sounding-poles, rakes and other impedimenta of his calling, a business that pays the catcher according to luck from $5 to $50 a week. The haul, which was watched by a luckless fisherman with considerable envy, proved a good one, the ground being literally cut from under the feet of the terrapin, and there were vast expansive grins, accompanied by chuckles loud and deep, as the well-laden boat rowed back with its precious freight to the quaint old capital of Maryland.

Terrapins are jealously guarded by the law, and a stringent Act exists which protects diamond-back terrapins in the waters of the State of Maryland. The fishing opens on the first of November and terminates on the 31st of March. It is unlawful to catch any terrapin of a size less than five inches on the bottom of the shell, or to interfere with or destroy the diamond-back terrapin's eggs. It is stated that thirty years ago the dealers found it difficult to sell terrapins at $6 a dozen, and now the difficulty lies in obtaining them at any price. Their numbers are rapidly decreasing, and unless some effective protective means are forthwith taken, a terrapin will indeed prove a rara avis in terris.

Sliders are plentiful in the tributaries of the Chesapeake, as also are "snappers." Turtle are fished for in this way: The fisherman plants poles, some times a hundred, in the middle of the stream; to each pole he fastens a line, to which is attached a hook baited with salted eel. The snapper grabs bait and hook and is hauled up, always vicious and desperate. The fishermen around these tributaries take a thousand pounds weight of turtle a week, which they sell at ten cents a pound. The snappers' eggs, about the size of marbles, are considered a great delicacy.

Apropos of turtle and terrapin, the following is the menu of a perfect Maryland dinner as arranged by "one of the knowing ones":

"Four small oysters from Lynhaven Bay; Terrapin *à la* Maryland; Canvas-back ducks; a small salad of crab and lettuce; Vegetables—Baked Irish potatoes; Fried hominy cakes and plain celery."

Shade of Lucullus, pale not with envy!

THE KALLOCH-DE YOUNG SHOOTING.

THE passions arising from the virulence of political factions culminated in San Francisco on Saturday, August 23d, in the public shooting of the Rev. Isaac S. Kalloch by Charles De Young, the senior proprietor of the San Francisco *Daily Chronicle*. Mr. Kalloch is the candidate of the Workingmen's Party for Mayor, and, in the course of his canvass, made many political speeches. De Young was opposed to him politically, and said that he would force him to withdraw from the canvass. De Young sent word to Kalloch that, in case he would not withdraw, he would publish in the *Chronicle* a full history of Kalloch's career in Boston and Kansas. Kalloch told him to go ahead, and he went ahead. De Young thereupon printed a long article on Kalloch's amours while he was pastor of the Tremont Temple Society in Boston, his trial for adultery, and his forced resignation. This article was followed up on the following days by others of similar character, and the reverend politician became decidedly restive under them; so much so that on Friday evening he addressed a large audience in the Metropolitan Temple, at which it had been previously advertised that he would read an article published some two years ago by S. F. Naphtaly, attacking the De Youngs, for which they had attempted to kill him, but failed. De Young sent word to Kalloch that if he read that article he would shoot him on sight. Kalloch didn't read the article, but in his address to the large audience he scored the De Youngs mercilessly, reflecting on their personal record and family antecedents in the most direct manner. After adjourning the meeting in the hall, he went outside, mounted a stand and spoke briefly. After reviewing the attacks of the *Chronicle* upon himself, he said: "In maligning the reputation of my father, who has filled an honorable grave for many years, these journalistic vipers have rendered most vicious retaliation on my part necessary and justifiable. Their disgraceful records make such attack possible, and I am justified in pronouncing them the bastard progeny of a prostitute."

This was too much for the De Youngs, and on Saturday morning Charles De Young drove in a coupé to the Jessie Street entrance of the Metropolitan Temple, where Mr. Kalloch had his study, and sent word to him by a District Telegraph boy that a gentleman wished to speak with him. Kalloch was just stepping into a carriage with Carl Brown, the private secretary of Dennis Kearney, but on receiving the messenger he started at once for De Young's coupé. The moment he reached the door of the vehicle De Young leveled his revolver and fired. The ball entered the left breast, between the third and fourth ribs. Kalloch staggered backward for an instant, and then turned to run, when De Young sent another ball after him, which penetrated the left thigh. By this time a crowd had surrounded the coupé, and an attempt was made to secure De Young. An officer appeared and tried to protect him, and in the scuffle the coupé was overturned, De Young leaping out of the door, revolver in hand. The officer was knocked down and trampled on, and De Young was severely bruised, but the two managed to push through the crowd, which were yelling, "Hang him! kill him!" and reached the corner of Fifth Street. Here they were joined by two other policemen, and they hurried into the Baldwin Hotel, whence they escaped by a different entrance, entered a carriage, and were driven rapidly to the City Prison, followed by the hooting crowd, which had now swelled to thousands. De Young was put in one of the tank cells, where he was soon joined by his brother, Michael Henry, who had fled from the publication office of the *Chronicle*, and rushed to prison for protection. Meanwhile the crowd around the building was constantly increasing, and many demonstrations of a desire to take the De Youngs by force were made. A rope was stretched around the jail, which was guarded on every side by policemen, and Brigadier-General McComb ordered the militia to assemble in their armories and wait for orders. Strong guards were posted around the publication office of the *Chronicle* in Montgomery Street, and the composition-room in Clay Street, as threats were freely made by the workingmen that they would sack the two buildings, and a strong body of them actually marched down town for this avowed purpose, but the sight of the policemen deterred them from committing any actual violence, although a large and excited throng hovered about the two offices for hours, discussing the shooting of Kalloch, and swearing to take summary vengeance on the De Youngs.

In the afternoon over 16,000 excited men assembled at the Sand Lots, and were addressed by several persons. Dennis Kearney arriving on the scene, counseled moderation, and finally the crowd dispersed. The excitement for two or three days was intense, but at last accounts had subsided, the recovery of Kalloch being regarded as probable, and De Young having been formally committed for trial. He has published a statement in defense of his action, which has somewhat modified the public estimate of the offense, but the press of the city has very generally branded the shooting as an utterly indefensible outrage.

A dispatch from United States Senator Sharon, dated August 27th, expresses the sentiment of the better portion of the community as to the affair as follows: "The excitement in this city has entirely subsided, and there is no apprehension of violence. It is much regretted by all that political discussion should have passed the bounds of legitimate argument, being converted into the vilest possible abuse, dragging into the arena the living and the dead, sparing neither age nor sex, but that violence should follow was to be expected as a natural result. The animus of the political fight is opposition to corporations and their control in politics."

The Belgian Education Law.

THE Belgian Elementary Education Law has now fully come into force. On the morning after its publication in the official *Moniteur* all the Clericalist journals, with two exceptions, appeared with a black border round their columns in order to show their deep grief at the terrible event. One of them, the *Avenir*, of Charleroi, even went so far, in its leading articles on the subject, as to insult the King, whom it accuses of having preferred the cause of this world to the cause of God. Those provincial councils which are most subject to clerical and conservative influences still assert that they will afford no assistance to the setting up of the "godless" schools instituted by the State.

Foreign readers must be warned against believing the representations made by prejudiced correspondents, who take their tone from the conservative press of Belgium. Religious teaching is fully permitted in every school, but it is henceforth to be withdrawn from the clerical dictators and manipulators, who claimed a jurisdiction over history, literature, science and every other branch of popular culture, wherever it could be pretended that a religious or ecclesiastical interest was involved. That the party will accommodate themselves to accomplished facts even sooner than was expected may be gathered from the action of their leader in the Senate, Prince Ligne, who voted against the law, but since it has come into force has hurried forward to present a piece of land to the commune of Uccle, near Brussels, for the erection of its new primary school, which will of course be conducted in accordance with the regulations of the new law. Meanwhile the clergy are hoping that they will still be able to retain a hold over the education of the middle classes, and are eagerly turning their attention to secondary instruction. The brilliant success of the State School of Agriculture at Gembloux, near Namur, has long been a thorn in their side, and they have succeeded in founding an agricultural college of their own at Carlsbourg.

SCIENTIFIC INTELLIGENCE.

According to a German Paper, American honey can be distinguished from that of European origin by the different character of the pollen grains.

Professor Webster, of Union College, is adding greatly to the Schenectady Museum, in his dredgings and fishings in the waters near Provincetown, Mass.

Herr Karl Russ, the eminent German ornithologist, is writing a new work on foreign and domestic birds, in three volumes. Two are completed, and part of the third has recently appeared. A full account of the domestic birds of the United States will be given.

Too Much Salt in Well Water, Professor Latimore thinks, may be taken as a proof of the infiltration of sewage, for the reason that nearly all the salt used for domestic purposes escapes by the way of the water-closet or the house-drain. Normal well water only contains a few grains per gallon of salt.

Professor Ogden N. Rood, of Columbia College, is spending the Summer at his residence in Stockbridge, and is engaged in interesting experiments on the velocity of light. His work on "Chromatics" has been published, and is received with high praise by scientific men in this country and Europe.

Mr. Heskin, of Preston, England, has discovered a new way of making magnesium. He puts the anhydrous chloride of magnesium in a tubulated earthen retort and passes hydrogen or carbonic oxide gas through the molten mass. The chloride is reduced and metallic magnesium forms a regulus in the slag.

Dr. A. S. Packard, the distinguished entomologist, reports that the locust was in New Mexico in 1865, 1868, 1874 and 1877, and that it has penetrated into Eastern Arizona. It comes into the country from Colorado, thus proving the correctness of the former conclusions of the Entomological Commission.

Professor Geike, the distinguished Edinburgh geologist, arrived in New York, August 11th, and left immediately for the Western States, where he will remain studying the mountain systems of that region until October. He will be able to meet some of Mr. Clarence King's detached parties and accompany them to the Yellowstone and to the mines of Nevada and California.

Von Boeckmann has discovered that cast-iron, long submerged, becomes pyrophoric, and may, therefore, be dangerous. He reminds us that this phenomenon is not unfrequently seen in a remarkable degree in cast-iron cannon-balls and grapeshot that have been recovered from the sea after a century's submersion. Such bodies often heat and may take fire spontaneously.

Professor Otto Von Struve, the eminent astronomer in charge of the Russian Observatory at Pulkowa, near St. Petersburg, has arrived at Washington for the purpose of inspecting the large objective belonging to our Government, and if it comes up to his expectations he is authorized to order a bigger one of Alvan Clark & Son, of Cambridgeport, Mass. The Emperor of Russia intends to have the best telescope in the world, and he sends to the United States to command it.

When Nickel and Cobalt cool they absorb carbonic oxide and become brittle. To avoid this evil M. Fleitmann has taken advantage of the readiness with which metallic magnesium will destroy the oxides of carbon. He fuses the metals nickel and cobalt with a small quantity of magnesium, and thus renders the two metals malleable. The addition of one-eighth per cent of magnesium not only renders nickel and cobalt malleable but makes them also weldable when hot. Cobalt becomes so hard as to be applicable for cutting instruments.

New Preparation of Carbolic Acid.—Solidified disinfecting tablets, containing fifty per cent. of concentrated carbolic acid, have been introduced for domestic disinfecting purposes. The great advantage of this solid form is that it removes the danger of accidental poisoning; and from the high per centage of acid present, the tablets provide, even when dissolved in a considerable quantity of water, a solution capable of arresting all kinds of putrefactive change, and of destroying all the lower forms of insect, vegetable, or germ life.

The Social Science Association held its meeting this year at Saratoga, September 9th-12th. The programme is a very attractive one, including, as it does, papers by some of the most distinguished scientists and educators in the country, among them President Daniel C. Gilman, who presides; President Porter, of Yale, S. Wells Williams, Professor William T. Harris, Professor Justin Winsor, Colonel George E. Waring, Mr. Charles L. Brace, and many others. Topics will be discussed relating to jurisprudence, social economy, finance, prison discipline, charity, sanitary science, etc.

Messrs. Remsen & Ylles, of the Johns Hopkins University, Baltimore, have been making a series of interesting researches on the oxidation of substitution products of what are called the aromatic bodies, benzoic, etc. They have made a solid on the kresol from their oxytoluic acid. It is too early to say what practical application may eventually be made of the new compounds, but we ascertain that the links in the chain of discovery furnished by these accomplished chemists will be used in completing the steps leading to practical results.

To Purify Water for feeding steam-boilers, M. Asselin recommends the oxalate of soda. The hardness of the water being known, sufficient of the alkaline salt is added to precipitate all of the lime as oxalate. The oxalate of lime thus produced is not thrown away, but is regenerated by treating it at a boiling temperature with carbonate of soda. By a double decomposition there are formed carbonate of lime, which is insoluble, and soluble oxalate of soda, which is ready to be used over again to remove the lime from a new supply of water. The process will not work for drinking water, as oxalic acid is a poison.

Mr. K. Chernoff has succeeded in the curious experiment of magnetizing cast-iron by surrounding the mold in which the bar was cast by an electro-magnetic reel, along which a current was allowed to flow during the casting process, so that the liquid metal became magnetic and cooled under the influence of the magnetic current. The result was a magnetized bar of white cast-iron, but having a symmetrical cavity extending about two-thirds of its length, the metal being extremely thin just opposite the centre of the reel. It is suggested that powerful and permanent magnets of cast-iron may be obtained in this way by casting under pressure, and that by some modification of the experiment the plan of magnetizing the fluid metal might be usefully employed in casting hollow cylinders without cores.

M. Coulon, Conservator of the Industrial Museum of Rouen, has discovered a new system for transforming sound into light, which phenomenon has been the subject of a lecture by M. Geraldy with the Gower telephone. Two Geissler tubes are put in quick rotation on an axis. The Ruhmkorf coil of the first is worked by an ordinary interruptor, and gives the deviation of a luminous cross. The interruptor of the second is replaced by a telephone. The figure presented by the second tube projects on the first one which is colored by uranoxide glass, and exhibits the most rapid changes according to the height of the note delivered in the telephone trumpet. The sensibility of the changes are startling and most interesting. The apparatus is exhibited at the Palais de l'Industrie in Paris, where it attracts great attention.

PERSONAL GOSSIP.

COUNT GÉRARD, of Nanrois, the great-grandson of Racine, has received from the Pope the hereditary title of Marquis.

VERDI, the composer, who now lives at Genoa, says that his age and infirmities have compelled him to relinquish all artistic work.

COUNT SZECHENYI, while recently in Berlin, declared his unwillingness to succeed Count Andrassy as Premier of Austro-Hungary.

THE marriage of King Alfonso will take place in Madrid at the expiration of the period of mourning for the Infanta Maria del Pilar.

MR. GLADSTONE thinks that the settlement of the Alabama claims by arbitration will rank in history with the abolition of the slave trade.

EDWARD KING has been decorated by the French Government for the interest he manifested in the recent literary congress at London.

A GREAT shooting contest was concluded at Versailles, August 25th, in which Milton Farrow, the American marksman, gained the first three prizes.

THE Legislature of Georgia has selected James Oglethorpe and Crawford W. Landon to represent that Commonwealth in the National Gallery of States at Washington.

MME. and MLLE. GRÉVY, the wife and daughter of the President of the French Republic, are summering in the Pyrenees, where, at the end of August, M. Grévy rejoined them.

THE Rev. Michael McCabe, of Woonsocket, has been appointed Vicar-General of the Catholic Diocese of Providence, in place of Father Mahan, lately consecrated Bishop of Hartford.

THE Queen has sent to John B. Buckstone, the actor, and late manager of the Haymarket Theatre, £50. Lord Beaconsfield has recommended that a grant of £100 be made to Mr. Buckstone from the royal bounty.

SIR ROWLAND HILL, who originally conceived the idea of the penny-postage system in England, and first introduced the use of postage-stamps to prepay mail matter, died at his home in Hampstead, England, August 27th, aged 84.

MLLES. MARIE and Louise d'Oczeszko, two sisters, aged seventeen and eighteen years respectively, have just passed their bachelor's degree with honors at the College of Sciences, Marseilles. They are the daughters of a Russian noble.

DR. BESELER has been elected Rector of the University of Berlin. He is one of the moderate Constitutional members of the Reichstag, and a strong opponent of the recent financial and economic measures of the German Government.

HON. JOHN DIKEMAN, of Brooklyn, ex-Judge of the Court of Common Pleas and ex-County Judge, died August 23d, aged eighty-five; Hon. John C. Ten Eyck, ex-Senator of the United States from New Jersey, on August 24th, aged ninety-five.

MISS MARY AITKEN, a niece of Thomas Carlyle, and his amanuensis, was married, on Thursday, August 21st, at Dumfries, Scotland, to her cousin, Alexander Carlyle, of Brantford, Ontario. The distinguished author was present at the ceremony.

THE San Francisco Board of Underwriters have voted to give Captain Armstrong and his daughter $500 each for the courage and fortitude they displayed in bringing the ship *Templar* into port against adverse winds and after many of the crew had been lost from yellow fever.

M. GAMBETTA has just received a most remarkable gift—a portrait of his mother, embroidered in silk on crimson velvet. The work, which was executed by a Mlle. Gerard, a young lady of Marseilles, is said to be excellent in its minuteness and in its artistic and lifelike appearance.

M. AUGUSTE CAIN, the sculptor deputed by the City of Geneva to execute the principal portions of statuary connected with the grand monument, costing 2,000,000 francs, Geneva erects to the memory of the Duke of Brunswick, who bequeathed nearly a million sterling to the municipality, has completed his task.

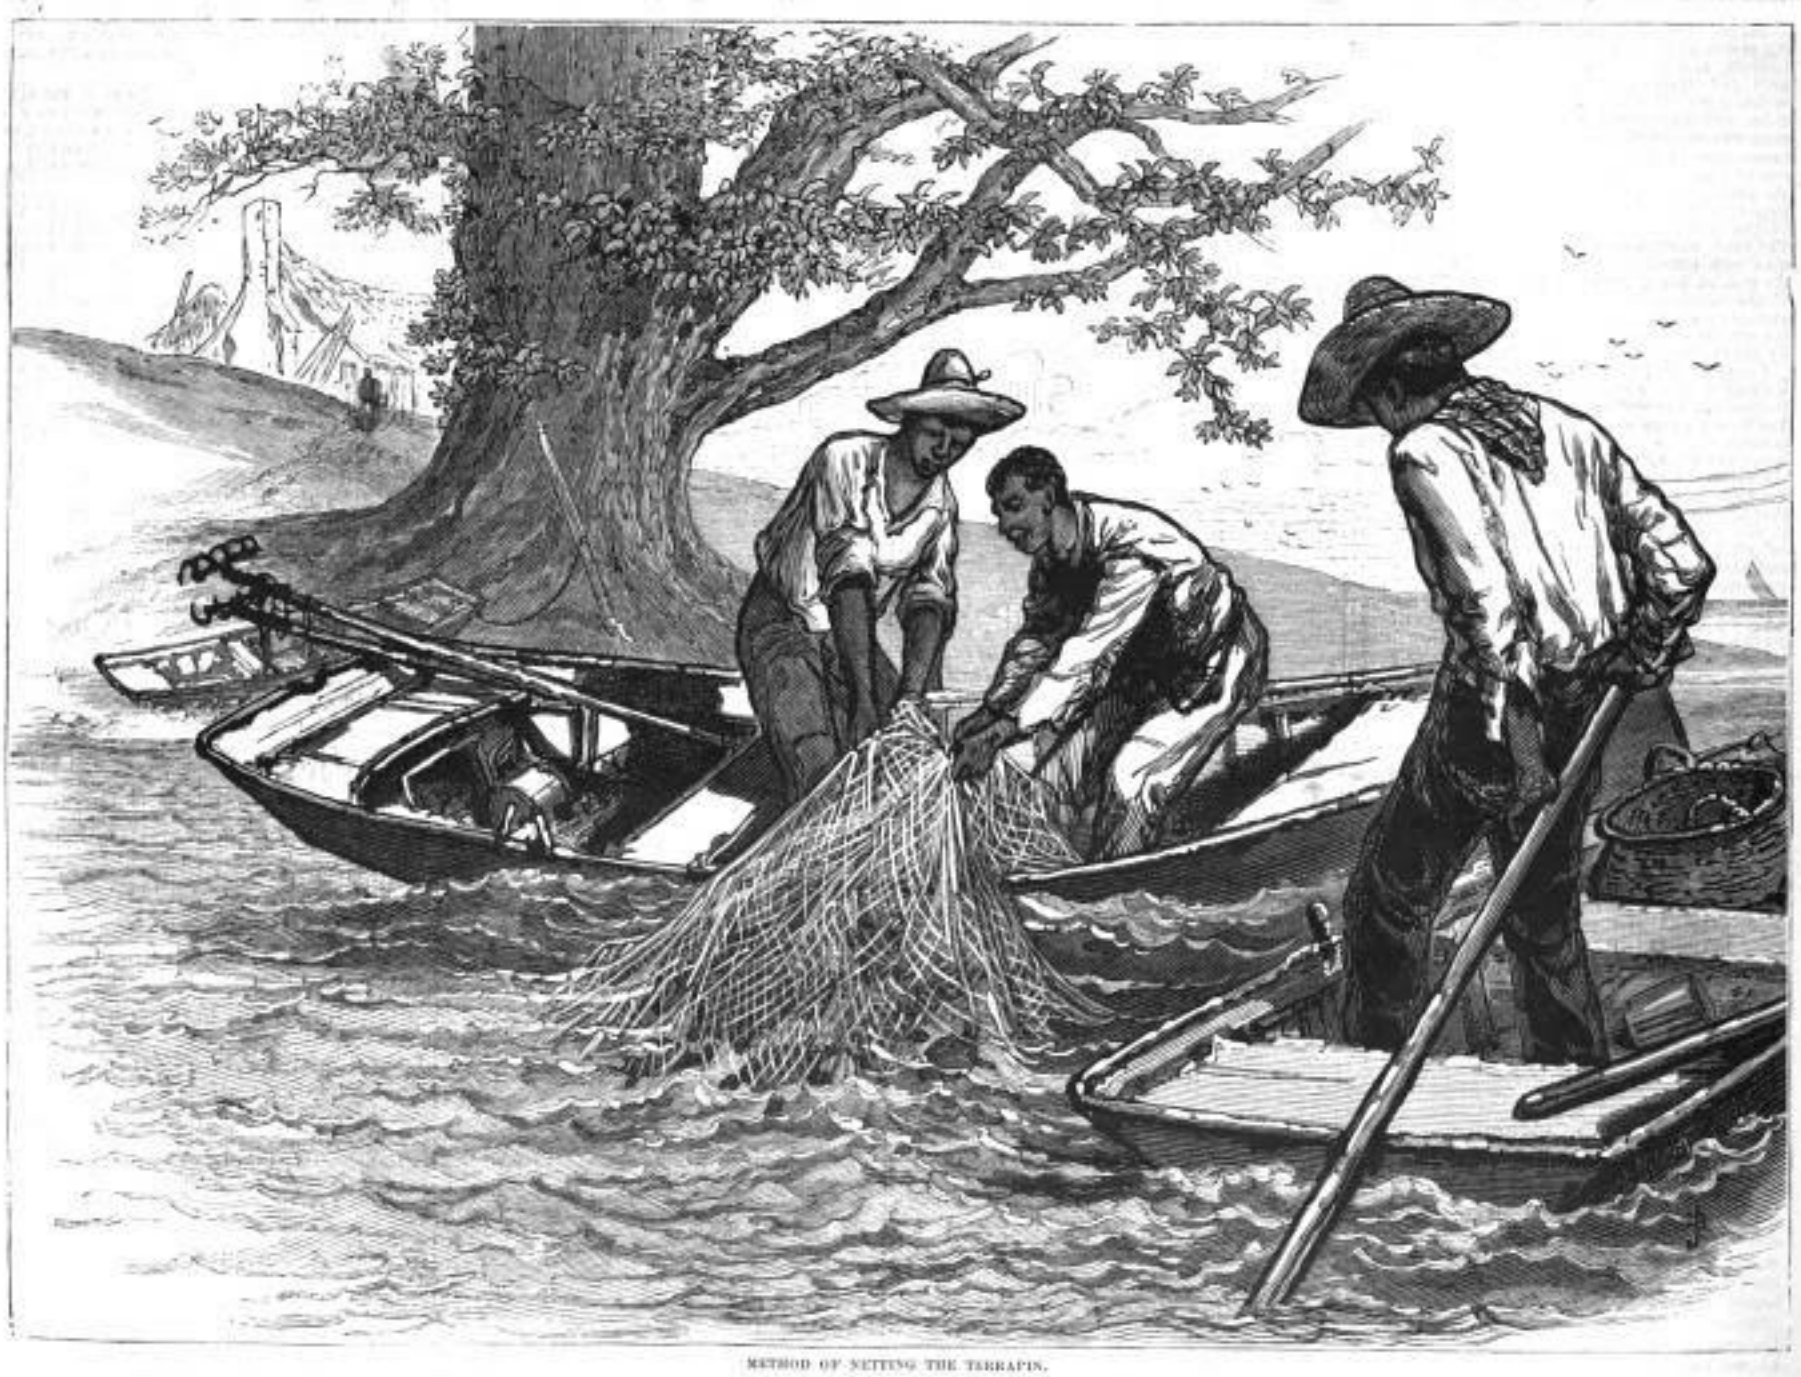
"WILD BILL," the frontiersman, who was killed about three years ago, and reminiscences of whose adventures filled a large space in Western newspapers, was buried at Deadwood, Dakota Territory. His body was disinterred the other day, and it was found to be entirely changed into a stony substance very much like marble.

IN Pope Leo's garden, in the middle of a large graveled square, he has had reproduced by a design in young boxwood, carefully trimmed, the arms of the Pope. He has ordered all the tapestries in the Vatican to be placed in chronological order and according to the schools to which they belong. In many ways he shows taste in things not ecclesiastical.

IT is now rumored that a marriage has been arranged between the heir-apparent of the Grand Duchy of Baden and the Princess Beatrice of England. The Prince, who is just twenty-two, is a grandson of the Emperor William and a kinsman of the late Prince Imperial, whose grandaunt, Stephanie, married the Grand Duke Charles Louis of Baden in 1806.

PROFESSOR LANDERER, of Athens, says that a very popular remedy against sea sickness, to the smoky mariners in the Levant, is the daily internal employment of iron, according to a method peculiar to themselves. The substance is obtained in a very primitive way—a portion of the iron-rust adhering to the anchor and anchor-chain being scraped off and administered.

THE Moscow journals relate an extraordinary escape of a young Nihilist girl named Gobieshawska from the hands of the police. They had discovered the house in which she was concealed, and were about to make the arrest, when, to their surprise, they saw a balloon rising from the garden containing the object of their search and two men. The balloon rapidly disappeared.



GENERAL WEITZEL, United States Engineers, has been engaged twelve years in building and operating locks, and in July next will have completed the largest lift-lock on the globe at Sault Sainte-Marie, Mich. Its dimensions are: Length, 515 feet; breadth, 80 feet; lift, 18 feet, and gates admitting a vessel of 60 feet beam. General Weitzel's calculations are that eleven minutes only will be required to pass a vessel through, including, of course, the time necessary to pass in and out of the lock.

AFTER a considerable amount of difficulty, the trustees of the British Museum have succeeded in obtaining a successor to Mr. Hormuzd Rassam in the work of Assyrian exploration. Lieutenant Kitchener, Royal Engineers, whose name has for many years been closely connected with the work of the Palestine Exploration Fund, has accepted the post, and will, as soon as official duties permit, start for Mosul. Lieutenant Kitchener had only just returned from Cyprus, where he had been sent to arrange for the ordnance survey of that island.

NEW JERSEY.—THE BARK "NESTOR," EN ROUTE FROM THE CAPE OF GOOD HOPE TO NEW YORK, PASSING THROUGH A LOST CARGO OF WATER-MELONS, AUGUST 23D.

A MARINE MELON PATCH.

THE officers of the bark *Nestor*, which arrived at New York from the Cape of Good Hope on August 23d, report a singular experience that was had on the night previous. The vessel was off the Jersey coast; with a light but steady wind, almost no progress appeared to be made. A peculiar appearance of the water and a continuous bumping of something against the vessel's bow were reported by the lookout. The officer of the deck being called, was unable to explain the mystery. Then the captain was aroused, with no better results. But when daylight broke a singular sight was presented. The water, as far as the eye could see, was covered with watermelons. A sailor insisted that the State of New Jersey had sunk, and that the vessel was riding over her famous melon patches; but when the fruit was examined, and no stems nor parts of the vine were found attached, this theory was abandoned. The only explanation reached was merely a suggestion that a fleet of fruit-punkies, or schooners, had been wrecked during the late storm, or obliged to throw overboard the deck cargo. The fruit was in good condition, and indicated an excellent crop both as to quantity and quality.

On the morning of August 26th, the docks along the Hudson, at the foot of Fulton, Vesey, Harrison and Jay Streets, presented an unusually animated spectacle. The waters were covered with watermelons—whole, halved, quartered and in every variety of condition—some a little specked, others quite decayed, and others to all appearance in good condition. The street Arabs fished for them with running nooses, speared at them with sharply pointed bits of timber, lowered themselves by ropes and angled for them with their toes, while Italian fruit-venders "of the baser sort" bought them of the boys for sums ranging all the way from one to three cents each.

These vessels were mostly from Nanticoke, on the eastern shore of Maryland, where the sandy shore is peculiarly adapted to melon-culture. Vessels which sail from Nanticoke go across the Chesapeake Bay to Baltimore, and thence to this city by canal, the trip taking from two to three days. To go "outside" takes only about forty-six or forty-eight hours, but shippers object to the outside passage, as the fruit gets jammed and bruised by the tossing of the vessel.

PROF. GEORGE F. BARKER, M.D.—FROM A PHOTOGRAPH BY GUTEKUNST.

GEORGE F. BARKER, M.D.

PROF. GEORGE F. BARKER, who had the honor to preside at the meeting of the American Association for the Advancement of Science, at Saratoga, last week, was born at Charlestown, Mass., July 14th, 1835. In early life he was apprenticed to a philosophical instrument maker in Boston, and thus acquired that skill in the manipulation of apparatus for which he has since been distinguished. In 1856 Professor Barker entered the Yale Scientific School, and graduated as Bachelor of Philosophy in 1858. He was chemical assistant for two Winters (1858-61) in the Harvard Medical School. In 1861 he was appointed professor of chemistry and geology in Wheaton College, Illinois, and was acting professor of chemistry in 1862-63 in the Albany Medical College, where he graduated as M. D. in 1863. Early in 1864 he became professor of natural sciences in the Western University of Pennsylvania, at Pittsburg, was instructor (1865) in the Yale Medical College, and was appointed professor of physiological chemistry and toxicology at Yale in 1867. In 1871 he was chosen Vice-President of the American

NORTH CAROLINA.—MONUMENT TO THE UNKNOWN DEAD, AT SALISBURY.—SEE PAGE 30.

Association for the Advancement of Science. In 1873 he became professor of physics in the University of Pennsylvania, Philadelphia, which is his present position. In 1876 he was elected a member of the National Academy of Sciences. In 1878 he went out with the Draper Eclipse Expedition, to Rawlins, Wyoming, to witness the solar eclipse of July 29th, as spectroscopic observer. On his return he attended the St. Louis meeting of the American Association, where he was elected President for the ensuing meeting.

Professor Barker has devoted the greater portion of his time to the work of instruction, in the class-room as well as the public lecture-room. He has written much on various scientific subjects, his "Text-Book of Elementary Chemistry," published in 1870, having had an exceptional success. Among the scientific papers which he has published may be named the following: "The Forces of Nature," Albany, 1863; "Report of a Trial for Strychnia Poisoning," Philadelphia, 1864; "Formic versus Carbonic Acid," New Haven, 1867; "On Normal and Derived Acids," New Haven, 1867; "On Molecular Classification," New York, 1871; "On the Spectrum of the Aurora," New Haven, 1871; "Correlation of Vital and Physical Forces," New York, 1871; "New Vertical Lantern Galvanometer," Philadelphia, 1875; "The Molecule and the Atom," Salem, 1876; "Report on the Solar Eclipse of July, 1878," Philadelphia, 1878. He has been for several years one of the chemical editors of the *American Journal of Science and Arts*.

TO THE "UNKNOWN DEAD."

THE MONUMENT AT SALISBURY, N. C.

THE *souvenirs* left by the war around the outskirts of Richmond have long since been celebrated as they deserve; but a scarcely inferior interest attaches itself to another spot which is far less widely known—the Cemetery of the "Unknown Dead," at Salisbury, N. C.

On a sloping ridge, about half a mile from the town, a massive boundary-wall of stone fences in an inclosure seven acres in extent, two of which constitute the cemetery proper, the remaining five being laid out as a lawn and planted with trees. A neat lodge has been erected at the main entrance, over which the national colors are daily displayed in fine weather. The whole inclosure forms a charming feature in the local panorama; but the chief interest of the spot naturally centres itself in the eighteen trenches, two hundred and forty feet long, of the actual "burial-ground," in which lie, according to the most reliable estimates, 11,700 soldiers of the Union, who perished in the adjacent prison-pens during the last years of the war. Identification being impossible, these poor wrecks of humanity were interred in one promiscuous mass, from which circumstance the cemetery derived the touching name by which it is still known.

In the midst of this historic ground, the passing traveler, looking from the window of his car as he rattles by the foot of the slope, sees on its highest point, outlined in bold relief against the warm, dreamy sky of the South, a plain obelisk of New Hampshire granite, 26 feet 10 inches in height, which, since the 8th of February, 1876, has kept its silent watch over the graves of the "unknown dead." This monument, erected at a cost of $10,000, is from a design by Mr. Augustus Van Cleef, of New York.

A design which has borne away the palm from so many formidable competitors (including even Mr. Randolph Rogers, of Rome, the designer of the bronze gates in the Capitol at Washington) must needs be excellent of its kind; and it cannot be denied that in this case the artist's conception is fully worthy of his subject.

The nameless dead are very happily symbolized by a veiled tablet on the upper part of the shaft. Below it a helmet, shield and sword typify the great struggle, and a pair of broken fetters the tardy bursting of the prison-bands by the hand of Death, which came all too slowly to some of these heroic sufferers; while on the summit of the pillar hangs a sculptured laurel wreath, emblematic of their unfading glory.

But, perhaps, the most admirable feature of this noble memento is the Spartan terseness of its inscription. The execrable taste of the past century would have defaced it with bombastic verse or pompous prose, bringing in a crowd of worn-out commonplaces about "fell Death," "weeping Muses," "the rage of Mars," and "the laurels of Clio and Melpomene." But the intrusion of such sorry tinsel—an impertinence at the best of times—would be doubly so in the case of men like those who lie here:

> "These were not stirred by passion,
> Nor yet with wine made bold;
> 'Twas not renown that moved them,
> Nor did they seek for gold.
> To them their country's summons
> Was as the voice of God;
> Unswerving, uncomplaining,
> The way of death they trod."

Two simple words tell their whole story; and those words are "PRO PATRIA."

FUN.

THE last resort—A shoemaker's shop.

TRADE winds are regulated by blow laws.

How much does a ship's companion-way?

THE old man of the sea was an ocean buoy once.

IT is necessary to re-cruit a table caster occasionally.

THE most fashionable "morning wrapper" is the milkman.

L. S. D. are considered the best letters of credit in Great Britain.

NAPOLEON said that bayonets think, and we all know Pike's Peak.

TWO thousand pounds, cut short, is considered the ace among coal-dealers.

DEAD men tell no tales, but we frequently hear of the articulation of their bones.

JAPAN must be a poor place for the laboring men, for we are constantly hearing of the lacquer work in that country.

"AT what age were you married?" asked she, inquisitively. But the other woman was equal to the emergency, and quietly responded, "At the personage."

"How are you off for funds to-day?" asked a collector of an impecunious though classical debtor. "I am *semper idem*—always the same, emphatically without change!"

AT a legal investigation of a liquor seizure, the Judge asked an unwilling witness: "What was in the barrel that you had?" The reply was: "Well, your Honor, it was marked 'whisky' on one end of the barrel and 'Pat Duffy' on the other end, so that I can't say whether it was whisky or Pat Duffy was in the barrel, being as I am on my oath."

A MAN wearing wet clothes, and carrying a fishing rod and a basket, stopped a train on the Erie Railroad by giving a danger signal. "What's the matter?" the conductor asked. The man coolly replied that he had caught an enormous trout, and thought the passengers might like to take a look at it.

A YOUNG man who went to a circus and stepped too near the monkeys' cage had his arm seized and savagely jerked by one of the monkeys. He would have escaped safely had he not said "it was merely a monkey wrench"; but when they heard that, the infuriated crowd threw him into the lions' cage.

AN illustrated book, in pamphlet form, containing remarkable incidents in the life of Emma Abbott, is being compiled by Mr. Jas. W. Morrissey. The edition will be 200,000.

CUTICURA REMEDIES

Infallibly cure all Skin and Scalp Diseases, Scaly Eruptions, Itchings and Irritations. The testimonials of permanent cures of Skin and Scalp Diseases which have been the torture of a lifetime, by the CUTICURA REMEDIES, are more wonderful than any ever before performed by any methods or remedies known to the medical profession.

MURRAY AND LANMAN'S FLORIDA WATER is one of the surest and speediest of cures for every form of nervousness. It relieves headache when other applications completely fail. It reinvigorates the fatigued and overtaxed body, and it imparts force and buoyancy to the mental powers.

THE FINEST APPETIZING TONIC IN THE WORLD.—The Angostura Bitters of Messrs. J. G. B. Siegert & Sons are doubtless one of the most beneficial discoveries of the present time. The artistic combination of the excellent ingredients of which these Bitters are composed, renders them the purest and most useful hygienic liquors now extant, as it can be used by invalids and those in good health, by adults and by children, with equal advantage. For the public this cordial forms an attractive and delicious social drink on account of its exquisite flavor, and for the sick a useful remedy, which may be particularly recommended in complaints of the stomach and bowels, want of appetite, dyspepsia, diarrhœa and fever and ague. Try it, but beware of counterfeits, which are all injurious to health. Ask your grocer or druggist for the genuine Angostura Bitters, manufactured by Dr. J. G. B. Siegert & Sons.

BURNETT'S FLAVORING EXTRACTS are used and indorsed by the best Hotels, Confectioners and Grocers throughout the country. They are perfectly pure, and of great strength—at once the cheapest and best; and received the highest award at the Centennial Exhibition.

Common Sense Chairs and Rockers.

A lady writes: "The only objection to your Common Sense Rocker is, we all want it." Send stamp for Illustrated Catalogue to
F. A. SINCLAIR, Mottville, N. Y.

American Fruit-Preserving Powder

AND LIQUID is the Cheapest, Most Reliable, and Best Known Method of preserving all kinds of **Fruit, Tomatoes, etc. Strawberries, Raspberries,** and all high colored Fruits retain their rich color, as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving properly.
Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruit, Tomatoes, etc.,** and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, without *sealing* air-tight. Simply corked or tied down with a strong paper is all that is needed.
The Fruit will keep without *sugar*, or any quantity of sugar may be added as desired.
Warranted to be as healthful as table salt.
The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.
One package will preserve 250 pounds of Fruit, Tomatoes, etc. Price **One Dollar** per package.
Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of Rocky Mountains, for $1.25 per package. **Local and General Agents Wanted.**
Address,
L. P. WORRALL, No. 24 Liberty Street, New York.

THE MANSION HOUSE,

THE UNRIVALED ILLUSTRATED FAMILY JOURNAL.

Frank Leslie's

CHIMNEY CORNER.

This popular periodical has, for the past fourteen years, maintained its superiority over all its rivals, and occupies a field that no other journal attempts to fill. It presents a constant succession of brilliant attractions, literary and artistic; and while healthy fiction is given for the entertainment of its readers, and agreeably instructive articles for the home circle, no inconsiderable space is devoted to biographies of the good and great, to science, travels, curiosities of foreign life, the marvelous in nature and art, etc., etc.

The pages of the CHIMNEY CORNER abound with attractive reading alike for the little ones and for those of larger growth, combined with pictures that attract the eye and fix impressions vividly on the mind.

The Best Writers contribute to its columns; the serial stories are of the most absorbing interest, of great power, true to life, and embracing a wide range of subjects. These, together with short stories, essays, etc., etc., are from the pens of such popular writers as:

JOHN HABBERTON, author of "Helen's Babies"; NOURSE ROBINSON, author of "That Mother-in-Law of Mine," "The Janitor's Daughter," etc., etc.; EYTA W. PRESCH; CHRISTIAN REID; MRS. VICTORIA VICTOR, author of "The Dead Secret," etc.; M. T. CALDOR; FRANK LEE BENEDICT; J. W. DE FOREST; CORNY CAREW, author of "Belle Boddkin of Ballyboden"; PROF. H. C. DE MILLE, author of "Three Strokes; or, The Secret of Cozy Dell"; and other equally celebrated authors.

Beautiful Steel Engravings are frequently presented to the subscribers, far exceeding in value the price of a year's subscription.

Each Number contains sixteen pages, eight of which are beautifully embellished.

Published every Monday, and for sale by all newsdealers, price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

ROYAL

BAKING POWDER

Absolutely pure. Made from Grape Cream Tartar. Housekeeper's favorite in leaving ones of the world. No other preparation makes such light, flaky hot breads, or luxurious pastry. Can be eaten by dyspeptics without fear of the ills resulting from heavy indigestible food. ☞ Commended for purity and wholesomeness by the Government Chemist, Dr. Mott. Sold in cans only.

ROYAL BAKING POWDER CO., New York.

THE GENUINE
GAFF, FLEISCHMANN & CO.'S
Compressed Yeast

Bears the following Label, which is printed on Yellow Paper.

THE merits of the *Genuine "Compressed Yeast"* are undeniable. As proof of it, we refer to the host of imitations which have been offered to the public, hoping that the stolen name of

"COMPRESSED YEAST"

(which is secured TO US alone by letters patent of U. S. dated December 5th and 19th, 1876, January 9th and 16th, 1877, and March 6th, 1877,) would sell their goods by deceiving the public.

The housekeeper who once uses GAFF, FLEISCHMANN & CO.'S COMPRESSED YEAST, cannot be induced to abandon our pure extract of grain, which is a natural leaven, for a counterfeit article or a chemical compound, both of which are to be avoided if good health is a first consideration with the consumer.

(Formerly of 241 Broadway.)

CURE BY ABSORPTION.

"SAPANULE,"

Nature's Remedy applied by a Natural Method.

This justly celebrated lotion is pronounced by all who have used it to be of wonderful distinctive power, as well as full of healing.

Physicians of all schools recommend it as an external remedy, safe to use and of great value.

Inflammation cannot exist where it is applied.

Never fails to relieve pain, from whatever cause.

Cures Wounds, Bruises, Sprains, Burns or Scalds, Neuralgia, Rheumatism, Lame Back, Headache, Piles, Boils, Erysipelas, Contracted Cords, etc.

Removes all soreness from Bunions, Chilblains and Corns, curing them.

When used in sponge or foot baths, it at once relieves all pain and soreness of body, limbs or feet.

"SAPANULE"

SOLD BY ALL DRUGGISTS.

Ask your druggist to get it for you if not on hand.

PINT AND QUART BOTTLES, 50c. AND $1.

LAZELL, MARSH & GARDINER, Wholesale Agents, N.Y.
SAMUEL GERRY & CO., Prop'rs, 257 Broadway, N.Y.

A KEY THAT WILL WIND AND NOT WEAR OUT.

SOLD by Watchmakers. By mail, 50 cents. Circulars free. J. BIACK & Co., 36 Dey St., N.Y.

ISSUED

SEPTEMBER 15th.
SEPTEMBER 15th.

This novel of Western life by the famous American poet will be a new surprise to all his admirers. His vivid imagination, his picturesque power of description, his intimate knowledge of our mountain life, all combine to render it the most remarkable American novel of the time. The work teems with characters which are entirely new creations, as distinct and real as any of Cooper's heroes, realistic and in absolute keeping with the scenes and the time.

The thousands who have enjoyed his poetical works and his previous novels will know how to appreciate this work of fiction.

Single copies, 25 cents. Annual subscription, $3; six months, $1.50; four months, $1—post-free.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

WHERE ARE THE "INDEPENDENTS?"

OUR enlightened contemporary, the *Nation*, in recently offering some observations on the relations of the "Independents" to the next Presidential election, took occasion to remark on the strange and inexplicable manner in which the political reformers calling themselves by this name, or by that of "Liberal Republicans," have disappeared from the current phases of our political life and manners. It professed itself unable to tell what has become of them, so complete is the subsidence of all overt agitation on their part; and, in this ignorance of their present whereabouts, it could only ask: "Wherever they are, whether they are so satisfied with the situation, that they mean to give no sign of their existence at the next Presidential election, and to allow all that Mr. Hayes has done to carry out their ideas, even if it be not all he might have done, to be treated by the [next Republican] Convention as a mistake, and quietly ignored?"

While cordially recognizing, with the *Nation*, the great improvement which has been effected in the *morale* of the public service under President Hayes, we incline with it to the opinion that this partial improvement has been solely due to him and his Cabinet, and has not received either support or encouragement from the acknowledged and dominant leaders of the Republican Party. And the views even of the President and of his Cabinet under this head have been so vague and inconsequent that but for remembering the limitations which wait on all human excellence in this terrestial sphere we should find almost as much room for criticism as for admiration in paying the homage that is due to either. With so many sops thrown to the Southern adventurers who took part in the electoral counts of Louisiana and Florida; with a member of the Cabinet traveling by land and sea under a roving commission in pursuit of the Presidency; with another member of the Cabinet (and he, too, the "bright consummate flower" of Civil Service Reform) making bold to avow that he is supporting Sherman "in every way possible" in order to "kill off Grant"; and, finally, with the Republican Vice-President participating in the scramble of a political convention in New York, we are obviously still at a great remove from that political millennium towards which Mr. Dorman B. Eaton has long been straining his eyes with the faith of a prophet and the zeal of a reformer.

Since the Democratic leaders limit even their cheap professions of favor for Civil Service Reform to a simple change in the *personnel* of the Federal administration, it is plain that the real friends of this great and greatly needed reformation must look rather to themselves than to either of the existing political organizations of the country if they would hope to effect a radical and permanent cure of the evils from which the public service and the political morality of the people have so long suffered at the hands of political traders, wire-pullers and tricksters.

It is in accord with the order of nature, where social interests are involved, that a reform in moral ideas must always precede a reform in political methods and measures. It has been the deplorable weakness of all efforts heretofore made in the direction of an amended Civil Service that the moral sentiment of the country has not been inexorably bent on its attainment, and hence the avowed hostility of "machine politicians" and the half-hearted adhesion of professed friends in this matter of grave public concern. It is, therefore, at once timely and pertinent to ask what the earnest patrons of this reform "mean to do about it" in view of the next Presidential election.

As serving to show that the question has not lost its place even in the field of "practical politics," we observe that the Republicans of Minnesota, at their State Convention held on the 2d instant, adopted the following resolution under this head:

"We adhere to the advanced position heretofore taken by the Republican Party in favor of civil service reform. A true reform of the civil service should, among other benefits, lead to a reduction in the number of offices and promote economy. Any important measure of civil service reform, in order to be effective, should be put into the form of law, and not be left subject to annulment by mere Executive authority."

Such expressions as these, even when coming from professional politicians (who have sometimes been known to assume virtues without having them) are at least a sign that the "moribund issue" of the last Presidential campaign is not entirely dead, however poorly the starveling child may have been provided for by its foster-parents in whose hands it was farmed out. And on the whole we cherish the abiding conviction that though the present "whereabouts" of the political Independents of the last Presidential campaign may need to be advertised for by the *Nation*, yet in spite of all appearances on the surface of things, the number of such Independents was never so great as at the present time. Indeed, one reason why the organized activity of the old Independents is less conspicuous than it was at a former period may be found in the fact that all the existing political organizations, not even excepting the Greenbackers, are more or less in a state of "dissolution and thaw." New points of crystallization are slowly but surely forming in the present chaos of political opinions and confederations, when, as Mr. Foster, of Ohio, tersely put it a few months ago, "a man scarcely knows what party he belongs to as soon as he crosses a State line." The defection of the Western and Southern Democrats from the hereditary doctrines of their party on the currency, and the Republican reaction against even the "mild" reforms of the Hayes administration in favor of Grant and "Grantism," have jointly combined to weaken the hold of multitudes in both the great historical parties of the country. The Independents are not so much dead as passing through a new Avatar in that perpetual process of political evolution which goes on in the figure of human society, and which is never so much the sign of life as when the decay of effete organizations lends itself to the formation of a new birth in the body politic.

THE BRITISH CROPS AND TRADE.

THE crops in England are ruined, and irretrievably so. She must face the grim reality, and, in facing it, cry *Deo gratias* that her Cousin Jonathan's granary is full to overflowing. The *Mark Lane Express*, the Koran of the English farmer, says: "The damage done is irreparable. No subsequent weather can prevent the outcome of this season's wheat crop proving the most disastrous both in quality and quantity. Happily the weather, the last day or two, has been well suited to harvest operations. Many fields are still quite green, while in others wheat, though more forward, is a bad color. Root crops are choked with weeds. Potatoes have gone from bad to worse. In fact, in no single instance can agricultural prospects be said to have improved during the past fortnight."

The first scene in a new act in the drama of English domestic legislation has been played out in the British House of Commons, and the curtain will not fall until England's land-laws shall have been recast. Her system of agriculture now finds itself unable to bear the strain of American competition, and the Agricultural Commission appointed by Parliament must examine not only the various methods of farming the soil, and the precise influence of foreign competition, but the far wider problem of the tenure of land. The tenant farmers pay about $350,000,000 to their landlords for rent, over and above which they must pay their laborers before they have a penny for themselves. This Commission will have to ventilate two points of superlative importance: the number of people whom the English soil can be expected to support, and the manner in which the productive power and the market value of land are to be maintained, not to say increased. There are 32,000,000 of consumers,, while two-thirds of the soil is in the hands of less than 11,000 owners. Has the death-knell of feudal monopoly been rung?

The *Times* dwells upon the significant fact that while every Bessemer converter in the United States is in full swing, there are no less than forty-four idle in the United Kingdom. Owing to the depression in trade and foreign competition, the earthenware and china manufacturers of Staffordshire have resolved on a reduction of wages of employés, which will affect over fifty thousand workmen. Notices of a reduction of wages, affecting three thousand more cotton operatives, have also been posted in the mills at Glossop, in Derbyshire.

LEGACIES OF THE BERLIN CONGRESS.

WHEN Lords Beaconsfield and Salisbury returned in triumph from Berlin in August, 1878, they declared that they had brought home to England "peace with honor," and boasted that they had effectually checkmated Russia and preserved the "independence" of the Ottoman Crown. It is now time to observe how far the Treaty of Berlin has been executed, what of its provisions remain still unfulfilled, and what guarantee it affords to-day for the peace of Europe in the future. For the principal articles of the treaty were to be carried out within a year's time from its ratification; and that year was completed on the 2d day of August last. On the one hand, it is energetically claimed, not only by the English Cabinet but by Prince Bismarck and Count Andrassy, that the treaty has reaped all the fruits that were expected of it. On the other, Mr. Gladstone, and with him some leading French and Italian statesmen, declare that it has proved to a large extent abortive, and that the peace of Europe is still threatened by the Eastern question.

Within certain limits there is a modicum of truth in each of these assertions. There are important provisions of the treaty which have been promptly and completely carried out; there are other important provisions still unfulfilled. An examination of these will show that Russia has by no means gained all that she sought by the Treaty of San Stephano, which was replaced by that of Berlin; and that, on the other hand, the independence of Turkey has been by no means established, and the efficacy of her defenses against Russia has not been secured.

Bulgaria has been detached from the Sultan's dominion and formed into a practically independent State under the rule of a Prince nominated by Russia. But the provision of the treaty by which the great quadrilateral of Bulgarian fortresses were to be razed has not been carried out. Eastern Roumelia, lying south of the Balkans, which would have become independent under the treaty of San Stephano, has been made an "autonomous" province, garrisoned by its own militia, and presided over by a Christian governor, Aleko Pasha, whom the Powers forced the Sultan to nominate, and guaranteed civil and religious liberty. So far the treaty of Berlin is observed; but, contrary to its stipulations, the Sultan has not fortified the Balkans, and does not garrison Bulgaria, in spite of Lord Beaconsfield's boast that he had secured this "impregnable defense" for the Sublime Porte. It seems altogether probable that Russian intrigue, local agitation and the weariness of the Powers, will sooner or later effect a union between Bulgaria and Eastern Roumelia, under Prince Alexander; and thus Russia will finally have accomplished her aim to make a single State of the Bulgarian provinces. If this happens, the Sultan's dominion will have dwindled by one-third, and its limit of defense will be the plain of Adrianople, perilously near the capital itself.

The Berlin Congress, to put it mildly, encouraged Greece to look for a cession of Greek-populated territory from Turkey. The Powers did not guarantee such a cession, nor did they agree to coerce the Sultan in the matter; but they held language which led Greece reasonably to expect a portion of Epirus and Thessaly, with the City of Janina, and perhaps Salonica. The Greek claim was founded in justice; for the provinces sought by King George, by every principle of nationality belonged to the Hellenic kingdom. This Greek claim is one of the most awkward legacies of the Congress. It still remains unsatisfied; it is still unurged upon the Porte, in any effective form, by Lord Beaconsfield and Prince Bismarck; and England has managed to lose her championship of Greek interests, which has been warmly taken up by France, and in a degree by Italy. The Greek question is a sore and irritating one, and likely enough contains within it the seeds of future wars.

It is true that the Berlin Treaty, while permitting Austria to occupy Bosnia temporarily, put no limit upon the period of that occupation; but its continuance is scarcely in accord with the intention of the Congress, and is at this moment causing bad blood between Austria and Russia. This occupation was regarded as a temporary expedient, as a protection to Austria, while the affairs of Turkey, in confusion as a consequence of war, were being settled. But Russia has so far faithfully fulfilled her engagements at Berlin as to withdraw her troops entirely from Turkish territory within the stipulated time; and Austria would seem to have no motive left for keeping her hold on Bosnia, unless, indeed, her motive is to finally annex that province to her own Empire.

The clear understanding that England made herself responsible for the inauguration of extensive reforms in the Sultan's Asiatic dominion has not yet been carried out. A few corrupt or tyrannical pashas have been dismissed at Sir Henry Layard's instance; but Asia Minor is reported as still sunk in the degradation in which the Berlin Congress found it. This is a serious branch of the Eastern Question, and bristles with future dangers. But the English Ministers plead for time, and promise that ere long the reforms will have been effected.

It seems that, after all, the most serious loss of Russia, in exchanging the Treaty of Berlin for that of San Stephano, has been in the matter of the war indemnity demanded by her from Turkey. By the latter treaty, Russia would have held Turkish territory in pledge for its payment, and would have been able to seize the first fruits of the Turkish revenues to defray it, in postponement of the interest of Turkey's creditors. The Treaty of Berlin deprived Russia of these guarantees, and thus made the securing of the indemnity a remote if not an impossible task.

A general survey of the consequences of the Berlin Treaty would lead to the conclusion that it postponed, but by no means settled, the Eastern Question. It left behind it many seeds that may ripen into a general European conflict. While it rid Turkey of Russian troops, and saved Constantinople from imminent attack, it really weakened the Sultan's power nearly, if not quite, as much as that power would have been weakened by the Treaty of San Stephano. Turkey is actually as much deprived, as a source of national defense and revenue, of Eastern Roumelia as of Bulgaria. She has probably lost Bosnia forever. That she must sooner or later settle with Greece, and give up her Greek provinces, is certain; it is only a question of time. Portions of her territory have been taken away and added to Roumania, Servia, and Montenegro; and these bitter enemies have been strengthened by her loss. The Asiatic reforms will probably be abandoned; England must be content with the not very promising acquisition of Cyprus, which is virtually another loss to Turkey. Neither Lord Beaconsfield nor Prince Gortschakoff have much ground for triumph in the issue of the Treaty of Berlin. At best, it was a compromise between two antagonists who were not ready to encounter each other in a trial of arms. Russia did not secure the full fruits of her expenditure of men and money; England did not secure, in Turkey, an invincible barrier against Russian aggression. The Eastern Question still exists.

THE CALIFORNIA ELECTION.

THE California election has resulted in a mixed verdict. The Workingmen, or Kearneyites, carry San Francisco for their Mayor and some other offices, the Republicans elect the Governor and three of the four Congressmen, and the Democrats and Workingmen secure local advantages in a few places where they combined their vote. So far as can be determined from the imperfect returns, the preponderance of advantage in the State at large is largely with the Republicans. Kalloch's plurality in San Francisco is small, and but for the sympathy in his behalf created by the murderous assault of De Young, he would probably have been defeated. In view of all the circumstances of the contest, the result must certainly be regarded as a triumph for the conservative sentiment of the State. The Kearney faction will never again be able to command so large a vote as on this occasion, when the depression of business and other exceptional causes operated in their favor.

EVENTS ABROAD.

SIR GARNET WOLSELEY, England's only general, finding that setting a price upon Cetewayo's head failed to produce the required article, has taken to hunting the Zulu lion, and the most recent dispatches announce the burning of Amrakage, the immortal rebel's kraal, and the destruction of his powder magazine, ten miles distant therefrom. The pursuit is being maintained by human blood-hounds who, according to Archibald Forbes, delight in pig-sticking, as the feats of the Seventeenth Lancers at Ulundi have been grimly designated. Cetewayo had notified Wolseley that he was willing to submit and pay taxes, but that the country must be cleared of British soldiers. His messengers were informed that Cetewayo was no longer king, and that he must surrender unconditionally.

Will John Bull refuse to pay that little bill for Newfoundland fish of $103,000? He is bemming and hawing, and stroking his chin with his forefinger and thumb. He is cogitating, ruminating and endeavoring to pooh-pooh it, but Secretary Evarts wants his money and means to have it, too. The *Times* declares that the "inshore fisheries are the inalienable heritage of Canada and Newfoundland, and that these countries must say whether and on what terms participation in them should be granted to a foreign country." To say the least of it, this is the sublimity of impudence, in view of the fact that the Washington Treaty guarantees our fishermen the same rights on these grounds as are enjoyed by the natives. There is a cloud on the horizon, and who can say that a few miserable cod-fish will not prove a *casus belli* if not a *casus fœderis*.

Paris has had her sensation in the arrival of the amnestied Communists from New Caledonia. The scenes at the Orleans Railway depot were such as delight the hearts of the Paris *bourgeoisie*. The ex-convicts looked pale and thin, and as a rule

Digitized by Google

were accompanied by the pet animals who had shared their exile. How truly French this is!

Marshal Canrobert has succeeded in running with the hare and in hunting with the hounds. He obeyed the Government of the Republic by remaining at home instead of attending the funeral of the son of the man who made him, and then, as a private tourist, when all was over, he visited Chiselhurst and made his peace with the Empress Eugénie. The man who uttered the words to his cuirassiers and dragoons on the Crimean battlefield, "You are *fine bullets* which I send at will on the enemy," should have flung his commission in the teeth of the Minister of War and have been pall-bearer on that melancholy day.

A dispatch from Rangoon announces that the souls of the Burmese are in arms and eager for the fray, that twelve guns have been mounted on the frontier and 40,000 men concentrated. The departure of the British Resident is considered at Mandalay to be a triumph for the party hostile to the British, as the King stoutly refuses all communication with any official under a Resident. This is another chance looming up for Beaconsfield — another "peace with honor"; and who knows but that Tracy Turnerelli may yet be enabled to place the wreath upon the head of the Sphinx?

"Little Martinez Campos, the fighting cock of Spain," consents to Alfonso's marriage with the Archduchess Marie, and the Cortez is to be convoked by that good little man early in November. Campos, for he is the Alpha and Omega of the Cabinet, the power behind the throne, has also decided to instruct his diplomatic puppet at Washington to insist upon Cuban refugees and filibusters being compelled to respect neutral obligations. It is supposed that this refers to the Cuban organization in New York, and that the desperation of the Spanish Government is such that it will not hesitate to ask our Government to prevent the holding of public meetings or parades having for their object the creation of sympathy for the insurgents in Cuba.

Leo XIII. is the type of a peace-maker, the human dove to send forth laden with oil for the troubled waters, at least so thinks Martinez Campos, who has confidentially solicited His Holiness to induce Don Carlos to enter a monastery, or at least to yield up his pretensions to the Crown of Spain in favor of Alfonso. The Pope, a shrewd man of the world, despite his being inclosed by the four high walls of the Vatican, didn't see it, and blandly replied that he could not well interfere, but that he would advise the Count de Chambord to be consulted in the capacity of peacemaker. Verily, Leo loveth a joke.

There are some indications of a quarrel between Austria and Italy, growing out of the restiveness of the latter over the question of the *irredenta* provinces. A leading conservative organ in Rome declares that Italy will never concede that "Italian provinces still under Austrian sway belong to Austria by full right and shall continue to do so indefinitely."—The Russian Imperial Council has decided, despite the remonstrances of the Grand Duke Constantine and Count Tolstoe, to introduce further repressive measures against the Nihilists. It is difficult to stamp down molten lava, as the Russian police have already discerned to their cost. —The French Government has been beaten in the Councils-General on the Ferry Educational Bill.—At a recent banquet at which Mr. Charles Stewart Parnell, Home Rule Member of the House of Commons from Meath, was present, a toast to the Queen was hissed. The Lord Lieutenant of Ireland has directed an investigation of the circumstances under which Mr. Parnell, a magistrate and member of Parliament, permitted such an indignity to Her Majesty to pass unnoticed.—At a recent disorderly meeting of some 15,000 persons in Limerick, assembled to consider the land question, Mr. Parnell advised farmers to combine and pay no rent until they got a reduction, and advised landlords to accept these terms while they could, as the opportunity would never recur. The crowd applauded the address and shouted in favor of shooting landlords and agents.—The crops in Italy are a total failure. Perhaps King Humbert will now cease manufacturing 100-ton guns, and apply the fire towards relieving his distressed subjects.

THE decrease in the public debt during the month of August amounted to $3,527,395. The amount of cash in the Treasury on the 1st instant was $243,696,228. The total number of standard silver dollars coined to that date was 40,273,050. The aggregate weight of the silver paid out from the United States Treasury and United States Mints during August was fifty-six tons.

NOW HERE is something alarming. A paper on the anthracite coal fields of Pennsylvania, read at the recent meeting of scientists at Saratoga, declares that in 186 years, or in the year 2065, these fields will be totally exhausted, and we will be compelled to fall back on the bituminous coal fields. It is consoling to know that these latter have an area of 200,000 square miles, and that there is no danger that the supply will give out for at least a century or two. And by that time, if the millenarians are correct in their predictions, the question of coal supply will not be likely to trouble the scientists or anybody else on this terrestrial ball.

DURING the month of August 12,135 immigrants arrived at this port, making the number for the present year 76,809—an increase of 22,654 over last year. The increase is mainly from Scotland, Ireland, Norway and Sweden. Nearly all the immigrants of the year have settled in the Western States, where all of them find steady employment and opportunities to make the most of any peculiar capacity they may possess.

SECRETARY SCHURZ is making a personal investigation into the arrangement of the Indian Agencies, having spent some time in Dakota in learning for himself just how the agencies are conducted, and whether the Indians are treated fairly. He is the first Secretary of the Interior who ever went among the Indians to investigate charges against the agencies and secure efficiency in the management of Indian affairs. He is reported as finding among the Indians generally gratifying evidences of advancement, and there can scarcely be a doubt that great benefits will result from his visit to these camps, and his official manifestation of interest in their welfare.

GENERAL GRANT sailed from Yokohama for San Francisco, September 3d, and will probably reach the Golden Gate somewhere about the 25th. During his stay in Japan he was the recipient of the very highest honors. The Mikado is reported to have consulted him on many important points of international policy, and to some extent of domestic policy. It is not surprising that the Japanese Government should desire, in the present situation of national affairs, to avail itself of the counsel of so conspicuous a representative of the one country which has always manifested a genuine friendship and sympathy with it.

THE official statement of Mr. Louis H. Cramer, Receiver of Taxes at Saratoga, covering his transactions for the last nine months, is in every way a model document. It shows in minutest detail all his receipts and disbursements, supplying just the information needed by every taxpayer as to the disposition of the public moneys. In these days when so many public officials obscure and muddle their accounts so as to make them unintelligible, and thus frequently conceal irregularities, waste and plunder, it is gratifying to learn that there are some custodians of public trusts who rightly appreciate their responsibilities and discharge them intelligently and conscientiously.

THE indications of the political canvass in Ohio favor the election of the Republican candidate for Governor. The financial heresies of General Ewing are alienating many of the best men of his party, while the activity and popularity of Mr. Foster, on the other hand, are everywhere consolidating and invigorating the Republicans, who aim not only to elect their Governor, but to obtain control of the Legislature, and so secure Mr. Thurman's seat in the United States Senate. The influence of the result, whatever it may be, will not be confined to Ohio: on the contrary, it will be felt in every Northern and Western State, and, as to the financial question, may prove decisive to an extent not now anticipated.

THE Republican State Convention, held at Saratoga last week, adopted at least one resolution which will command almost universal assent, as follows: "Moneyed and transportation corporations are not alone the works of private enterprise, but are created for public use, and with due regard to vested rights it is the clear province and the plain duty of the State to supervise and regulate such corporations as to secure the just and impartial treatment of all interested." If the Republican Party of New York had only acted up to the doctrine here announced when it had the power, the public would have escaped very many of the evils of corporation management which have been disclosed by the Legislative inquiry now in progress, and which seem to have become firmly intrenched in official policy and usage.

THE practice of carrying weapons received a very wholesome rebuke at the hands of Judge Cowing, of the Court of General Sessions, some days since. A prisoner who had been convicted of firing a loaded pistol at an officer for being ordered away from a street corner, being brought up for sentence, the Judge said there was no reason or excuse why any man should go through the streets armed with a bowie-knife or a pistol, and nine-tenths of those who carry weapons do so for purposes of violence and plunder. The law, he added, is an ample protection for any peaceful, law-abiding citizen, and in this view of the case he sentenced the prisoner to the penitentiary for one year—the heaviest penalty allowed by the law. Judge Cowing is entitled to the thanks of the public for thus branding a dangerous and indefensible practice precisely as it deserves.

THE examination made by the State Insurance Superintendent into the condition of the life and fire insurance companies of this city has resulted in some very remarkable disclosures. In a number of cases defalcations of officials were discovered of which stockholders and the public have been kept in entire ignorance, and in one case a former president of a life company had for a period of ten years purloined the company's funds without being discovered or even suspected by the directors or the committee which passed on his accounts every quarter. The books were manipulated by the president so that the balances would show correctly after the funds had been taken. At his death the Board of Directors gave his widow a bonus of $1,000 and passed resolutions eulogizing his memory, and announcing that the bonus was given because of "his useful and meritorious services." It is estimated that his defalcations reached between $40,000 and $50,000. In view of such a disclosure as this, illustrating both official dishonesty and the incompetence, stupidity and negligence of those intrusted with the oversight of corporation finances, the public may well begin to doubt whether there is safety anywhere for the stockholder or the policy-holder in institutions of this character.

THE nomination of Mr. Alonzo B. Cornell as the Republican candidate for Governor of New York, by the State Convention at Saratoga last week, was not unexpected by close observers of the drift of opinion in the party. While Mr. Cornell's candidacy was opposed by some prominent and influential Republicans, he had the cordial support of most of the party managers, and, with the opposition dividing its strength, his nomination was a foregone conclusion. Mr. Cornell may not be the strongest candidate who could have been named, but his personal character is unassailable, and his public career has been in every way honorable, and that certainly will prove a positive advantage in the canvass. Whether he will be elected will depend very largely upon the action of the Democratic State Convention and the attitude of the City Democracy toward the ticket which may there be named.

A TELEGRAM from Yokohama, Japan, announces the arrival there, on the evening of September 2d, of the Swedish exploring steamer *Vega*, with Professor Nordenskjöld on board, having accomplished the famous Northeast Passage. The vessel sailed from Gothenburg on July 4th, 1878, and during the entire trip the officers and crew maintained the best of health and spirits. Contrary to the general experience of Arctic explorers, not a single case of scurvy occurred on board. Professor Nordenskjöld is highly elated over the success of his voyage. He thinks the voyage from Europe to Asia by Behring Strait is certain and safe, with very little more experience of navigation in the Northern seas. From Japan to the mouth of the Lena River there are no difficulties in the proper season for experienced sailors. The Lena River taps Central Siberia, and a large prospective trade can readily be developed.

THE establishment of a professorship of Chinese at Harvard College is an important experiment in the direction of an enlargement of our educational methods. The step is understood to have been taken at the suggestion of persons who, by residence or business association with China, regard it as a subject of importance that young men in commercial life may go to the East ready furnished with the language of the Celestials. It is probable that the eligibility of the course will be restricted so as to admit only such students as will study with a view to locating in China, where they may help to enlarge our commercial and business relations with that country; but it is not decided yet how the language will be taught, how ample will be the opportunity of taking up the study, or what books will be used. All that has been done so far is to decide that the language should be taught, and to secure a competent teacher—Professor Ko-Kum Hua; but with this much done, the experiment is certain to be made, and the results can scarcely be otherwise than beneficent.

WHAT is known as the Gothenberg system of dealing with the traffic in intoxicating drinks appears to be attended, wherever fairly tried, with satisfactory results. This system is one (under the Swedish Licensing Act) in which the corporation of the town, who are responsible for its order, purity and well-being, give power to a company to become the guardian of the "drinking traffic," and they, and they alone, as the old licensed houses one by one lapse, have the right or power to renew the license or to increase the present number, and then only under their own management. Through the company, whatever be the money results of the houses, the town reaps the benefit. The company, as they see need, open fresh public-houses or buy up old and not-required ones, making the public necessity the supreme consideration in whatever they do. In Gothenberg the evils of drink have been materially diminished by the operation of this system, under which at certain times ale and beer alone are not sold—to be drunk on the premises—unless food be bought also. The system closes public houses from five on Saturday evening until Monday morning, but gives to the garden *cafés*, which are in the hands of the more responsible and wealthier managers, the privilege of selling ale and porter on Saturday until eleven o'clock P. M., and on Sunday evening after five o'clock until eleven. A correspondent, who has investigated the subject in all its bearings, says: "The results are visible to every observant man—no inebriated persons at the railway-stations, no drunkenness on board the boats and no drunken brawlers in the streets. The apprehensions and committals have fallen off most noticeably, and the consumption of stuff has decreased." Would it not be well for the "reformers," here and elsewhere, who are continually suggesting all sorts of impracticable schemes for arresting the evils of intemperance, to consider whether some such method of rational restraint as is here outlined may not be worth an honest trial before resorting to more sumptuary measures?

NEWS OF THE WEEK.

Domestic.

THE plurality for the Republican State ticket in California is about 22,000.

EFFORTS are making to establish a new coal combination, but they have been so far unsuccessful.

THE Minnesota Republicans have renominated Governor J. S. Pillsbury, who has served for two terms.

THE Prohibitionists of New York have nominated Professor John W. Mears, of Oneida, for Governor.

EX-MINISTER WELSH, recently returned from England, has closed up his accounts with the Government.

ALLEGED irregularities in the Department of Public Parks in this city are to be investigated by Mayor Cooper.

THE trial of the Chisholm indictments was commenced last week in the Court of De Kalb County, Mississippi.

TWO persons were killed and nine badly scalded by an explosion on the steamer *Atlanta*, on Lake Erie, September 5th.

THE total number of cases of yellow fever in Memphis up to September 7th was 1,505, and the total number of deaths 272.

THE will of the late Thomas Wilson, a retired merchant and capitalist of Baltimore, bequeathed over $700,000 to charitable objects.

THE Congressional Committee on the Depression in Labor, just returned from the West, reports there is little depression in that section.

PRESIDENT HAYES and family left Washington September 8th for the West. He will visit the Cincinnati Exposition, and then go to Kansas.

A VIOLENT rain and wind storm visited Southern Louisiana, September 1st, destroying the crops and a large number of sugar-houses and other buildings.

SINCE January 1st, 17,292 German immigrants have landed at this port, which is an increase of 3,767 compared with the corresponding period of last year.

CHARLES DEMOND, late Treasurer of the Massachusetts Home Missionary Society, has been arrested on a charge of embezzling $8,000 belonging to that society.

GENERAL WILLIAM H. HAYS, of Springfield, Ky., is to be appointed United States District Judge for the district of Kentucky, vice Judge Ballard, deceased.

MR. JEFFERSON BORDEN, one of the founders of the manufacturing industries of Fall River, Mass., and an officer in many of the local banks and other corporations, has failed.

EIGHTY-TWO descendants of John Emery, who settled in Newbury in 1635, were present at a reunion September 2d, including representatives from seven States and Washington, D. C.

MRS. KATE SPRAGUE has made application to the Supreme Court of Rhode Island for the appointment of a trustee for her property in Kingston, R. I. Mrs. Sprague proposes to visit Europe.

AMONG recent deaths are those of Mr. Lawrence Waterbury, a well-known merchant of this city, who had accumulated a fortune of $2,000,000, and Hon. John Kerr, of the Superior Court of North Carolina.

A PORTION of the Sprague estate was sold at auction in Providence, R. I., September 4th, to satisfy the claims of the Bank of Commerce of New York. It was bought in by the bank at a nominal price.

MESSRS. ALBERT PELL and Clare Sewell Read, a sub-commission of the Parliamentary and Royal Commission appointed to examine into the maladies and remedies of the agricultural depression in Great Britain, arrived at this port September 6th.

REV. W. H. H. MURRAY, of Boston, has published a card announcing his withdrawal from the ministry and denying the charges affecting his business integrity. He declares that he will pay in full the obligations against him. Involuntary proceedings in bankruptcy have been commenced against him.

AT a meeting of the Superintendents of the Poor at Saratoga, last week, a resolution was passed asking Representatives and Senators in Congress to make some provision, in the absence of a head-tax, whereby the burden of supporting pauper emigrants might be met by Federal support, with release of the State from the entire expense.

Foreign.

THE Marquis of Lorne formally opened the Toronto Exhibition, September 5th.

THE growth of toleration in Mexico is shown by the opening of a new Methodist church in Puebla.

THE Spanish Government proposes to send immediately 25,000 troops to maintain tranquility in Cuba.

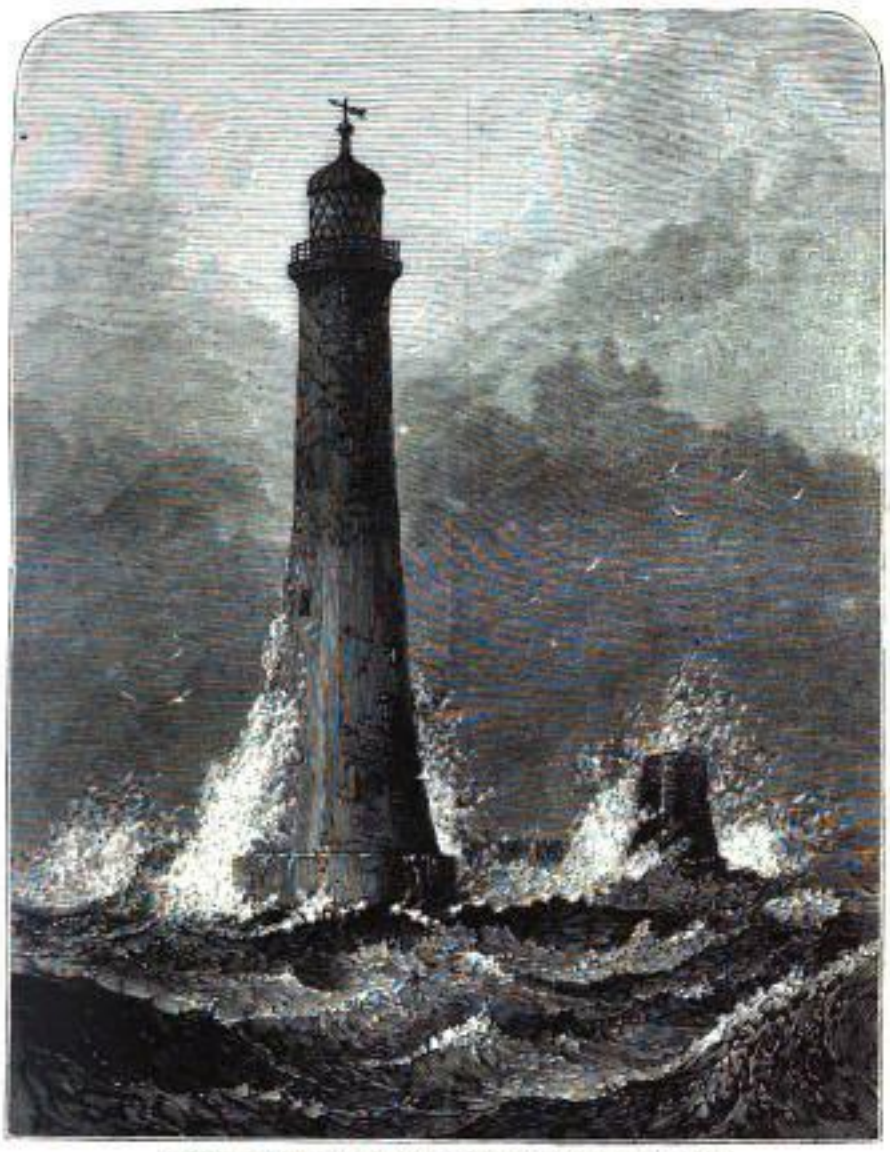
STEPS are being taken in Mexico to raise money for the payment of the American debt. The feeling in favor of the re-election of President Diaz is increasing.

THE anniversary of the surrender of Sedan was celebrated throughout Germany on September 2d. At Berlin the celebration was made the occasion of great rejoicing.

AT the request of the United States Government, two cadet engineers from Annapolis Naval Academy will be admitted to the Royal Naval College, at Greenwich, as students, next month.

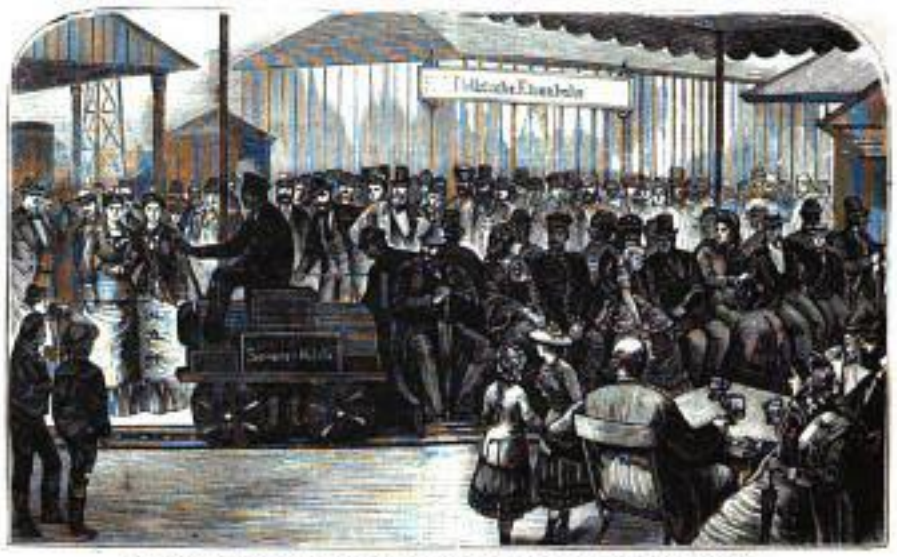
OWING to heavy storms and floods in the River Neva, the canals in the centre of St. Petersburg have overflowed, and the foxbourgs are under water. Iron roofs were blown from houses and churches in all directions.

THE deep-sea section of the French cable has been laid, and the line is complete from Brest to St. Pierre. The steamer *Faraday* is now returning to Europe to ship the section of the cable which is to connect St. Pierre with New York.



THE Greek and Turkish Commissioners have not come to terms. Should the Greek Government not share the Porte's views, it is believed that the two Governments will agree to refer the question to a joint mediation of the Powers.

THE police of Eastern Roumelia believe they have discovered a widespread conspiracy extending throughout Tartar-Bazardjik, Kazanlik, Eski-Zagra and Haskoi. They have discovered the existence of six revolutionary committees. Pamphlets have been found summoning the people to arms. A speedy uprising of Mohammedans is expected. Aleko Pasha proposes to place twelve battalions of militia on a war footing.



INFORMATION comes by way of Simla, an important post in British India, that on September 3d twelve Afghan regiments revolted and attacked the Ameer's arsenal at Cabul. Being joined by the populace, they assailed the British Embassy and finally set it on fire. Major Cavagnari, the Envoy, and his staff were killed after a heroic struggle. The Ameer was at the mercy of the insurgents. British forces have been ordered to advance on Cabul and Candahar.

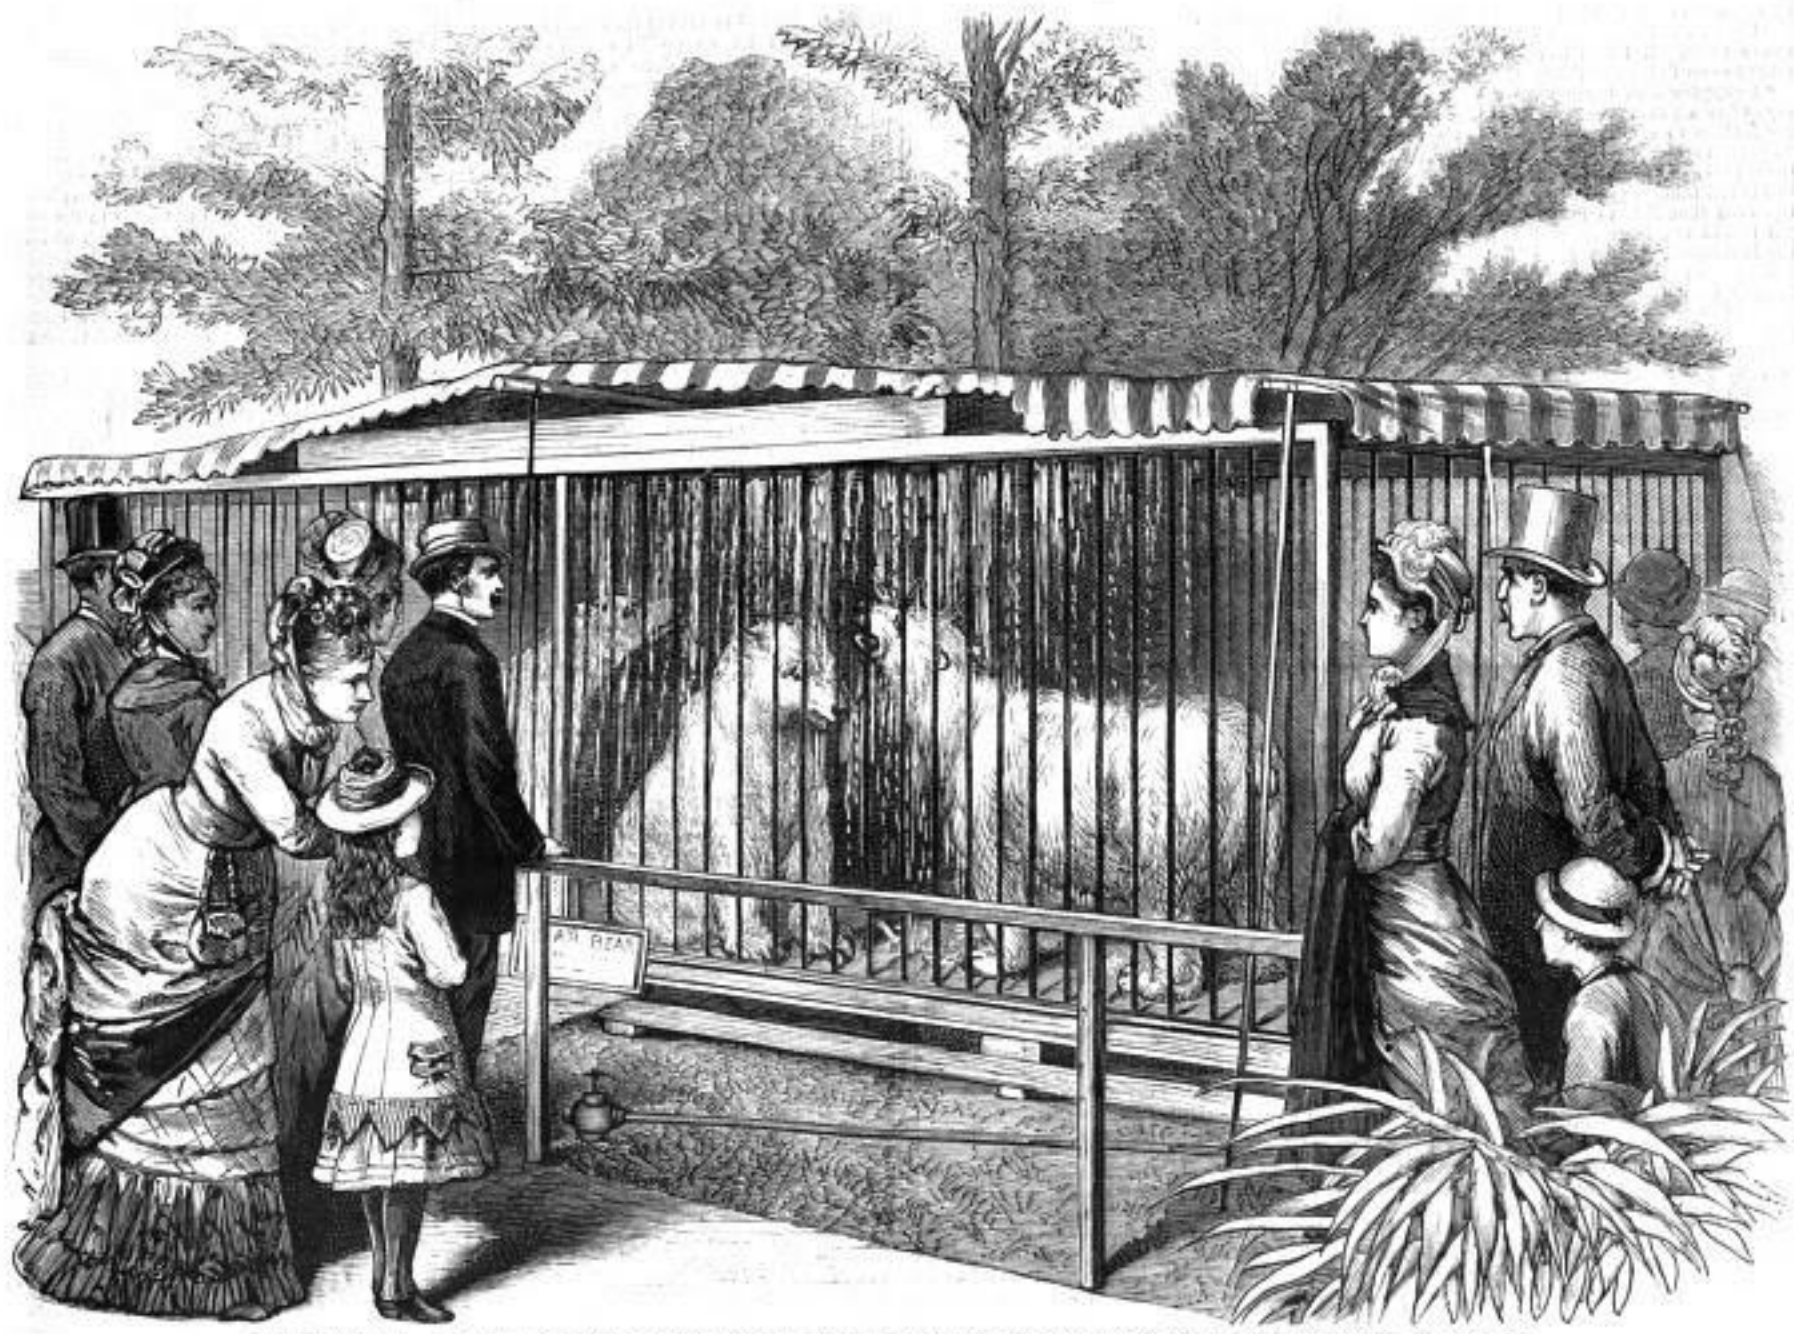
NEW YORK.—REMOVAL OF OBSTRUCTIONS IN THE HARBOR BY THE GENERAL GOVERNMENT—THE STEAM-DRILLING SCOW AT WORK ON DIAMOND REEF, OPPOSITE WHITEHALL.



EXCAVATIONS IN NEW YORK HARBOR.

WHILE negligent officials are busily engaged in filling up the lower bay with ashes and garbage, the United States Government is as busy excavating and blasting away the rock which forms obstructions to navigation. A dangerous plateau of rock known as Diamond Reef lies midway between the Battery and Governor's Island. For the past twenty-five years, off and on, attempts have been made to remove this reef, but none has met with the success of that now going on under the immediate direction of General Roy Stone, and the general supervision of General John Newton.

The reef was originally a plateau about two acres in extent, and rose to within fifteen feet of the surface of the water, while all around it the depth was forty feet and over. As it lay directly in the channel, frequent wrecks resulted from carelessness or ignorance in piloting, or vessels being blown on the reef, for the majority of large vessels drew over fifteen feet of water. About two years ago operations were begun to reduce the level of the rock, and at present the extent of the reef has been reduced to one acre, and the depth increased to over twenty feet.

The work is done by a steam-drilling scow. The conditions were very severe, as there were large masses of rock to be blasted, huge boulders too large to be lifted but not large enough for drilling, very swift and strong currents of water, and great crowds of larger or smaller steam and sailing vessels; but all these obstacles have been overcome by science and ingenuity, and the gratifying result of a deepened channel is nearly reached.

The drilling scow is placed directly over the rock

NEW YORK CITY.—AWAITING THE SNOW AND ICE OF WINTER—HOW THE POLAR BEARS IN CENTRAL PARK PASS THE SUMMER MONTHS.—SEE PAGE 53.

Digitized by Google

to be drilled. This scow is also a machine-shop and a fortification against collisions, which at first were frequent, but now are rare. In the centre of this scow is a large well thirty-two feet in diameter, through which a large iron dome descends to the bottom and rests on the rock to be drilled. The drilling tubes, irons and ropes pass through this dome and are operated from the scow. When the holes are drilled, cartridges filled with dynamite are inserted, and the scow moved away to a safe position. Then the cartridges are discharged by electricity. The broken rock falls away off the ledges and sides of the reef into deep water. This operation is repeated again and again until the proper depth is reached over the entire extent.

A few hundred feet from the drilling scow is another scow, on which is a hydraulic pump, which is used for the very peculiar purpose of washing the surface of the rock, at the bottom of the water. A large pipe, some eight or ten inches in diameter, is directed to the bottom at the desired point. Connected with this is a hose which runs along the pipe and terminates in a small nozzle just at the end, through which water is forced at a pressure of 150 pounds to the square inch. This digs away the dirt and loose small stones. An induced current of water is generated in the large pipe by another hose, which forms a partial vacuum, the result being that the water, stones and dirt rush up through this large pipe and are discharged at the other end into deep water. This leaves the surface of the rock bare and clean and ready for drilling. When a blast is to be made, a danger signal is hoisted on the scow, so that passing vessels shall not come too near.

The work is one of the most important of the century, and is under the same general supervision as that done at Hell Gate, One Hundred and Twenty-fifth Street, Harlem River, and Coenties Reef, at each of which places from eight to ten feet have been added to the depth of the water.

LOVE IS ENOUGH.

CHAPTER II.—(CONTINUED)

SITTING alone in the darkness, waiting for Marion's return, I feel very sorry for Will, and very anxious to see him once more and ask his forgiveness before we part for the last time, for, of course, we must now, as prospective husband and wife, part for ever. Somehow I know he will be sorry to give me up, his "girl love," his "little pet," his "Princess," who has grown up side by side with him from childhood. Still the separation must come—and partings are always bitter.

Marion's voice in the passage rouses me from my long reverie. She is speaking to some one—Aunt Dan, most likely.

"We may go; Sir Harcourt has given us permission, and we will take first train in the morning."

"Marion," I say, eagerly, with my head half buried in the cushions of the sofa, "why cannot we go to Ashfield? I should like it so much better. I feel as though I cannot give up my home, my own dear home. Oh, it is too hard!"

I had never cared for Ashfield very much before; I had always looked upon it as a quiet dreary little place, rather pleasant in the Summer, but quite unfitted for the dignity of a settled residence. Now to think of it as mine no more is breaking my heart. Will's home it is—his wife's, his children's home, but never, never mine. If I had but loved Will—but I do not even finish the thought.

"I suppose Will has not come back yet?" I say, after a pause, thankful that it is too dark for Marion to see how I have been weeping. "Speak to me, darling; for I think this is some hideous dream tormenting me. If I had but loved him," I go on, too much absorbed in my own thoughts to notice Marion's silence, "it would not have seemed so bad; but now my humiliation is complete. To be in his debt is horrible to me—it kills me with shame. Oh, Marion, shall I ever get over it? Let us go away at once—I never want to see him again; and I shall never cease to hate him all my life."

There is silence for some moments, broken only by my sobs; and then Will's voice answers me, and Will's arms lift me from the floor.

"Ida, my darling, the home at Ashfield is your own for ever—nay, do not shrink from me—yours with your freedom; for you are quite free from your promise to me from this moment. While I thought you loved me I could bear anything; now that hope has gone. Still, you must not hate me, poor girl! Heaven knows I would have spared you this suffering had I given my life to do it! But it was not to be. Still I will not be hated for having loved you so long and dearly. If I ever seemed harsh or unkind to you, it was because I dreaded a rival in your work. Forgive me—I was wrong. It is all over now. Put your hands in mine, and let us part good friends at least."

"If you knew I had no money, it was your duty to have told me so," I reply coldly, and then continue in my usual impulsive, illogical way, "but the last thing a woman can expect from a man is fair and honorable treatment. Whatever income I may possess I shall be very thankful for, but I will receive no gift from you, so do not try to deceive me a second time. I am free, you know"—with a bitter smile, which of course in the darkness he does not perceive—"and I can study and work; and, if I am indeed penniless, my work will earn me a living."

"Whatever I possess is yours, Ida, by every law of right or honor under the sun," Will answers, firmly. "You were our uncle's pet and darling—the little Princess of his happy old age; you were all the world to him, young as you were when he died. I remember so much better than you; and it was you, and you only, he hoped to make happy with his wealth. When persuaded by Sir Harcourt to leave us joint-heirs, it was only on condition that I pledged myself to gain your love and your hand in marriage. The will was informal, I know, and the law acknowledges me alone as his heir. But what is that to me? No informality on mere technical grounds can put aside the wishes of the dead or release me from my promise."

"But if I do not love you?"

"It cannot make the slightest difference to me—I shall always hold the half of my income in trust for you; and, now that we all know about it, I shall at once have a deed executed that will put you in legal possession of what is really your own."

"I will not have it," I cry passionately. "I will tear the deed into a thousand pieces if it ever comes into my hands; I have not sunk so low in my own sight yet as to let you beggar yourself for me."

"Ida, my love, my darling, surely you are not leaving me on account of this wretched money? After all these long, long years, Ida, can you really take yourself away from me without a regret? Speak but one word, darling—but half a word—to tell me you love me a little, and nothing shall ever part us again."

He has taken me in his arms. His hands are trembling as he puts my hair back from my face; his breath is on my cheek; in another moment I shall be vanquished—my pride and determination will have forsaken me—and, held thus to his heart, shrouded and surrounded by his love, I shall ignobly declare that love is enough!—oh, more than enough!—to fill my heart and life for evermore; but I remember in time, and tear myself away.

"I do not love you," I whisper; "so let us part at once and end this wrong at least for ever."

His arms fall from me, and a weight like lead lies on my heart. His voice is steady and quiet when next he speaks to say good-by.

"Good-by," I answer, brusquely, conquering an almost irresistible impulse to cast myself at his feet and beg his forgiveness; "I don't suppose we shall ever see much of each other again—our paths in life will be different."

"Good by, my princess!"

Covering my face with my hands I sink down on to the couch as he leaves the room, and wonder what my future will be. The past is gone with Will. My heart beats wildly, and its throbbing has a new unrestful pain. The old pet name again—"My Princess"—how sweet it sounded! No, indeed, no longer his princess—by my own will and deed, far, oh, far removed from his life and love!

CHAPTER III.

MARION and I have been a month at Middleton; and very happy we have been, despite the trouble we share mutually. We have worked very hard, too—at least I know I have, and I think Marion would say as much for herself.

I have sketched from nature morn, noon and night; and our little sitting-room is hung all over with trophies of my skill.

I am resting just now on my laurels. We are living at a charming farmhouse, a mile away from the little country-town, in the prettiest village that one could imagine. Mrs. Page, the owner of the farm, was a servant of Aunt Dan's many years ago, and is Marion's foster-mother.

I am in love with everything I see about me—the lanes are so shady, the cottages so picturesque, the children so delightfully ragged and artistic.

Our sitting-room looks out over a narrow strip of garden-ground on to a long wide meadow that slants, shaded by fine oaks and beeches, to a wood where a little brook runs brawling and tumbling and tossing over the lichened stones all day long. Marion declares that the sprite who dwells by its flowery margin must have a touch of the Bacchante in its nature, to account for the wild mirth and reckless jollity of the shining rivulet. The wood itself seems literally crowded with ferns and flowers and singing-birds, and there is such color and freshness over everything. The trees sparkle and quiver in the June sunlight, and the fleecy white clouds sail over the azure sky like troops of snow doves. The apple-blossoms cover up the orchard-paths, and the stocks and pinks and homely flowers in the garden are the very joy of my heart.

Every evening Marion and I throw open our window and listen to the nightingales singing in the wood beyond; and, waking in the early morning, we hear the voice of the cuckoo close above our window.

One thing I notice—that, since I began to sketch from nature, I find myself loving and appreciating the country as I never did before.

Although Marion and I never speak of Will, he is rarely absent from my thoughts. It seems sometimes as though everything I looked upon reminded me of him—and it is never an easy thing to put an old friendship out of one's head; still it is not particularly satisfactory to find all one's leisure moments determinedly occupied by the very person one wishes most to forget. And in the rest I gave myself after a month's hard work I thought oftener of Will than anything else, my art not excepted.

Aunt Dan writes us that Will has found Clara Linder, but she is not in want or poverty as he imagined; she is rich and clever, and, my aunt adds, beautiful beyond any one she has ever seen. She has inherited a fortune, while I have lost one. Such is the strangeness of life. My aunt fills a long letter with this news and her comments upon it—a letter that troubles me greatly, that breaks up my morning, and makes me resolve henceforth to drop my aunt as a correspondent.

For days after the advent of this epistle I have no heart to work, and cannot regain my usual sweet serenity. Marion, with her accustomed tact and kindliness, does not bring Clara's name into any of our long chats; nor does she question me upon the cause of my debility and idleness.

Now that the novelty of painting has worn off, I find it much harder work than I expected, and dreadfully unprofitable. Of course, I am only a student, but I doubt sometimes whether I shall ever reach a higher grade. I do not possess Marion's steady, persistent habits; my education and training have been against me. I take things up in a fever, and drop them after a time from sheer inability to keep my mind concentrated upon them until I have carried them through successfully.

Marion was right. I have neither patience nor perseverance, and my ability counts for nothing.

I have lazy days, when I betake myself to the wood, with a novel and a box of chocolate, and do not reappear until the dinner-hour. And then again I work at my painting with as much earnestness as though my life depended upon the necessity I feel to accomplish a given amount in a given time.

Marion watches me in her usual quiet manner, and says nothing.

Sometimes I think she is too busy to notice my fitful moods. I have always excuses for my business or idleness, and she invariably accepts them with great good faith; yet her silence upon the subject of the letter makes me think that she understands my state of mind very well.

I am lying on the mossy grass in the orchard one morning, with some crewel-work beside me and an old volume of tales, when Marion calls me from the garden.

I have been reading a very tragic story of a man and woman who loved each other fully, perfectly, nobly, but who were never permitted to enjoy their love on earth. He languished, till death released him, in the dungeons of the Church of Rome; she dragged on the weary years of a long life in the stone cell of a convent. No fault on either side condemned them to this separation, this misery. They were victims to the avarice and ambition of those who should have best loved and protected them. I feel quite sorry for the sad, broken lives, whose mournful story has touched my heart.

A shower of snowy, rosy blossoms fall over me; and I sigh as I shake them off and answer Marion's call.

In my present mood I can never hope to do anything great or good in this world—I am not fitted for it, I have strength neither of will nor of action. Had I chosen, I might have made one person supremely and quietly happy; but I disdained such an ordinary achievement, and even that is denied me now. The sunlight sheds its warm bright rays upon the tangled labyrinth of trees and shrubs that make this farm-garden so delightful to my artist eyes. Down in the meadow the cows are lowing, standing in the shady pool; and the perfume of the lilies under Marion's window reaches me on every little passing breeze, with the endless "coo, coo" of the doves in the cot behind me.

Marion, attracted by my voice, comes through the garden-gate and up the mossy path. She has a letter in her hand, and I look up at her with animation.

"News from town, Marion?" I ask.

"Not exactly; but something I think you will like equally well. Lady Tressilian wants us to go to a dance she is giving at Green Court. I don't know who told her we were here. She has seen Sir Harcourt, I should imagine. We are to stay at the Court all night."

"Oh, don't let us go!" I say, hastily. "I dislike these Summer dances so much—and, besides, I have nothing fit to go in!"

"As you please, of course," replies Marion; "but Miss Harcourt tells me this morning that Miss Linder is to be there, and I for one should like to see the heroine of your romantic story."

"And Will?" I ask, questioningly.

"Oh, Will remains in town with Sir Harcourt; besides, he hates balls and parties of every description, as you very well know."

"Oh, Marion!" I cry, with something like a gasp, "we must go and see her! I hate the idea of it, but I must do it."

"Very well, dear; then I will go in and write to Lady Tressilian that we will come."

I throw myself back on the grass and feel very tearful, although I scarcely know the reason of my sudden grief. The Summer flies and little spiders crawl up and over and under my thin muslin dress; and one or two inquisitive fowls peck and cluck perilously near me. I throw out my arms once to ward off an attack on my person, and, alarmed and indignant, they scamper off as fast as possible to the other end of the orchard, only to return five minutes later.

Suddenly Marion's rich, clear voice drowns all the fainter music of birds or doves. She is singing her favorite song and accompanying herself on the piano.

The music is too much for me. I bury my head in the pages of the book I have been reading, and let myself be carried away by the strong emotions aroused by the song; and it is like a cry from my own heart when Marion passionately sings:

"How could I tell I should love thee to-day
Whom that day I held not dear?
How could I know I should love thee away,
When I did not love thee anear?"

For I do love Will now with all my heart.

CHAPTER IV.

IT is the night of Lady Tressilian's *fête*. We are dancing under a large marquee erected in front of the house. The dancers' flying feet keep time to the exquisite strains of the Guards' band; and I am the acknowledged belle of the ball.

I rather enjoy the novelty of my position, and am glad that I followed Marion's advice, and draped myself in the simple classical costume that every one is pleased to admire so much. I wear a crown of white lilies on my hair, and I have lilies on my breast and round my throat and arms—not a touch of color anywhere about me, save the red in my cheeks and the gold in my hair.

The fragrance of the lilies acts upon me like a subtle intoxication.

Will is here, and has danced twice with me; Clara Linder has not yet arrived. I question Will about her after a time, and he tells me that she promised him to come to-night—that she is really very pretty, but shy to nervousness. I imagine that Will's voice takes a tender tone unconsciously in speaking of her, and the demon of jealousy overpowers me with his cold gigantic shadow.

I do not give Will any chance to speak to me after he tells me this. Clara Linder, sweet, shy, modest—just such a woman as he most admires—is continually before me. And when, eventually, Will brings a white-clothed, calm-faced, dark-haired girl to me, and introduces her as Clara Linder, my state of mind—its pain, anger and jealous love—is not to be described.

Never in my life have I been so gay, so brilliant, as I am to-night. I dance recklessly and madly far into the night. I flirt with all the men I know, and laugh and jest to my heart's content, in spite of Will's stern eyes and Marion's reproachful gaze. Clara Linder may have the monopoly of all the feminine graces under the sun. I will share no virtue with her. In my jealous rage and pain, I almost believe that Will is already in love with her.

It is late in the night that Will and I dance together for the last time. Then he folds a shawl of dainty lace over my shoulders, and asks me to walk out with him through the garden, to see the silvery lake asleep in the moonlight, with the alders fringing its quiet banks. He tells me, too—what I did not know before—that it was upon this little lake that Geoffrey Harcourt, the youngest member of the family, asked my mother to be his wife; and that it was at Lady Tressilian's house that they spent their honeymoon after their marriage. I think he tells me this to steady me, to make me calm and thoughtful, before he asks me again, in more deeply passionate tones than I have ever heard from his lips before, to take back my hasty words of a month ago, and give him another chance of winning me for his love, his wife.

But neither calmness nor thoughtfulness can enter a heart torn with jealous feelings and conflicting emotions; and so, from very wantonness, loving him as truly and desperately as ever maiden loved, I trifle with his earnestness, coquette with his passion, and put his love and prayer away from me—how, I know not—it is a mystery to me ever afterwards. But so it is.

The sky is tenderly, deeply blue above our heads; the moon in full dreamy splendor shines down on to the lake, the ferns, the flowers, the statues, until one could imagine the whole an enchanted scene from the "Arabian Nights," and expect to see fays and sprites peeping at one from every drooping shrub or tree.

We are in the fragrant, grassy rose-garden, and I am flitting from flower to flower, silently admiring and caressing each one in turn. The silence, however, becomes too oppressive, too eloquent, too charmful. It seems to bring us too near to each other, to unveil our mutual thoughts, to express our feelings without a sound. It is a positive relief to me when Will's voice breaks the stillness, and the faint strains of the band reach us—tenderest dream-music.

What madness is it that makes me scorn and refuse the love I would give my life to be assured of? What power checks the happy words upon my lips when Will's passionate appeal stirs the very depths of my soul? I know not; but I stand by his side, carelessly plucking my flower-chain to pieces in the soft, sweet moonlight, and, without looking at him, I tell him to forget me—that it is best so—that I can never marry him—that I am quite happy with my work and my life—and that Clara Linder, from the brief glimpse I have had of her, is in every respect more suited to be his than I am.

"It is very good of you to wish to marry me," I conclude; "but it would not be right for you to do so now. I could never feel happy to be indebted to you for everything I possessed."

Will walks up and down the path excitedly while I have been talking, and, as the last words leave my lips, he lays his hand upon my shoulder.

"Ida, you jest with me. As if I have not suffered enough without this! Have you nothing more to say to me, Ida? Is that all?"

"I think so," I reply, with affected simplicity. "I shall never alter my mind on that point; of course, if I loved you very much, it would make all the difference."

"Yes, I suppose so. And that can never be, Ida?"

"Never," I answer faintly; and I turn away from him in the direction of the ballroom.

We walk on in a profound silence, until we reach the path that leads us straight to the lawn; but, as we pass under the shade of a spreading ash, my companion stoops over me suddenly and kisses me, with one long, close kiss, on my lips. I break away from him, outwardly angry and indignant, but thrilling with the sweet, strange ecstasy that comes to us but once in life, when passion wakens to respond to love.

"My darling, forgive me! My life is over, for I have lost you. Ida, darling, will you ever know how much I have loved you?"

I listen dreamily, gladly, to those sweet words, with flushed cheeks and beating heart; and then suddenly Captain Tressilian's voice rouses me from my delightful reverie, and I am aware that we have reached a group of people on the lawn, and that Will has resigned me to my new partner, as in duty bound.

"I have been verging on desperation," says Captain Tressilian, as we go into the ballroom. "The dance is nearly over, and it is your favorite '*désir*.'"

"Never mind," I say, with a wretched attempt at a smile. "I believe I am too tired to dance any more to-night. Would you mind it very much if we sat down for a little while in some cool place?"

Digitized by Google

"Why, you are quite pale," replies the good-natured fellow. "I'll go and get you some wine, and you'll soon feel all right."

But the moment he is gone I join Marion in one of the ante-rooms, and complain of a sudden weariness and illness; and even while I am talking to her a dimness comes over my eyes, and I sink down upon a lounge, and faint away for the first time in my life.

CHAPTER V. AND LAST.

I DO not tell Marion anything about my interview with Will, and we go back to Middleton the next day and take up the thread of our usual daily life. Somehow the knowledge of Will's love is a great comfort to me. I live over again many times in the day the few short moments I passed with him, and the memory of his face and his sweet, tender words remains with me continually. I take up my work again steadily and bravely, but I am not happy; and gradually I fall ill, and Marion nurses me. Still I do not give up my art. I cling to it with greater love than ever, and Marion encourages me to try my hand at a picture, and prophecies a brilliant success for me; but I shake my head doubtfully. Of what use is it to sketch the cattle standing or lying in the meadow-grass, to coax the children to pose for me with their birds'-nests or wild-flowers, or to study the shades and tints in the sweet, still wood, while all my heart is away with Will, and all my desire "has gone out unto him"?

So I think and feel as the days slip on, each one leaving me more wretched than the last; and so, one evening, in a passion of grief and tears, I tell Marion.

"I always knew it, darling," she answers, gently; "and now be the brave noble girl I always believed you, and write to Will to-day."

"No, I cannot, Marion—I cannot write to him."

So much of my pride yet remaining. Marion suggests nothing more; and in silence and wretchedness that evening closes.

The next morning Marion stands, grave and anxious, with my breakfast-tray in her hand, by the side of my bed. I am too unwell this morning to get up to breakfast.

"Ida, do you know Will sails for India next week? Is this miserable pride to make you both wretched for life? You have behaved altogether wrongly and wickedly to Will; and, unless you gain his forgiveness and love now, you will regret it all your life."

"If he would but come to me!" I moan, in reply.

"Go to him," is Marion's answer. "It is not right he should come to you."

"Let me go alone, then!" I cry, with sudden determination. "Let me go quite by myself, and do not tell them I am coming."

And so, while the impulse is on me, I take the train to London, and arrive at Kensington early in the afternoon. My uncle is much better, and is very pleased to see me. Aunt Dan gives me a hearty welcome, and Jim sheds a few complimentary tears on my behalf. It is very pleasant to be at home again, and my bodily weakness makes me quite emotional. I tell my uncle that I have come up to do some shopping; and, in questioning Aunt Dan about Will, I find that he is going to India on business of Sir Harcourt's, and that he goes to-morrow instead of next week. She is so busy preparing for his departure that she is obliged to leave me every few moments; and the dear old soul is so much upset that she has forgotten that I have came up to town alone, and has never once inquired after Marion.

I am sitting in my own room again, where, three months ago, I smoked Will's cigarette, when the door opens sharply, and some one starts back upon seeing me.

Then Will comes into the room, almost reluctantly, and we shake hands as strangers. I look up shyly through my lashes. Is that Will's face, pale and haggard, as though he had known many sleepless nights, with lines and shadows about the mouth and under the kindly eyes? It is not like Will at all.

"I did not expect to find you here," he says, quietly. "Of course you have heard of my sudden journey? I am very busy, as you may imagine, and therefore I know you will excuse me."

He positively turns to leave the room; and even at this last moment my pride and despair struggle for the mastery. But love triumphs.

"Will," I murmur, stretching both my hands to him in the old impulsive way he used to love so in the old days, "why will you go away? I am sorry—I did not mean——"

But the next moment I am caught to Will's heart, and am weeping away my grief and misery upon his breast.

* * * * * *

The next evening I return to Middleton, and Will accompanies me. He will not go to India, I need scarcely say. My uncle has been informed of our engagement, and is in a high state of gratification about it. Aunt Dan has pleaded for a month at least to conclude the preparations for the wedding, and I have begged that, until we are married, I may remain with Marion at Middleton. The day before we return to town, Marion and I sit together for our last chat in the dear old-fashioned parlor we both love so well. The day's heat and noise are over, and the hazy, fragrant twilight is fast deepening into night. Marion is talking to me of my happiness in becoming Will's wife; she is warning me against my besetting sins of pride and self-will, and declares she is glad I have gained my happiness through sorrow and pain.

She takes my hands and kisses me, and her eyes are wet with tears.

"Ida," she says, after a pause, "I should like you to promise me something to-night. I have a fancy that on this night you would think a promise sacred."

I turn gladly towards her, and she draws me down to her side on my knees, while her caressing hand plays with my hair.

"You will make him happy, Ida, very happy, will you not?"

"I will try, Marion," I answer, humbly. And then we kiss each other, and remain quite still until Will's voice sounds in the porch inquiring for me.

I rise hastily and stand in the light of the window; and Will comes into the room, and, not seeing Marion in her shady corner, puts his arms about me, and, with low murmuring words of happy love, leads me into the still and peaceful Summer night.

KEEPING THE POLAR BEARS COOL DURING THE SUMMER.

THE beautiful Polar bears in Central Park have been spared much suffering during the Summer by an ingenious device, which gives them a slight experience of their natural temperature. Above the cage a large water-tank has been put up. This is supplied with water from the Croton mains by a hose. Through holes pierced in the bottom the water pours upon the bears in the manner of a shower-bath, but in much greater quantity. The bears pass the most of the time beneath this tank, and appear to enjoy the steady stream. They take their food as soon as passed through the bars to the shower and there devour it. As long as the water is pouring upon them they remain docile and happy. It is necessary, in order to preserve their health, to keep them cool with water from Winter to Winter. As soon as frost sets in the tank will be removed, and the bears left to enjoy a more congenial temperature than the present.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Proposed New Eddystone Lighthouse.

The projected new Eddystone Lighthouse, which is to supersede the one that was erected by Smeaton towards the end of the last century, is shown in our illustration as it will appear when completed, standing about 127 feet higher than the existing tower. The new tower, which is to be constructed entirely of granite, will consist of a cylindrical base, 44 feet in diameter and 22 feet high, having its upper surface 2½ feet above high water of Spring tides. From this base will spring the shaft of the tower, 85 feet 6 inches in diameter at the commencement, and 18 feet 6 inches in diameter under the cornice, the top of which will be 138 feet above the rock. On the cylindrical base there will thus be formed a level margin 4 feet 3 inches wide for a landing-platform. The tower is to be a concave elliptic frustum, the generating curve of which has a semi-transverse axis of 178 feet, and a semi-conjugate axis of 37 feet. The tower is to be solid, with the exception of a water-tank, to the level of 25½ feet above high-water Spring tides. At this level the walls will be 5 feet 6 inches thick, diminishing to 2 feet 3 inches at the top. The tower will contain nine apartments, 10 feet in height, in addition to the lantern, the seven uppermost being 14 feet in diameter. The whole of the work is to be dovetailed and cemented, both horizontally and vertically. On the completion of the new lighthouse it is intended to take down the present lighthouse to the level of the top of the solid base, 29 feet above high water of Spring tides. This portion of the present structure is shown remaining in our illustration of the proposed new lighthouse as it will appear when the work is finished. It has been determined that the elevation of the focal plane of the light shall be 130 feet above high water, by which the range of the light will be increased from 14 to about 17½ nautical miles, so as just to overlap the range of the new electric lights at the Lizard.

An Electric Railway at Berlin.

At the Berlin Exhibition there is an electric railway constructed by Siemens and Halski. The power is supplied by a stationary dynamo-electric machine (worked by a steam-engine) to a similar machine on a locomotive, making use of the track to conduct the electricity. The conductor can make or break the connection and thus control the motor. The track is circular and about six hundred feet long. There are three wagons attached to the locomotive, affording accommodation for twenty passengers. Dr. Siemens does not pretend that there is any economy in the contrivance, and it is only exhibited as a toy. When we consider that a steam-engine has to get up electricity on the stationary dynamo-electric machine to be conveyed at great loss to a second machine, we can see that it would be much more economical to apply the steam directly to the locomotive.

Incidents of the Zulu War.

Lord Chelmsford left the camp on the White Umvolosi at noon, July 3d, and advanced with General Newdegate's division and General Wood's flying column. Next morning, after crossing the river, he was attacked by a Zulu force variously estimated at from 12,000 to 20,000. The enemy appeared simultaneously on all sides, and when the British troops formed in hollow square on a plain near Ulundi, they commenced a desperate attack, advancing regularly with astonishing pluck and determination for about an hour. At last, however, broken by the heavy, well-directed fire of the artillery, they wavered, and then the square opened and the cavalry dashing out, charged them, and a complete route ensued. Our engraving represents the square opening to allow of the egress of the cavalry. The Zulu loss was estimated at 800, while the British was but ten killed (including Captain Edgell, Seventeenth Lancers) and forty-two wounded, amongst whom were Colonel Lowe and Major Bond. As soon as the battle was over Lord Chelmsford advanced to Ulundi and burnt every kraal within a circle of three miles. The Zulu messengers, as they came into the camp the second time, escorted by some of the Lancers, with the two tusks of ivory carried by the men behind, are shown in one of our sketches. One of them held a cleft stick, in which was stuck the letter written by an unknown European for Cetewayo, addressed "To Lord Chelmsford, Esq." It was inclosed in an old English official envelope, which had been that of a letter sent to the Zulu King by Colonel North Crealock, Military Secretary, from Fort Newdegate, some time before. The British Commander-in-Chief dismissed the Zulu messengers, desiring them to tell Cetewayo that if by noon on July 3d the stipulations had not been complied with the advance would recommence. The 3d came and went, yet no signs of submission, so on the 4th the battle was fought.

Visit of the King of Italy to Genoa.

The first visit of the King of Italy to Genoa after his accession to the throne was marked by all the enthusiasm that has greeted his appearance since Passanti attempted his life. He was accompanied by his Queen, who, like the Princess of Wales, attracts all classes by her unassuming manners and happy disposition. The King is suffering much with consumption, but, despite the entreaties of his physicians insists in performing his onerous public and social duties without interruption. The popularity of the royal couple increases steadily.

SIGNIFICANT STRAWS.

THE Montana wool-clip will exceed 1,200,000 pounds.

TWO hundred and sixty-five vessels are en route from Europe to load with grain at Baltimore.

THE rice crop of South Carolina for the year is estimated at 44,000 tierces, and that of Georgia at 26,000.

IRON bridge building is fast becoming one of the most active and important of Philadelphia's industries.

MACHINERY has been put up at Fernandina, Fla., to experiment in making paper from Palmetto fibre.

IRON ore yielding 47 per cent. of iron has been discovered on Smith's Creek, about two miles from Waynesburg, Green County, Pa.

THE increase of flouring mills in the four States of Illinois, Wisconsin, Iowa and Minnesota from 1860 to 1878 was from 1,138 to 3,090.

RECENT reports from Shanghai show a great diminution in British transactions, while American commerce was almost doubled in the past year.

EIGHT hundred more coastwise vessels have arrived at Boston during the seven months of the present year than during the corresponding time of last year.

HON. MARTIN I. TOWNSEND, of Troy, who has just returned from an extended tour in the West, says that there never was a country so flourishing as the West is to-day.

OYSTERMEN of Long Island are looking forward to a season of unusual prosperity, as more oysters are being grown in their waters than at any time within twenty-five years.

IT is stated that three prominent silk manufacturers from Macclesfield, England, have decided to settle in Paterson, N. J., next year, bringing several hundred hands with them.

THE brass works at Rome, N. Y., are turning out two tons per day, and have orders sufficient ahead to keep them at work nearly two months. The rail mill is temporarily closed for want of iron.

THE New York carpet trade was never better than at present. Some of the manufacturers say they don't want to see another order; that they have all and more than they can do for six months to come.

DURING the first six months of the year $13,524,000 have been invested in railroad construction, most of that money having been expended in the Western States. The steel alone used has cost about $8,000,000.

THE Atlanta (Ga.) Rolling Mill is now manufacturing rails, fish-plates, merchant bars and bridge iron. The mill employs 500 men, and is running full double time. Present orders will keep them busy till November.

THE old Lake Superior iron mine is again asserting its prominence. Its lake shipments up to August 20th footed up 91,080 gross tons, against a total of 65,960 tons for a corresponding period last year—a gain of 25,120 tons.

THE Internal Revenue Bureau has prepared a statement, showing that the number of gallons of spirits produced during the fiscal year of 1879 was 71,892,612, against 55,103,103 in 1878, showing an increase of 15,789,564 gallons.

THE report of the business of the port of Baltimore for the month of August just closed shows an increase in the amount of grain received of over a million bushels, the receipts being 5,548,000 bushels, all but about 800,000 of which was exported.

THE grape crop along the Hudson River promises to be the largest ever gathered. The vines will, it is said, aggregate three tons to the acre. The principal variety is the Concord. Growers in several places will ship as many as thirty tons each.

THE Kansas City *Price Current* reports the yield of wheat in ten counties in Southeastern Kansas at 2,057,655 bushels, against 1,139,654 bushels last year, showing an increase of 918,001 bushels. The estimated corn crop in ten counties is placed at 37,000,000 bushels, against 22,000,000 bushels last year—an increase of 15,000,000 bushels.

A COPPER belt some two miles long and from 200 to 400 feet wide has been discovered about the middle of the southern part of Maine, directly on the coast. Some twenty miles to the northward of this copper belt silver has been found in flakes, masses and filaments. A shaft has been sunk some hundred feet deep, and it is reported that the ore increases in richness with the depth.

THE total yield of the Leadville carbonate camp up to the close of July was $9,401,283; 47,929 tons of ore were produced, equal to 9,893 bullion tons and 3,391,483 silver ounces. The average yield of all ores smelted there is estimated at seventy ounces to the ton. In addition to the product of the local smelters, there have been shipped from Leadville over $5,250,000 worth of high grade ore. About ten tons of ore are now shipped daily.

REPRESENTATIVES of the Bessemer steel works of this country held a meeting in Philadelphia, on September 3d, at the rooms of the American Iron and Steel Association, for the purpose of adopting such measures as they may deem proper for the regulation of the trade, which is now more active than for several years past. Out of the eleven Bessemer steel works in this country, ten were represented at the meeting, the Vulcan Works, of St. Louis, being the only one unrepresented. Reports represented the trade as enjoying an extraordinary degree of prosperity and the prospect is of the brightest character. Without an exception every rail-mill in the country has orders for more than it can produce up to the end of the year, and many of them have already taken orders for several months in the ensuing year.

THE exports of wheat to Europe from the four principal Atlantic ports for the week ending August 30th amounted to 4,596,737 bushels, as follows: New York, 2,476,365 bushels; Baltimore, 1,142,919 bushels; Philadelphia, 700,465 bushels; Boston, 276,988 bushels. The exports of corn were: New York, 177,982 bushels; Baltimore, 148,685 bushels; Boston, 972,009 bushels; total, 1,892,656 bushels. Of the exports of wheat, 1,045,543 bushels were shipped to Antwerp, 640,236 bushels to Liverpool and London, and 1,447,215 bushels to France. The receipts and exports of wheat at the seven seaports of the Atlantic coast in the last six weeks were: Receipts, 32,256,650 bushels; exports 22,868,384 bushels; an increase in the receipts over the same period last year of 14,686,989 bushels, and in the exports 9,979,225 bushels.

AN incident more practically illustrative than statistical figures of the prosperous condition of the iron manufacturing industry in this country has just occurred in connection with the negotiation by Government officers for the iron-work on the extension wing of the new State, War and Navy Department Building in this city. Instead of advertising for bids, the officers in charge of the work addressed circular letters to the prominent iron manufacturers and contractors throughout the country requesting them to submit estimates for the iron-work. Replies to these circulars have been received, and, strange to say, in a majority of cases the contractors have declined to bid for the work on account of the large number of orders ahead. As a rule, there is great competition for Government work of this kind, for the reason that the prices are usually liberal and payments prompt. Now, however, instead of being embarrassed to decide between the bidders, the Government is likely to experience some difficulty in getting the proper persons to do the work.

AT HOME AND ABROAD.

—SAVANNAH will celebrate her centennial on October 9th.

—THE shipment of pine straw from Wilmington, N. C., to New York is assuming large proportions.

—THE excess of the earnings of the Sing Sing State Prison over the expenditures for August was $3,200.

—THE Minnesota sugar-cane, out of which a splendid article of sugar is made, is grown successfully in West Tennessee.

—THE celebrated Kennedy cattle-ranche, Texas, on the Rio Grande, has been purchased by an English company for $800,000.

—THE General Assembly of Virginia is stocking the waters of that State with game and food fish. A hatchery has been established in Wayne County.

—IN the capital of Japan there are about seventy thousand soldiers, all in the American uniform, and provided with arms purchased from the United States and England.

—FOUR millions of the old State debt of North Carolina have been retired and new bonds given in their place, the latter representing $1,120,000. Eight millions of the old bonds yet remain outstanding.

—THE famous Whitehall gold mine on the narrow-gauge railroad near Fredericksburg, Va., formerly owned by Commodore Stockton, has been purchased by Boston capitalists and operations will be resumed October 1st. Some years ago this mine yielded $140,000 in seven months.

—THE annual meeting of the American Methodist Mission in Japan has been held in Tokio. Four natives were admitted to the ministry on trial. There were reported 435 members, a gain of 209, 173 probationers and 54 children. The natives contributed for various purposes $445. There are 713 scholars in the Sunday and 346 in the day schools.

—ACCORDING to official statistics, the Italian harvest of the year shows a deficiency of 10,000,000 quintals of maize, 5,000,000 quintals of wheat and 2,000,000 quintals of other grain. In consequence of the failing crops, the Italian Home Minister has issued a circular to the prefects of the various provinces directing them to call on property-owners for work for needy laborers.

—THE correspondent of a Swiss paper warns collectors of antiquities to beware of fabricated specimens of articles purporting to belong to the age of bronze and to have been found among the remains of lake-dwellings and in the beds of rivers. He says there is a regular manufactory of these things near the Lake Bienne, and that bronze swords are being offered at 100 francs each which are not worth as many centimes.

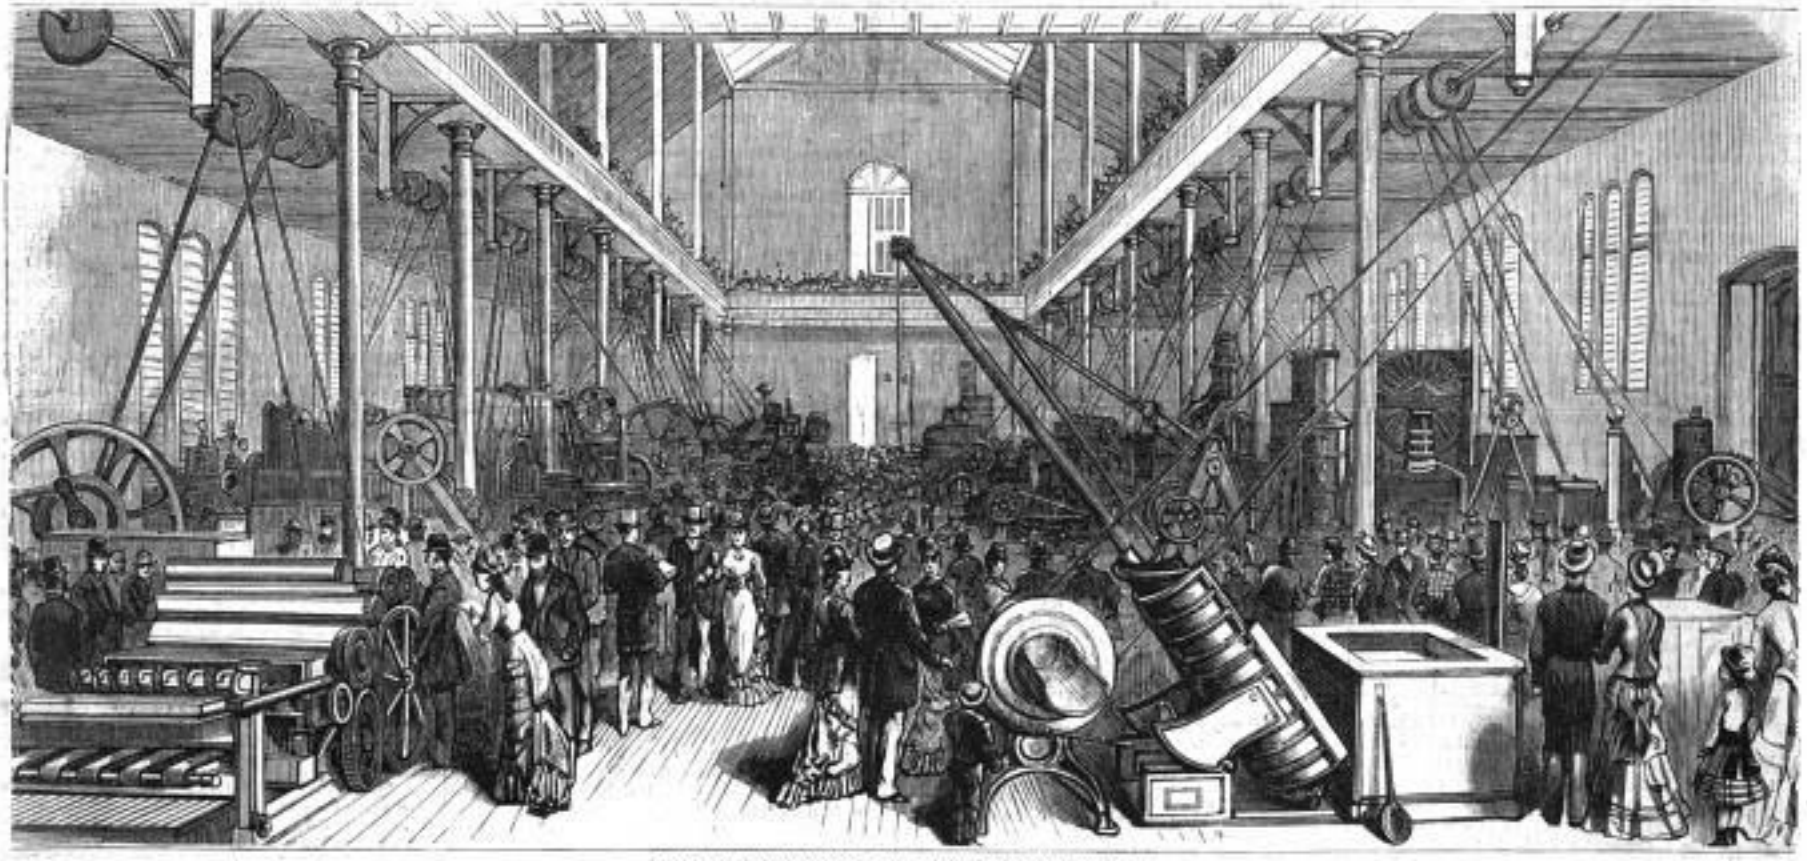
—UNDER the new administration of the telegraphic lines in France, in combination with the post-office, a great increase in the number of telegrams is noticeable. In 1878 eleven millions of messages were transmitted. Paris is now connected directly with 113 towns of France, and with the principal ones there is a double line. London is connected with Paris by nine wires, with Brussels and Berlin by three, and with Vienna and seven other cities by two.

—THERE are 735 miles of railroad in process of construction in Texas. This includes the Texas Central Railroad from Ross Station west, 150 miles; the Texas and Pacific, from Fort Worth west, 30 miles; the Gulf, Colorado and Santa Fé, from Richmond northwest, 140 miles; the Houston, East and West Texas, from Livingston north, 80 miles; the East Line and Red River, from Sulphur Springs west, 50 miles; the St. Louis, Texarkana and Waco, from Texarkana southwest, 230 miles, and other roads of less note.

—SOME interesting trials with carrier-pigeons have lately been made in Germany, in order to ascertain whether the pigeons, after being confined for some time at a point distant from their proper home, would still return to it when liberated. Accordingly 149 birds were carried from Aix-la-Chapelle to Metz, and liberated after a month's confinement. By the morning of the day following 134 had returned to their cotes in Aix la-Chapelle, the bird which arrived first having flown from Metz to Aix la-Chapelle, 112 miles, in four hours and thirty-eight minutes.

—THE attention of the Prussian Government is just now greatly taken up with the late portentous increase in the number of tramps and masterless men who throng the country districts demanding work or bread. Arrests for vagabondage and mendicity have increased from 5,250 in 1875 and 6,234 in 1876 to 7,268 in 1877 and 9,000 in 1878. The number of arrests has thus almost doubled in four years, and the cost of maintaining tramps in prison amounted last year, for the kingdom, to 2,600,000 marks ($600,000). The cause of this unsatisfactory state of affairs is attributed to the pressure of the times and the consequent difficulty of obtaining work.

—MATRIMONY is rather expensive in Zululand, as indeed it is everywhere else. Each lady has to be bought of the king or her own people with a great many head of cattle, so that the chieftains who possess the largest number of wives are very much looked up to by their less fortunate neighbors. It is, in fact, a sure way of advertising one's wealth, and the husband of many wives is entitled to wear his hair in a peculiar fashion, in order that his superior position may be at once recognized. It is greased, and passed through a ring at the top of his head; and on account of the form which in course of time it assumes, he is henceforth known as a "Saucepan Chief," and venerated accordingly.



—THE monarchical factions in France are quarreling over their holy places. The Imperialists are anxious to build in the heart of Paris a memorial chapel in honor of Prince Louis Napoleon. The Legitimists have their expiatory chapel, which stands in the middle of a small and gloomy square, and there they assemble every 21st of January, the anniversary of the execution of Louis XVI., to pray for the repose of his soul and for better times. The Orleanists, too, have their chapel, just outside the fortifications, reared on the spot where the eldest son of Louis Philippe was thrown from his carriage and killed, and dedicated to his memory. The Royalists of both branches object, however, to a third tabernacle.

—THE Republicans of the State of New York, in convention, assembled at Saratoga, September 3d, nominated candidates for State offices, adopted a platform, and adjourned *sine die*. The following is the ticket chosen: For Governor—A. B. Cornell, of New York; for Lieutenant-Governor—George G. Hoskins, of Wyoming; for Comptroller—J. W. Wadsworth, of Livingston; for Secretary of State—General J. B. Carr, of Rensselaer; for Treasurer—N. B. Wendell, of Albany; for Attorney-General—Hamilton Ward, of Allegany; for State Engineer—Howard Soule, of Onondaga. A platform was adopted pledging the party anew to national supremacy, equal rights, free elections and honest money, thanking President Hayes and the Republicans in Congress for their recent attitude, and denouncing the present Democratic policy. The regulation of corporations was advocated. Senator Conkling was temporary chairman, and Vice-President Wheeler was president of the convention.

REGRET.

REGRET, regret! a potent spell
To chain the memory to the past;
To bid the tear of sorrow well,
And suffocate the heart at last.

What hopes, with fairest colors lined,
Besiege the weary, burdened breast,
And seek for entrance but to find
The casket filled by black unrest!

Yet with this canker deeply fraught,
Life's bitter trials must be met,
And soloced but by one fond thought—
To die will be my least regret.

BLUE EYES AND GOLDEN HAIR.

By ANNIE THOMAS.

CHAPTER III.—(CONTINUED).

MISS ELDON is a very fair specimen of a well-bred young Englishwoman, as having "taken it out of him" in a sharp trot down to the Kensington Gardens rails, she turns, and, holding her handsome little horse in to a walk, rides slowly along. There is no "doubt" about Daisy, even in this place, where discernment is so sorely taxed. There is not a superfluous button, not an unnecessary bit of braid about her navy-blue habit; and round the brim of her hat there is not a superfluous half-inch of tulle. You remark immediately that she does not ride to her audience, and that both horse and rider are perfect types of their respective kinds. But if you do not know her, you remark nothing further.

Truth to tell, she is riding the Knave of Hearts with most reprehensible carelessness this morning; for her mind is very much given to the consideration of that question concerning Sir Bolingbroke which her aunt has raised with auntly zeal and indiscretion. Miss Bertram's words have not borne all the fruit she intended them to bear; still they have had some weight with the girl, who has up to this morning enjoyed all that is enjoyable without troubling very much as to what is to follow. But now, as Daisy rides slowly along, she falls to thinking of what the home-life down at Burnsleigh is; and when she has thoroughly resuscitated the memories of it, she has it borne in upon her vividly that she will have to go back to that life, and resume it, just as though this brilliant episode had never come within her experience. The sweet blue eyes are gazing apparently at the living panorama before her. In reality they are looking into the future, and seeing all the gloom of it.

She is startled abruptly from her daydream by the Knave of Hearts suddenly swerving to the near side, and then returning to the path of duty by a series of plunges. Well-bred horse as he is, he cannot always control an emotion of surprise, and he has experienced a profound one in seeing a young man who is leaning on the railings sweep off his hat in salute to Miss Eldon. He is an English horse, and utterly unaccustomed to the society of men who signalize the fact of their existence before the lady has nodded an acknowledgment of it.

Of course Daisy sits the shy. If I ever venture to unseat a heroine, it shall be in a little country lane, where no one can see her. For though such accidents do happen in public places in real life, it is not advisable that they should ever befall a heroine of romance. The majority prefer that she should be a sort of female Admirable Crichton, and it is well to respect the prejudices of the majority.

But though Daisy remains in the saddle, the shy arouses her suddenly from her daydream, and looking with understanding for the cause of the emotion of the Knave of Hearts, she finds it in a young, tall, lissome-figured man, whose swarthy face is glowing with satisfaction at the sight of her, and whose tawny eyes are riveted upon hers with a tender earnestness that brings vividly before her a half-forgotten scene, in which a handsome boy transferred a well-loved mastiff puppy to the care and ownership of a golden-haired slip of a girl.

The Knave is almost brought upon his haunches by a dexterous turn of her wrist, and in a moment she is leaning forward, holding her hand out with hearty gladness.

"Harry Poynter! How did you know me?"

"By your eyes and hair, Daisy," the young fellow replies; "they're not changed, though you are. But I ask the same question: how did you know me?"

"I knew——" she begins, then she hesitates. It is difficult to say how she recognized him. In the old days he had been the pleasantest object on which her vision ever lighted, and now, though he is utterly different from the boy whom she remembers, there is no one who may with him compare. "You're very different from what you were when you gave me Tartar; but still, somehow, you're like your own self," she says, at last; and as she says it she sees Sir Bolingbroke Bray approaching her.

"So you remember Tartar, too!" Mr. Poynter says, delightedly; and her attention being caught by Sir Bolingbroke at this juncture, it is some few moments before she can reply.

"Remember Tartar! Does one forget one's dearest friend after being separated from him for a month?"

"Who's the happy man who occupies that proud position, Miss Eldon?" Sir Bolingbroke says lightly, laughing. He quite means to have Daisy for his wife; but it does not stir the faintest jealousy within him to hear her speak of some one unknown as her dearest friend. If she will only become Lady Bray he is quite prepared to bear the burden of her forming a dozen "dearest friendships," if she feels so inclined.

"He's only a dog," Daisy says; and then she turns a little in her saddle, and inclines her head slightly to Sir Bolingbroke, in a way that ought to show him that she considers their interview at an end—that he is free to, and she ready and willing that he should, ride on—and that she desires to resume uninterrupted intercourse with the handsome, debonair-looking young fellow who is leaning over the rails.

But this is not at all within the limits of Sir Bolingbroke's intentions. A rival in the abstract, or even a defined rival if he only be absent, is endurable enough to the young baronet; but a rival well defined and present, who engrosses Daisy's attention away from Sir Bolingbroke Bray, is quite a different thing.

"I shall have the honor—your aunt has accorded me her permission—of being your escort this morning, Miss Eldon," he says, sitting at ease coolly, and regarding Mr. Poynter with the same lazy expression of interest which he might exert himself to evince at sight of an Indian brave or a fine specimen of a wild red-deer. There is about Harry Poynter such vitality, such young, healthy, happy vigor and freshness, that he is a marked object here in the ranks of languid, bored, fashionable-looking men. It is not that the recently returned squire of Glenholme is rough, unpolished, ill-dressed, or "bad form" in any way; it is simply his looking thoroughly "alive" which distinguishes him from the majority of the men who are inertly reclining in divers attitudes that are expressive of utter weariness on the railings under the blazing July sun. Daisy, who is replete with this same physical force herself, perceives and appreciates it quickly in another, especially when it is presented in so fair a guise as in the person of her old friend, Harry Poynter.

Tartar is a very thawing topic. They discuss him as he was in the days of his infantile grace and innocence, and Daisy describes the dog into which he has developed. She winds up her essay on Tartar by saying:

"But how is it that you've been so long in England without seeing him?"

"Because," he says, "I denied myself that bliss in order to watch for the opportunity, which has come at last, of seeing you."

Daisy's pearly face grows pink as she hears him, and her eyes gleam like stars with the sweet pleasure she feels in her old friend's remembrance of her. Of what avail is it to Sir Bolingbroke now that he has the place at her off-side for the remainder of this morning's ride? Harry Poynter has the nearer place in her interest; and *that* once fairly awakened, the end is not so very unforeseen.

"It has been the one drawback to my otherwise perfect felicity up here that I wasn't down at Burnsleigh when they welcomed you to your 'own again,'" she says to young Poynter, disregarding grandly the symptoms Sir Bolingbroke is lazily developing of its being his opinion that it would be well for them to move on.

"I had staid away from 'my own' for a good many years for other people's pleasure; it occurred to me that it wouldn't hurt other people very much if I staid away a little longer from my own," he answers, sparkling up with a sense of the entire appreciation she will have for all that is meant or may be meant by his speech. "I didn't feel inclined to hie me home the instant I was free to do so; the place and I know so little of each other that I shall see very little of it, if itself is the only attraction it offers me."

"You shall not be an absentee," she cries out. "I mean—I beg your pardon, Mr. Poynter; but I live in the place, you know, and understand all about the advantages and disadvantages of your absence or presence. The people you let it to were rich and good enough in their way; but they thought more about the London shop by which they make their money—very naturally—than they did about ameliorating the condition of the poor or oiling the social hinges of the neighborhood. And papa was a sort of stand-between those new people and the Granvilles and others of the Granville ilk, and papa suffered. Don't you understand now why I wish you to go home and to stay at home—as you will, Harry?"

She bends forward again to offer him her hand in farewell as she says this, and a smile like a sunburst gleams forth from her glorious eyes and breaks the lines that have been sombre about her flexible lips.

"Oh, Daisy, Daisy, if you look like that I'll go to Glenholme or to anywhere else for your sake," he mutters; and then he adds aloud, "May I have your address? I hear you are staying with your aunt, Miss Bertram."

She gives him her card at once gladly, and now Sir Bolingbroke feels that the time has come for him to assert himself.

"In the interest of the Knave I must beg you to come on, Miss Eldon; he has chafed against your unconsciously tightened hand till his mouth is bleeding."

She slackens her rein at once, and the clever little horse steps out in his matchless style without another suggestion being made to him. "Come and call on us to-morrow," the girl lilts out to Harry Poynter, turning her bright face towards him encouragingly; and as he shouts back his promise to do so, he resolves that he will call and call again till he wins the right to call this darling Daisy his own.

Sir Bolingbroke is very sensible. He sees that Daisy is in a rarefied atmosphere, the chief elements of which are recollection and possibility, admiration for a new type, sympathy with a good-looking adventurer upon an untried career, and girlish glee in the part she is playing of wielder of strong men's wills.

"Let her nourish her fancies," Sir Bolingbroke thinks as he trots along by the Knave's side, discoursing of the wind and the sun, the weather and the forthcoming banquet at Orleans House, the impossibility of existing in London an hour after "one feels that the time to go has come," and the miserable nothingness of a life that has to be lived away from London altogether. "Let her nourish her fancies; they are intangibilities that will never interfere with my comfort; and the effort she makes at nursing them throws an enormous amount of expression into those seas of love and fantasy—her eyes."

Accordingly, in fulfillment of his view of the case, Sir Bolingbroke sends sentiment to the right about altogether this morning, and talks nothing but society to her.

"You'll be at Lady Beauton's to-morrow of course?" he half-questions. "St. Briac is to conquer the heiress of the year, Miss Millard, on his own ground—it's an understood thing; she goes for the title and his good looks, and he goes for all that "cotton" can procure him."

"How very funny, and how very sad!" Daisy says, sagely. "You speak just as if Miss Millard were a bale of goods, and as if Lord St. Briac wouldn't have to live with her so long as they both do live, if they marry."

"That doesn't always follow, Miss Eldon." Sir Bolingbroke answers with (to his credit, be it said) a heightened color.

"What doesn't always follow?" the Daisy asks, in innocent forgetfulness of the "story" of Sir Bolingbroke and Lady Bray.

"Well, it doesn't always happen that people live together, 'so long as they both do live,' because they marry unadvisedly. Let me tell you——"

"No; tell me nothing," Daisy interrupts. "People shouldn't marry unadvisedly. We can all stay as we are if we can't marry the one we love; and if we marry the one we love, then it must be all right."

"That's your theory," he says, laughingly.

"That's what I believe, Sir Bolingbroke."

"Well, my practice has been somewhat different; but I won't defile your ears by giving you a recital of the last Lady Bray's works. I have been a very badly-treated man, and I thought myself a blighted man, Miss Eldon, until I saw you; now I feel that I still have a motive in life, and that motive is to win you for my wife."

He is a graceful, lissom, well-favored young fellow, and he has a baronetcy and twenty thousand a year. Daisy remembers that he is, and that he has all these advantages, as she listens to him. Across her mind, too, as she listens, there flashes a vision of what Burnsleigh life is and will be. But closely following on that vision there comes one of a gallant-looking, dark-eyed, sanguine-complexioned man, who has looked at her this day with a look to which her heart has beaten responsively, in a way that it has never beaten to the look of another man. And side by side with this remembrance there rises another—that of Sir Bolingbroke's sorely tried, sadly fallen, lost, unmentioned, and unmentionable wife.

Daisy is not a woman of the world yet. She does not understand that "these things are," but are not to be mentioned. So she comes out with rather a hard rejoinder to his request.

"What an unworthy motive, Sir Bolingbroke! For your real wife is still alive, isn't she?"

"She is not my wife. Don't you understand that I have divorced her?"

"I don't understand anything of the sort: I only understand that what God has joined together man cannot put asunder. I am sorry for you, for I think you ought to live the rest of your life alone, and that thought is a sad one. Now, shall we go home?"

"I am to consider your answer a final one?"

"Yes, please," she says, simply; and then, as they come to the end of the Row, she puts her hand out to wish him good-by, and says, "No one will know of this from me, Sir Bolingbroke."

"I don't care who knows that I have 'loved the highest,' though it's been my ill-fortune to have loved in vain," he says, in a tone of such brave sincerity that Daisy's heart melts towards him, and her eyes beam such admiration for the manly candor with which he speaks of his disappointment, that he takes heart of grace, and determines to "try her again" at some future day. "Her head is a trifle turned by the success she has had," he tells himself. "When the season is over, and she has to face the parsonage and the poverty again, she'll take a more lenient view of my position."

Meanwhile Daisy rides home with her head and heart in a whirl of delight at the unexpected *rencontre* she has had with her old friend Harry Poynter. By the time she gets into her aunt's presence she has forgotten all about Sir Bolingbroke Bray, and so she replies to Miss Bertram's anxious inquiry, "Well, have you seen him?" with the words:

"Yes, aunt, and it has made me so happy; he's coming here to call to-morrow."

"It's rather strange that he does not come to-day, I think," Miss Bertram cries, embracing Daisy rapturously; "my darling child, I am so pleased! The best match of the season! Twenty thousand a year and a title! They will admit down at Burnsleigh that I have done well for my niece."

"Are you thinking of Sir Bolingbroke?" Daisy stammers.

"Of course I am; of whom else can I—or you—be thinking?" Miss Bertram almost screams.

"I was thinking of my old friend, Harry Poynter," Daisy says, blushing and laughing. "I told you when I first came up, if you remember, that the young Squire of Glenholme was coming back to live. Oh, didn't I mention it? I'm surprised at that, for I was thinking about him a great deal. He gave me Tartar. Well, this morning I saw him in the Row, and, oh, Aunt Bertram, he has grown so handsome, and he looks so splendid and manly! He's coming to-morrow to call on you——"

"Have you seen Sir Bolingbroke?" Miss Bertram interrupted, sternly.

"Yes."

Daisy feels that she is going to be sharply cross-examined, and nerves herself to the task of baffling her aunt's curiosity and keeping her promise of "not letting any one know" that she has rejected the baronet.

"You have seen him, and he has spoken to you? At least he went to the Row for that purpose this morning."

"Yes, he spoke to me," Daisy says, innocently.

"And what have you said to him?"

"Oh, a number of things! I was in such high spirits at having seen Harry that I talked more than usual, I think."

"Do leave Harry, as you call him (I detest such familiarity between young men and women as exists in the present day) out of the conversation, and tell me, without further frivolity, how you and Sir Bolingbroke stand with regard to each other."

"Very pleasantly, I believe," Daisy says, quietly. "He told me about Lord St. Briac and Miss Millard; Lord St. Briac wants her money, Sir Bolingbroke says, and she wants the title. It's to be arranged to-morrow at Lady Beauton's dance. Are we going to it, aunt? Sir Bolingbroke asked me, and I couldn't tell him."

"We are," Miss Bertram says, curtly. Then she sits in silence for a few minutes, feeling puzzled and disappointed. Sir Bolingbroke has evidently, she thinks, either failed to find an opportunity of wooing Daisy this morning, or failed to use it. No girl could resist avowing that she had received such a brilliant offer, if the offer had been made; at least ninety-nine girls out of a hundred could not refrain from uttering the vaunt. However, it is just possible, she feels, that Daisy may be the exceptional hundredth. She makes one more effort to discover exactly how things are.

"And that was all he said? You have nothing more to tell me?"

"Well, aunt, to tell the truth, I can't remember all he said. He spoke about St. Briac and Miss Millard—that I've told you; and we talked of Tartar; and he said how splendidly the Knave trotted. And so he does, Aunt Bertram; there isn't another horse that comes near him as to pace or style of going."

"Wasted his time talking about Tartar and the Knave, the great goose!" Miss Bertram thinks, angrily, but she says aloud:

"Yes, Sir Bolingbroke is a good judge of horses, as he is of most things. The woman who is fortunate enough to win him will be the mistress of the best appointed establishment in London;" and, after saying this, Miss Bertram does allow Sir Bolingbroke to drop out of the conversation.

(*To be continued.*)

THE GREAT CINCINNATI EXPOSITION.

ON Wednesday, the 10th inst., the permanent Exposition Buildings at Cincinnati, the finest in America, and representing a value of one million dollars, were dedicated to the citizens of that city, and at the same time opened to the public for the seventh and by far the most complete and magnificent of the series of Expositions which have made that city famous. The illustration which appears on page 41 gives some idea of the general shape and outline of the buildings, but can afford no just conception of their great proportions and architectural beauty. They together make the chief edifice of a city of large and handsome buildings.

It is not too much to say that the Exposition thus opened will be the grandest ever held in the West. The preparations for it have been very elaborate and comprehensive. The whole continent has been explored for attractions in the laudable effort to make this a complete and well-arranged exhibition of the present status of American agriculture, manufacture, art, floriculture and natural history. Each of these general departments will be so elaborately treated that, while in any ordinary Exposition in the West it would be the conspicuous feature, in this Exposition the merits of the other departments will forbid pre-eminence to any. Cincinnati was the first city in the United States to make a public exhibition of a collection of machinery in motion, and this has always been a great attraction in her Expositions. This department, in the present display, will be more complete and interesting than ever before. It includes, in addition to machinery heretofore exhibited, a very perfect set of cotton-working machinery; an electric machine for the production of the electric light; a machine making envelopes by the hundred thousand; printing machines of the latest types and in great variety; the whole process of lithographing will be practically shown; a very complete set of flouring machinery is exhibited in operation; the latest and most improved ideas of farm-engines and pumps will be exemplified, not to mention nail machines, etc., etc., to the extreme limit of the space and accommodations of Power Hall.

Floral Hall, with its crystal roof, falling water, lake, grottoes and rare and costly plants and flowers, all lighted at night by electricity, presents a scene of beauty delightful to contemplate and pleasant to remember. The exhibits of rare exotics, ferns and other cryptogamia will be very large.

The student of natural history will find, in the rooms devoted to that exhibit, a very complete exposition of the *fauna* of the United States, culled from many of the largest private collections; and if he should be desirous of supplementing his anatomical study by a view of living forms, the Zoological Garden invites him to its leafy retreat.

The spacious fireproof rooms devoted to art afford every security to the costly paintings and engravings which have been solicited to grace their walls, and consequently no difficulty has been found in securing the most treasured works of art from private galleries throughout the United States. As a result, this department will outdo any of its previous achievements.

The grand organ, the largest in America, built by E. & G. G. Hook & Hastings, of Boston, Mass., will be played four days in every week during the Exposition, which will continue until October 11th. The celebrated Theodore Thomas Orchestra will give concerts; Carrier's Band has also been engaged during the whole Exposition; and, in fact, Cincinnati seems to have laid every attraction she possesses under contribution to instruct and delight her guests. At the time the last Exposition was held, in 1875, Cincinnati had only one railway

Digitized by Google

resort—the Lookout House. Since that time the Bellevue, Highland House and Prince Hill Pavilion have been built, and, with their entertainments and attractions, are well worth an evening visit.

MANUFACTURE OF STOVES.

THE "FAVORITE" FOUNDRY IN CINCINNATI.

AS a matter of interest to the public we illustrate on page 44 a portion of the immense stove foundry of W. C. Davis & Co., located on Third Street, from John to Smith Streets, in Cincinnati. Our space is too limited to convey a correct impression of the extent of this mammoth establishment, but some idea of the process of manufacturing stoves can be gained from the illustrations we present. The buildings occupy the entire square from John to Smith Streets, and a portion of the square east of John Street, their warehouses being located on the square between Central Avenue and John Street. They employ about four hundred men. The principal molding floor occupies one and one-quarter acres, the main building being 50x150 feet, the storage building 50x100 feet, the sample room 50x125 feet, with two mounting rooms 100x170. The main building and storage rooms are each five stories high. They finish, complete for shipping, about one hundred and twenty-five of the celebrated "Favorite" cooking stoves per day. In addition to this they turn out daily a large number of heating stoves, and tons of hollow-ware.

Their great specialty is their immense line of "Favorite" cooking stoves—for wood only, or for coal and wood. These goods are said to have gained a reputation never before attained by goods of this character, and must possess great merit to have reached the immense sale they now have. Each department of this large establishment is under the supervision of an experienced person, and great care is used in the inspection of the goods from the time they leave the hands of the molder until they reach the final finish in the completed stove. Only the best material that can be obtained is used, and the most skilful workmen employed to produce what is claimed to be the largest, best finished and most complete line of stoves in the world. The melting capacity of their two cupolas is about seven thousand tons per annum. Their goods reach almost every State in the Union, and several foreign countries—the "Favorite" being made in such variety as to meet the demands of all classes and nations—and, by means of judicious advertising, the fame of the "Favorite" cooking stoves has been carried to nearly every portion of the globe that is reached by American newspapers and periodicals.

In our page of illustrations, No. 1 represents a workman engaged in making wooden patterns; No. 2 is the salesroom of the company; No. 3 shows the men "catching" iron in the cupola; No. 4 is the apartment where the castings are cleaned; No. 5 is a general view of the molding room; No. 6 shows the manner of "feeding" the cupola; No. 7 is a scene in the polishing room; No. 8 shows the sifting, hammering, cleaning, touching up, dusting and pouring of the iron into the mold; and No. 9 is the filing room.

MEMPHIS UNDER QUARANTINE RULE.

THE situation of affairs in plague-stricken Memphis cannot be said to improve. While the yellow-fever continues its ravages with but little abatement, thieves and incendiaries embrace every opportunity to plunder and destroy. Companies of military and mounted patrols of citizens do duty day and night in protecting property and arresting suspicious persons. It is a curious anomaly that all the baser persons of the baser sort of people come to the surface in the presence of the worst and most hideous forms of pestilence and plague. A correspondent pictures the situation as follows: "Business has almost ceased except for the necessaries of life; doctors, nurses, lounging negroes, Howard visitors, members of relief-organizations, State troops, police, firemen and newspaper reporters are all the people you see on the street. Occasionally some woman or child comes along to remind us of the past, but even that woman or child is acclimated."

A physician of the city who has been conspicuous in fighting the pestilence, describes the city as practically cut off from the world. There are no trains running into or out of the town, and nobody leaves the place without the authorities knowing it. No steamboats land there at all. The supplies are all brought down on barges, which are dropped by steamboats a couple of miles above the city, and allowed to float down. When they arrive at the city, men in skiffs or tugs secure them and bring them to the landing, as shown in our illustration. If there is any fever carried abroad it is done by some daring peddler who runs his wagon of supplies into the town on a venture, sells out, and then gets away as speedily as possible.

The Memphis Committee of Safety, under the chairmanship of Dr. D. T. Porter, have established camps on the Raleigh dirt road, and on the Mississippi and Tennessee Railroad; besides which there are Camps Marks, Father Matthew, Berjes, Burke, Langstaff, Tenions, and one on the bluffs for the soldiers engaged in patrol duty, and their families. On September 2d the National Board of Health approved of the site submitted by Mr. Johnson, Superintendent of Quarantine, for the establishment of a quarantine picket, encircling the entire city and suburbs. Fifty mounted policemen were assigned to patrol duty at once to enforce this new regulation. Ingress and egress to and from the infected regions will be practically cut off, save in exceptional cases, where passes will be required certifying the bearer has had the fever. This is the only practical measure set on foot to prevent the introduction of the plague to the surrounding hamlets and villages, now free from infection. By this means the conveyance of all baggage, plunder, bedding, goods and wares, in which infection may be secreted, will be effectually checked. Heavy penalties will be attach to all wilful infractions of the rules. No effort will be spared to institute effectual quarantine.

Quarantine regulations are also enforced at the transfer stations along the line of the Louisville and Nashville and the Memphis and Charleston Railroads. The fever has broken out at Bantya's Station, six miles east of Memphis, in the district of Dr. Huber Jones, a Howard physician. Under the direction of the National and State Boards of Health the city is undergoing a thorough system of disinfection. Every house where the fever has developed and a death occurred is being fumigated and cleansed. All privy-vaults are being disinfected and covered with lime, preparatory to being emptied and filled with earth as soon as cold weather sets in. Sixty men and twelve teams are engaged in the work. The force use daily near 200 barrels of lime and 5,000 gallons of solution of copperas. All nurses sent out by the Howards are furnished with a package of copperas and sulphate of zinc. The copperas is used for disinfecting the discharges of patients. When a death occurs the corpse is washed with sulphate of zinc, then wrapped in a sheet wet with the same solution and buried at once.

The funds of the Howard Association are at last exhausted, and on September 1st, President Langstaff left for the principal cities of the West, North and East, to consult with the parties who last year so nobly aided in soliciting contributions for the relief of the sufferers from yellow fever.

No religious services are held in the churches, the authorities deeming a collection of people unfavorable, and about the only events of a pleasant character are the occasional dress-parades of the soldiers on the bluffs.

Father Walsh, who organized and superintended the Father Mathew camp last year, and took care of the sick and destitute of every class and denomination, is at his grand work again, and, we regret to learn, is sorely pressed for funds, having exhausted all his private means, and being without material outside help.

Nineteen new cases and thirteen deaths were reported on September 4th. On the same day the rules and regulations governing pickets and patrols on duty in the suburbs were promulgated. The most important of the rules provides that neither lint-cotton nor seed-cotton will be allowed to enter Memphis during the epidemic. A petition, signed by every merchant in the city, protesting against the enforcement of this rule, has been presented to Superintendent of Quarantine Johnson.

Jay Gould telegraphed the following from New York on the 5th:

To W. J. Smith, Acting President Howard Association, Memphis, Tenn.

I send you by telegraph $5,000 to aid the Howard Association. I am certain the generous people throughout the country will contribute liberally to aid your stricken city. At any rate keep on at your noble work till I tell you to stop, and I will foot the bill. What are your daily expenses? ANSWER. JAY GOULD.

The money was forwarded through the Bank of New York, which will forward money free of charge for all persons desiring to make contributions. During the afternoon Mr. Gould received the following reply:

MEMPHIS, September 5th.

Jay Gould, Esq., New York City:

Your handsome donation of $5,000 to the Howard Association of Memphis, to be used in relieving the sick under our care, is most gratefully acknowledged. The grand sentiment you express to continue our noble work, and, in the event that our appeal to the generous people throughout the Union is not heeded, that you would foot the bill, has nerved us all and strengthened our faith in the cause we are now engaged in. Such liberality as you have shown will, we have no doubt, find a responsive echo in the breasts of the charitable of the nation. Our expenses now aggregate $1,000 per day, and should the fever continue to spread, the expenses must necessarily increase. W. J. SMITH,

Acting President Howard Association.

Our front-page illustration represents a Sister of Charity on her errand of mercy—a scene from real life. The room is miserable, squalid, plague-stricken. It is divested of every superfluous article of furniture, all of which has gone to procure medicine and nourishment for the unfortunate man who now lies in the last dread pangs of the ghastly yellow fever. The terrible shadow of a terrible death is in that apartment. The wife now fears for her child, her famine-stricken child, who, already in the nausea of sickness, has ceased to clamor for food. Her husband dying, her child stricken—what a picture of utter desolation, of utter despair! A timid knock comes to the door; it remains unheeded. A second knock, and the crushed woman draws her tottering limbs to the portal. A ray of God's sunlight leaps into the room. In the doorway stands the messenger of consolation, the gentle messenger who will pour oil upon the bleeding wounds, and who will repeat the great grand lesson of the Good Samaritan.

Children's Games—How they Travel from Land to Land.

TRAVELERS, observing the likeness of children's games in Europe and Asia, have sometimes explained it in this wise: That the human mind being alike everywhere, the same games are naturally found in different lands, children taking to hockey, tops, stilts, kites, and so on, each at its proper season. But if so, why is it that in outlying barbarous countries one scarcely finds a game without finding also that there is a civilized nation within reach from whom it may have been learned? And what is more, how is it that European children knew nothing till a few centuries ago of some of their now most popular sports? For instance, they had no battledoor and shuttlecock and never flew kites till these games came across from Asia, when they took root at once and became naturalized over Europe. The origin of kite-flying seems to lie somewhere in Southeast Asia, where it is a sport even of grown-up men, who fight their kites by making them cut one another's strings, and fly birds and monsters of the most fantastic shapes and colors, especially in China, where old gentlemen may be seen taking their evening stroll, kite-string in hand, as though they were leading pet dogs. The European boy's attic appears thus an instance not of spontaneous play instinct, but of the migration of an artificial game from a distant centre. Nor is this all it proves in the history of civilization. Within a century, Europeans, becoming acquainted with the South Sea Islanders, found them down to New Zealand adepts at flying kites, which they made of leaves or bark cloth, and called manu, or "bird," flying them in solemn form with accompaniment of traditional chants. It looks as though the toy reached Polynesia through the Malay region, thus belonging to that drift of Asiatic culture which is evident in many other points of South Sea Island life. The geography of another of our childish diversions may be noticed as matching with this. Mr. Wallace relates that, being one day in a Dayak house in Borneo, he thought to amuse the lads by taking a piece of string to show them "cat's cradle," but to his surprise he found that they knew more about it than he did, going off into figures that quite puzzled him. Other Polynesians are skilled in this nursery art, especially the natives of New Zealand, who call it maui, from the name of their national hero, by whom, according to their tradition, it was invented. Its various patterns represent canoes, houses, people, and even episodes in Maui's life, such as his fishing up New Zealand from the bottom of the sea. In fact, they have their pictorial history in "cat's cradle," and whatever their traditions may be worth, they stand good that the game was of the time of their forefathers, not lately picked up from the Europeans. In the Sandwich Islands and New Zealand it is on record that the natives were found playing a game of drafts which was not the European game.

SCIENTIFIC INTELLIGENCE.

Cost of Rare Metals.—Dr. Theodore Schuchardt, of Goerlitz, Saxony, prepares all of the rare metals to complete chemical collections. The following are the quotations for some of them, showing that they are much dearer than gold: Cerium, $5 per gramme; lanthanum, $10 per gramme; didymium, $7.50 per gramme. These are obtained in globules by electrolysis. Thorium, in powder, is $9 per gramme.

Benzole and Benzine.—These names have generally been regarded as synonymous, but certain pharmaceutical works now apply the same benzine to a light petroleum derivative, while benzole refers to a product of the distillation of coal. The two are very different in their chemical properties. No aniline can be made from benzine. True benzole is soluble in half to three-quarters its weight of alcohol, while the petroleum spirit requires six times its weight.

Magnesium Chloride for Gas-meters.—According to Dr. F. Brockhoff, a solution of magnesium chloride is found preferable to water for filling gas-meters. There is no appreciable loss by evaporation, freezing is practically impossible, and the gas is freed from ammonia. At the Glasswerth mines, in Germany, enormous quantities of this salt are thrown away, and it may therefore be available for the purpose suggested. In the United States glycerine and water, as recommended by Professor Wurtz, would be preferable.

A New Tanning Process.—Professor Knapp, of Brunswick, Germany, has finally succeeded in tanning leather by means of minerals, salts and acids, thus dispensing with the usual extracts of tan bark, galls, etc. The details of the method are not yet published, but there appears to be no doubt of the success of the experiment. The leather is said to be quite as good as that prepared in the old-fashioned way—the time required is very short and the cost of chemicals trifling. If all this be true, it will produce a revolution in an important branch of industry.

The Electric Light in Surgery.—Dr. Nitze, of Saxony, proposes to employ the electric light for the illumination of the interior of the body in surgical operations. The method employed is the incandescence of platinum, the same as has been adopted by Edison; and to protect the parts from the enormous heat there is an arrangement for passing a current of cold water through the brass handles. The instrument is called the Cystoscope, and consists of a long thin tube, on one end of which an optical apparatus can be screwed; at the other end are openings in which the platinum wire is inserted. Dr. Nitze hopes to be able to light up the interior of the stomach of a living patient by means of this ingenious contrivance.

The Adirondack Surveying Party, consisting of ten persons, has made a start from Potsdam as the point of beginning. Dr. C. H. F. Peters, of Hamilton College, has accurately established the latitude and longitude of Potsdam, and the longitudinal meridian thus obtained will be used as a base line from which all calculations will be made. The survey will include the whole Adirondack region, locating its rivers, lakes, etc., of which a map is to be made. Other parts of the State have been carefully surveyed by Dr. Gardiner, and maps have been prepared in accordance. The triangulations are connected with the base lines established by the officers of the Coast Survey, and the position of every township will thus be accurately known.

M. Chevreul, now in his ninety-third year, began his annual course of lectures on organic chemistry at the Museum of Natural History, in Paris, on June 16th. Notwithstanding his advanced age, he is most conscientious in the performance of all his duties, and will lecture if a single person is in attendance. A good story is told *apropos* of this quality. He recently found a single auditor, but, nothing daunted, expatiated for an hour upon an abstruse point in organic analysis. At the close of his lecture he noticed that his hearer did not move, so he announced that the lecture was finished and that the gentleman could leave, whereupon the man spoke up and said: "I beg your pardon; I am the cabman who brought you, and I was to wait to take you home."

Mr. Donald Mackenzie and M. Roudaire have propounded schemes for flooding the Sahara and creating an artificial inland sea in the interior of Africa. What is known as the Basin of El Joof is a great depression, 200 feet below the ocean level, in the western portion of the Desert of Sahara, covering an area of 60,000 square miles. Mr. Mackenzie, after several explorations, affirms unequivocally that all that would be required to convert the arid basin of El Joof into a vast sea would be to pierce a sandbar 300 yards in length and a little over 30 feet deep. He claims that when communication was once established the waters of the ocean would pour into the depressed basin and scour out the channel for itself. By means of such a sea the whole of North Central Africa would be brought within easy reach of the harbors of Europe.

Vivisection.—The sincerity of the opposition to vivisection now so rampant in England has been put to a severe test by the discovery that the construction of the Act of Parliament just passed "was so awkward that it forbade field sports as well as vivisection." It may be the height of cruelty to experiment upon dogs, hares, doves and frogs previously rendered insensible by chloroform, but to set dogs at wild boars to be gored to death, or to chase a poor hare all day across the fields, knocking up horses and worrying the keepers, is a refined and gentlemanly proceeding, which ought not to be interfered with by Act of Parliament. Nobody justifies unnecessary cruelty to animals even in the study of how to save men's lives, but as opposed to hunting for pleasure the surgeons think they have the best of the argument.

Explosion of Finely Divided Starch.—To prevent the adhesion of gundy to the molds while in the process of drying, the cavities are brushed over with powdered starch. The molds are then put into rooms heated by red hot stoves to a temperature varying from 140 degrees to 180 degrees Fahrenheit. No gas jet or naked flame is on any account permitted in the drying-room, and all currents of air are carefully avoided. Notwithstanding all of these precautions accidents will happen, as was illustrated on August 6th, at a candy factory in Elm Street, New York. One of the men slipped from a ladder to the floor, thus raising a cloud of starch dust, and immediately there was an explosion which shook the entire building and severely injured several workmen. It is evident that a red-hot furnace is not the proper drying oven for such a locality.

Breathing Laughing Gas under Pressure.—Mr. Paul Bert, the eminent successor of Claude Bernard, has made a successful experiment in the application of the protoxide of nitrogen by means of an air pump. He mixes in a rubber bag eighty-five per cent. protoxide and fifteen per cent. oxygen. Inhaled at the ordinary pressure this mixture produces no effect; but if breathed in the bell of an air pump at the moment when the pressure has been raised a quarter of an atmosphere insensibility supervenes with extreme rapidity, and as the lungs find in the artificial atmosphere sufficient oxygen for blood-making, the respiration goes on normally. As soon as the mask is taken off sensibility reappears, and as soon as it is reapplied the patient becomes insensible. This discovery, it is believed, will have important application in surgery. The protoxide as applied by dentists at ordinary pressure has a tension of one hundred and its influence lasts only a short time.

PERSONAL GOSSIP.

PROFESSOR CHARLES PHILLIPS has resigned the Chair of Mathematics in the University of North Carolina because of ill-health.

LIEUT.-GEN. VALENTINE BAKER PASHA is likely to be nominated by the Ottoman Government to an important civil and military position in Kurdistan.

PROFESSOR JOHN TYLER, a son of William S. Tyler, D.D., of Amherst, has just returned from a three years' course of study in Germany to accept the Professorship of Biology in Amherst College.

AMONG the deaths of last week was that of Mr. William Jay Barker, of this city, aged 56 years. Mr. Barker was a man of marked integrity and uprightness of character, and enjoyed in the fullest sense the confidence of all who knew him.

THE State Department has notified Judge Hilton that the Republic of Liberia has appointed him Consul for Liberia at New York. Judge Hilton, while appreciating the honor, has declined to accept, as business will not permit him to perform the duties.

THE new bishop of Jamaica is Right Rev. William George Tozer, D.D., who was graduated at St. John's College, Oxford, in 1851, was consecrated in 1863 as a missionary bishop, and after working for ten years on the east coast of Africa, resigned on account of ill-health.

JUDGE J. L. RICE, of Keokuk, Iowa, who died last week, bequeathed $10,000 to the Library Association of that city for the erection of a building, $5,000 to Williams College of Massachusetts, and $1,000 to St. John's Episcopal Church of Keokuk.

DR. ROSA WELT, a young Viennese lady, has shown herself to be so learned and practical that she has been appointed by her university—that of Bern—assistant lecturer to Professor Pflüger in the branch of ophthalmology, in which she has made very advanced studies.

THE ex-Empress Eugénie has just purchased of Baron Sessler-Herzinger the Castle of Wasserburg, Upper Styria. The front contains 122 windows, and the building is over 400 years old. She will have the ex-Khedive of Egypt as a neighbor, if he succeeds in buying of Moritz Von Bartmann his Castle of Frank.

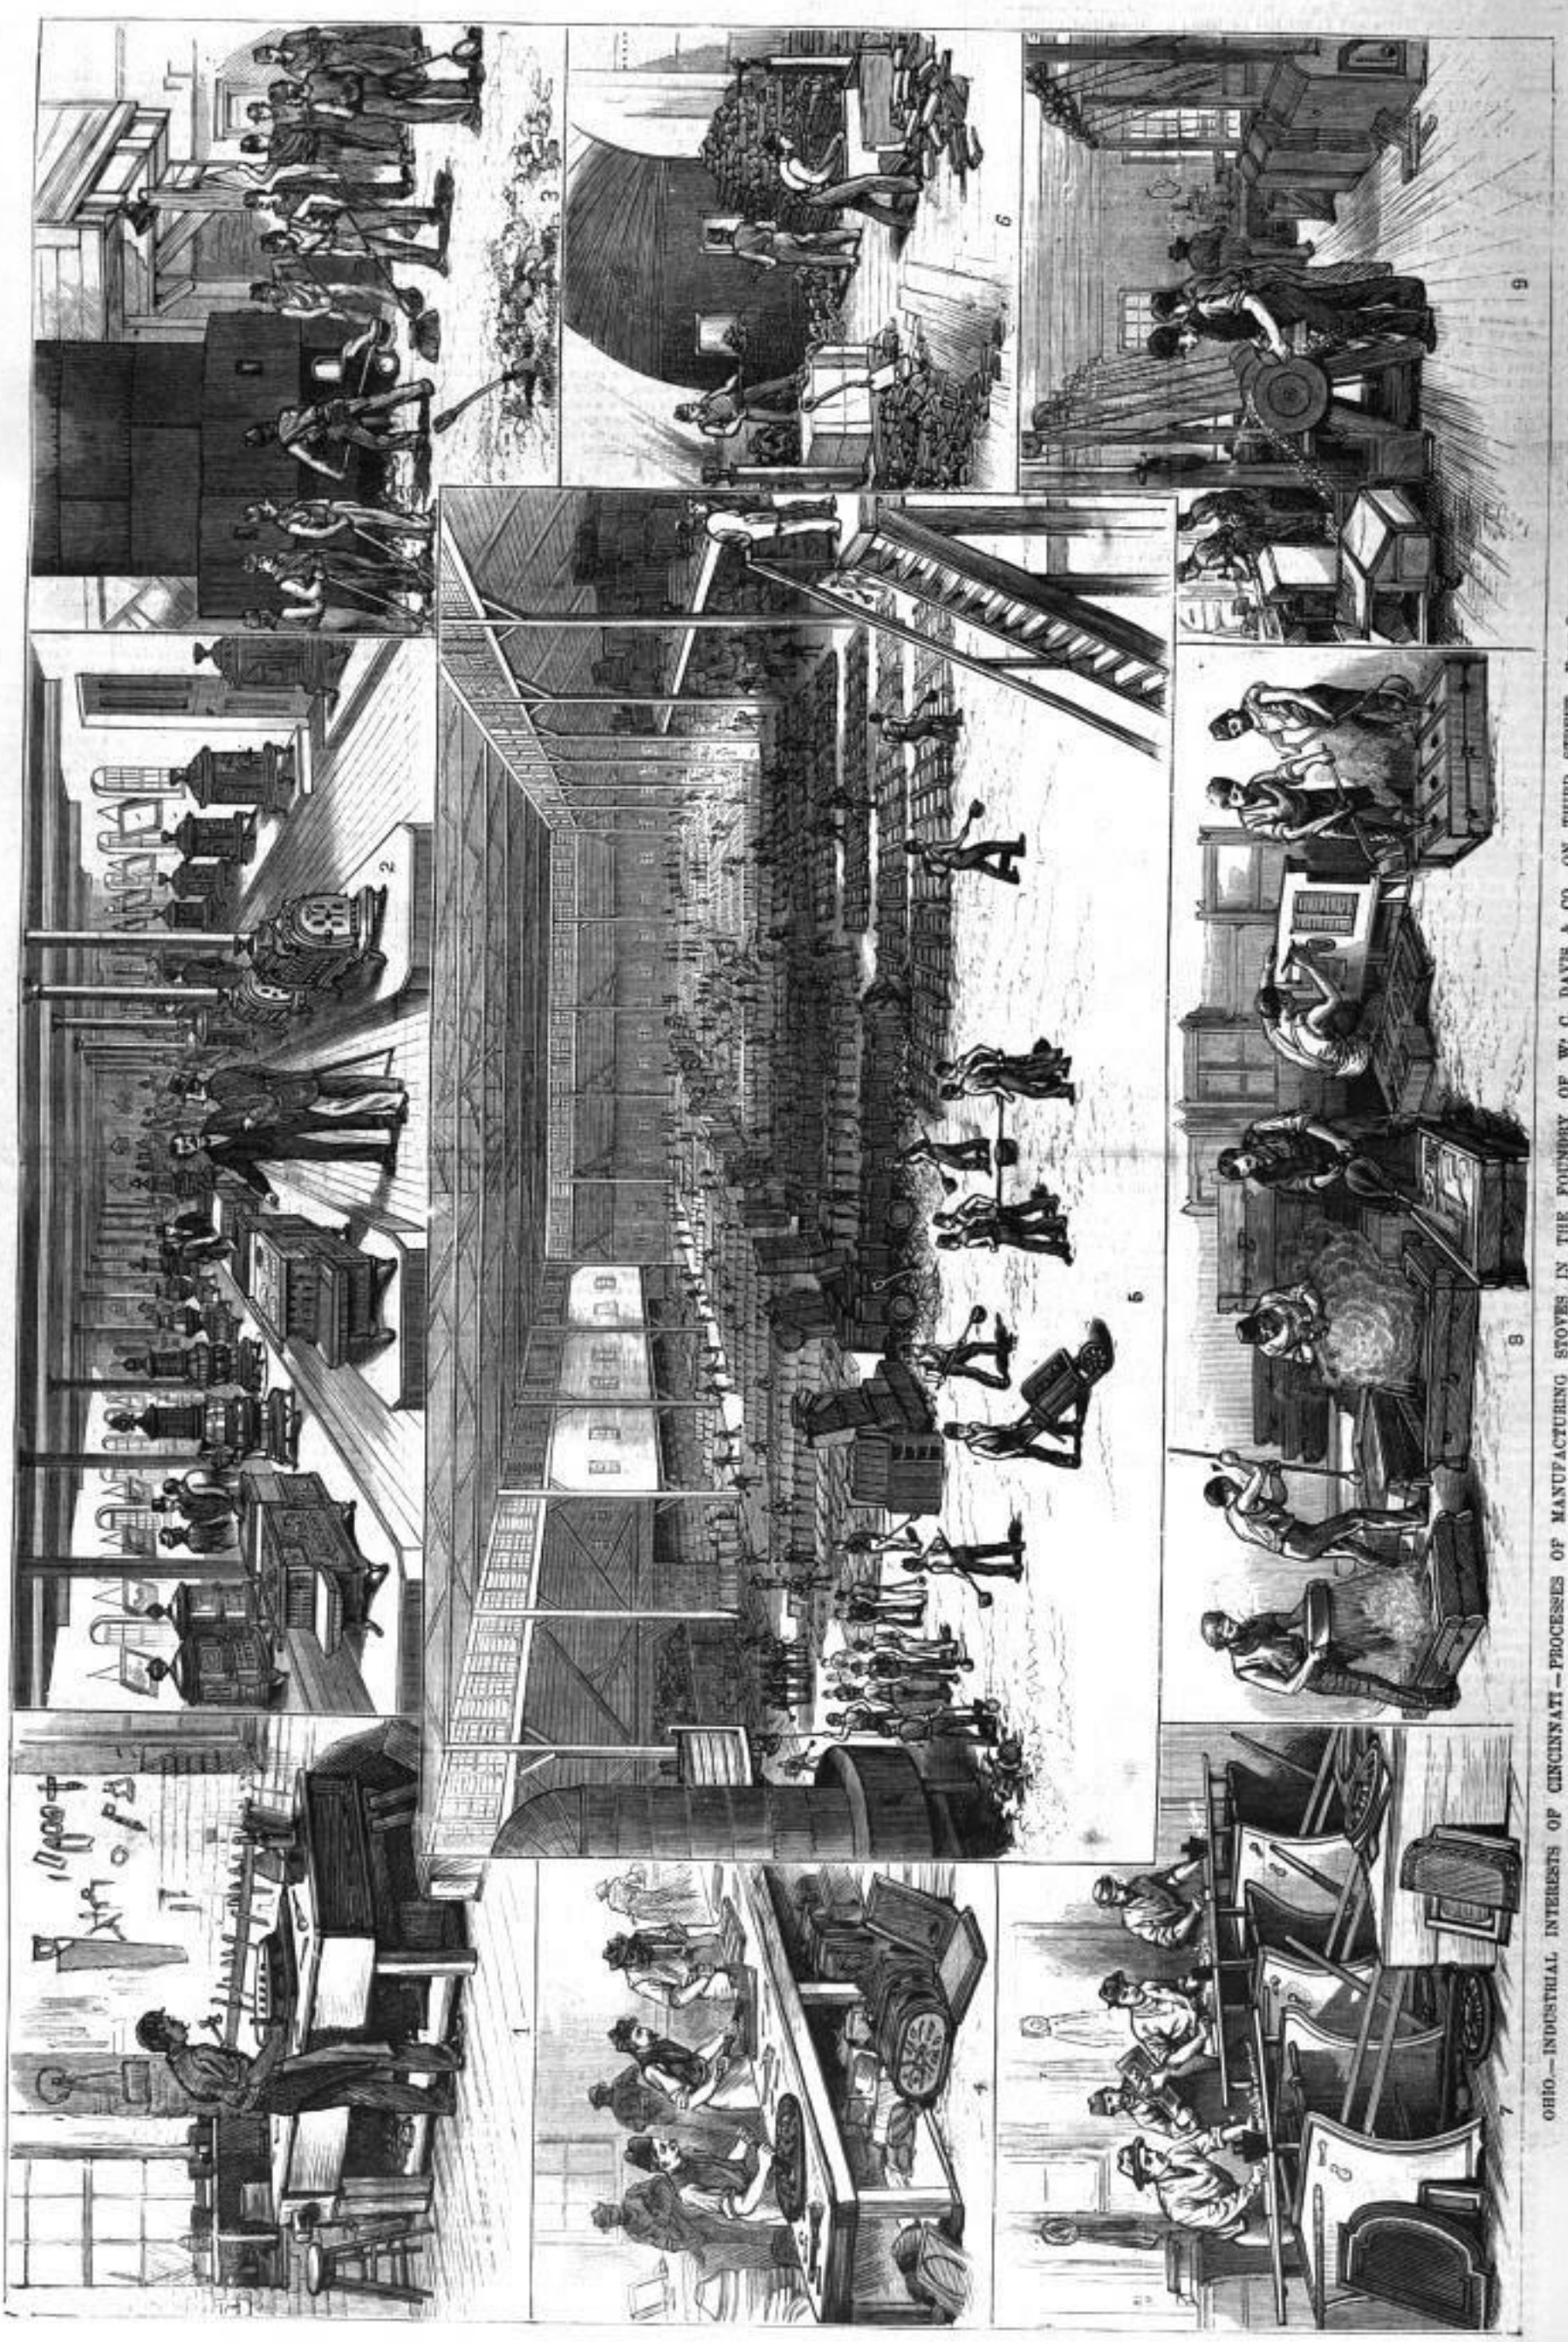
THERE are eighty colporteurs in connection with Mr. Spurgeon's church in London. They visit every month about 75,000 families. During the past year 162,000 tracts were distributed gratuitously, and over $41,000 was realized from the sales of 927,000 separate publications. The total number of visits during the year was 928,290.

MR. KO-KUN-HUA, the new Chinese Professor at Harvard, is a slender, richly-dressed man of forty. He is now established at Cambridge with his wife and six children. He is engaged to teach Mandarin Chinese for three years at $200 a month. It will be taught simply for commercial purposes to those young business men intending to go to the East.

RANAVALONA, Queen of Madagascar, has issued a proclamation to her subjects commanding them to send their children to school, saying that it makes her glad to see her subjects wise. She adds: "And so be all of you diligent, for although you do not now know the sweetness of knowledge and wisdom, you will discover it when they become yours."

THE question as to the appointment of a bishop to the vacant See of Amiens, which caused considerable discussion between the Vatican and the French Government, has been settled by the Vatican's consenting to the appointment of M. Guilbert, at present Bishop of Gap, who recently caused a sensation by declaring that the Church and the Republic could live on good terms with each other. He will be succeeded at Gap by M. Roche, another Liberal.

THE marriage of Carlotta Patti and Ernest de Munck was solemnized on Wednesday, September 3d, at the Mairie du Neuvième arrondissement and at Trinity Church, Paris. The witnesses for Mlle. Patti were the Marquis de Caux (Adelina Patti's late husband) and Signor Gardoni; for M. de Munck the witnesses were M. Chizzola and M. Bourdillon. Only a few relatives and personal friends were present. After the ceremony a splendid luncheon was served at the bride's house.



THE extent and character of the work done by Mr. Plimsoll, "the sailors' friend," is sufficiently indicated by the reports for the first half of this year, during which period 427 vessels were detained as unsafe under the provisions of the Merchant Shipping Act. Of 331 alleged to be unseaworthy by reason of defects in hull, equipment or machinery, only five proved on survey to have been improperly detained; in thirty-nine cases the sailors themselves entered complaint. Every one of the ninety-six vessels complained of as overloaded or improperly loaded was pronounced unsafe on examination; only one of these was reported by the crew.

TWO well-known African travelers will again start for the dark continent during the Autumn. Dr. W. Junker will visit the Egyptian Soudan, while Dr. Oscar Lenz, the eminent Ogowe traveler, will go to Morocco, by order of the German African Society. This society is making arrangements to establish in Morocco a school for African travelers, as it were; the country, although comparatively near, being yet very scantily investigated. Moreover, the young travelers will there get thoroughly accustomed to Mohammedan life, and the society will thus acquire well-trained representatives to be sent afterwards to various parts of Central Africa.

WHEN Mr. Moody laid the corner-stone of his proposed school for girls at Northfield the other day, he placed in the copper box some fine, soft specimens of flax and wool carded and spun in 1820 by his mother, who sat near him, white haired and happy. Among the other things contributed to the box was a volume of his sermons, presented "by Ambrose Moody." "No, no," cried Mr. Moody, blushing and reaching for the book, but it vanished in the box, and he cast a reproachful look at his tall nephew, who stood laughing beside him. The trowel which Mr. Moody used was one which, he said with some emotion, had long been employed by his father, a stone-mason, in earning his bread and that of his children.

MR. WILLIAM FULLERTON, JR., the son of ex-Judge Fullerton, has not chosen to follow his father's profession, but has, instead, turned his attention to one more congenial to his tame—music. Sir William Blackstone, the old law commentator, said that he who followed the law could not follow the Muses; and he himself, when he began the practice of law, wrote a poem entitled "Farewell to the Muse," and beginning, "Shakespeare, no more thy sylvan son." Mr. Fullerton, Jr., spent some years in Europe, where he had the opportunity to listen to the best music properly performed, and wrote graceful letters on musical topics to the *Home Journal*. He has now come before the public as a composer of a song entitled "Adieu, Susan, ma Rose Blonde," the words being written by Alfred de Musset, with an English adaptation by Mrs. H. H. Partridge. The music is graceful and delicate, and written with much ability. The composer has not traveled in the beaten track, and has not only conceived a pretty melody, but filled it with an accompaniment which shows considerable knowledge of harmony and sequence. The song as a whole is an exceedingly creditable effort, and worthy a place in the repertoire of every singer. The compass of the song is from E to G.

THE THEATRICAL SEASON.

"HOW charming!" "How superb!" "What a *coup d'œil!*" were the exclamations that involuntarily escaped the lips of the hundreds of spectators who assembled to witness the production of "Rescued" at Booth's Theatre on Monday night of last week. Mr. Boucicault has wielded a magic wand. He has transformed by a single touch the gloomy and overladen interior of this theatre into a very dazzle of bright and harmonious tints, into a hall as light, as glowing and as full of color as that of the Abencerrages. The *ensemble* is all satisfying, from the time-honored green baize curtain, upon which the eye loveth to refresh itself, to the beaded lights; from the velvet carpet to the gay livery of the lackeys; from the half-concealed orchestra, discoursing soft and dreamy music, to the gorgeous proscenium boxes. Everything seems in unison, and, despite the vigorous efforts of the gilding to establish a glittering pre-eminence, the whites and the scarlets muster sufficiently strong to keep his Golden Mightiness within average bounds. What a luxury are these proscenium chairs — roomy, caressing, reminding mankind of the Club, the fairer sex of the boudoirette. Fans, too, are on "hand," while soda water flows gratis upon the lobbies. Mr Boucicault has rendered Booth's a thing of beauty The *entourages* are so seductive that the crankiest of husbands or the most selfish of fathers dare not complain of the exchange from dining-room or study, while the auditorium is so admirably lighted that the ladies' dresses can be microscopically criticised by the captious ones of their own sex. "Rescued" is a pronounced success. The acting is superb, especially that of Mr. Clayton and of Miss Coghlan, the *mise en scène* is worthy of Boucicault, and the piece is put on the stage in a manner that reflects credit all round.

Max Strakosh's menu is a superb one, and the lovers of Italian opera may safely anticipate a series of banquets. Report speaks enthusiastically of Madame Stringer, a new prima, as well as of Mademoiselle Stolz; while the vocal sensation will be Mademoiselle Bianca La Blanche, sister of no less a personage than Miss Fanny Davenport. Mr. Strakosh promises to do "Traviata," "Barbiere," "Faust," "Carmen," "Rigoletto," "Favorita," "Puritani," "Lucia," "Sonnambula," "Mignon," "Don Giovanni," "Matrimonio Segreto," "Flauto Magico," "Aida," "Ballo in Maschera," "Trovatore," "Norma," "Lucrezia," "Ugonotti," "Dinorah," "Roberto," "Lohengrin," "Guglielmo Tell," "Fra Diavolo," "Figlia del Reggimento," "Don Pasquale," "Cenerentola," "Freischütz," "Fidelio," "Ernani," "Nozze di Figaro," "Mefistofele," "Marta," "Mose in Egitto," and "Otello."

At the Grand Opera House that most excellent of *prima donnas* and most charming of little ladies, Miss Emma Abbott, has produced the opera of "Paul and Virginia." The pure and pathetic story is wedded to music worthy of the theme, and in the hands of "honest little Emma" the tender *Virginia* has found a true, a sympathetic, and a captivating exponent. With such artists as Mr. and Mrs. Seguin, *et id genus omne*, and in such management as Mr. Morrissey's, this distinguished troupe will render English opera all that the tastes of the most fastidious may yearn for.

Aimée is delighting cosmopolitan audiences at the Fifth Avenue. Her chic, her delicious daring and her melodious warbling form a very fascinating ensemble. Her *répertoire* is as varied and extensive as ever, and those to whom bouffe at its best is productive of pleasure should go see and hear this *piquante* little lady.

"Brother Sam" gives Mr. Sothern a rôle in which he fairly revels, and the habitués of the Park Theatre well know how to appreciate the vagaries of the ever popular "Ned" S. That overflowing houses testify to this goes without saying.

At the Standard, Bandmann appears as *Narcisse*, Madison Square Garden is giving a very realistic performance of "Pinafore"; while at the Olympic Miss Jennie Yeamans and J. S. Siemens appear in "Mitt."

John T. Raymond's *Jehabod Crane* is drawing large houses at Wallack's, as it is bound to do, for it is a masterly conception, and one that requires the most delicate and dexterous handling.

Niblo's is enchanting vast audiences with "Enchantment," which as a spectacular display is put on the stage worthy of the Châtelet at Paris.

FUN.

IS A man with a wooden leg club-footed?

IT'S a long worn dress that has no turning.

ONE of the oldest truths nowadays is Sojourner.

DOES the maternal codfish call its young with a codfish bawl?

IF blood will tell, a musquito should be confessing nearly all the time.

JUDGING from the smell of the average churchgoer, patchouli, musk, jockey club, frangipanni, etc., have taken the place of burnt incense of former times.

ONE man asked another why his beard was so brown and his hair so white. "Because," he replied, "one is twenty years younger than the other."

THE maddest man in seven counties is the farmer who worked like a hero to save a drowning man, only to find that he had rescued a lightning-rod agent.

"TO THE poor, all things are poor," said the grocer, as he weighed out a half-pound of his most robust butter for a ragged little fellow with a two-cent piece

A BOY will fight like fury for his place at the first table, but when it comes to turning the grindstone after dinner he's harder to find than five aces in a pack of cards.

A MASSACHUSETTS lady is reported to have scolded her little boy for taking a drink of water at a hotel, "For," said she, "we pay a dollar for our dinner, and water is very filling."

REFLECTIONS of a practical man—"We are going to have a bad year. I must undergo some hardships and make some sacrifices. First, I will lower my servants' wages. Second, I will give no more tips to the waiters at my club. Third, I will get invited out to dinner as often as possible."

A WELL-KNOWN AMERICAN AUTHOR.

REFERRING to his own complete restoration to health through the use of COMPOUND OXYGEN, after many years of invalidism and exhaustion from overwork, T. S. Arthur, the well-known American author, says in his *Home Magazine*, under date of February, 1878: "Drs. Starkey and Palen are physicians in regular standing, of high personal character, and above the suspicion of quackery or pretense. A new curative agent has come into their possession, and their administration of it, so far, has resulted in restoring to health many who had regarded their ailments as incurable, and in giving back a good measure of health to a large number of invalids who had vainly sought for help through other means of cure." The testimony of others as well known to the public will be found in our "Treatise on the Nature, Action, and Results of Compound Oxygen." It is mailed free. Address DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

THE Charleston and Savannah papers reach us with the usual yearly statement of the business condition of those cities. The facts and figures furnished in long array leave no doubt that these Southern marts are fully participating in the improved trade of the country.

SKIN DISEASE.

GREAT suffering for sixteen years. A wonderful cure by the CUTICURA REMEDIES.

MESSRS. WEEKS & POTTER: *Gentlemen*—Cuticura Remedies have done me a power of good. I have been afflicted with skin disease for sixteen years. Some days it troubled me more than others, but at night the itching nearly drove me wild. I would scratch until the blood would run down my limbs. I have had several physicians. Some said they could cure me, but others said not. I will say that before I used the Cuticura Remedies I was in a fearful state, and had given up all hope of ever having any relief. But, like a drowning man grasping at a straw, I thought I would try the Cuticura Remedies, about which I had read so much. They have performed a wonderful cure for me, and of my own free will and accord I recommend them.

Yours truly, S. A. STEELE.
68 West Van Buren Street, Chicago, Ill.,
March 7th, 1879.

HALFORD TABLE SAUCE, unrivaled by any relish, for family use. Recommended by the best families.

THE uses to which MURRAY & LANMAN'S FLORIDA WATER is put may, without exaggeration, be said to be universal. In refined and cultivated society it is recognized as the most refreshing and agreeable of perfumes for the handkerchief, the toilet and the bath.

PURIFY the blood, cleanse the stomach and sweeten the breath with HOP BITTERS.

THE standard quality of BURNETT'S COCOAINE and FLAVORING EXTRACTS have, without an exception, won for them the highest awards for excellence over all competitors, in every exposition wherever they have been placed, for the past twenty years; and, to place the capstone upon past honors, the Tribunal at the Centennial, composed of experienced judges at home and from abroad, join in the popular verdict, and pronounce them "the best in the world."

HALFORD TABLE SAUCE. No gentleman's table should be set without it—a genuine relish.

THACKERAY, during his memorable visit to America, expressed the most unbounded liking for our hotels, though himself the most conservative of Britons. We can scarcely wonder at this when measuring by the standard of the ST. NICHOLAS hotel, of New York. This great establishment is even better than in Thackeray's day, for it has kept in the van of every modern improvement. Its table, apartments, conveniences, etc., are unsurpassed.

HALFORD TABLE SAUCE, relish for soups, fish, steaks, chops, cold meats, gravies, etc.

DR. WILLARD PARKER, the eminent physician, on his eightieth birthday, last week, expressed his views at considerable length on the sanitary aspect of the temperance question. The moderate use, says Dr. Parker, of pure wines and malt liquors is an undoubted means of health, and those who adhere to this practice are certain to promote health and prolong life. The "AMERICA" Extra Dry Champagne of A. WERNER & Co. is just such a wine as Dr. Parker would commend. It meets all the demands of the case, and never fails to invigorate and strengthen, without unduly stimulating the system. The testimony and experience of physicians like Drs. Doremus and Parker adds great weight to the claims made for the pure, unadulterated wines of our own country.

THE ASBESTOS ROOFING is the only reliable substitute for tin. It costs only about one-half as much, is fully as durable, is fireproof, and can be easily applied by any one. H. W. Johns' Manufacturing Company, 87 Maiden Lane, New York, are the sole manufacturers.

HALFORD TABLE SAUCE, best relish in use. For family use preferable to all others.

QUIET nerves and balmy sleep in HOP BITTERS, for sleepless ladies and invalids.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

FOR SALE BY ALL DRUGGISTS AND FANCY GOOD DEALERS.

Barlow's Indigo Blue.

Its merits as a WASH BLUE have been fully tested and indorsed by thousands of housekeepers. Your Grocer ought to have it on sale. Ask him for it.

D. S. WILTBERGER, Proprietor,
No. 233 North Second Street, Philadelphia.

American Fruit-Preserving Powder

AND LIQUID is the Cheapest, Most Reliable, and Best Known Method of preserving all kinds of **Fruit, Tomatoes, etc. Strawberries, Raspberries,** and all high colored Fruits retain their rich color, as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.

Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruit, Tomatoes, etc.,** and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.

The Fruit will keep *without sugar,* or any quantity of sugar may be added as desired.

Warranted to be as healthful as table salt.

The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.

One package will preserve 250 pounds of Fruit, Tomatoes, etc. Price **One Dollar** per package.

Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of Rocky Mountains, for $1.25 per package. **Local and General Agents Wanted.**

KEEP MANUFACTURING COMPANY
631, 633, 635 & 637 Broadway, New York.

WITH $5 You can buy a whole

IMPERIAL AUSTRIAN
100 Florins Vienna City Gov't Bond,

Which bonds are issued and secured by the Government, and are redeemed in drawings

FOUR TIMES ANNUALLY

Until such and every bond is drawn with a larger or smaller premium. Every bond must draw a Prize, as there are NO BLANKS.

THE THREE HIGHEST PRIZES AMOUNT TO
200,000 FLORINS,
50,000 FLORINS,
30,000 FLORINS,

And bonds not drawing one of the above prizes must draw a premium of not less than 130 Florins. The next drawing takes place on the

1st of OCTOBER, 1879,

And every bond bought of us on or before the 1st of October is entitled to the whole premium that may be drawn thereon on that date.

Out-of-town orders sent in REGISTERED LETTERS, and inclosing $5, will secure one of these bonds for the next drawing.

For orders, circulars, or any other information, address,

Copyrighted 1876. Pat. Mar. 5, 1878.

Beware of Infringements.

Piano or Organ Playing actually Learned in One Day.

This is not a new and untried invention. It has been before the public OVER 4 YEARS, and has gained for itself testimonials and praise from all parts of the world.

IT IS NOT A HUMBUG. It is copyrighted, and duly and legally patented under the laws of the United States.

MASON'S CHART.

It is the most wonderful invention of the age. The most infallible test of its value is that over 60,000 have been sold in the United States alone. One Chart sold in a small town has brought in orders for a hundred from the same place. It is a **new theory,** and a decided departure from the old or any other method. It teaches Piano or Organ playing by sight, and not by ear or memory. **Mason's Chart is a machine** which fits over the keys of a Piano or Organ, indicating exactly where and how the hands are to be placed, and the proper keys to strike, changing its position and arrangement to suit the key in which the piece is written that you wish to play. They are perfectly infallible in their results. If you can read you can play the Piano or Organ in **one day** better than a teacher could teach you in three months. If you have no Piano you can learn at some friend's house, and astonish all with your knowledge. DEXTER SMITH, the editor of the leading musical paper in the world, says, "They should find a place in every house, whether there is a Piano or Organ or not. They are to music what the multiplication table is to arithmetic." It gives decided satisfaction in every case. It cannot be otherwise, saving, as it does, a hundred times it cost, and in its **great simplicity lies its unequalled success.** "I am perfectly satisfied, no words cannot be said in its praise. It is the best thing in the world for both teacher and pupil." — JOHN STEVENS, Geneva, O. "The Chart received; gives perfect satisfaction. I apply for the money."— JOHN J. SHUPERT, Vicksburg, Miss. "Mason's Chart received yesterday; am highly pleased with it."— LIZZIE M. BEARDSLEY, Rochester, Ind. "The Chart my daughter bought gives perfect satisfaction."— W. R. HOLMES, Paterson, N. J. "The Chart received; it is every way complete. My wife wishes the agency."— ISAAC HUNTER, Springfield, Mo. We have thousands of letters like the above. MUSIC TEACHERS THEMSELVES UNHESITATINGLY ENDORSE IT. The price is **one dollar** for a complete set (4 forms), and includes payment of postage by us; $7 a dozen to agents or the trade by express.

SPECIAL OFFER. We publish a bound Musical Album containing **16 pieces** of the latest popular music, which could not be bought separately, at retail, **for less than $4.** To every purchaser of a Mason's Chart, who will state in what paper they saw this advertisement, and will agree to show the Chart to their friends, we will give, as a **FREE PRESENT,** our Musical Album, with $4 worth of music. Those wishing the Album sent by mail, prepaid, will enclose 30 cents extra, otherwise we will send it by express. No one will regret learning to play the Piano or Organ; it is the most popular of all accomplishments. Address **The Turner Manufacturing Co., 17 Dock Square, Boston, Mass.,** who are Sole Agents.

ROTULUS BRACE.

PATENTED 1879.

1. It is light and simple.
2. The rolls which hold the straps cannot be felt when the suspender is worn.
3. It is more comfortable, as the roll at the back shifts with every motion of the body, and thus prevents binding on the shoulder.
4. It is more durable, and therefore the most economical. In all other suspenders the principal strain comes at the juncture at the back, and they generally give way at that point. The double roll takes away this strain.

Mailed to any address, prepaid, on receipt of price, 55 cents. Say what color and length are wanted.

SELF-RAISING

Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation offers admirable means for the introduction of a valuable element into the system."

Dr. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahnemann Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

If your grocer has not got it send a three cent stamp to the manufacturers for a sample.

D. LANGELL'S ASTHMA & CATARRH REMEDY.

(PATENTED.)

HAVING struggled twenty years between life and death with ASTHMA or PHTHISIC, and been treated by the most eminent physicians without receiving any benefit, I was compelled, as a last resort, to experiment on myself. I had become so bad that I was compelled to sit on my chair day and night, straining for my breath. My sufferings were so intense that it is useless to attempt to describe them. Always believing that nature had provided a remedy, it it could only be found, I commenced compounding roots and herbs, and inhaling the odor from them, when I fortunately discovered a most wonderful remedy and sure cure for ASTHMA and CATARRH. I now offer to all afflicted with the above named diseases, the benefit of my discovery, and if they will improve the opportunity, I will guarantee they will never suffer with that terrible disease (Asthma) FIVE MINUTES, and will be able to lie down to sleep and rest comfortably. As a further guarantee I propose to any person not fully satisfied, after using one-third the contents of a package, the other ASTHMA or CATARRH to return the remaining two-thirds to the proprietor, and the purchase money will be refunded by return mail. I will say further, if the foregoing proposition is not satisfactory, send your name and address, and I will send you one trial package *Free of Charge.* Should your druggist fail to keep this remedy, I have a large supply on hand, put up in strong packages with full directions how to use it, which I can send by mail to any address on receipt of the price.

$1.00 per Package.

Address, D. LANGELL, (Inventor & Sole Proprietor,) Apple Creek, Wayne Co., Ohio.

Sold by Druggists and Medicine Dealers generally.

☞READ WHAT THE AFFLICTED WHO HAVE TRIED IT, SAY ABOUT IT.☜

W. T. BROWN, *Monroe, Texas,* writes:—D. LANGELL, your Asthma and Catarrh Remedy has completely cured my wife. She suffered with Asthma from the time she was a year old, which is now thirty years.

S. A. HOPKINS, *Joplin, Mo.* D. LANGELL, Dear Sir:—I have used your valuable Asthma and Catarrh Remedy, and say with pleasure that it cured me. Please make my statement known to the world.

GEO. CORR, *Apple Creek, Ohio,*—I do hereby certify that I was afflicted with Catarrh fifteen years. I used about two-thirds of a package of D. LANGELL'S Asthma and Catarrh Remedy, and am now entirely cured.

C. V. HARD, Cashier Worcester Nat. Bank, Ohio.—D. LANGELL, Dear Sir:—Having been severely afflicted with Catarrh in the head, I was persuaded to try your Inhaling Remedy, which effected such an astonishing cure, that I give it public testimony as being a successful and speedy cure for Catarrh.

R. D. BIDWELL, *Downey City, Cal.*—D. LANGELL, Dear Sir:—Your Asthma and Catarrh Remedy has proved to be all you claim for it. I have no language that will express the amount of benefit I have already received, and I wish to say to the afflicted—*No humbug this time.*

Such testimony should convince the most doubtful sufferer that my Asthma and Catarrh Remedy is the wonder of the age. It is my own discovery, gathered from the fields, and contains no injurious drugs. IT IS SAFE, RELIABLE AND TRUE.

SEVENTH INDUSTRIAL EXPOSITION OF CINCINNATI.

THE seventh annual exposition of the industrial interests of Cincinnati was opened on Wednesday, September 10th, in the grand Permanent Building, formerly known as Music Hall.

The arrival of President Hayes and party was an event anticipated with that genuine warmth of sincere friendliness which is the highest possible compliment. Cincinnati put on her robes of rejoicing and decked herself in festal guise to welcome the Chief Magistrate.

A party of distinguished citizens, consisting of two gentlemen from the Exposition Committee and four of the Citizens' Committee, met the Presidential party at Madisonville. Messrs. M. A. Ingalls and J. H. Laws represented the Exposition Commissioners, and the citizens were represented by G. W. Jones, chairman of the committee, and Messrs. J. W. Herron, Sir A. T. Goshorn and Larz Anderson. Mr. Steward, the General Superintendent of the road, was also of the party.

The party left the cars at Madisonville, where they awaited the arrival of the special train containing the Presidential party. The citizens of Madisonville were out in full force, old and young, of all ages, conditions and shades of color. The special train came in sight, arrived, stopped, and Mr. Hayes, hat in hand, stood on the platform bowing and shaking hands with all who crowded eagerly towards him. As the train arrived, there was a call for Mrs. Hayes, who smilingly appeared on the platform and was greeted very warmly by the waiting throng. The Presidential party consists of the President and his wife, B. A. and R. P. Hayes, General W. T. Sherman, Attorney-General Devens, General George A. Forsythe, General William Myers, General J. E. Tourtellotte, General George M. Bacon, staff officers. Mrs. Hayes had her little daughter and her youngest son, Scott, with her.

THE PRESIDENTIAL PARTY MET AT MADISONVILLE BY THE RECEPTION COMMITTEE.

Arrived at Cincinnati, a military company presented arms, and several policemen kept the passage clear for the party to pass to the carriages in waiting, and almost before the crowd were aware the visitors were driven to the Grand Hotel. Early in the morning the President held a general reception at the hotel, while Mrs. Hayes made calls upon some acquaintances. At two o'clock the President and his suite took their places in the procession, which was unusually prompt in starting. Throughout the line of march all the streets were crowded with people and the windows well filled with sightseers. The first division, which was purely military, acted as an escort to the President and distinguished guests. The trades' display was the first ever seen in this city. At the Exposition Building Mrs. Hayes and two hundred ladies reviewed the procession from the main balcony.

When the procession reached the Exposition Building, Governor Bishop made the opening address, tracing the history of the grounds now covered by the Exposition Buildings from the time of their purchase by the city in 1857 up to the present time.

President Pendleton, of the Exposition Board, followed in an address of welcome. In the course of his remarks he recalled the incident that the Governor of Ohio who opened the first Cincinnati Exposition attends the opening of the seventh as President of the United States.

The President responded to the personal allusions in a brief speech, in which he noted the remarkable revival of business in all sections of the country as a fact full of encouragement, and at the close of his remarks the Seventh Exposition was declared open.

OHIO.—OPENING OF THE SEVENTH INDUSTRIAL EXPOSITION OF CINCINNATI IN THE GRAND PERMANENT BUILDINGS, SEPTEMBER 10TH — ARRIVAL OF PRESIDENT HAYES AT THE ENTRANCE TO THE BUILDING, ESCORTED BY THE MILITARY DIVISION OF THE PROCESSION.

THE MAINE ELECTION AND ITS LESSONS.

WHEN an admirer of Napoleon the First was once vaunting to Christopher North the superiority of the great French warrior over the Duke of Wellington, considered as a military commander, and pointed, in evidence of his assertion, to the alleged fact that the Duke was surprised at the battle of Waterloo, "It may be," replied Christopher, "that the Duke was surprised there, but didn't he *astonish* the Frenchmen in the end by remaining master of the field?" It certainly was a surprise which the Greenback guerillas and their Democratic allies practiced last year on the Republican hosts and their skillful leader, Senator Blaine, when, as the smoke of the battle lifted from the field in Maine, they (the fusionists) found themselves in possession of the enemy's camp, with abundance of "spoils" in prospect. It must, therefore, be with something like astonishment that they now find the fruits of their short-lived victory as suddenly and unexpectedly plucked from their hands as they were suddenly and unexpectedly gained.

Though it is too early as yet to write a complete bulletin of the recent political contest in the Pine-Tree State, or to make up a full list of all the "killed and wounded," enough is definitely known to make it certain that the Republicans have regained the practical control of the State. If they still fall short of an absolute majority in the popular vote, they have recovered their ascendency in both branches of the State Legislature, and will thus be able, according to the way prescribed by the Constitution of the State, to place their gubernatorial candidate in the position he has failed directly to secure by the popular suffrage. It is only by a small contingent of the whole vote, in a vote unusually large, that the Republicans have failed to obtain the absolute majority they desired, and since the percentage of increase in the votes cast by them is greatly superior to the similar percentage of their allied opponents, it is obvious that the former rather than the latter are "on the gaining hand" in Maine, and may more confidently count on winning the electoral vote of that State in the next Presidential election, if they shall learn how to use their victory with discretion.

That the "stalwarts" of Maine have much to learn under this latter head is made evident by the political "upturning" of the last year, and by the undisguised restiveness with which moderate Republicans, of the ex-Governor Chamberlain school, have threatened to kick in the party traces. And that they are likely to profit by the lesson administered to them may be inferred from the sagacity which the Republican leaders have previously displayed in interpreting "the hand of Providence" when it is held up in a threatening posture through the ballot-box.

That the Greenbackers and the Democrats of Maine have much more to learn, if they hope to retrieve their fallen fortunes in that State, it is not at all necessary for us to say in view of the confusion which has just waited on their united banners. As far as regards the financial issue (the leading issue of the pending Autumnal elections, as we regard it), the Greenbackers of Maine, as of every other State, have been doomed to fight a losing battle ever since the resumption of specie payments on the first of January last. After the sacrifices already made, and properly, because necessarily, made in order to place the business of the country on a stable foundation, the people of the United States do not mean that the hands shall be put back on the dial, but are rather intent on pushing them forward until they shall point not only to a "parity of purchasing value between paper and coin," but to a revolution of all the outstanding questions which still threaten us with a liability to the perils of inflation or to the mischiefs of a depreciated currency on a mono-metallic basis.

And the Democrats of Maine are now in a position to calculate what they have gained by sacrificing the hereditary principles of their party in order to patch up a temporary alliance with an ephemeral organization. A party which throws its ancient principles overboard in order to snatch a transient triumph from chance or fate, is a party which has already lost faith in itself, and therefore lost its hold on the confidence of the people. Where men fall away from their historical convictions, the outer lapse is a sure mark of a worse decay in that inner creed which is the bond of all concerted action in the field of politics. For the lack of this unifying principle no "cement of public plunder" can furnish a substitute. The long supremacy of the Whigs in England during the reign of Queen Anne is explained by the fact, as Burke recites, that their wise leaders, Sunderland, Godolphin, Somers and Marlborough believed, in common with their followers, that no men can act with effect who do not act in concert; that no men can act in concert who do not act with confidence, and that no men can act with confidence who are not bound together by "common opinions, common affections, and common interests."

Unless the opinions which bind men together in political activity are sufficiently strong to be held with tenacity; unless their "common affections" are genuine and their "common interests" are solid, we must be content to see the game of politics degenerate into a mere scuffle for place without regard to honor or consistency. In so saying, we are not making a plea for party spirit, since party spirit, as we have remarked before, is never so bitter and proscriptive as when it is divorced from real and substantial issues capable of being upheld or opposed in the field of debate. It is the absence of real and vital issues to which their faith can attach that has made the Democrats "a prey to ill-advised coalitions in Maine, Massachusetts and Ohio. It is not the coalitions which have stripped the party of its native strength in these States. It is because the party in these States was already stripped of its native strength that it stooped to enter into the coalitions, and it must find itself before it can hope to find the path that leads to victory.

THE SPANISH MARRIAGE.

IF we are to believe the correspondents, King Alfonso of Spain has lost no time in wooing the fair Archduchess Marie Christina of Austria. The scene of their brief courtship was the pretty French watering-place of Arcachon, on the Bay of Biscay, whither the Archduchess, spite of her jaunty declaration that "If he wants to win me, let him come and woo me," went from Vienna to meet him. The two, we are told, during their sojourn there, were inseparable, walking the gardens hand-in-hand in true lover fashion, and the King declaring himself to be supremely happy. Indeed, in the ardor of his passion His Majesty has committed several breaches of rigid Spanish etiquette, making unexpected calls, kissing his hand to the numerous balconies of the villa where his fair lady was enshrined, etc. And yet it is only a year and a half since the bells were pealing for his marriage with Princess Mercedes, and only a few months since the same bells were tolling the requiem of his bride and queen, dead in the bloom of her golden youth.

The Archduchess Christina is the daughter of the Archduke Charles Ferdinand of Hapsburg, who was a grandson of the Emperor Leopold of Austria. She is just twenty-one years of age, is finely educated, an excellent linguist, and has a keen taste for the piquancy and splendors of life. The advances of King Alfonso were not at first received with favor by the Austrian Government, but difficulties were gradually removed, though some peculiar conditions were imposed by the Hapsburgs. As stated by a correspondent, "the series of mysterious deaths in the royal family of Spain in the course of the last twelve months caused a good deal of apprehension among the Austrians, and made them hesitate at accepting the proposals of an alliance. But in due time a compromise was elaborated. The new Queen will take with her from Vienna her own medical attendant, her own private secretary, three ladies of honor and three chamberlains, and will, moreover, be dowered from His Majesty's personal property, the capital of the same to be deposited in a foreign bank, beyond the reach of revolutions and *pronunciamientos*, which, as experience has shown, sometimes drive kings and queens into exile and poverty." The same writer adds:

"The marriage is not likely to be popular. It is opposed by even constant Royalists, who point to history to prove that Austrian alliances have always brought ill-luck with them; while the Liberals are alarmed by the probable consequences of such a union. The Archduchess is almost fanatical in her attachment to the Catholic Church, and they believe will be so much under the influence of the clergy that the moral conquests of 1868 may be imperiled. All these considerations are certainly of great weight in a country which, like Spain, has only recently and with difficulty emerged from a period of constant revolution, but Spanish politicians should have urged them sooner; and such is the influence—backed by intelligent bayonets—of the Prime Minister, that I think we may count upon a favorable vote of the Cortes, when the representatives of the people meet on the 6th of October, and that the nuptial ceremonies will be celebrated with great pomp, at Madrid, immediately after the expiration of the mourning for the Infanta Doña Maria del Pilar, excepting always some new family bereavement shall again necessitate an adjournment."

It is said that Alfonso has munificently ordered the rooms which were prepared for Mercedes in his different palaces to be newly furnished for his consort that is to be. She will have the satisfaction of knowing that there is not in her apartments a single object to remind the King of her interesting predecessor. She will be fortunate, indeed, if the world shall find in her the same sweet and tender graces which won for Mercedes the homage of all noble hearts.

FINANCIAL PERIODICITY.

IN an address on the business situation before the Cincinnati Chamber of Commerce, on the 10th instant, President Hayes quoted the statement of an English writer that there is a regular periodicity in the recurrence of hard times; that in England they return in about ten years, and in this country once in about twenty years. There is certainly some ground for this statement as to the periodicity of financial disasters. Let us illustrate. The year 1837 will be remembered as peculiarly a "panic" year. So great was the financial embarrassment in this country that Congress was convened three months in advance of its customary date of meeting for the purpose of considering the situation. Ten years and a quarter later, or in November, 1847, Great Britain was visited by a grave commercial and financial crisis. Among the banks which suspended payment were the Royal Bank of Liverpool, North and South Wales Bank, Newcastle Union Joint-stock Bank, and many others. Of important commercial houses which failed were Barton, Islam & Higginson, for £1,000,000; Barclay Bros. & Co., £450,000; D. & A. Denny, Glasgow, £300,000. The Funds fell to 79½, and the rate at the bank ranged from 8 to 12 per cent., while out of doors accommodation could scarcely be obtained at any price. Altogether, in the month of November, there were in Great Britain 242 heavy failures during this crisis.

Turning now to 1857—which will also be remembered as a panic year in this country—we find that on November 9th occurred the failure of the Western Bank of Scotland, which was only "the forerunner of a series of commercial disasters of unusual magnitude." An authority relates that "the bank had for years been in an insolvent condition, owing to the immense advances made by the late manager to speculating firms whose assets were of a merely nominal character." On December 17th the total liabilities of this bank were declared to be £8,911,932. On the 11th the City of Glasgow Bank closed its doors, and this one was followed by the Liverpool Borough Bank (liabilities £5,000,000). The commercial prostration was terrible. Sanderson, Sandeman & Co. failed for £5,000,000; Dennistoune & Co. for £2,000,000; the bullion in the Bank of England diminished to £7,171,000, while its notes in circulation amounted to £60,000,000. Finally, Parliament was called together "to consider the alarming financial condition of the country."

Referring, lastly, to 1866, it is noticeable that the now celebrated "Black Friday" occurred on May 11th. Overend, Gurney & Co. having failed on the day previous for £11,000,000. On "Black Friday" Peto & Betts failed for £4,000,000; Shrimpton, railway contractor, £200,000; while the shares in Agra & Masterman's bank, which had been thirty-three premium at the beginning of the year, fell to one discount.

It has been seen that the City of Glasgow Bank failed November 11th, 1857. Last year it failed again on October 2d, and this failure was followed by the stoppage of many of the most prominent financial institutions and business firms in Great Britain.

The periods of the financial crises named as occurring in England have been 1837, 1847, 1857, 1867, 1878—an average of ten years and a quarter elapsing between each. There is enough in this periodicity, perhaps, to warrant financial wiseacres in investigating the question whether or not financial conditions — like suicides, post-office irregularities, etc.—may not be governed by inflexible natural laws; and, as the "sage of Brooklyn Heights" used to say, "occur in cycles."

MR. EVARTS IN CANADA.

THE visit of Secretary Evarts to Canada last week, as the guest of the Governor-General, was marked by a variety of incidents at once pleasant and significant. The Secretary was everywhere received with demonstrations of kindliness and good feeling, and every possible opportunity was taken by those with whom he came in contact to express a hearty desire for a closer intercourse between Canada and the United States. On the occasion of a reception at Toronto, Mr. Evarts took occasion to speak of the political relations of the two countries, referring especially to the Fishery question, of which he spoke as follows:

"So far as any future relations of the two countries to the Fishery question are concerned, as the Treaty of Washington has made but a temporary provision, terminating now in six years, of course there will be some negotiations; but it is scarcely necessary for me to say that those negotiations will be conducted on our part, and certainly on the part of England so far as we have any opinion or feeling, in a quiet, and I think I may say—for the people pride themselves on their good sense on both sides of the water—in as sensible a way as any subjects of dispute are ever conducted. I imagine that there is constantly pressing on the minds of those who live upon the borders of these two great nations a wish that the commercial, the custom-house and duty embarrassment may be reduced to a minimum, and that there may be as free a flow of commerce between the two communities as the interests of the two may render possible. Of course, we don't always agree when we are on two sides of a great national consideration; any more than when we are on the opposing sides of a private litigation—but this teaches us, at least, one thing, that on both sides of the line these matters are governed by the pretty strong predominance of what we may call human nature. It is a pretty constant quantity in public as well as in private affairs, and if the most enlightened and the most patient and the most benevolent treatment can be applied to all these subjects on one side and the other it will end, I have no doubt, in the great extension of freedom of intercourse and a great reduction of the embarrassments which are felt, I suppose, to be quite unsuitable between communities so much alike and where freedom of intercourse is so desirable."

THE CABUL REVOLT.

DESTINY seems resolved, latterly, to be unpropitious to the political fortunes of Lord Beaconsfield. Just as it seemed certain that England had emerged from her Asiatic and African wars, and after Lord Beaconsfield had indulged himself in complacent congratulations, at the Lord Mayor's banquet, upon the successful issue of all England's foreign troubles, the horrible revolt and massacre of Cabul occurred to utterly spoil the fair prospect, and to turn the feeling of triumph into one of fresh anxiety and alarm. A new war, or at least renewed hostilities, must be undertaken in Afghanistan at once. Indeed, scarcely had the news of the revolt arrived, when the further intelligence came that General Roberts was already moving on Candahar.

The most striking feature, perhaps, of the tragedy by which Major Cavagnari and his staff met their deaths, is its vivid resemblance to what took place in the Anglo-Afghan war of nearly forty years ago. Then, as now, the English invaded Afghanistan, overturned the reigning Ameer, Dost Mohamed, and replaced him with Shojar, a ready tool of English interests. Then, as now, the victory of the English seemed complete, and their possession of Cabul, the capital, secure. Then, as now, the Cabulese populace, joined by disaffected soldiery, rose in revolt, attacked the English Residency, and murdered Sir Alexander Burnes, the English Resident. It is to be hoped that the sequel of the dismal story will not be as closely repeated; that the remnant of the British force at Cabul will not be, as the remnant of 1842 was, utterly annihilated by their semi-barbarous foes.

But in any event the Afghan War is to be resumed. The "scientific frontier" must still be fought for. Whether Yakoob Khan, the Ameer placed on the Afghan throne by the English, is a traitor to them or has been overcome by his own subjects, a rule must still be established at Cabul favorable to their interests, and Cabul itself secured against a similar outbreak in future. There can be no turning back. At whatever cost of men, money and popularity, the Beaconsfield and Lytton policy must be inexorably pursued. That policy is nothing more nor less than the attempt, in the struggle between England and Russia for supremacy in Asia, to gain for England the advantage derived from the military command of Cabul. Larger forces must now occupy that stronghold; a more able and self-sustaining tool than Yakoob Khan must be placed upon the throne of Shere Ali; and the Indian frontier must be strengthened. Nor may this be all that is necessary to secure the much-talked-of "scientific" defense. It is very likely that the English may deem it imperative to occupy Herat. It is even possible that they may venture upon the conquest of Merv. There is but too palpable proof that Russia has secured the friendship of the Persian Shah; and the danger from that side has been growing week by week. All this involves a perfect labyrinth of peril to the English Government. No step can now be taken forward without risking a direct collision with Russia. It will require a most delicate diplomacy, with Russian troops on the right bank of the Oxus and the English threatening Herat, to avoid a *casus belli*. Then, in England itself, the political dangers of the Tory Cabinet have grown wonderfully formidable by reason of the Cabul revolt. The small but vigorous party which has been boldly asserting that India "does not pay," and which hints that it were better to abandon that magnificently expensive appanage of the Crown than to go to more wars and cost to defend it, will derive fresh strength from the disaster. The still larger party which has always denounced the Afghan War, has refused to sanction its policy or its expense, and has continually

Digitized by Google

predicted misfortune from it, will renew its attack upon Lord Beaconsfield with a new vigor and will be far more energetically backed by popular opinion than before. It will be no easy task for the Premier to hold his own, even with the present docile Tory Parliament; and, should any exigency arise forcing him to dissolve it, his chances for a victory at the polls will be vastly lessened.

The revolt at Cabul, in brief, is likely to lead to very grave complications and consequences. It reopens a dismal past and it once more brings to the front the whole subject of the British rule in India. The present miserable condition of that Empire, the enormous expense attending its rule even in time of external peace, the necessity for ever arising to enter upon unheroic wars to defend it, the perpetual misunderstandings, now with Afghanistan, now with Russia, now with Burmah, now with Persia, will once more be sharply reviewed, both at home in England, in Europe and in Asia; and the questions are likely to be more than ever pressed upon the English people—first, whether they can afford to retain their hold upon India; and, secondly, whether they are going to be able to retain that hold at all.

EVENTS ABROAD.

THE insurrection in Cabul and the probable consequences of a renewal of the struggle for British supremacy in Afghanistan are commented upon elsewhere. Naturally this particular subject has absorbed public attention in England to the exclusion of almost everything else. The labor troubles in many of the manufacturing centres still continue, and the outlook for the industrial classes generally is gloomy in the extreme. In Scotland, especially, the depression is becoming terrible. For many years past landowners have been gradually dispossessing the people of almost foothold on the land, while counties that were formerly as blooming gardens have been turned into veritable wildernesses, over which no man must tread without permission. Former inhabitants have been crowded to the large towns or seaside villages, there to seek a precarious subsistence, and, as a result, there is a vast number of people, unemployed, in Glasgow and elsewhere, who are suffering severely. Divorced from the land, these poor people are thoroughly dependent on the fluctuations of trade, and when, as at present, depression exists, they starve.

The Austrian occupation of Novi-Bazar, guaranteed to her under the Berlin Treaty, is being accomplished with the co-operation of the Turkish authorities. Austria's hold on Bosina and Herzegovina has made the advance of her troops entirely feasible and safe, and Novi-Bazar once occupied, lying as it does between Servia and Montenegro, with the Ottoman frontier on the southeast, she will possess a vantage-ground which will enable her to promote her commercial and political interests in the East. It is intimated that Austria has guaranteed the Sultan his European possessions in consideration of Turkey's non-resistance to the Novi-Bazar occupation; the statement, however, lacks confirmation. It is not probable that Russia will regard the extension of the Austrian frontier upon such conditions as these with any extraordinary enthusiasm.

Another batch of the amnestied Communists have reached Paris from Noumea, and been most hospitably received by their friends. A number of the amnestied died on the homeward voyage, and several others were severely ill, owing, it is alleged, to the insufficiency and poor quality of the food supplied them. M. Waddington has renewed his proposal to resign the French Premiership, but will remain in office, it is now understood, until the Senate shall dispose of the Ferry Education Bill.

The Spanish Government is again confronted by the spectre of revolt in Cuba. Many of the leading politicians express serious apprehension as to the outcome of the present perturbations; but none of them as yet seem to comprehend that the true way to deal with the Cuban question is to recognize the right of the people to at least a modified self-government, and cut up by the roots the abuses in the island administration—and especially the onerous system of taxation—which have produced the existing discontent. Some thousands of troops are to be sent out from Spain, most of whom will probably perish from climatic disorders without at all contributing to the permanent pacification of the island.

A special conference of the International Congress of Meteorology will be held at Hamburg, on the 1st of October, to consider a scheme for the establishment of observing stations within the circumpolar regions. The stations proposed are the north coasts of Spitzbergen and Novaya Zemlia, the North Cape, the mouth of the Lena, Point Barrow, and the east and west coasts of Greenland, as far north as possible. Lieutenant Weyprecht, with whom the scheme originates, has determined, whatever the conference may decide, to proceed to some one of the points named, and he will stay at the station selected for twelve months, making observations of all phenomena that are likely to be of use in promoting the study of meteorology. Important scientific results may be achieved by this enterprise.

The negotiations between the Vatican and the German Government appear to be at a standstill. The Pope is said to have suggested, in an autograph letter to the Emperor William, that the direct intervention of the latter in the way of clemency is the only way to restore harmony. The Government has informed the Catholic clergy of Munster, who petitioned for the removal of hindrances to religious instruction in schools, that nothing will be done to effect an essential change until the Catholic Church formally acknowledges the inalienable right of the State to make its own laws.

The readers of Stanley's story of his African explorations will recall King Mtesa, ruling near Victoria Nyanza, who proved himself, under peculiar circumstances, the sturdy friend of the explorer. It is now announced that Mtesa has abolished slavery throughout his dominions. As the result of this decree a million of slaves were liberated in a single day. This act of a savage chief in the heart of the Dark Continent shines with singular lustre in contrast with the despotic policy of some Christian monarchs.

The latest story as to King Cetewayo is that he is still at large, but has only two followers.—The Irish Home Rulers propose to hold a popularly elected convention of 300 members—the same number as composed the former Irish Parliament—to discuss Irish questions before the next session of Parliament.—No results have yet been reached by the commission on the rectification of the Greek frontier, and the outlook is not encouraging.—Sympathy with the Memphis yellow fever sufferers extends to Paris, where a festival in aid of the relief fund is proposed.

THE Butler Greenbackers in Massachusetts have eclipsed all competitors in their bid for the soldier vote. Their platform includes a proposition that soldiers of the late war ought to be paid the difference between the price of greenbacks received by them during the war, about forty cents on the dollar, and the present price of the same currency, with interest from the date of each payment, now amounting to about $500 a man. Could even Butler demagoguery any further go?

THE movement in favor of the metric system is gaining ground. Resolutions favoring the system and an international coinage on the gramme weight of gold, nine-tenths fine, was adopted by the American Social Science Association at its Saratoga meeting last week. The resolutions urge the passage of the Bill now before Congress, providing that hereafter metric denominations of weight and measure shall be introduced into and made obligatory in the service of Custom Houses for invoices expressed metrically.

IT is estimated that England will need, for the current cereal year, 128,000,000 bushels of wheat to meet the requirments of her home consumption. A competent London authority estimates the money value of the deficiencies in the several crops in the United Kingdom as follows: Wheat, $125,000,000; beans, peas and rye, $15,000,000; potatoes, $75,000,000; hops, $6,250,000, and hay, $78,000,000; making a total loss of $296,000,000. This is equal to a loss of about $25 per acre on the land under cultivation.

A NEW line of steamships between Philadelphia and Marseilles and other Mediterranean ports is about to be established. It will be started with English steamers of about 3,500 tons burden, but it is intended to replace them with American steamers at an early date. The outward cargoes will be of coal and other products of American industry, while the return freights will consist of the usual materials of a Mediterranean cargo for America. Philadelphia merchants appear to be giving a good deal of attention to the development of the Mediterranean trade.

AMERICAN manufacturers of cotton goods are about to make an effort to establish a trade with Africa. Commodore Shufeldt, of the Ticonderoga, has supplied samples of the goods now sent to that country by England, with the prices charged therefor, and those who have looked into the matter are confident that we can furnish goods of the same quality at a lower price. Most of the goods are of red and other brilliant colors, and if our manufacturers will take pains to adapt their products to the African taste, there can scarcely be a question as to their success in competing with the English dealers.

THE Mormons of Utah have not succeeded in their efforts to secure for the convicted polygamist, Reynolds, a modification of the rigors of imprisonment. The United States Marshal has been instructed from Washington that Reynolds is not to be treated any better than other criminals under his care; that he is being punished for a crime, and that his punishment must be in all respects similar to that of persons undergoing sentence in the Utah Penitentiary. It is gratifying to find that the Federal authority is at last to be unsparingly enforced against the polygamous abomination and its supporters.

THE announcement was made the other day that a dispatch had been received in France from the steamer *Faraday*, engaged in laying the new French cable in mid-ocean. This feat would seem to demonstrate the practicability of the idea of General A. J. Myer, of the United States Signal Service, that ocean signal-stations may be established in lines traversing the ocean parallel with and over the telegraphic cables, and in communication with either Continent. General Myer's plan, not yet definitely or officially broached, contemplates the employment of six or more ships, anchored like the lightship off Sandy Hook, as stations, at distances of 250 miles or less apart, all to have telegraphic communication with the ocean cable, and so being able to dispatch from mid-ocean to the central office in Washington, thence to be distributed over the world, intelligence of any impending storm, or of any violent perturbation already abroad upon the waste of waters, or of any meteorological or other fact in which the world has an actual concern. Such a proposition as this would, a few years ago, have seemed the dream of wild fanaticism; but it appears now to be quite as possible of accomplishment as much that has already been achieved in the matter of weather forecasts.

DENIS KEARNEY seems to have recovered from his recent attack of moderation and conservatism, and is again on the rampage in genuine sand-lot fashion. The present object of his animosity is General Grant, whom he proposes to hang and burn in effigy on his arrival in San Francisco. This proposition is said to have created intense indignation on the Pacific Coast, and it is intimated that an attempt to carry it out would be likely to result in very serious consequences to the blatant Kearney. The people of San Francisco are distinguished for nothing so much as hospitality, and they will not tamely permit a deliberate insult to be offered to a guest so distinguished as the ex-President, who comes covered with honors from all the peoples he has visited.

THE next Legislature of Maine will include an unusual number of members of high ability. Among other conspicuous gentlemen who were chosen at the recent election was the Hon. Eugene Hale, who has acquired a national reputation as a Representative in Congress, and who does not, apparently, think it beneath his dignity to serve his constituents in the more obscure position of a State legislator. If our men of experience and real ability, everywhere throughout the country, would act up to the same conception of personal duty and consent to serve the people in any capacity, however humble, to which they might be called, the public service would soon become something better than the refuge for incapables and tricksters which it now so largely is. There can be no genuine elevation of the character of the public administration or improvement of the quality of our laws so long as our best citizens refuse to occupy public stations.

ONE of the most interesting and valuable documents ever issued by the Federal Government is that on the state of labor in Europe, being a compilation of reports from United States Consuls, showing the rates of wages, cost of living to the laborers, the business habits and systems of all the principal European countries. A wide diffusion of the information contained in this volume, illustrating the vastly superior condition of the laboring classes in this country as contrasted with that of the toiling masses of Europe, would do more to put an end to the industrial agitation stimulated and encouraged by demagogues and charlatans than any and all other means which it is possible to employ. If the Government cannot afford to place a copy of this book in the hands of every workingman and laborer, then it should be done by employers and trade associations who are so largely interested in the cure of the evils of strikes and consequent industrial disintegration.

A PARTY of over eighty English farmers reached this port last week, *en route* for Texas, where they have secured lands, and propose to make a struggle for independence. In conversation, they uniformly represented that they had decided to abandon their English homes only because they had found that they were fighting a losing battle with circumstances which they were powerless to overcome. One of them stated the case of the English tenant-farmer as follows:

"The best land of England is now, as it has been for years, held by the gentry. Such land as they can do without, that they do not wish to preserve for hunting purposes or for their own farms, they rent to cnants. These tenants are generally men whose fathers and grandfathers have rented and cultivated the same lands. With them the task has been one of constant effort to make bad lands productive. The contest has been so laborious that men are living, and in this party, who know that the tenants are no better off now than they were forty years ago. Some of them are poorer. We have found in recent years that while we could raise good crops of straw we could not produce large kernels of grain, and that in spite of all our efforts our grain was smaller and our labor was gradually becoming less remunerative. For some time back we have considered this situation in meetings of farmers, and, looking about for a land in which the conditions appeared to be most favorable, we struck upon Texas."

Other parties of farmers will follow the company just arrived, and if their expectations are realized, the population of Texas and other States will be largely increased from this quarter. All the tenant-farmers now contemplating emigration possess some ready money, and their chances of success will therefore be greater than those of the ordinary immigrant.

NEWS OF THE WEEK.

Domestic.

THE Maryland Greenbackers have nominated Howard Meeks for Governor.

HENRY J. GULLY, on trial at De Kalb, Miss., for the murder of Cornelia Chisholm, has been acquitted.

THE Democrats of Wisconsin have nominated Mr. Alexander Mitchell for Governor, but he declines to accept.

A CONVENTION of the colored men of the State of New York will be held at Elmira on the 14th day of October.

THE Astley Belt walk, it has finally been arranged, will begin at the Madison Square Garden, in this city, September 22d.

A MALADY called spotted fever has caused fifty deaths in the counties of Polk, Paulding, and Haralson, Georgia, within a fortnight.

A COMMITTEE of the Georgia Legislature has discovered irregularities in the office of the State Treasurer, and recommends that he be impeached.

MR. NATHAN APPLETON addressed an audience of capitalists and others at Chickering Hall, in this city, last week, in behalf of the Panama Canal project.

REPUBLICAN caucuses in Massachusetts so far have chosen 566 delegates, of whom 247 are pledged to Pierce for Governor, 226 for Long, and 83 uncommitted.

A REUNION of the prisoners of war during the rebellion will be held on October 1st and 2d at Toledo. About 2,000 have expressed their intention of attending.

THE Republicans of Maryland have nominated James A. Gray for Governor; Samuel Molladen for Comptroller; and Francis M. Darby for Attorney-General.

MEMPHIS is still ravaged by yellow fever. Twenty-seven new cases and eleven deaths were reported September 12th. The Howard Association is in need of financial aid.

THE Massachusetts Greenbackers have nominated General B. F. Butler for Governor, Wendell Phillips for Lieutenant-Governor, and Jonathan Arnold for Secretary of State.

THE post-office at Canandaigua, N. Y., was broken into September 10th, the safe blown open, and $2,000 in money and a large number of stamps and registered letters taken.

MR. CHESTER A. ARTHUR has been elected Chairman of the Republican State Committee of New York, and the work of organizing for the campaign has already commenced.

THE Essex County (N. J.) Grand Jury has found an indictment for murder in the first degree against Joseph A. Blair, who shot his coachman, John Armstrong, at Montclair last June.

ACTING CASHIER W. W. KERNS, of the Northwestern National Bank of Minneapolis, is a defaulter to the extent of $135,000, which he has lost in speculations. About $8,000 was recovered.

THE total vote in Maine will, it is estimated, reach about 139,000, and leave Mr. Davis, Republican, lacking only from 300 to 500 votes of an absolute majority. Both branches of the Legislature are Republican.

COLONEL THOMAS SCOTT, of the Pennsylvania Railroad, has returned from his European trip in improved health. He is said to have made financial arrangements in Europe which insure the completion of the Texas and Pacific Railroad.

A CALL has been issued by General P. H. Sheridan for a meeting of the Society of the Army of the Cumberland, to be held in Washington November 19th and 20th, the anniversary of the battle of Missionary Ridge. The statue of General Thomas will then be unveiled.

DURING the month of August 12,131 immigrants arrived at this port, an increase of 4,000 over the number in August, 1878. During the first nine months of that year, over 80,000 immigrants have landed here, 1,010 having arrived in one day last week.

A MEETING of the World's Fair Committee in this city, held last week, adopted a resolution reaffirming the determination to hold the fair in 1883, a year having significance as the centennial of the ending of the war for independence, and recommending that September 23d and November 25th, 1880, be days of special celebration.

THE New York State Democratic Convention met at Syracuse on Wednesday, September 10th, and on the following day a full ticket was nominated amid great confusion and excitement. The ticket bears the names of all the State officials excepting Lieutenant-Governor Dorsheimer, for whom Hon. Clarkson N. Potter was substituted. As soon as it was evident that Governor Robinson would be renominated, the Tammany delegates withdrew to another hall and formed into a convention and nominated Hon. John Kelly for Governor, while agreeing to support the balance of the State ticket.

Foreign.

TWO hundred houses in the town of Vlaxama, Russia, have been destroyed by fire.

PRINCE GORTSCHAKOFF attributes Prince Bismarck's hostility to his friendliness for France.

TURKISH troops have been sent from Constantinople to repress the insurrection which has broken out in Kurdistan, Asia Minor.

EASTERN ROUMELIA is reported to be in a state of anarchy; a great Slav kingdom is contemplated by the secret societies of the province.

THE French harvest shows a deficiency of 5,000,000 hectolitres, equal to about 14,000,000 bushels, which must be supplied by imports.

IN Afghanistan the mutineers are advancing on Jelalabad and Cabul. General Roberts's forces are also menaced, and he has called for four more regiments.

ALL the directors of the West of England and South of Wales District Bank, except one, have been committed for trial for publishing false balance sheets.

AT the second election in Bordeaux, France, September 14th, for Member of the Chamber of Deputies, M. Blanqui was defeated by 258 votes in a poll of 9,138.

THE Italian provisional estimates for 1880 show a decrease of 28,000,000 lire in the receipts, without counting the reduction of the grist tax. The War Office expenditure exceeds that of 1879 by 8,000,000 lire.

IT is stated that the King of Abyssinia claims the whole of the strip of coast which was ceded to Egypt in 1877, and also several towns and the territory in which they are situated. If his demands are rejected war is apprehended.

THE breaking up of the old Arctic exploring ship *Resolute* is now complete. The commemorative piece of furniture to be constructed from a portion of the timbers for the President of the United States will probably be in the form of an elaborate secretaire.

THE MAN OF MANY MEDALS.

ANNUAL GAMES OF THE NEW YORK CALEDONIAN CLUB.

THE sons of the Land o' Cakes had an "unco' gude" time of it this year at Jones's Wood Colosseum, the occasion being the annual games of the New York Caledonian Club. Such plaids, and bonnets, and tarries, and philabegs, and sporans, and kilts! Such screeching of bagpipes, and skirling of bare-legged Highlanders. We had Rob Roy, striding about as though his foot was upon his native heath. We had Baillie Nicoll Jarvie, portly as to stomach, winky and watery as to eye, with "Ma conscience" in broad Lowland ever and anon dropping from his mutchkin-moistened lip. We had the Dandy Dinmont, with his sandy hair and cheek bones as high as the Tribune clock; and we had more tartan than ever appeared at the bidding of Rossie Prince Charlie on the fatal field of Culloden. The Highlanders, strongly reminding one of those wooden effigies standing outside "shoeshin'" shops, swaggered about as did their ancestors in the "Saut Market" when Charles Edward held high revel at his Royal Palace of Holyrood—many of them plated with medals won at tossing the caber, throwing the hammer, dancing the Highland Fling, or in footing it between the crossed blades of the "bloddie" claymore. There were "drouthy neebors," too, in that mad, merry crowd, who were "sa fou" but just a wee drappie in their 'ee," and, oh, it was excruciatingly funny to behold the mingled gaze of astonishment and disgust on the bloated features of a beer-beloved Dutchman, as these sons of Caledonia strutted in, calling for "a quaich" in accents as moist as a Scotch mist. The kilts visibly affected prudish young ladies, and the "Oh, mys," "How dreadfuls," "Well, I nevers," that rose above the screechings of the pipes, constantly assailed the ear. A Cincinnati man confidently informed us that he felt at home in these pipe-shriekings. There is no music so foot-moving as that of the Highland Reel, and the very instant "Mrs. M'Pherson" or "Johnny Cope" was struck up, the floor was taken possession of by a dozen jigging couples, who thoroughly abandoned themselves to the ecstasy of their native music, and who footed it until the pipers were fairly compelled to pause for lack of wind for their chanters. Old and young, handsome and ugly, crossed hands, flung themselves into paralytic postures, jigged and wriggled, and stamped and whirled, and yelled and shrieked, while bowls of applause, mingled with right royal, honest and hearty laughter, came from the enthusiastic bystanders. We had foot races, and walking matches and sword dances, and flings, and tossing the caber and "hitch and kick," and "all manner o' games." Every event was admirably contested, especially that of the five-mile race, a son or grandson of the Emerald Isle, Tom Donohoe, wresting the prize from the two crack champions. Bang went saxpences! and bang went mutchkins of the best whisky in the world, bar none; and although no moon appeared to light the Macs homeward, "any chiel amang them announced her presence to

A GERMAN OUT OF HIS ELEMENT.

the music and words of Robbie Burns, while loud and deep were the parting declarations, that "rank was but the guinea stamp, the man's the gowd for a' that." We congratulate the New York Caledonian Club on the pre-eminent success of its annual gathering, and more than all upon the genuine good-fellowship and thorough clannishness that distinguished it from the first screech of the bagpipes to the very last.

LIFTING THE HAT.

THE minor loss of a man's property is included in the major loss of himself; and so, while he surrenders his weapons he also yields up, if the victor demands it, whatever part of his dress is worth taking, the motive for taking it being in many cases akin to the motive for taking his weapons; since, often being the hide of a formidable animal, or a robe decorated with trophies, the dress, like the weapons, becomes an addition to the victor's proofs of prowess. At any rate, it is clear that, whatever be the particular way in which the taking of clothing from a conquered man originates, the nakedness, partial or complete, of the captive, becomes additional evidence of his subjugation. That it was so regarded of old in the East we have clear proof. In Isaiah xx. 1—4, we read: "And the Lord said, like as my servant Isaiah hath walked naked and barefoot three years for a sign, . . . so shall the King of Assyria lead away the Egyptians prisoners and the Ethiopians captives, young and old, naked and barefoot." And that the Assyrians thus completely stripped their captives is proved by their sculptures. Nor are we without evidence, furnished by other races, that the taking off and yielding up of clothing hence becomes a mark of political submission, and in some cases even a complimentary observance. In Fiji, on the day of paying tribute, "The chief of Somo-somo, who had previously stripped off his robes, then sat down and removed even the train or covering, which was of immense length, from his waist. He gave it to the speaker, who gave him in return a piece large enough only for the purposes of decency. The rest of the Somo-somo chiefs, each of whom on coming on the ground had a train of several yards in length, stripped themselves entirely, left their trains, and walked away, thus leaving all the Somo-somo people naked." Further we read that during Cook's stay at Tahiti, "two men of superior rank came on board, and each singled out his friend; this ceremony consisted in taking off great part of their clothes and putting them upon us." And then in another Polynesian island, Samoa, we find this complimentary act greatly abridged; only the girdle is taken off and presented.

With such facts to give us the cue, we can scarcely doubt that this surrendering of clothing originates those obeisances which are made by uncovering the body, more or less extensively. We meet with all degrees of uncovering having this meaning. From Ion Batula's account of his journey into the Soudan in the fourteenth century, Mr. Tyler cites the statement that "women may only come unclothed into the presence of the Sultan of Malli, and even the Sultan's own daughters must conform to this custom." Other parts of Africa show us an incomplete, though still considerable, unclothing as an obeisance. In Abyssinia, inferiors must bare their bodies down to the girdle in presence of their superiors, "but to equals the corner of the cloth is removed only for a time." The like occurs in Polynesia. The Tahitians uncover "the body as low as the waist in the presence of the king;" and Forster states that in the Society Isles generally, "the lower ranks of people, by way of respect, strip off their upper garments in the presence of the principal chiefs." How this obeisance becomes further abridged, and also how it becomes extended to other persons than rulers, are well shown by the natives of the Gold Coast. Cruikshank says: "They also salute Europeans, and sometimes each other, slightly removing their robe from their left shoulder with the right hand, gracefully bowing at the same time. When they wish to be very respectful, they uncover the shoulder altogether, and support the robe under the arm, the whole of the person from the breast upwards being left exposed." And of these same people Burton remarks that "throughout Yoruba and the Gold Coast, to bare the shoulders is like unhatting in England." That uncovering the head, thus suggestively compared with the uncovering of the upper part of the body, has the same original meaning, cannot be questioned. Even in certain European usages the relation between the two has been recognized, as by Ford, who remarks that "uncloaking in Spain is equivalent to our taking off the hat." Hence it seems that the familiar taking off of the hat among European peoples, often reduced among ourselves to touching the hat, is a remnant of that process of unclothing himself, by which, in early time, the captive expressed the yielding up of all he had.

SOME USES OF THE OCEAN.

WITH so many people at or coming from the seashore, it is a good time to call to mind some of the uses of the sea, practical and other than as a source of entertainment simply. It would be serving a great purpose if it were only the pathway of commerce and the world's washing machine, but it is a deal more.

It is, though few persons stop to think of it, more abundantly stocked with life than dry land is, and this ocean life is useful in many ways, in supporting life on land, and so is made directly valuable to mankind. How much more prolific the sea is than the land is suggested in the fact, that while an average acre of land will yield a ton of corn or two or three hundred weight of meat in a year, there are thousands of miles of sea bottom which give up daily tons enough of sea food to the acre to equal in nourishment the yearly yield of the best-tilled land. A hundred pounds of fish are equal in nourishment to two hundred pounds of bread or to seven hundred pounds of potatoes, and though science can help matters along, we have not yet reached the point where we can confidently say that the ocean's supply of fish needs artificial replenishing. There come times of scarcity and times of plenty. Fish appear and disappear. Whether they are killed off, driven off, or accidentally led to move, nobody can know.

One singular factor in increasing the business of fishing of late years has been the railroad. Quick transit has carried fish in the best condition to markets where it previously was as poor as it was rare, and has given an immense impulse to the fishing industry. The extent to which the world fishes is very hard to determine. Statistics, at best faulty, are necessarily very vague on such matters, but a few collected facts are as follows: Great Britain imports yearly of the products of the sea $40,000,000 worth. The fisheries of France and Russia yield for market each about $17,500,000 worth; of Norway, $16,000; of Denmark, $800,000; of New England, $8,000,000. There are in Ireland 5,965 fishing boats, with 23,693 fishermen; in Scotland, 14,547 boats and 45,263 fishers; in the four British North American provinces, 18,000 fishing boats and 42,000 fishermen, with 200,000 persons one way or another handling and living by fish. The census gives to this country 20,000 fishermen outside of the whale fishery. The whole Asiatic coast is devoted to fishing. Far north and far south parts of the world get all their living from the sea, and it is said that dried fish is one of the absolutely indispensable foods in the tropics.

THE BROADSWORD DANCE.

SHE SAYS SHE "WILL NEVER, NEVER, FORGET HER SENSATIONS ON FIRST BEHOLDING THE KILTS!"

A CURIOUS MANIA.

M. MONSELET, has discovered in the shop of a bookseller on the Quai Voltaire, in Paris, one of the most singular monuments of human idiosyncrasy yet brought to light. It consists of no fewer than forty-five manuscript volumes—quite modern—written in utterly unknown characters. An assembly of savants, having been convoked to pass an opinion on the hieroglyphics, declared that they were quite beyond their ken. The form of the letters, we are told, bears, when looked at from some distance, some resemblance to Oriental calligraphy, but this is the only description vouchsafed. Several pages are framed by borders executed with the pen in the most marvelously delicate style—flowers, animals, heraldic shields, angels, landscapes, ruins, etc.; the illuminators of missals produced nothing superior to them. M. Monselet proceeds: "And now what do these forty-five volumes contain? Everything tends to the supposition that they are memoirs, of which the author was so morbidly jealous that he created a writing peculiar to himself for the purpose of transcribing them. And this author is known; but he died a little while ago. He was an architect, very skilful in his profession and much consulted, M. H. Legrand, to whose pen are due some important works—not in manuscript—that indicate a man of perfectly serious tastes. How, then, can we find an explanation of these many volumes in which are deposited the secrets of his inmost thoughts, destined to die with himself? And in the first place, where did he find time for writing them? I do not exaggerate in saying that by the perfection of its calligraphy this collection represents more than two years' labor. If it be a mystification, we must allow that it has been carried out with rare patience; but for my part I prefer to attribute it to a wild and pleasing mania. I feel convinced that M. H. Legrand owed the best moments of his life to his solitary and mysterious occupation."

THE ORIGIN OF CROQUET.

CROQUET is not, as many suppose, of modern birth, but it may be traced through its various stages to Persia as far back as the eighth century. Its origin was polo, which the Persians played with a long-handled mallet called chugan. In the ninth century the game made its way into the Eastern empire, the original mallet changing its form into a long staff ending in a broad bend filled with net-work of gut strings.

"Thus," says a writer on the subject, "there appeared in the East as belonging to the great sport of ball 'play on horseback the first shapes of two implements which remodeled the whole play life of medieval modern Europe, the chugan being the ancestor of the mallets used in croquet, and of an endless variety of other playing clubs and bats, while the bent staff, with its network, was a primitive racket." We find that the original ball games in which sticks were used were played on horseback, and instead of polo being an outgrowth of these sports played on foot the latter are the changes made in the Persian game of chugan, which, as has been said, was the parent of all our games in which artificial means are used to propel the ball. The transition from the chugan of Persia to the short-handled mallet used on foot was easy and natural, and the substitution of a club came by gradual changes, the head being probably the original implement, which was superseded by a rounded stick.

A WONDERFUL SWISS HEALTH RESORT.

IT is well known that in Europe mountain resorts for Winter as well as Summer are now on trial. Those most noted are at Goerbersdorf, Falkenstein and Davos. The village of Davos am Plaiz, in Switzerland, is situated on a large plateau 5,000 feet above the sea level, and completely surrounded by mountains, which screen it from high and penetrating winds. Like that of almost all corresponding altitudes, the air is very dry, its humidity being less by two-thirds than that of Nice or Cannes. This gives it a property of elasticity, or, as it is sometimes called, electric tension, which modifies in a remarkable manner the sensations of heat and cold. Persons often sit in the open air, even after sunset, with the mercury below freezing, without overcoats, without the slightest discomfort, and most of these invalids at that. The daylight at Davos is very short in Winter, the sun overtopping the mountains about 10.30 A. M., and sinking behind their summits from 3.30 to 4 P.M.; but the sunshine, while it lasts, is very bright, and the heat of its direct rays is intense, rising to 100° or over, and at the same time the temperature in the shade will vary from 22° to 30°. The average temperature for Davos for January, 1878, was 16° most of the nights, and many days marking zero or below. A writer says: "The sun will almost boil one's back, while icicles from his breath will form on his mustache and beard, and, changing front, his face will be actually sunburnt. From the constant sunbronzing to which they are subjected, invalids soon lose all appearances of delicate health. The food generally is not inviting, nor even well cooked, but an enormous appetite is established after a few days' sojourn; and the rule, to which there are but few exceptions, is that everybody gains more or less rapidly in flesh. The doctors drive everybody out of doors—it is not too much cold, but too much heat, that they dread. The recreations are walking, sledding, coasting, skating, snow-balling and eating. An excursion of ten miles on foot soon becomes a bagatelle to delicate women who at home could not be induced to walk a fourth of that distance. In the evenings there are hops, amateur theatricals and various entertainments—but all by medical direction—of short duration, which is even extended to the Sunday service, which is restricted to one session of one hour. Persons who have had hemorrhages cease to bleed, coughing and expectoration rapidly diminish—in fact, there will be more coughing in an average country church than in one of these assemblies of invalids.

TOM DONOHOE WINNING THE FOOT-RACE.

NEW YORK CITY.—ANNUAL GAMES OF THE NEW YORK CALEDONIAN CLUB AT JONES'S WOOD AND WASHINGTON PARK, SEPTEMBER 4TH.

Digitized by Google

WHOSE WAS THE THIRD CHAIR?

"AS for me," said Doctor Cairnes, "I am a Spiritualist!"

"Aha!" cried his guests, gleefully, in chorus. They drew up their chairs to the smoldering embers, pushed by the decanters and glasses, lighted jubilantly their cigars, and turned again to their host.

"A Spiritualist," they said, "and why?"

"Because," said the doctor, in a dreamy, hesitating tone, "my experience has taught me there is something in it—that is soul-satisfying. We all know that the world is composed of matter of various kinds: looked at with the eye of a scientist, these different varieties of matter are classed almost from Divinity down to mere crustacea. This is perhaps interesting, but unsatisfying to human egotism. We find that from certain upheavings of the ocean, lovely islands have been formed; that from an ugly seed a great, glowing, lustrous flower bursts forth; but this only leads us to look for more——"

The doctor paused. His friends wondered what all this had to do with Spiritualism. They had been invited here upon this Christmas Eve in question to enjoy the hospitality of one of the choicest spirits of the age in a bodily shape, and some of the finest in a liquid variety. The latter had been partaken of modestly, according to the wont of these gentlemen, who were sybarites of the soul as well as the body, and would not have spared this night from study or given it over to pleasure, had they not expected, and in a manner demanded, other than an ordinary revelry.

"He's a grand fellow," said Professor Bates, when he opened his invitation. "A little queer, perhaps, but that is a capital fault." The professor neither drank nor smoked, therefore he was to jog the halting voice of Doctor Cairnes.

"Your experience in Spiritualism was soul-satisfying, you say?" he insinuated.

"Yes," said the doctor, starting out of a reverie, "it was, indeed!"

"There was, in fact, something in it?" pursued the professor.

"Yes," repeated the doctor, "there was, indeed," and relapsed into his reverie again.

"And would it be intrusive to ask," said a young medical student, "what in thunder that 'something' was?"

"It was a woman," said the doctor, looking at him dreamily.

The six gentlemen hitched their chairs nearer to the fire, exchanged an unctuous glance with one another; the professor wiped his spectacles, and put them again upon the bridge of his nose.

"And a man," added the doctor.

Then they all waited quietly—it was evident to these kindred souls that the doctor's spirit was getting *en rapport* with his theme, and they concluded to give it time.

"When I was a young man," said the doctor, at length, "I was connected with a hospital situated in one of our seaport cities. It was a gloomy pile of buildings, infested with vermin of every kind, lighted wretchedly, and poorly ventilated. Through the great, gloomy corridors—wind-swept and icy cold in Winter, dark, damp, moldy in Summer—there seemed to stalk the phantoms of those lonely and desolate wretches whose bitter fate it was to die here, uncared for and unattended, save by men given over to the pursuit of science, or creatures possessed by a sordid brutality. The windows, covered with dirt and cobwebs, effectually kept out the sunshine at all seasons, and life there was a dreary business at the best. I should have speedily got away if it had not been that I fell violently in love with one of the occupants."

"The woman?" murmured the guests.

"No," said the doctor, "the man! He was, however, the victim, or one of the victims, of the woman!"

"There is something interesting in that word 'victim,'" said the student.

"You will allow, gentlemen," continued the doctor, "that there are grades of friendship, as there are grades in the different varieties of matter I alluded to—for instance the diamond is only matter, yet it is more precious than mud——"

"And cleaner," suggested the student, with a subtle fling at the doctor's story.

"I have the honor," said Doctor Cairnes, "to call you my friends."

"The honor is on our side," said the student, determined not to be outdone in politeness.

"But for Paul Wayne, the young physician I found in the hospital on the coast, I held the profound sentiment which, when it reaches the exaltation of love, passeth that of woman. His face suited his form, and both matched his spirit, and all were supremely beautiful! I see him now as he passed with his firm, light step through the gloomy corridor, his blonde hair falling about his high white brow, his glowing eye full of a wild enthusiasm, the ominous red spot in his cheek burning and paling fitfully, his lips shaping unconsciously the thoughts that surged from his overwrought soul."

"Was he a madman?" inquired the student.

"He was a Spiritualist," said the doctor. "He believed that soul could be brought into communication with soul without the aid or incumbrance of the body, and that the power of the will was absolute.

"He was not long in making me a convert to his wild but beautiful belief, and I accepted with heart and soul the exquisite future he held out to me of a love that can neither be belittled by envy or jealousy, debased by passion, nor defrauded by time or death.

"It was infinite, unbounded, immortal:

"Heaven knows how many hours we squandered thus happily, wandering up and down the old corridors, his arm thrown lovingly about my shoulders, for he was many inches taller than I——"

"He must have been a giant," murmured the student.

"He was indeed a giant," said the doctor, "at least in will; what he desired he endeavored to attain at any risk. Once having determined upon a course of action, he never paused in pursuing it, and, by mere contagion of will, saved many poor wretches from sinking into the jaws of death. 'Determine you will endure the operation,' he would say; 'will to subdue the fever. Live! Come, I am certain you will arise from this bed and walk,' he said, one day, to a poor patient that everybody had given up, and the man is still alive.

"But when we were one evening taking our usual stroll in the corridor, he confessed to me he had met, the night before, with the woman he had so long prayed to see—longed to hear, yearned to meet. The woman of all the world made for him, the one supreme creature given by a gracious, bountiful, omnipotent Nature for the full fruition of all the wild hopes he had dared indulge in. 'You know, Harold,' he said, 'I have not allowed myself to suppose it possible I should meet her body and spirit; I *knew* in some future state we should belong to each other, but to enjoy this happiness here, now, without delay, oh, heaven! it is too much, Harold.' He pressed his hand to his heart, became deadly pale and trembled. I supported him in my arms, and he soon regained composure and strength.

"'I have not seen her,' he hastened to add; 'she was the sibyl of a meeting I attended, and the first sound of her voice made me tremble; there was that of feeling, of delicacy, of melody in it that went straight to my soul. I loved her, Harold, as I love her now, as in ages ago I loved her, as I shall love her in centuries to come!'

"Then he told me of all she had said, of the poetry of her language, of the music of her voice, filling the darkened room with a melody and light of its own.

"I became enraptured with the mortality of the creature he had shown me.

"'She is beautiful, Paul,' I said, 'she is worthy of you. She is slight of form, infantile in face, her skin is transparent, her eyes great and dark and glowing; she is always pale, but her spirit burns and glows and radiates through her voice.'

"'Yes, yes,' he murmured; 'friend of my soul, you have painted her!'

"We went together that night to the meeting, and I came away scarcely less in love with her than was my friend; in truth, it seemed that her presence overpowered all that entered it, but Paul alone dared to love her.

"To love, with Paul, was no mere passive, negative state of being, he became the embodiment of passion. Egeria was here upon the earth; she was made for him; time, nor circumstance, nor place, nor position should separate them. She must be his forthwith—his, since it was the custom of a weak age by the bond of the law, human and divine.

"But Egeria refused to marry him.

"Not that she did not love him, that was simply impossible; to look upon him was to love him; but for some secret reason she refused to let him look upon her, to let the light shine upon their interviews. They communed in darkness, and it proved the strength of fascination which the soul of Egeria possessed that at every interview we came away more enraptured than ever. For Paul allowed me to share his love and his life. I was no hindrance to their happiness. I loved them with that purity and strength that my being was merged with theirs, and they forgot in a manner I was in the room with them. Night after night passed away. Entranced by her divine presence, I could have lingered on for ever. But it was different with Paul; he became restless, dissatisfied, gloomy: an eager craving dawned in his face which, day by day, increased to a positive hunger.

"'Egeria,' he exclaimed, one night, in reply to one of her fervid, impassioned sentences, 'I must see you—I demand it as a right—as a necessity!'

"'Impossible,' said Egeria, with a shudder in her voice.

"'Is it,' said Paul, 'that your soul is jealous of your body? Can't you trust me? Come, I have seen you already.'

"Egeria started.

"'Tell her, Harold,' said Paul, 'that a friendship like yours and a love like mine can not be deceived.'

"'You have seen me!' murmured Egeria; 'why, that would be happiness indeed—you have seen me, and yet you love me?'

"There was a latent terror in that musical voice that struck a chill to my heart, but Paul cried out with a passionate fervor that could not be denied, 'You are beautiful, Egeria,' and then paused, for a low sob escaped from her lips—she started to her feet as if to flee.

"'Stay,' I cried. 'Paul does not mean the common type of beauty, a mere combination of flesh and color that ordinarily serves as a bait for the senses.'

"'What in heaven's name does he mean?' said Egeria, in a voice that blended a trifle of hope with an immensity of despair.

"'He means that he loves you,' cried Paul, throwing himself at her feet; 'pale and fragile as you are, is it not meet the spirit should overpower the body? But your eyes are the windows of your soul, and they are great and dark and glowing.'

"'Oh!' cried Egeria, 'I cannot stand this! Oh, this is terrible! Any agony is better than this!'

"She walked rapidly to the mantel; suddenly we heard the quick, sharp scratch of a match, and in a moment she stood in the full blaze of a lamp suspended from the ceiling. Paul leaped upon his feet. At last we saw her."

The doctor paused and sighed heavily.

"Well, out with it at once!" cried the young student. "What was she? A hunchback, a mermaid with the head of a woman and the body of a fish, a ghoul with her chopsticks on the mantel?"

"She was none of these," said the doctor. "She was a woman."

"Beautiful as Venus, or hideous as Hecate?"

"Neither one nor the other. She certainly was not beautiful, but I don't think she was hideous. How can I describe her? She was simply *not* Egeria, that was all—that was enough!"

"Egeria slipped out of the room, and this other woman took her place," suggested the student, for at this point of the story Doctor Cairnes became so absorbed with memory and thought that he needed somebody like the student to urge him on.

"No," said the doctor; "the soul of Egeria was imprisoned in the body of another woman."

"The deuce!" said the student. "That complicates matters a little. Describe the usurper. Let's hear what she was like."

"She was tall, heavy-framed; her feet were broad, her hands bony and large, her arms were muscular, her skin red, with that peculiar scaly appearance that denotes a scrofulous affection of the glands; her physique suggested power, but lacked grace; her forehead was low and protruding, from which the hair, of a dull, leaden color, was pulled back without crinkle or curl, and fastened in a knot behind. Her eyes, small, deep-set, and of a cold, pale blue, seemed to hold a twinkle of ferocious glee over the horror of my poor Paul; a singular scar with a few freckles over the bridge of the nose gave it the appearance of a well-manipulated dislocation——"

"Oh, Lord!" interrupted the student, "don't describe her any more. You've given her to us quite graphically, I assure you. How did your friend bear it?"

"He covered his face with his hands, gave vent to a low, terrible cry, and rushed from the room."

"And you?"

"I followed him," said the doctor.

"That was rather rough on Egeria, wasn't it?" said the student.

"Not at all," said the doctor. "For a time the bodily presence that enveloped the soul of Egeria was omnipotent, but only for a time. I confess that for my part the disillusion was final. The cord that bound Egeria's spirit to mine was one of friendship, and it wasn't strong enough to bear the strain upon it. It succumbed to the weight of this ponderous body that was thrust before us, and I never again was able to infuse enough strength in that cord to enable it to be worth anything. With Paul it was different; the cord with him was one of love, and love, my friends, is all-powerful—at least it was with Paul. I have said before that he was a man of iron will and rather enjoyed the surmounting of obstacles that lay in his path.

"For a time Paul became a prey to despair. We continued our walks up and down the dreary corridors of the hospital, but they were oppressed by silence and haunted by the phantom of defeated hope and the ghost of a happiness which was the more terrible to lose that it seemed perfect.

"'It is too much,' he cried to me one night, in agony—'it is not to be borne.'

"I shook my head mournfully, for I didn't see what could be done in the matter.

"'Of course,' said Paul, 'you must know that I have not yielded to this monster.'

"I was weak enough not to understand him, and asked him *what* monster?

"'This fiend,' he said, 'that has taken possession of the soul of Egeria.'

"'You think, then,' I said, 'that that was not Egeria?'

"'Having known Egeria, do you suppose it possible?' he asked, with an accent of contempt for my faculty of prevision.

"'Her divine soul,' continued Paul, 'has become the prey to this corporeal matter. This is the lion, Harold, that lies in the path of joy, and this is, no doubt, the test to my title to her affinity. Think you unalloyed happiness is gained without a struggle? I do not shrink from the combat, Harold; there is no cowardice in my soul; but I do not yet know the means to be employed. I cannot yet tell how her spirit shall be freed from this terrible tyranny; but it shall be done, Harold, I promise you.'

"I told him that I wasn't in any hurry to have his power vindicated in this way, and suggested that time, perhaps, would bring about the desired solution to our difficulties. He glared upon me, muttered the word 'craven,' and fled away out of my sight through the dark corridor.

"Paul was wrong to accuse me of either stupidity or cowardice. My encounters with thought and judgment were not so rapid and vigorous in their results as his, but they were in the main conclusive. Having grappled with the idea he suggested to me, I understood it thoroughly and accepted it—the more readily that it had been a sore abomination to me to believe it possible so beautiful a soul could belong to so repelling a body. It was altogether, however, an abstract theory with me, and had nothing personal in it. I have said before that from the moment that match was lighted and that large figure loomed up before me the cord that bound my spirit to Egeria's was as effectually riven as it would have been by the application of a match to a string of any kind less spiritual in its nature.

"The peculiar bulkiness of the figure, the chuckle on the thin lips, and the leer in the deep-set eye, were more effectual in their way than a lion of any kind. I had but the one desire—to get away from the whole combination, body and spirit, and never encounter the one nor the other again. It proved a weakness upon my part which I am sorry to confess, but there are grades in the matter of humanity as well as all other matter."

"Yes, yes," said the student, anxious that the doctor shouldn't begin his classification of matter again.

"And Paul," continued the doctor, "had reached that supreme state of manhood when all the perfection that is found in the different attributes of nature centres itself in man as a masterpiece.

(To be concluded in our next.)

DINNER-TABLE ABLUTIONS.

THE history of dinner-table etiquette, as far as the cleansing of the fingers goes, has caused a great deal of discussion. In "Notes and Queries" some information was asked about it a number of years ago, but not any very satisfactory responses were received. Table manners and table equipage have been derived from the French. Strange as it may seem, a great many dinner amenities owe their origin to the East. Bibliophile Jacob says somewhere that the napkins during a repast were possibly brought into use in Europe after the Crusades. Oriental habits at dinner, where the Turk of the old school to-day, having no knife or fork, plunges his fingers in the pillau, is but a continuation of customs of the time of Saladin. The Oriental is excessively clean in his habits, and between the fingering of the viands and some of the manipulations of a cook with his dishes, really the difference is only this, that the Turk who picks out a peculiarly nice tidbit to offer to his guest does it in view of every one, while the cook's prior actions are not seen. As fountains were ever spurting and gurgling in *Haroun al Raschid's* banqueting halls, opportunities to cleanse one's fingers in the flowing waters must have been ever at hand. Oriental people retained the habit of hand or finger washing after dinner. The method is not, perhaps, adapted to our customs, yet it is a very sensible one. A servant, after the repast, makes the round of the table, (the guests are seated on low cushions on the floor,) holding a copper vessel, provided with a very long but narrow spout. In the other hand he carries a wide, deep copper basin. A tiny stream of water is poured over the fingers of the guests into the basin, while another servant follows with a towel. The first portion of the performance is proper enough; but as one towel usually serves for all the guests, a kind of universal jack towel, delicate-minded Europeans rather dislike the custom.

It is not necessary to go further back, and refer to the Biblical habits before and after partaking of food. As to the more modern custom, Brillat Savarin, whose book on the *Physiologie du Gout* was written in the early part of this century, inveighs against the finger-bowls. He says: "It was about forty years ago that some people in good society—they were almost always women—commenced to wash out their mouths (*rincer la bouche*) after their meals." Brillat Savarin deprecates the custom, and calls it useless, indecent, and disgusting, rather directing, however, his criticism against the mouth-rinsing than finger dipping. It is useless, he writes, "because the mouth is in excellent condition at the end of a repast, when fruit has been partaken of, or a last glass of wine or water has been imbibed." Say what one may, the cleaning of the mouth after dinner is a disgusting habit, and no screening of this operation, by placing the hand before the mouth, can conceal its objectionable features. If an after-dinner ablution has to be performed, especially when fruit is eaten, it should be restricted to the use of the finger-bowl alone. The smaller goblet then introduced in the finger-bowl should be discarded, unless, in order to add completeness, a tooth-brush were added to the paraphernalia.

A SWABIAN HARVEST FESTIVAL.

NOVEL DRAMATIC PRESENTATION OF A HISTORIC INCIDENT.

THE Swabian Volksfest, held at Ridgewood Park, Long Island, during four days of last week, was an occasion of great interest to the Würtembergers of New York, Brooklyn and Long Island. The festival opened on Sunday, the 7th, when the procession, marching to the park, gathered first around a singular pillar that stood in the open field of the park. It was about thirty-five feet high, and covered with every variety of vegetable that flourishes in the soil of Long Island. They were not rudely fastened on, but were arranged according to an artistic design. Cabbages, pumpkins, and other large vegetables covered the base, and turnips, corn, onions, etc., in sections, covered the rest of the pillar. A wonderful cornice, in which huge watermelons predominated, crowned the top, and over all was a generous sheaf of ripe wheat. The black-and-red flag of Würtemberg, and the colors of the United States and of Germany, were a part of the decorations. About midway up the shaft four shields were fastened, bearing the names of the provinces of Würtemberg, namely, Neckar, Black Forest, Danube and Jaxt. The entrance to the grove was spanned by an arch that bore the words "Welcome, all Würtemberg." Beneath was the coat-of-arms of the kingdom.

After the formal opening the day was given up to general enjoyment, the programme being almost exclusively musical. The day was devoted, as far as historical reminiscence was concerned, to the famous composers of Germany, and especially those of Würtemberg, Uhland, Gluck, and Silcher. On the second day there was a historical procession, the programme culminating in the marriage of two young Swabians in the costumes and according to the peculiar rites of their fatherland.

On the third day the great event was the dramatic presentation of a well-known historical incident. In 1140 Conrad, King of Würtemberg, after a protracted siege, captured the City of Weinsberg, and with it Count Welf the Sixth. The victory was a significant one, and it had a romantic termination. The women of the captured city presented themselves before King Conrad and begged a single favor. It was that they might take away with them that which they held most dear. The request was granted. The women thereupon marched to the guard-house and each took her husband on her back and bore him out of the city. Some of the King's retainers protested against this unusual way of redeeming captives, but the King kept his word, though he admitted that he had made a mistake. This was on the 21st of September, and the celebration of the event has been made a feature of the harvest festival. It was this incident which was acted out at the Ridgewood festival, in the presence

Digitized by Google

of a delighted multitude. We illustrate the scene on page 56. The last day of the festival, which was most enjoyable throughout, was devoted to athletic and equestrian sports.

"RESCUED" AT BOOTH'S THEATRE.

MR. BOUCICAULT'S "adaptation" of Booth's is an increasing success, and many in the audience leave the theatre more gossipy over the *coulisses* than over the performance. The contrasts and harmonies are so vivid, yet so subtle, so startling yet so satisfying, that the mind's eye revels in them long after the physical organ has lost sight of their crimsons and golds. Given this exquisite framework, it should be a dull play indeed that would fail to please an audience comfortably settled down to enjoyment; and as "Rescued" possesses all the qualifications that insure unqualified success, an evening at Booth's becomes an intellectual treat of the very highest order. Mr. Boucicault has again displayed his marvelous powers of weaving golden tissue from out the ordinary threads of human and very clayey passion, and of entangling and disentangling with a dramatic manipulation as deft as it is ingenious. A train-robber, possessed of imagination and minus principle, forges a will, and assumes the condition of a Russian noble. The counterfeit passes as good coin, and the Muscovite swell is accepted by the Upper Ten of Mayfair and Belgravia as though he were a Romanoff. He is met at every turn of his little game by the word "check," uttered by one *John Weatherby*, who, as the forged will was but a clumsy piece of business after all, turns up as a *bona fide* inheritor, and who, by falling in love with the *Lady Sibyl Ferrers*, still further forces the hand of the unscrupulous Muscovite. The *Count* resolves upon uniting himself to *Lady Sibyl*, one of the conditions of the forged will, while another stipulates that in default of her ladyship's consent she will forfeit one-half the fortune which is to come to her so soon as she is declared heiress by the removal of such relations as stand between her and the estates. The Muscovite resolves upon clearing away all obstacles, but is eventually defeated, and *John Weatherby*, "the iron man," marries the *Earl's* daughter. This is but the motive of the piece, the incidents and situations being in the highest degree effective, while the dialogue is crisp, clean cut and sparkling. The under plot is full of color, the characters of the newsboy and his twin-sister stand out in wondrous relief, while the *Phœnix O'Reilly* of Mr. John Brougham is a portrait "after nature." The acting of Miss Rose Coghlan as the *Lady Sibyl* is all womanly, and Mr. Clayton, as *John Weatherby*, true to his artistic instincts, presents us with a masterful creation. "Rescued" is put upon the stage in a manner worthy of the æstheticism of the management. Our illustration represents the *Earl* and his daughter leaving *John Weatherby* in possession of Mount Audley.

COD-FISHING OFF NANTUCKET.

COD-FISHING is the special industry of Nantucket, farming and fishing being the chief occupation of the people. The surrounding waters literally abound with fish of various kinds, and on the treeless island there are several ponds containing a large variety of the finny tribe. At Siasconset, one of the two first towns of Nantucket, everybody fishes, from the aged grandparents to the tiny toddlers. An infant's first play-toy is a float or broken rod, and boys of five and six years of age are experts. Our illustration represents a fisherman, accompanied by an expert, topping the wave on his return to shore. The boats put out for about a mile, and to a novice it is one of the most exciting and picturesque sights imaginable to see the fishing-boat—manned by a man and a boy, occasionally a little girl—plunge through the leaping, bounding, rolling, frothing surf. On the return a suitable billow is selected, and, with a dexterity begotten by years of practice, the fisherman spins his stout little boat into its crest, and is borne like a flash to the tawny sands.

THE UPRISING IN AFGHANISTAN.

Difficulties and Perils of the British Occupation.

THE revolt of the Afghan regiments in Cabul, and the slaughter of the members of the British Embassy and their escort, has produced a profound excitement throughout Great Britain. All accounts agree that Major Cavagnari and others were killed while making a sortie upon the enemy from the burning Residency. The buildings being entirely of wood, the besieged could make no defense against fire. Major Cavagnari's force made a gallant attack upon twelve Afghan regiments but were overpowered by numbers, after having slain not less than 250 of the enemy. The defenders of the Embassy fought bravely until exterminated by the Afghans. With a view of avenging the outrage, large reinforcements of troops are to be dispatched to India to operate in Afghanistan, and the troops already there will as soon as possible advance on Cabul. But this advance will be delayed by a variety of circumstances. Twenty-five per cent of the native troops on the frontier are on furlough. The season has been a sickly one, the hospitals are full of men unfit for service by fever and hardships of the campaign. There are very few infantry regiments in the Trans-Indus provinces which could muster 500 men, and there is probably not a cavalry regiment in the Punjab which could put 300 men on parade. The transport departments have been broken up and their reorganization will be difficult. Upward of 60,000 camels are officially reported to have perished in the late campaign. This great loss has made it almost impossible since then to obtain a sufficient supply of these animals for ordinary uses, to say nothing of the exigencies of a campaign. There are few horses in Afghanistan, and camels are absolutely indispensable to any extended military operations. General Roberts may have sufficient mules and camels to admit of the hasty advance of a brigade in light marching order; but the Government of India will have to strain every nerve to guard his communications and keep him provisioned. Unfortunately the regiments in India nearest to Afghanistan have mostly suffered from cholera and are numerically weak, the men being debilitated, and they will require heavy draughts to bring them up to their war strength, and it is thought that at least two months must elapse before men to recruit the regiments can arrive from England.

A dispatch from Allahabad says that, though some trustworthy sources give the assurance that General Roberts will be at Cabul in a fortnight, it is said in military circles at Simla that the 9th of October is the probable date of the beginning of a forward movement because of the deficiency in wheeled transportation.

A correspondent at Simla also fears that there will be no forward movement in force before the end of September. By those who know the position of things an advance is declared to be impossible.

At the latest advices, the insurrection seemed to be spreading, and the impression is gaining ground in England that a well-organized rebellion is on foot, and that it is traceable to Russian influence. The entire country between the capital of Afghanistan and the Indian border is said to be well stocked with Russian emissaries and Russian money. Although that portion of the British army in India which is composed of native Hindoos appears anxious to be led against the Afghans, their enthusiasm is regarded as much too great to be natural and genuine. They are, therefore, objects of suspicion, and their conduct is closely watched. This fact has led to much uneasiness in India, as well as in Afghanistan, and English residents refer with gloomy forebodings to the great Sepoy revolt of 1857 and 1858. The situation is further embarrassed for the English troops by the lack of transportation for army stores and guns.

A dispatch from Bombay, dated September 11th, says: "Serious riots are proceeding in Cabul, and many traders and citizens have been killed. Messages have reached Candahar from Cabul urging a general rising against the British on September 15th. Similar messages have been dispatched to other Afghan cities. The frontier tribes are still quiet."

A dispatch from Lahore says: "Shikarpore merchants trading with Central Asia report that the revolt in Cabul is due to Russian intrigues. Russian agents have been most active at Herat. They have for some months urged the Ameer's brother to declare against him, promising the support of the Heratee regiments. They were charged by the Ameer's brother with being the cause of the revolt against the Ameer and the English."

Special dispatches from India say that two regiments of Highlanders and two regiments of native troops are moving up the Khuram Valley, and that two regiments of native cavalry and one British and two native regiments of infantry are now on their way to the Khuram Valley.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Last Accident to the King of Spain.

On returning from the funeral services over the remains of the Infanta Dona Maria del Pilar at the Palace of the Escurial to La Granja, the state traveling carriage, containing the King of Spain, his sisters and General Echegaz, was overturned on the road, which is difficult of travel on account of the ruts and holes. The King's arm was dislocated and the General's wrist sprained, but the Princesses escaped with slight contusions and considerable fright. In consequence of this accident His Majesty was obliged to carry his arm in a sling during the one hour's courtship with his future wife, the Archduchess Maria Christina of Austria.

The Emperor of Morocco.

The English Minister at Madrid, Mr. Sackville West, recently had a conference with M. Salvela, Minister of Foreign Affairs, on the subject of the protection of the European residents in Morocco, now threatened by the religious fanatics of that State. A dispatch from the Moorish town of Saffi, received via Cadiz, has been received, stating that the Emperor of Morocco, Muley Hassan, had barely escaped falling into the hands of the rebel fanatics while passing with a part of the royal army from Morocco to Fez. He owed his safety ultimately to the support of a contingent of troops led by an English ex-officer, Captain McLean, who is reported to have drawn the men from the mixed population of Gibraltar. The Emperor escaped, but the strong Mohammedan partisans are reported to have elected another ruler, to private council of the leading sheiks, at Fez, and a religious war is feared.

The New Eddystone Lighthouse.

In our last issue we gave an engraving of the new structure to be erected on the Eddystone rocks, fourteen miles off the shore of Plymouth, in the British Channel, and an account of the brief ceremony of laying the foundation-stone in the coffer-dam, by the Duke of Edinburgh, as Master of the Trinity House Corporation, assisted by the Prince of Wales. The ceremony itself is shown this week, together with a view in the great stone-cutting establishment at the Oreston granite quarries, near Plymouth, which will supply a large portion of the stone material for the new lighthouse. In the engraving the architect is testing the shape of the granite blocks to ascertain if they will interlace correctly when placed in position. We may here add that the building now in course of erection is expected to be completed in about four years, and that Her Royal Highness the Duchess of Edinburgh has promised to lay the top stone. Its height will be 130 feet above high water at Spring tide, and its light will be visible at a distance of more than seventeen miles.

Expulsion of Jews from Roumania.

The latest intelligence concerning the Jewish question in Roumania is to the effect that Prince Gregorie Stourdza has arrived at Bucharest to assume the leadership of the various parties opposed to the emancipation of the Jews. It is proposed to consolidate these different factions into an organization identical in principles with the former American party known as "Know-Nothings." According to Articles Five and Forty-one of the Treaty of Berlin, religious liberty and the open profession of every form of worship were assured to all the natural subjects of the new States of Bulgaria and Roumania, yet there is an antipathy to the Jews which is increasing daily, one proof of which is furnished by our illustration, showing a party of Israelites being escorted to the frontier by representatives of the authorities.

A Buck Hunt with General Wood.

"Marching along these solitary wastes," says Doctor Doyle Glanville, to whom we are indebted for this sketch, "but few signs of life are visible—not even a bird, save now and then when we kill oxen, and the vultures mysteriously appear. Occasionally we come across the track of some startled hare, or perhaps a buck, when the excitement is for the moment tremendous. My sketch represents a little incident in yesterday's march, when a buck sprang up and ran through the column. In an instant a lot of soldiers and natives went pell-mell after it, many coming to grief and sprawling over the ant-bear holes that abound in the long grass. The numbers were too much for it; the game was duly bagged, and the happy hunters were rewarded at their dinner by a change from the usual fare, which consists of trek-ox, which steals to toughness the leather of the plain domestic boot."

COLLEGE CHAT.

THE annual convention of the Delta Kappa Epsilon Fraternity will be held with the Dartmouth College Chapter the first week in October.

CALISTHENICS and military drill have been made compulsory in the public schools of Montreal, but the same time devoted to them is to be taken from the Saturday holiday.

REV. ALFRED OWEN, D. D., of Chicago, has been appointed President of Denison University (Baptist), Ohio. Dr. Owen is a graduate of Colby University and Newton Theological Seminary.

NO RESPONSE is yet received from Dr. Tucker, of New York, as to accepting the professorship of sacred rhetoric, but the hope is confidently expressed that he will join the Andover faculty.

THE Peabody Normal School, at New Orleans, is the only normal school for colored people in the world, and was established by Hon. R. M. Lusher. It is supported by the Peabody Educational Fund.

THE first Siberian University will be opened this year; it will be at Tomsk; great numbers of students have been exiled, it will be remembered, from connection with the political opposition to the Government.

THE Jubilee Singers, who have been giving concerts in America and Europe in aid of Fisk University for several years past, have earned for that institution the net sum of $150,000, besides receiving valuable works of art as gifts for the university.

EX GOVERNOR RICE says that he has returned from Kansas and Colorado, profoundly impressed with what the great West is doing for the education of its communities. He found in Colorado that the largest, most imposing buildings in the cities and towns are the school-houses.

PRESIDENT BARNARD, of Columbia College, is in favor of co-education. It may be safely said that no man in the country takes broader views than this venerable man. He believes the time will come when every college will open its doors to women the same as to men.

THE sum of $600,000 has been appropriated in Texas to carry the school work through the remainder of the year; $300,000 had already been distributed. San Antonio has the most successful educational system of all the Texan cities. The great need in that State is good trained teachers.

AT Wesleyan University, the entire mathematical and astronomical departments have been transferred to Observatory Hall, where two large rooms have been fitted up, one for a laboratory, the other for a mathematical recitation room. Professor Burke, lately of Wilbraham Academy, and a graduate of this college, is to assist Professor Van Vleck in this department.

THE *North China Daily News*, published at Shanghai, speaking of the departure of the Chinese professor for Harvard College, who has just arrived, says: "Should the United States Government, as it is believed it will, promise a permanent position in its Legation and Consulates to students of Chinese from Harvard, not only may the friendly relations of the two countries be strengthened, but the high hopes entertained by the American manufacturers of success with their wares in this Empire will probably not fail to be advanced as well."

RICHARD GATEWOOD, of Virginia, who graduated No. 1 in the class of cadet engineers at the Naval Academy last June, and F. T. Bowles, of Massachusetts, No. 3, made application to be allowed to attend the Royal Naval College at Greenwich, England, in order to study naval engineering, architecture, etc. That college is allowed to take a number of private students, including two from each foreign nation. The request has been granted without their undergoing the usual examination, their certificate of graduation at the Naval Academy being considered sufficient by the English Government. They will enter the Royal Naval College at the October term.

THE SEASON OF THE FAIRS.

THE Georgia State Fair will be held at Macon, October 27th to November 1st.

LOUISVILLE, Ky., began the annual exhibition of her Industries September 2d, and will close October 11th.

THE second annual opening of the Golden Gate Agricultural Fair occurred at San Francisco, September 1st.

THE annual fair of the New Jersey State Agricultural Society was opened at Waverley on September 15th, for six days.

THE forty-eighth exhibition of the American Institute of New York opens September 17th, and lasts until November 22d.

ON September 10th the Seventh Industrial Exhibition of Cincinnati was opened in the permanent buildings, to close October 11th.

THE colored people of North Carolina will hold their first industrial fair at Camp Russell, Raleigh, November 17th, 18th, 19th and 20th.

PATRONAGE of the Iowa State Fair, which opened at Des Moines, September 1st, has been unprecedented. Races were run every day.

THE annual exhibition of fruits, flowers and vegetables of the Massachusetts Horticultural Society was held in Boston, September 9th-12th.

PRESIDENT HAYES and suite have promised to attend the opening of the Michigan State Fair at Detroit, on September 17th. It will close on the 20th.

THE eleventh annual fair of the Southeastern Indiana Agricultural Society closed at Aurora, September 6th, after a most successful exhibition in every particular.

THE first annual fair of the Kentucky State Agricultural, Mechanical, Zoological and Botanical Association was held at Louisville, September 9th, 10th, 11th and 12th.

IN the great Exhibition Building in Fairmount Park, Philadelphia, the Pennsylvania State Agricultural Fair was opened September 8th. Many relics of the Centennial are seen.

GOVERNOR ST. JOHN of Kansas has received a letter from President Hayes accepting the invitation to be present at the agricultural fair to be opened at Neosho, September 25th.

A FEATURE of the St. Louis Fair and Exposition, which opens September 22d, will be the elaborate manœuvres of the military, for which $5,000 worth of prizes are offered.

AMONG the attractions of the Rhode Island State Fair, opened at Providence September 9th, were the champion steer, weighing nearly 4,000 pounds, and the Centennial Queen of Cattle.

THE fifty-first annual exhibition of the Pennsylvania Horticultural Society opened in Philadelphia, September 15th, and will close with a promenade concert and reception on Friday evening.

THE Board of Managers of the International Dairy Fair Association have decided upon a second exhibition, to be held at the city of New York during the second and third weeks in December of the present year.

FARMERS generally complain of the horse racing attractions of agricultural exhibitions, claiming that they do not belong in any sense to an exposition of mechanical, industrial, agricultural or artistic interests, and that they distract attention from the legitimate objects.

AT HOME AND ABROAD.

—THE Spanish Government will dispatch 5,000 troops to Cuba in October and 5,000 more later.

—TWELVE years ago Texas shipped only 75,000 bales of cotton. Last year she shipped 1,000,000 bales.

—GROUND was broken, September 12th, for a theological building at Vanderbilt University, to cost $65,000.

—THE State of Ohio stands fourth in manufactures, the value of the annual product being valued at $270,000,000.

—QUITE a brisk demand for American windmills has sprung up in the British colonies, West India Islands and South America.

—SHAVINGS from a planing-mill in Chicago are, by an air-blast, blown 700 feet through a 15-inch sheet-iron pipe to a distillery, where they are burned for fuel.

—RUSSIA has offered to restore to China the northeastern portion of the occupied territory, provided the Kirghis Nomads who fled to China may be sent back to Kuldja.

—SAVANNAH never before made such an exhibit in general business as she does to-day. She is not only the second cotton port, but the second in naval stores, lumber and rice.

—AN extra issue of the Canadian official *Gazette*, contains an order in Council extending the time for the prohibition of American cattle into the Dominion until the 15th of October.

—THE *Mark Lane Express* estimates that England will require of America 72,000,000 bushels of wheat this year—a quantity equal to the entire import of the United Kingdom five years ago.

—AN experiment at acclimatization is now being made in Holland. Ten thousand salmon fry from California have been put down in the Meuse, at Blerick, and 20,000 others are about to be added.

—THE Institute of International Law, now in session at Brussels, has voted in favor of a resolution recommending that the various States agree that the destruction or injury of submarine telegraph cables is an offense against the law of nations.

—PERFECT tranquillity prevails in the republic. The difference with Spain has been satisfactorily adjusted. Santo Domingo will salute the Spanish flag, the Spanish war-ships will return the salute, and the Governor of Puerto Plata will be removed.

—IT is announced in Dublin that Mr. Parnell and other persons interested in the land question contemplate shortly the issue of an appeal to the Irish people in all parts of the world to aid in the creation of a class of peasant proprietors in Ireland.

—THE Manchester *Guardian* says it is estimated that 30,000 persons are still out of work in Glasgow. The iron trades only are doing well. The building trades are in the worst condition, and it will be necessary again to make provision to assist the unemployed during the coming Winter.

—TRENTON'S manufacturers of pottery never knew business to be so brisk. The capacity has been doubled within the last six months, and new kilns are being put in by almost all the firms. Eighty-four kilns are now in operation, and these have in the last half-year turned out $1,035,000 worth of goods.

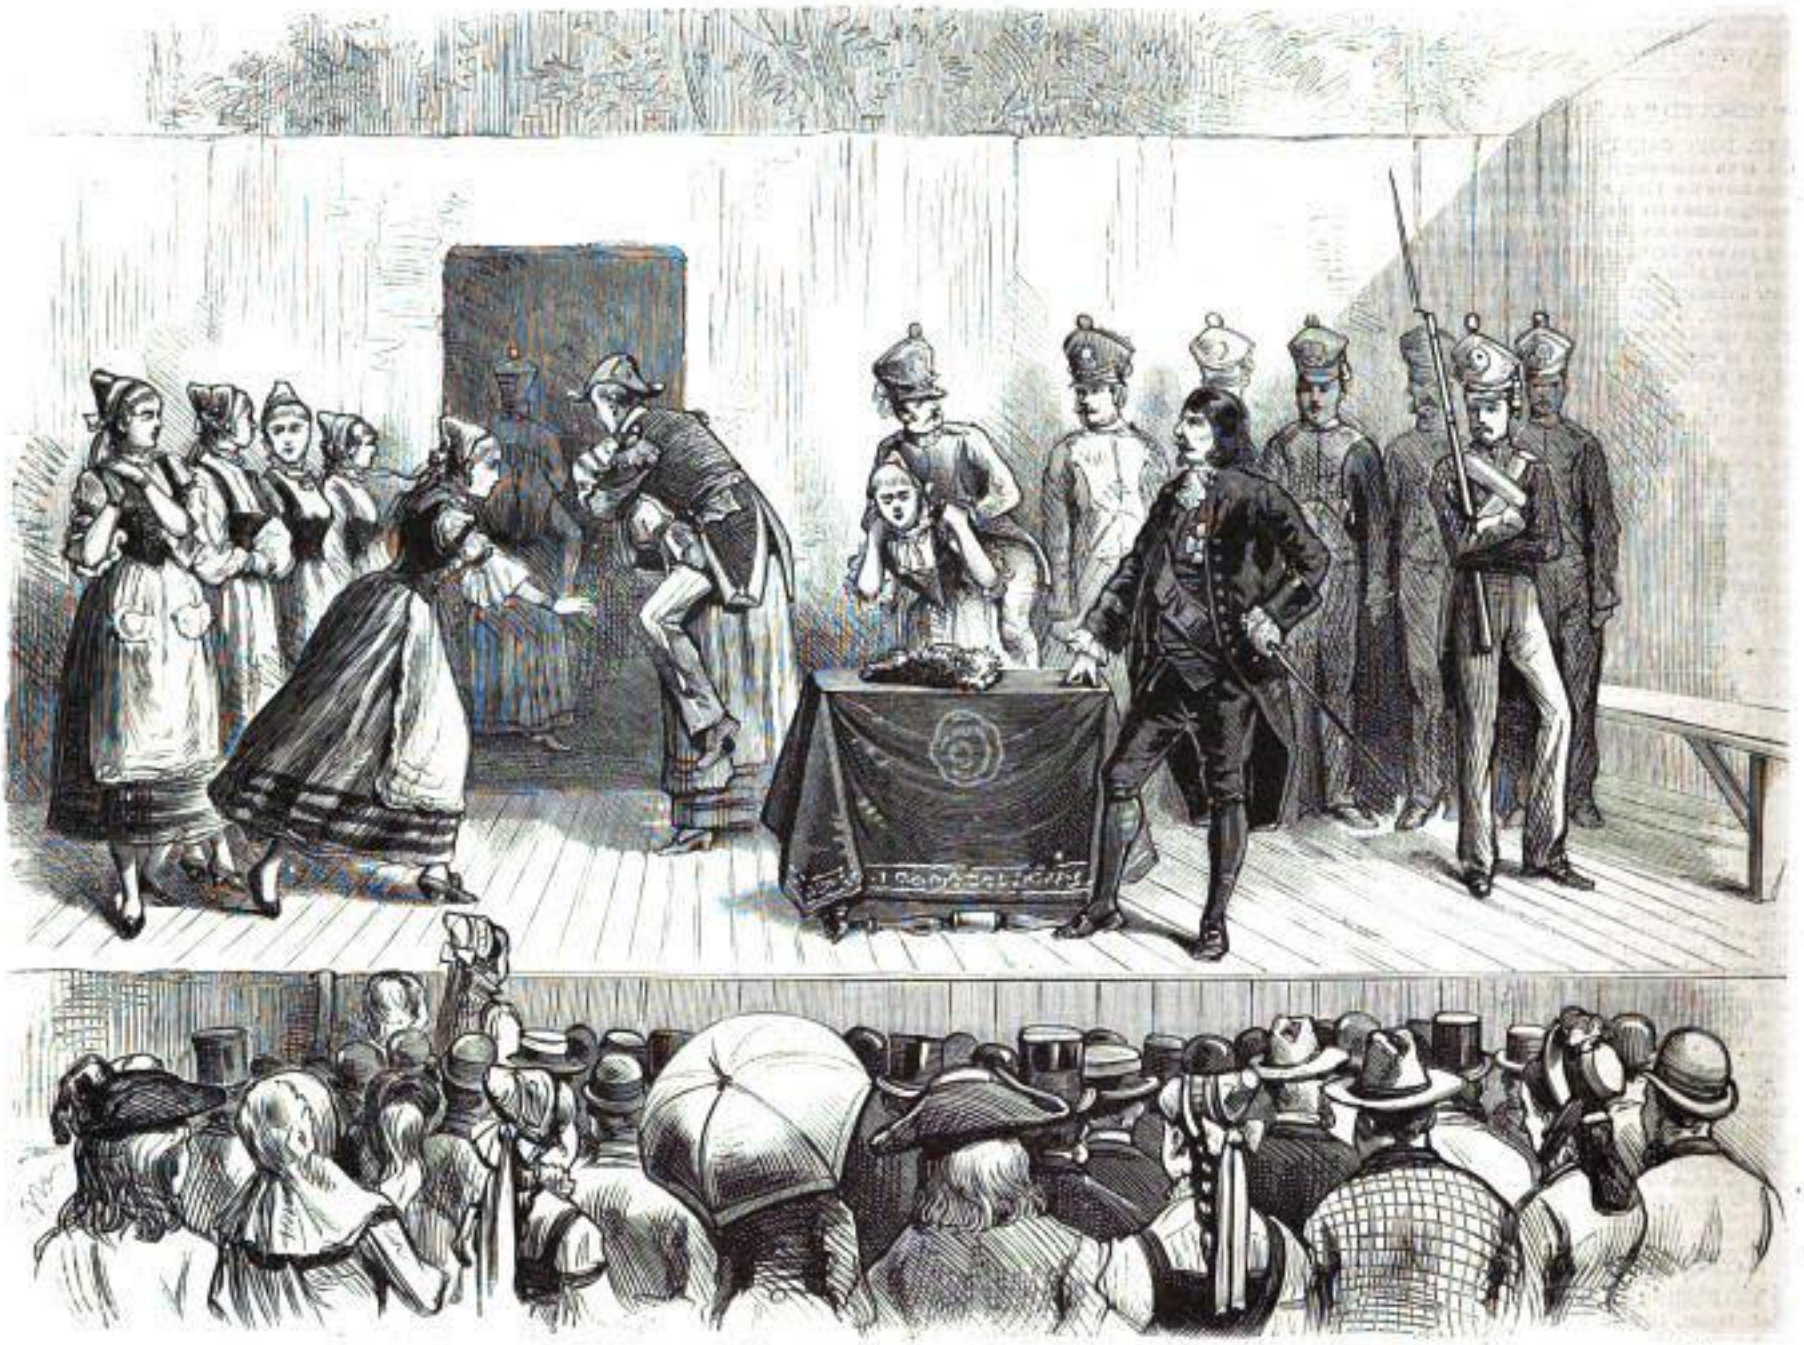
—MONTANA during the past sixteen years has produced $153,000,000 of gold and silver. Of this sum $147,000,000 was in gold. This makes Montana rank next to California as a producer of gold. There are already 200 quartz mines in the territory. Iron and lead mines have been opened, and coal is plentiful.

—THE extent of the bituminous fields by which Pittsburg is surrounded is equal to 8,000,000 acres. Estimating the upper seam at eight feet in thickness, it would contain 83,516,480,000 tons, which, at $2 per ton, or a little over seven cents per bushel, would be worth $167,032,960,000; enough to pay the national debt off thirty times.

—TEN arrondissements of Paris are now furnished with small popular libraries, open for two hours in the evening to the public, and the other arrondissements are taking measures with a view to being similarly provided. The average number of readers who frequented these libraries during the first half of the present year was 4,502.

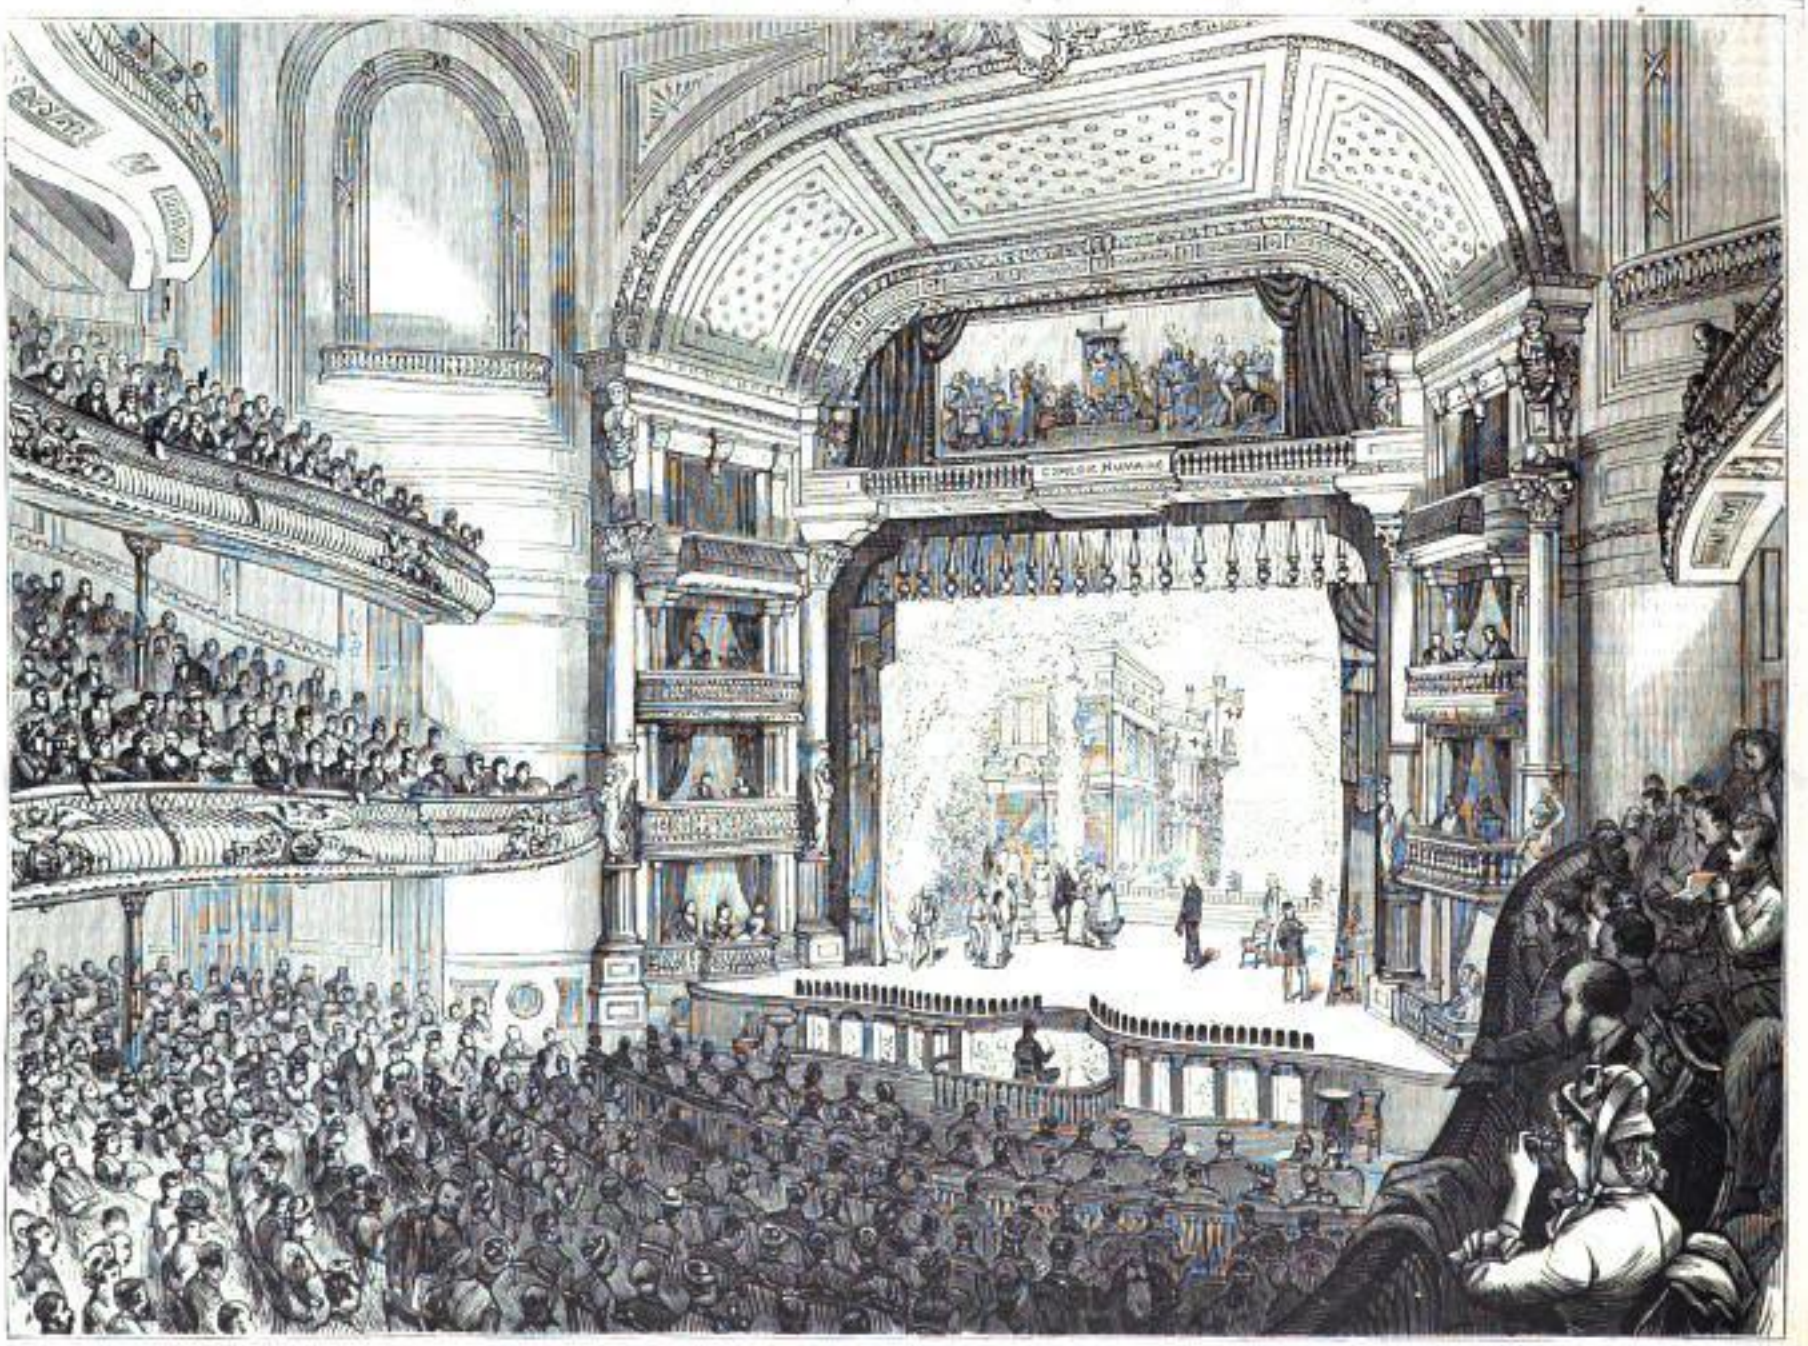
—THE Liverpool Town Council have decided, in accordance with a numerously signed requisition, to establish a horse fair in Liverpool every three months. The fair is expected to prove a very great convenience to farm-owners in Liverpool and the district, who have hitherto often had to scour the country in search of animals to suit their purposes.

—ACCORDING to official statistics furnished by the French War Office, 169,140 men will spend more or less time under the flag this year, in conformity with the new military law. The active army is set down at 479,100 men; the reserve of the active army at 144,510 men and 2,880 officers; the territorial army at 117,900 men and 6,820 officers.



—THE President of the Norfolk Oyster Packing Association says that 3,000,000 bushels of oysters will be taken from the Virginia waters this year, and more than one-third of these will be handled by the packers of Norfolk and Portsmouth. The average value of the oysters is thirty-five cents a bushel, making the oyster trade of Norfolk something like $350,000 a year. The business has been built since the war, and is steadily increasing.

—THE cattle of Texas are not afraid of a man, nor are they afraid of a horse; but they are afraid of a man on a horse. They do not understand, at least they do not seem to understand, that a man on horseback is a combination of animals. Apparently they regard the two as one animal, and one that is too powerful for them. To get off a horse in a herd of wild Texas cattle is almost worth a man's life, and an experienced herder will never do it.



—SHIPBUILDING in Maine appears to be carried on just now with considerable activity; in fact, that State is doing pretty much all of the sailing-vessel building contracted for in American yards. Steel as a substitute for iron in the construction of hulls is exciting some discussion. It is claimed that steel is lighter and in the long run much less expensive than iron. It is believed that its introduction in shipbuilding will work a revolution in that art and turn the tide of business into our shipyards. It is stated that a steel boat is to be built for one of the Hudson River lines.

—A LARGE gun, captured many years ago by the Turks in a war with the Persians, occupies a prominent position in the city of Bagdad, being placed on a kind of scaffold and illuminated at night by four lanterns. The gun is firmly believed to possess the miraculous power of curing fever and warding off its attacks. Accordingly, when fever is most prevalent, dense crowds push and struggle with each other with the object of reaching the gun and rubbing themselves against it. Of late, owing to the scarcity of quinine, the gun has been rubbed against with unusual vigor, and it is credited with miracles of healing that more than atone for any amount of destruction it may have effected in days of yore.

D. LANGELL'S ASTHMA & CATARRH REMEDY.

(PATENTED.)

HAVING struggled twenty years between life and death with **ASTHMA** or **PHTHISIC,** and been treated by the most eminent physicians without receiving any benefit, I was compelled, as a last resort, to experiment myself. I had become so bad that I was compelled to sit on my chair day and night, smoking for my breath. My sufferings were so intense that it is useless to attempt to describe them. Always believing that nature had provided a remedy, if it could only be found, I commenced compounding roots and herbs, and inhaling the odor from them, when I fortunately discovered a most wonderful remedy and sure cure for **ASTHMA** and **CATARRH.** I now offer to all afflicted with the above-named diseases, the benefit of my discovery, and if they will improve the opportunity, I will guarantee they will never suffer with that terrible disease (Asthma) **FIVE MINUTES,** and will be able to lie down to sleep and rest comfortably. As a further guarantee I propose to any person not fully satisfied, after using one-third the contents of a package, (in either **ASTHMA** or **CATARRH**) to return the remaining two-thirds to the proprietor, and the purchase money will be refunded by return mail. I will say further, if the foregoing proposition is not satisfactory, send your name and address, and I will send you one trial package *Free of Charge.* Should your druggist fail to keep this remedy, I have a large supply on hand, put up in strong packages with full directions how to use it, which I can send by mail to any address on receipt of the price.

$1.00 per Package.

Address, D. LANGELL, (Inventor & Sole Proprietor,) Apple Creek, Wayne Co., Ohio.

Sold by Druggists and Medicine Dealers generally.

☞READ WHAT THE AFFLICTED WHO HAVE TRIED IT, SAY ABOUT IT.☜

W. T. BROWN, *Monroe, Texas,* writes:—D. LANGELL, your Asthma and Catarrh Remedy has completely cured my wife. She suffered with Asthma from the time she was a year old, which is now thirty years.

S. A. HOPKINS, *Joplin, Mo.* D. LANGELL, Dear Sir:—I have used your valuable Asthma and Catarrh Remedy, and say with pleasure that it cured me. Please make my statement known to the world.

GEO. CORE, *Apple Creek, Ohio.*—I do hereby certify that I was afflicted with Catarrh fifteen years. I used about two-thirds of a package of D. LANGELL'S Asthma and Catarrh Remedy, and am now entirely cured.

C. V. HARP, Cashier Wooster Nat. Bank, Ohio.—D. LANGELL, Dear Sir:—Having been severely afflicted with Catarrh in the head, I was persuaded to try your inhaling Remedy, which effected such an astonishing cure, that I give it public testimony as being a successful and speedy cure for Catarrh.

H. D. BEDWELL, *Downey City, Cal.*—D. LANGELL, Dear Sir:—Your Asthma and Catarrh Remedy has proved to be all you claim for it. I have no language that will express the amount of benefit I have already received, and I wish to say to the afflicted:—*No humbug this time.*

Such testimony should convince the most doubtful sufferer that my Asthma and Catarrh Remedy is the wonder of the age. It is my own discovery, gathered from the fields, and contains no injurious drugs. **IT IS SAFE, RELIABLE AND TRUE.**

SEVENTH INDUSTRIAL EXPOSITION OF CINCINNATI.

THE seventh annual exposition of the industrial interests of Cincinnati was opened on Wednesday, September 10th, in the grand Permanent Building, formerly known as Music Hall.

The arrival of President Hayes and party was an event anticipated with that genuine warmth of sincere friendliness which is the highest possible compliment. Cincinnati put on her robes of rejoicing and decked herself in festal guise to welcome the Chief Magistrate.

A party of distinguished citizens, consisting of two gentlemen from the Exposition Committee and four of the Citizens' Committee, met the Presidential party at Madisonville. Messrs. M. A. Ingalls and J. H. Laws represented the Exposition Commissioners, and the citizens were represented by G. W. Jones, chairman of the committee, and Messrs. J. W. Herron, Sir A. T. Goshorn and Larz Anderson. Mr. Steward, the General Superintendent of the road, was also of the party.

The party left the cars at Madisonville, where they awaited the arrival of the special train containing the Presidential party. The citizens of Madisonville were out in full force, old and young, of all ages, conditions and shades of color. The special train came in sight, arrived, stopped, and Mr. Hayes, hat in hand, stood on the platform bowing and shaking hands with all who crowded eagerly towards him. As the train arrived, there was a call for Mrs. Hayes, who smilingly appeared on the platform and was greeted very warmly by the waiting throng. The Presidential party consists of the President and his wife, R. A. and R. P. Hayes, General W. T. Sherman, Attorney-General Devens, General George A. Forsythe, General William Myers, General J. E. Tourtellotte, General George M. Bacon, staff officers. Mrs. Hayes had her little daughter and her youngest son, Scott, with her.

THE PRESIDENTIAL PARTY MET AT MADISONVILLE BY THE RECEPTION COMMITTEE.

Arrived at Cincinnati, a military company presented arms, and several policemen kept the passage clear for the party to pass to the carriages in waiting, and almost before the crowd were aware the visitors were driven to the Grand Hotel. Early in the morning the President held a general reception at the hotel, while Mrs. Hayes made calls upon some acquaintances. At two o'clock the President and his suite took their places in the procession, which was unusually prompt in starting. Throughout the line of march all the streets were crowded with people and the windows well filled with sightseers. The first division, which was purely military, acted as an escort to the President and distinguished guests. The trades' display was the first ever seen in this city. At the Exposition Building Mrs. Hayes and two hundred ladies reviewed the procession from the main balcony.

When the procession reached the Exposition Building, Governor Bishop made the opening address, tracing the history of the grounds now covered by the Exposition Buildings from the time of their purchase by the city in 1857 up to the present time.

President Pendleton, of the Exposition Board, followed in an address of welcome. In the course of his remarks he recalled the incident that the Governor of Ohio who opened the first Cincinnati Exposition attends the opening of the seventh as President of the United States.

The President responded to the personal allusions in a brief speech, in which he noted the remarkable revival of business in all sections of the country as a fact full of encouragement, and at the close of his remarks the Seventh Exposition was declared open.

OHIO.—OPENING OF THE SEVENTH INDUSTRIAL EXPOSITION OF CINCINNATI IN THE GRAND PERMANENT BUILDINGS, SEPTEMBER 10TH — ARRIVAL OF PRESIDENT HAYES AT THE ENTRANCE TO THE BUILDING, ESCORTED BY THE MILITARY DIVISION OF THE PROCESSION.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE MAINE ELECTION AND ITS LESSONS.

WHEN an admirer of Napoleon the First was once vaunting to Christopher North the superiority of the great French warrior over the Duke of Wellington, considered as a military commander, and pointed, in evidence of his assertion, to the alleged fact that the Duke was surprised at the battle of Waterloo, "It may be," replied Christopher, "that the Duke was surprised there, but didn't he *astonish* the Frenchmen in the end by remaining master of the field?" It certainly was a surprise which the Greenback guerillas and their Democratic allies practiced last year on the Republican hosts and their skillful leader, Senator Blaine, when, as the smoke of the battle lifted from the field in Maine, they (the fusionists) found themselves in possession of the enemy's camp, with abundance of "spoils" in prospect. It must, therefore, be with something like astonishment that they now find the fruits of their short-lived victory as suddenly and unexpectedly plucked from their hands as they were suddenly and unexpectedly gained.

Though it is too early as yet to write a complete bulletin of the recent political contest in the Pine-Tree State, or to make up a full list of all the "killed and wounded," enough is definitely known to make it certain that the Republicans have regained the practical control of the State. If they still fall short of an absolute majority in the popular vote, they have recovered their ascendency in both branches of the State Legislature, and will thus be able, according to the way prescribed by the Constitution of the State, to place their gubernatorial candidate in the position he has failed directly to secure by the popular suffrage. It is only by a small contingent of the whole vote, in a vote unusually large, that the Republicans have failed to obtain the absolute majority they desired, and since the percentage of increase in the votes cast by them is greatly superior to the similar percentage of their allied opponents, it is obvious that the former rather than the latter are "on the gaining hand" in Maine, and may more confidently count on winning the electoral vote of that State in the next Presidential election, if they shall learn how to use their victory with discretion.

That the "stalwarts" of Maine have much to learn under this latter head is made evident by the political "upturning" of the last year, and by the undisguised restiveness with which moderate Republicans, of the ex-Governor Chamberlain school, have threatened to kick in the party traces. And that they are likely to profit by the lesson administered to them may be inferred from the sagacity which the Republican leaders have previously displayed in interpreting "the hand of Providence" when it is held up in a threatening posture through the ballot-box.

That the Greenbackers and the Democrats of Maine have much more to learn, if they hope to retrieve their fallen fortunes in that State, it is not at all necessary for us to say in view of the confusion which has just waited on their united banners. As far as regards the financial issue (the leading issue of the pending Autumnal elections, as we regard it), the Greenbackers of Maine, as of every other State, have been doomed to fight a losing battle ever since the resumption of specie payments on the first of January last. After the sacrifices already made, and properly, because necessarily, made in order to place the business of the country on a stable foundation, the people of the United States do not mean that the hands shall be put back on the dial, but are rather intent on pushing them forward until they shall point not only to a "parity of purchasing value between paper and coin," but to a revolution of all the outstanding questions which still threaten us with a liability to the perils of inflation or to the mischiefs of a depreciated currency on a mono-metallic basis.

And the Democrats of Maine are now in a position to calculate what they have gained by sacrificing the hereditary principles of their party in order to patch up a temporary alliance with an ephemeral organization. A party which throws its ancient principles overboard in order to snatch a transient triumph from chance or fate, is a party which has already lost faith in itself, and therefore lost its hold on the confidence of the people. Where men fall away from their historical convictions, the outer lapse is a sure mark of a worse decay in that inner creed which is the bond of all concerted action in the field of politics. For the lack of this unifying principle no "cement of public plunder" can furnish a substitute. The long supremacy of the Whigs in England during the reign of Queen Anne is explained by the fact, as Burke recites, that their wise leaders, Sunderland, Godolphin, Somers and Marlborough believed, in common with their followers, that no men can act with effect who do not act in concert; that no men can act in concert who do not act with confidence, and that no men can act with confidence who are not bound together by "common opinions, common affections, and common interests."

Unless the opinions which bind men together in political activity are sufficiently strong to be held with tenacity; unless their "common affections" are genuine and their "common interests" are solid, we must be content to see the game of politics degenerate into a mere scuffle for place without regard to honor or consistency. In so saying, we are not making a plea for party spirit, since party spirit, as we have remarked before, is never so bitter and proscriptive as when it is divorced from real and substantial issues capable of being upheld or opposed in the field of debate. It is the absence of real and vital issues to which their faith can attach that has made the Democrats "a prey to ill-advised coalitions in Maine, Massachusetts and Ohio. It is not the coalitions which have stripped the party of its native strength in these States. It is because the party in these States was already stripped of its native strength that it stooped to enter into the coalitions, and it must find itself before it can hope to find the path that leads to victory.

THE SPANISH MARRIAGE.

IF we are to believe the correspondents, King Alfonso of Spain has lost no time in wooing the fair Archduchess Marie Christina of Austria. The scene of their brief courtship was the pretty French watering-place of Arcachon, on the Bay of Biscay, whither the Archduchess, spite of her jaunty declaration that "if he wants to win me, let him come and woo me," went from Vienna to meet him. The two, we are told, during their sojourn there, were inseparable, walking the gardens hand-in-hand in true lover fashion, and the King declaring himself to be supremely happy. Indeed, in the ardor of his passion His Majesty has committed several breaches of rigid Spanish etiquette, making unexpected calls, kissing his hand to the numerous balconies of the villa where his fair lady was enshrined, etc. And yet it is only a year and a half since the bells were pealing for his marriage with Princess Mercedes, and only a few months since the same bells were tolling the requiem of his bride and queen, dead in the bloom of her golden youth.

The Archduchess Christina is the daughter of the Archduke Charles Ferdinand of Hapsburg, who was a grandson of the Emperor Leopold of Austria. She is just twenty-one years of age, is finely educated, an excellent linguist, and has a keen taste for the piquancy and splendors of life. The advances of King Alfonso were not at first received with favor by the Austrian Government, but difficulties were gradually removed, though some peculiar conditions were imposed by the Hapsburgs. As stated by a correspondent, "the series of mysterious deaths in the royal family of Spain in the course of the last twelve months caused a good deal of apprehension among the Austrians, and made them hesitate at accepting the proposals of an alliance. But in due time a compromise was elaborated. The new Queen will take with her from Vienna her own medical attendant, her own private secretary, three ladies of honor and three chamberlains, and will, moreover, be dowered from His Majesty's personal property, the capital of the same to be deposited in a foreign bank, beyond the reach of revolutions and *pronunciamientos*, which, as experience has shown, sometimes drive kings and queens into exile and poverty." The same writer adds:

"The marriage is not likely to be popular. It is opposed by even consistent Royalists, who point to history to prove that Austrian alliances have always brought ill-luck with them: while the Liberals are alarmed by the probable consequences of such a union. The Archduchess is almost fanatical in her attachment to the Catholic Church, and they believe will be so much under the influence of the clergy that the moral conquests of 1868 may be imperilled. All these considerations are certainly of great weight in a country which, like Spain, has only recently and with difficulty emerged from a period of constant revolution, but Spanish politicians should have urged them sooner; and such is the influence—backed by intelligent bayonets—of the Prime Minister, that I think we may count upon a favorable vote of the Cortes, when the representatives of the people meet on the 5th of October, and that the nuptial ceremonies will be celebrated with great pomp, at Madrid, immediately after the expiration of the mourning for the Infanta Doña Maria del Pilar, excepting always some new family bereavement shall again necessitate an adjournment."

It is said that Alfonso has munificently ordered the rooms which were prepared for Mercedes in his different palaces to be newly furnished for his consort that is to be. She will have the satisfaction of knowing that there is not in her apartments a single object to remind the King of her interesting predecessor. She will be fortunate, indeed, if the world shall find in her the same sweet and tender graces which won for Mercedes the homage of all noble hearts.

FINANCIAL PERIODICITY.

IN an address on the business situation before the Cincinnati Chamber of Commerce, on the 10th instant, President Hayes quoted the statement of an English writer that there is a regular periodicity in the recurrence of hard times; that in England they return in about ten years, and in this country once in about twenty years. There is certainly some ground for this statement as to the periodicity of financial disasters. Let us illustrate. The year 1837 will be remembered as peculiarly a "panic" year. So great was the financial embarrassment in this country that Congress was convened three months in advance of its customary date of meeting for the purpose of considering the situation. Ten years and a quarter later, or in November, 1847, Great Britain was visited by a grave commercial and financial crisis. Among the banks which suspended payment were the Royal Bank of Liverpool, North and South Wales Bank, Newcastle Union Joint-stock Bank, and many others. Of important commercial houses which failed were Barton, Islam & Higginson, for £1,000,000; Barclay Bros. & Co., £450,000; D. & A. Denny, Glasgow, £300,000. The Funds fell to 79¼, and the rate at the bank ranged from 8 to 12 per cent., while out of doors accommodation could scarcely be obtained at any price. Altogether, in the month of November, there were in Great Britain 242 heavy failures during this crisis.

Turning now to 1857—which will also be remembered as a panic year in this country—we find that on November 9th occurred the failure of the Western Bank of Scotland, which was only "the forerunner of a series of commercial disasters of unusual magnitude." An authority relates that "the bank had for years been in an insolvent condition, owing to the immense advances made by the late manager to speculating firms whose assets were of a merely nominal character." On December 17th the total liabilities of this bank were declared to be £8,911,932. On the 11th the City of Glasgow Bank closed its doors, and this one was followed by the Liverpool Borough Bank (liabilities £5,000,000). The commercial prostration was terrible. Sanderson, Sandeman & Co. failed for £5,000,000; Dennistoun & Co. for £2,000,000; the bullion in the Bank of England diminished to £7,171,000, while its notes in circulation amounted to £60,000,000. Finally, Parliament was called together "to consider the alarming financial condition of the country."

Referring, lastly, to 1866, it is noticeable that the now celebrated "Black Friday" occurred on May 11th, Overend, Gurney & Co. having failed on the day previous for £11,000,000. On "Black Friday" Peto & Betts failed for £4,000,000; Shrimpton, railway contractor, £200,000; while the shares in Agra & Masterman's bank, which had been thirty-three premium at the beginning of the year, fell to one discount.

It has been seen that the City of Glasgow Bank failed November 11th, 1857. Last year it failed again on October 2d, and this failure was followed by the stoppage of many of the most prominent financial institutions and business firms in Great Britain.

The periods of the financial crises named as occurring in England have been 1837, 1847, 1857, 1867, 1878—an average of ten years and a quarter elapsing between each. There is enough in this periodicity, perhaps, to warrant financial wiseacres in investigating the question whether or not financial conditions — like suicides, post-office irregularities, etc.—may not be governed by inflexible natural laws; and, as the "sage of Brooklyn Heights" used to say, "occur in cycles."

MR. EVARTS IN CANADA.

THE visit of Secretary Evarts to Canada last week, as the guest of the Governor-General, was marked by a variety of incidents at once pleasant and significant. The Secretary was everywhere received with demonstrations of kindliness and good feeling, and every possible opportunity was taken by those with whom he came in contact to express a hearty desire for a closer intercourse between Canada and the United States. On the occasion of a reception at Toronto, Mr. Evarts took occasion to speak of the political relations of the two countries, referring especially to the Fishery question, of which he spoke as follows:

"So far as any future relations of the two countries to the Fishery question are concerned, as the Treaty of Washington has made but a temporary provision, terminating now in six years, of course there will be some negotiations; but it is scarcely necessary for me to say that those negotiations will be conducted on our part, and certainly on the part of England so far as we have any opinion or feeling, in a quiet, and I think I may say—for the people pride themselves on their good sense on both sides of the water—in as sensible a way as any subjects of dispute are ever conducted. I imagine that there is constantly pressing on the minds of those who live upon the borders of these two great nations a wish that the commercial, the custom-house and duty embarrassment may be reduced to a minimum, and that there may be as free a flow of commerce between the two communities as the interests of the two may render possible. Of course, we don't always agree when we are on two sides of a great national consideration; any more than when we are on the opposing sides of a private litigation—but this teaches us, at least, one thing, that on both sides of the line these matters are governed by the pretty strong predominance of what we may call human nature. It is a pretty constant quantity in public as well as in private affairs, and if the most enlightened and the most patient and the most benevolent treatment can be applied to all these subjects on one side and the other it will end, I have no doubt, in the great extension of freedom of intercourse and a great reduction of the embarrassments which are felt, I suppose, to be quite unsuitable between communities so much alike and where freedom of intercourse is so desirable."

THE CABUL REVOLT.

DESTINY seems resolved, latterly, to be unpropitious to the political fortunes of Lord Beaconsfield. Just as it seemed certain that England had emerged from her Asiatic and African wars, and after Lord Beaconsfield had indulged himself in complacent congratulations, at the Lord Mayor's banquet, upon the successful issue of all England's foreign troubles, the horrible revolt and massacre of Cabul occurred to utterly spoil the fair prospect, and to turn the feeling of triumph into one of fresh anxiety and alarm. A new war, or at least renewed hostilities, must be undertaken in Afghanistan at once. Indeed, scarcely had the news of the revolt arrived, when the further intelligence came that General Roberts was already moving on Candahar.

The most striking feature, perhaps, of the tragedy by which Major Cavagnari and his staff met their deaths, is its vivid resemblance to what took place in the Anglo-Afghan war of nearly forty years ago. Then, as now, the English invaded Afghanistan, overturned the reigning Ameer, Dust Mohamed, and replaced him with Shojar, a ready tool of English interests. Then, as now, the victory of the English seemed complete, and their possession of Cabul, the capital, secure. Then, as now, the Cabulese populace, joined by disaffected soldiery, rose in revolt, attacked the English Residency, and murdered Sir Alexander Burnes, the English Resident. It is to be hoped that the sequel of the dismal story will not be as closely repeated; that the remnant of the British force at Cabul will not be, as the remnant of 1842 was, utterly annihilated by their semi-barbarous foes.

But in any event the Afghan War is to be resumed. The "scientific frontier" must still be fought for. Whether Yakoob Khan, the Ameer placed on the Afghan throne by the English, is a traitor to them or has been overcome by his own subjects, a rule must still be established at Cabul favorable to their interests, and Cabul itself secured against a similar outbreak in future. There can be no turning back. At whatever cost of men, money and popularity, the Beaconsfield and Lytton policy must be inexorably pursued. That policy is nothing more nor less than the attempt, in the struggle between England and Russia for supremacy in Asia, to gain for England the advantage derived from the military command of Cabul. Larger forces must now occupy that stronghold; a more able and self-sustaining tool than Yakoob Khan must be placed upon the throne of Shere Ali; and the Indian frontier must be strengthened. Nor may this be all that is necessary to secure the much-talked-of "scientific" defense. It is very likely that the English may deem it imperative to occupy Herat. It is even possible that they may venture upon the conquest of Merv. There is but too palpable proof that Russia has secured the friendship of the Persian Shah; and the danger from that side has been growing week by week. All this involves a perfect labyrinth of peril to the English Government. No step can now be taken forward without risking a direct collision with Russia. It will require a most delicate diplomacy, with Russian troops on the right bank of the Oxus and the English threatening Herat, to avoid a *casus belli*. Then, in England itself, the political dangers of the Tory Cabinet have grown wonderfully formidable by reason of the Cabul revolt. The small but vigorous party which has been boldly asserting that India "does not pay," and which hints that it were better to abandon that magnificently expensive appanage of the Crown than to go to more wars and cost to defend it, will derive fresh strength from the disaster. The still larger party which has always denounced the Afghan War, has refused to sanction its policy or its expense, and has continually

Digitized by Google

predicted misfortune from it, will renew its attack upon Lord Beaconsfield with a new vigor and will be far more energetically backed by popular opinion than before. It will be no easy task for the Premier to hold his own, even with the present docile Tory Parliament; and, should any exigency arise forcing him to dissolve it, his chances for a victory at the polls will be vastly lessened.

The revolt at Cabul, in brief, is likely to lead to very grave complications and consequences. It reopens a dismal past and it once more brings to the front the whole subject of the British rule in India. The present miserable condition of that Empire, the enormous expense attending its rule even in time of external peace, the necessity for ever arising to enter upon unheroic wars to defend it, the perpetual misunderstandings, now with Afghanistan, now with Russia, now with Burmah, now with Persia, will once more be sharply reviewed, both at home in England, in Europe and in Asia; and the questions are likely to be more than ever pressed upon the English people—first, whether they can afford to retain their hold upon India; and, secondly, whether they are going to be able to retain that hold at all.

EVENTS ABROAD.

THE insurrection in Cabul and the probable consequences of a renewal of the struggle for British supremacy in Afghanistan are commented upon elsewhere. Naturally this particular subject has absorbed public attention in England to the exclusion of almost everything else. The labor troubles in many of the manufacturing centres still continue, and the outlook for the industrial classes generally is gloomy in the extreme. In Scotland, especially, the depression is becoming terrible. For many years past landowners have been gradually dispossessing the people of almost foothold on the land, while counties that were formerly as blooming gardens have been turned into veritable wildernesses, over which no man must tread without permission. Former inhabitants have been crowded to the large towns or seaside villages, there to seek a precarious subsistence, and, as a result, there is a vast number of people, unemployed, in Glasgow and elsewhere, who are suffering severely. Divorced from the land, these poor people are thoroughly dependent on the fluctuations of trade, and when, as at present, depression exists, they starve.

The Austrian occupation of Novi-Bazar, guaranteed to her under the Berlin Treaty, is being accomplished with the co-operation of the Turkish authorities. Austria's hold on Bosina and Herzegovina has made the advance of her troops entirely feasible and safe, and Novi-Bazar once occupied, lying as it does between Servia and Montenegro, with the Ottoman frontier on the southeast, she will possess a vantage-ground which will enable her to promote her commercial and political interests in the East. It is intimated that Austria has guaranteed the Sultan his European possessions in consideration of Turkey's non-resistance to the Novi-Bazar occupation; the statement, however, lacks confirmation. It is not probable that Russia will regard the extension of the Austrian frontier upon such conditions as these with any extraordinary enthusiasm.

Another batch of the amnestied Communists have reached Paris from Noumea, and been most hospitably received by their friends. A number of the amnestied died on the homeward voyage, and several others were severely ill, owing, it is alleged, to the insufficiency and poor quality of the food supplied them. M. Waddington has renewed his proposal to resign the French Premiership, but will remain in office, it is now understood, until the Senate shall dispose of the Ferry Education Bill.

The Spanish Government is again confronted by the spectre of revolt in Cuba. Many of the leading politicians express serious apprehension as to the outcome of the present perturbations; but none of them as yet seem to comprehend that the true way to deal with the Cuban question is to recognize the right of the people to at least a modified self-government, and cut up by the roots the abuses in the island administration—and especially the onerous system of taxation—which have produced the existing discontent. Some thousands of troops are to be sent out from Spain, most of whom will probably perish from climatic disorders without at all contributing to the permanent pacification of the island.

A special conference of the International Congress of Meteorology will be held at Hamburg, on the 1st of October, to consider a scheme for the establishment of observing stations within the circumpolar regions. The stations proposed are the north coasts of Spitzbergen and Novaya Zemila, the North Cape, the mouth of the Lena, Point Barrow, and the east and west coasts of Greenland, as far north as possible. Lieutenant Weyprecht, with whom the scheme originates, has determined, whatever the conference may decide, to proceed to some one of the points named, and he will stay at the station selected for twelve months, making observations of all phenomena that are likely to be of use in promoting the study of meteorology. Important scientific results may be achieved by this enterprise.

The negotiations between the Vatican and the German Government appear to be at a standstill. The Pope is said to have suggested, in an autograph letter to the Emperor William, that the direct intervention of the latter in the way of clemency is the only way to restore harmony. The Government has informed the Catholic clergy of Munster, who petitioned for the removal of hindrances to religious instruction in schools, that nothing will be done to effect an essential change until the Catholic Church formally acknowledges the inalienable right of the State to make its own laws.

The readers of Stanley's story of his African explorations will recall King Mtesa, ruling near Victoria Nyanza, who proved himself, under peculiar circumstances, the sturdy friend of the explorer. It is now announced that Mtesa has abolished slavery throughout his dominions. As the result of this decree a million of slaves were liberated in a single day. This act of a savage chief in the heart of the Dark Continent shines with singular lustre in contrast with the despotic policy of some Christian monarchs.

The latest story as to King Cetewayo is that he is still at large, but has only two followers.—The Irish Home Rulers propose to hold a popularly elected convention of 300 members—the same number as composed the former Irish Parliament—to discuss Irish questions before the next session of Parliament.—No results have yet been reached by the commission on the rectification of the Greek frontier, and the outlook is not encouraging.—Sympathy with the Memphis yellow fever sufferers extends to Paris, where a festival in aid of the relief fund is proposed.

THE Butler Greenbackers in Massachusetts have eclipsed all competitors in their bid for the soldier vote. Their platform includes a proposition that soldiers of the late war ought to be paid the difference between the price of greenbacks received by them during the war, about forty cents on the dollar, and the present price of the same currency, with interest from the date of each payment, now amounting to about $500 a man. Could even Butler demagoguery any further go?

THE movement in favor of the metric system is gaining ground. Resolutions favoring the system and an international coinage on the gramme weight of gold, nine-tenths fine, was adopted by the American Social Science Association at its Saratoga meeting last week. The resolutions urge the passage of the Bill now before Congress, providing that hereafter metric denominations of weight and measure shall be introduced into and made obligatory in the service of Custom Houses for invoices expressed metrically.

IT is estimated that England will need, for the current cereal year, 128,000,000 bushels of wheat to meet the requirements of her home consumption. A competent London authority estimates the money value of the deficiencies in the several crops in the United Kingdom as follows: Wheat, $125,000,000; beans, peas and rye, $15,000,000; potatoes, $75,000,000; hops, $6,250,000, and hay, $78,000,000; making a total loss of $296,000,000. This is equal to a loss of about $25 per acre on the land under cultivation.

A NEW line of steamships between Philadelphia and Marseilles and other Mediterranean ports is about to be established. It will be started with English steamers of about 3,500 tons burden, but it is intended to replace them with American steamers at an early date. The outward cargoes will be of coal and other products of American industry, while the return freights will consist of the usual materials of a Mediterranean cargo for America. Philadelphia merchants appear to be giving a good deal of attention to the development of the Mediterranean trade.

AMERICAN manufacturers of cotton goods are about to make an effort to establish a trade with Africa. Commodore Shufeldt, of the *Ticonderoga*, has supplied samples of the goods now sent to that country by England, with the prices charged therefor, and those who have looked into the matter are confident that we can furnish goods of the same quality at a lower price. Most of the goods are of red and other brilliant colors, and if our manufacturers will take pains to adapt their products to the African taste, there can scarcely be a question as to their success in competing with the English dealers.

THE Mormons of Utah have not succeeded in their efforts to secure for the convicted polygamist, Reynolds, a modification of the rigors of imprisonment. The United States Marshal has been instructed from Washington that Reynolds is not to be treated any better than other criminals under his care: that he is being punished for a crime, and that his punishment must be in all respects similar to that of persons undergoing sentence in the Utah Penitentiary. It is gratifying to find that the Federal authority is at last to be unsparingly enforced against the polygamous abomination and its supporters.

THE announcement was made the other day that a dispatch had been received in France from the steamer *Faraday*, engaged in laying the new French cable in mid-ocean. This feat would seem to demonstrate the practicability of the idea of General A. J. Myer, of the United States Signal Service, that ocean signal-stations may be established in lines traversing the ocean parallel with and over the telegraphic cables, and in communication with either Continent. General Myer's plan, not yet definitely or officially broached, contemplates the employment of six or more ships, anchored like the lightship off Sandy Hook, as stations, at distances of 250 miles or less apart, all to have telegraphic communication with the ocean cable, and so being able to dispatch from mid-ocean to the central office in Washington, thence to be distributed over the world, intelligence of any impending storm, or of any violent perturbation already abroad upon the waste of waters, or of any meteorological or other fact in which the world has an actual concern. Such a proposition as this would, a few years ago, have seemed the dream of wild fanaticism; but it appears now to be quite as possible of accomplishment as much that has already been achieved in the matter of weather forecasts.

DENIS KEARNEY seems to have recovered from his recent attack of moderation and conservatism, and is again on the rampage in genuine sand-lot fashion. The present object of his animosity is General Grant, whom he proposes to hang and burn in effigy on his arrival in San Francisco. This proposition is said to have created intense indignation on the Pacific Coast, and it is intimated that an attempt to carry it out would be likely to result in very serious consequences to the blatant Kearney. The people of San Francisco are distinguished for nothing so much as hospitality, and they will not tamely permit a deliberate insult to be offered to a guest so distinguished as the ex-President, who comes covered with honors from all the peoples he has visited.

THE next Legislature of Maine will include an unusual number of members of high ability. Among other conspicuous gentlemen who were chosen at the recent election was the Hon. Eugene Hale, who has acquired a national reputation as a Representative in Congress, and who does not, apparently, think it beneath his dignity to serve his constituents in the more obscure position of a State legislator. If our men of experience and real ability, everywhere throughout the country, would act up to the same conception of personal duty and consent to serve the people in any capacity, however humble, to which they might be called, the public service would soon become something better than the refuge for incapables and tricksters which it now so largely is. There can be no genuine elevation of the character of the public administration or improvement of the quality of our laws so long as our best citizens refuse to occupy public stations.

ONE of the most interesting and valuable documents ever issued by the Federal Government is that on the state of labor in Europe, being a compilation of reports from United States Consuls, showing the rates of wages, cost of living to the laborers, the business habits and systems of all the principal European countries. A wide diffusion of the information contained in this volume, illustrating the vastly superior condition of the laboring classes in this country as contrasted with that of the toiling masses of Europe, would do more to put an end to the industrial agitation stimulated and encouraged by demagogues and charlatans than any and all other means which it is possible to employ. If the Government cannot afford to place a copy of this book in the hands of every workingman and laborer, then it should be done by employers and trade associations who are so largely interested in the cure of the evils of strikes and consequent industrial disintegration.

A PARTY of over eighty English farmers reached this port last week, *en route* for Texas, where they have secured lands, and propose to make a struggle for independence. In conversation, they uniformly represented that they had decided to abandon their English homes only because they had found that they were fighting a losing battle with circumstances which they were powerless to overcome. One of them stated the case of the English tenant-farmer as follows:

"The best land of England is now, as it has been for years, held by the gentry. Such land as they can do without, that they do not wish to preserve for hunting purposes or for their own farms, they rent to cnants. These tenants are generally men whose fathers and grandfathers have rented and cultivated the same lands. With them the task has been one of constant effort to make bad lands productive. The contest has been so laborious that men are living, and in this party, who know that the tenants are no better off now than they were forty years ago. Some of them are poorer. We have found in recent years that while we could raise good crops of straw we could not produce large kernels of grain, and that in spite of all our efforts our grain was smaller and our labor was gradually becoming less remunerative. For some time back we have considered this situation in meetings of farmers, and, looking about for a land in which the conditions appeared to be most favorable, we struck upon Texas."

Other parties of farmers will follow the company just arrived, and if their expectations are realized, the population of Texas and other States will be largely increased from this quarter. All the tenant-farmers now contemplating emigration possess some ready money, and their chances of success will therefore be greater than those of the ordinary immigrant.

NEWS OF THE WEEK.

Domestic.

THE Maryland Greenbackers have nominated Howard Meeks for Governor.

HENRY J. GULLY, on trial at De Kalb, Miss., for the murder of Cornelia Chisholm, has been acquitted.

THE Democrats of Wisconsin have nominated Mr. Alexander Mitchell for Governor, but he declines to accept.

A CONVENTION of the colored men of the State of New York will be held at Elmira on the 14th day of October.

THE Astley Belt walk, it has finally been arranged, will begin at the Madison Square Garden, in this city, September 22d.

A MALADY called spotted fever has caused fifty deaths in the counties of Polk, Paulding, and Haralson, Georgia, within a fortnight.

A COMMITTEE of the Georgia Legislature has discovered irregularities in the office of the State Treasurer, and recommends that he be impeached.

MR. NATHAN APPLETON addressed an audience of capitalists and others at Chickering Hall, in this city, last week, in behalf of the Panama Canal project.

REPUBLICAN caucuses in Massachusetts so far have chosen 556 delegates, of whom 247 are pledged to Pierce for Governor, 226 for Long, and 83 uncommitted.

A REUNION of the prisoners of war during the rebellion will be held on October 1st and 2d at Toledo. About 2,000 have expressed their intention of attending.

THE Republicans of Maryland have nominated James A. Gray for Governor; Samuel Mollaken for Comptroller; and Francis M. Darby for Attorney-General.

MEMPHIS is still ravaged by yellow fever. Twenty-seven new cases and eleven deaths were reported September 12th. The Howard Association is in need of financial aid.

THE Massachusetts Greenbackers have nominated General B. F. Butler for Governor, Wendell Phillips for Lieutenant-Governor, and Jonathan Arnold for Secretary of State.

THE post-office at Canandaigua, N. Y., was broken into September 14th, the safe blown open, and $2,000 in money and a large number of stamps and registered letters taken.

MR. CHESTER A. ARTHUR has been elected Chairman of the Republican State Committee of New York, and the work of organizing for the campaign has already commenced.

THE Essex County (N. J.) Grand Jury has found an indictment for murder in the first degree against Joseph A. Blair, who shot his coachman, John Armstrong, at Montclair last June.

ACTING CASHIER W. W. KEENE, of the Northwestern National Bank of Minneapolis, is a defaulter to the extent of $135,000, which he has lost in speculations. About $8,000 was recovered.

THE total vote in Maine will, it is estimated, reach about 139,000, and leave Mr. Davis, Republican, lacking only from 300 to 500 votes of an absolute majority. Both branches of the Legislature are Republican.

COLONEL THOMAS SCOTT, of the Pennsylvania Railroad, has returned from his European trip in improved health. He is said to have made financial arrangements in Europe which insure the completion of the Texas and Pacific Railroad.

A CALL has been issued by General P. H. Sheridan for a meeting of the Society of the Army of the Cumberland, to be held in Washington November 19th and 20th, the anniversary of the battle of Missionary Ridge. The statue of General Thomas will then be unveiled.

DURING the month of August 12,131 immigrants arrived at this port, an increase of 4,000 over the number in August, 1878. During the first nine months of this year, over 80,000 immigrants have landed here, 1,010 having arrived in one day last week.

A MEETING of the World's Fair Committee in this city, held last week, adopted a resolution reaffirming the determination to hold the fair in 1883, a year having significance as the centennial of the ending of the war for independence, and recommending that September 23d and November 25th, 1883, be days of special celebration.

THE New York State Democratic Convention met at Syracuse on Wednesday, September 10th, and on the following day a full ticket was nominated amid great confusion and excitement. The ticket bears the names of all the State officials excepting Lieutenant-Governor Dornheimer, for whom Hon. Clarkson N. Potter was substituted. As soon as it was evident that Governor Robinson would be renominated, the Tammany delegates withdrew to another hall and formed into a convention and nominated Hon. John Kelly for Governor, while agreeing to support the balance of the State ticket.

Foreign.

TWO hundred houses in the town of Viazama, Russia, have been destroyed by fire.

PRINCE GORTSCHAKOFF attributes Prince Bismarck's hostility to his friendliness for France.

TURKISH troops have been sent from Constantinople to repress the insurrection which has broken out in Kurdistan, Asia Minor.

EASTERN ROUMELIA is reported to be in a state of anarchy; a great Slav kingdom is contemplated by the secret societies of the province.

THE French harvest shows a deficiency of 5,500,000 hectolitres, equal to about 14,000,000 bushels, which must be supplied by imports.

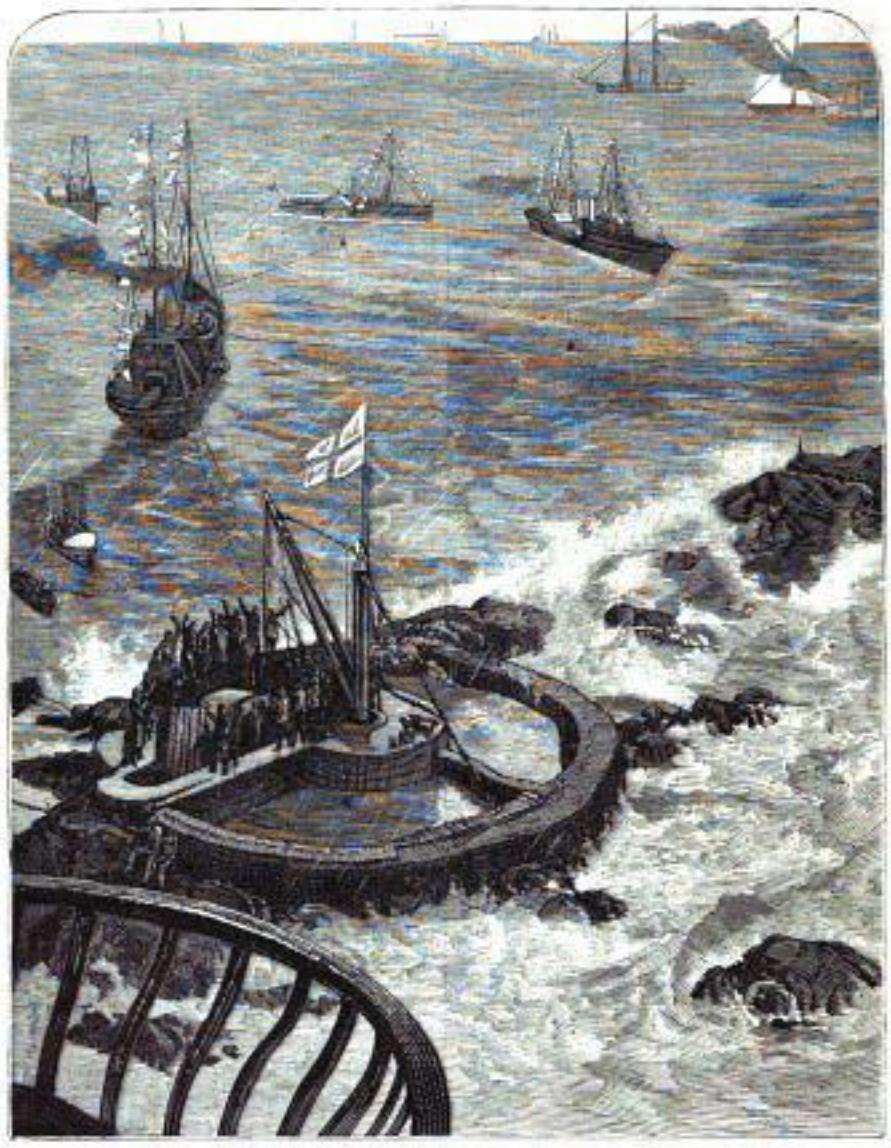
IN Afghanistan the mutineers are advancing on Jelalabad and Cabul. General Roberts's forces are also menaced, and he has called for four more regiments.

ALL the directors of the West of England and South of Wales District Bank, except one, have been committed for trial for publishing false balance sheets.

AT the second election in Bordeaux, France, September 14th, for Member of the Chamber of Deputies, M. Blanqui was defeated by 258 votes in a poll of 9,138.

THE Italian provisional estimates for 1880 show a decrease of 28,060,000 lire in the receipts, without counting the reduction of the grist tax. The War Office expenditure exceeds that of 1879 by 8,000,000 lire.

IT is stated that the King of Abyssinia claims the whole of the strip of coast which was ceded to Egypt in 1877, and also several towns and the territory to which they are situated. If his demands are rejected war is apprehended.



THE breaking up of the old Arctic exploring ship *Resolute* is now complete. The commemorative piece of furniture to be constructed from a portion of the timbers for the President of the United States will probably be in the form of an elaborate secretaire.

THE MAN OF MANY MEDALS.

ANNUAL GAMES OF THE NEW YORK CALEDONIAN CLUB.

THE sons of the Land o' Cakes had an "unco' gude" time of it this year at Jones's Wood Colosseum, the occasion being the annual games of the New York Caledonian Club. Such plaids, and bonnets, and turries, and philabegs, and sporans, and kilts! Such screeching of bagpipes, and skirling of bare-legged Highlanders. We had Rob Roy, striding about as though his foot was upon his native heath. We had Baillie Nicoll Jarvie, portly as to stomach, whisky and watery as to eye, with "Ma conscience" in broad Lowland ever and anon dropping from his mutchkin-moistened lip. We had the Dandy Dinmont, with his sandy hair and cheek-bones as high as the *Tribune* clock; and we had more tartan than ever appeared at the bidding of Bonnie Prince Charlie on the fatal field of Culloden. The Highlanders, strongly reminding one of those wooden effigies standing outside "shaneshin'" shops, swaggered about as did their ancestors in the "Saut Market" when Charles Edward held high revel at his Royal Palace of Holyrood—many of them plated with medals won at tossing the caber, throwing the hammer, dancing the Highland Fling, or in footing it between the crossed blades of the "bludie" claymore. There were "dronthy neebors," too, in that mad, merry crowd, who were "na fou' but just a wee drappie in their 'ee," and, oh, it was excruciatingly funny to behold the mingled gaze of astonishment and disgust on the bloated features of a beer-beloved Dutchman, as these sons of Caledonia strutted in, calling for "a quaich" in accents as moist as a Scotch mist. The kilts visibly affected prudish young ladies, and the "Oh, mys," "How dreadfuls," "Well, I nevers," that rose above the screechings of the pipes, constantly assailed the ear. A Cincinnati man confidently informed us that he felt at home in these pipe-shriekings. There is no music so foot-moving as that of the Highland Reel, and the very instant "Mrs. M'Pherson" or "Johnny Cope" was struck up, the floor was taken possession of by a dozen jigging couples, who thoroughly abandoned themselves to the ecstasy of their native music, and who footed it until the pipers were fairly compelled to pause for lack of wind for their chanters. Old and young, handsome and ugly, crossed hands, flung themselves into paralytic postures, jigged and wriggled, and stamped and whirled, and yelled and shrieked, while howls of applause, mingled with right royal, honest and hearty laughter, came from the enthusiastic bystanders. We had foot races, and walking matches and sword dances, and flings, and tossing the caber and "hitch and kick," and "all manner o' games." Every event was admirably contested, especially that of the five-mile race, a son or grandson of the Emerald Isle, Tom Donohoe, wresting the prize from the two crack champions. Bang went saxpences! and bang went mutchkins of the best whisky in the world, bar none; and although no moon appeared to light the Mace homeward, "my chiel amang them announced her presence to the music and words of Robbie Burns, while loud and deep were the parting declarations, that "rank was but the guinea stamp, the man's the gowd for a' that." We congratulate the New York Caledonian Club on the pre-eminent success of its annual gathering, and more than all upon the genuine good-fellowship and thorough clannishness that distinguished it from the first screech of the bagpipes to the very last.

A GERMAN OUT OF HIS ELEMENT.

LIFTING THE HAT.

THE minor loss of a man's property is included in the major loss of himself; and so, while he surrenders his weapons he also yields up, if the victor demands it, whatever part of his dress is worth taking, the motive for taking it being in many cases akin to the motive for taking his weapons; since, often being the hide of a formidable animal, or a robe decorated with trophies, the dress, like the weapons, becomes an addition to the victor's proofs of prowess. At any rate, it is clear that, whatever be the particular way in which the taking of clothing from a conquered man originates, the nakedness, partial or complete, of the captive, becomes additional evidence of his subjugation. That it was so regarded of old in the East we have clear proof. In Isaiah xx. 1—4, we read: "And the Lord said, like as my servant Isaiah hath walked naked and barefoot three years for a sign, . . . so shall the King of Assyria lead away the Egyptians prisoners and the Ethiopians captives, young and old, naked and barefoot." And that the Assyrians thus completely stripped their captives is proved by their sculptures. Nor are we without evidence, furnished by other races, that the taking off and yielding up of clothing hence becomes a mark of political submission, and in some cases even a complimentary observance. In Fiji, on the day of paying tribute, "The chief of Somo-somo, who had previously stripped off his robes, then sat down and removed even the train or covering, which was of immense length, from his waist. He gave it to the speaker, who gave him in return a piece large enough only for the purposes of decency. The rest of the Somo-somo chiefs, each of whom on coming on the ground had a train of several yards in length, stripped themselves entirely, left their trains, and walked away, thus leaving all the Somo-somo people naked." Further we read that during Cook's stay at Tahiti, "two men of superior rank came on board, and each singled out his friend; this ceremony consisted in taking off great part of their clothes and putting them upon us." And then in another Polynesian island, Samoa, we find this complimentary act greatly abridged; only the girdle is taken off and presented.

With such facts to give us the cue, we can scarcely doubt that this surrendering of clothing originates those obeisances which are made by uncovering the body, more or less extensively. We meet with all degrees of ununcovering having this meaning. From Ion Batula's account of his journey into the Soudan in the fourteenth century, Mr. Tyler cites the statement that "women may only come unclothed into the presence of the Sultan of Melli, and even the Sultan's own daughters must conform to this custom." Other parts of Africa show us an incomplete, though still considerable, unclothing as an obeisance. In Abyssinia, inferiors must bare their bodies down to the girdle in presence of their superiors, "but to equals the corner of the cloth is removed only for a time." The like occurs in Polynesia. The Tahitians uncover "the body as low as the waist in the presence of the king;" and Forster states that in the Society Isles generally, "the lower ranks of people, by way of respect, strip off their upper garments in the presence of the principal chiefs." How this obeisance becomes further abridged, and also how it becomes extended to other persons than rulers, are well shown by the natives of the Gold Coast. Cruikshank says: "They also salute Europeans, and sometimes each other, slightly removing their robe from their left shoulder with the right hand, gracefully bowing at the same time. When they wish to be very respectful, they uncover the shoulder altogether, and support the robe under the arm, the whole of the person from the breast upwards being left exposed." And of these same people Burton remarks that "throughout Yoruba and the Gold Coast, to bare the shoulders is like unhatting in England." That uncovering the head, thus suggestively compared with the uncovering of the upper part of the body, has the same original meaning, cannot be questioned. Even in certain European usages the relation between the two has been recognized, as by Ford, who remarks that "uncloaking in Spain is equivalent to our taking off the hat." Hence it seems that the familiar taking off of the hat among European peoples, often reduced among ourselves to touching the hat, is a remnant of that process of unclothing himself, by which, in early time, the captive expressed the yielding up of all he had.

SHE SAYS SHE "WILL NEVER, NEVER, FORGET HER SENSATIONS ON FIRST BEHOLDING THE KILTS!"

SOME USES OF THE OCEAN.

WITH so many people at or coming from the seashore, it is a good time to call to mind some of the uses of the sea, practical and other than as a source of entertainment simply. It would be serving a great purpose if it were only the pathway of commerce and the world's washing machine, but it is a deal more.

It is, though few persons stop to think of it, more abundantly stocked with life than dry land is, and this ocean life is useful in many ways, in supporting life on land, and so is made directly valuable to mankind. How much more prolific the sea is than the land is suggested in the fact, that while an average acre of land will yield a ton of corn or two or three hundred weight of meat in a year, there are thousands of miles of sea bottom which give up daily tons enough of sea food to the acre to equal in nourishment the yearly yield of the best-tilled land. A hundred pounds of fish are equal in nourishment to two hundred pounds of bread or to seven hundred pounds of potatoes, and though science can help matters along, we have not yet reached the point where we can confidently say that the ocean's supply of fish needs artificial replenishing. There come times of scarcity and times of plenty. Fish appear and disappear. Whether they are killed off, driven off, or accidentally led to move, nobody can know.

One singular factor in increasing the business of fishing of late years has been the railroad. Quick transit has carried fish in the best condition to markets where it previously was as poor as it was rare, and has given an immense impulse to the fishing industry. The extent to which the world fishes is very hard to determine. Statistics, at best faulty, are necessarily very vague on such matters, but a few collected facts are as follows: Great Britain imports yearly of the products of the sea $40,000,000 worth. The fisheries of France and Russia yield for market each about $17,500,000 worth; of Norway, $16,000; of Denmark, $800,000; of New England, $8,000,000. There are in Ireland 5,965 fishing boats, with 23,893 fishermen; in Scotland, 14,547 boats and 45,263 fishers; in the four British North American provinces, 18,000 fishing boats and 42,000 fishermen, with 200,000 persons one way or another handling and living by fish. The census gives to this country 20,500 fishermen outside of the whale fishery. The whole Asiatic coast is devoted to fishing. Far north and far south parts of the world get all their living from the sea, and it is said that dried fish is one of the absolutely indispensable foods in the tropics.

A CURIOUS MANIA.

M. MONSELET, has discovered in the shop of a bookseller on the Quai Voltaire, in Paris, one of the most singular monuments of human idiosyncrasy yet brought to light. It consists of no fewer than forty-five manuscript volumes—quite modern—written in utterly unknown characters. An assembly of savants, having been convoked to pass an opinion on the hieroglyphics, declared that they were quite beyond their ken. The form of the letters, we are told, bears, when looked at from some distance, some resemblance to Oriental calligraphy, but this is the only description vouchsafed. Several pages are framed by borders executed with the pen in the most marvelously delicate style—flowers, animals, heraldic shields, angels, landscapes, ruins, etc.; the illuminators of missals produced nothing superior to them. M. Monselet proceeds: "And now what do these forty-five volumes contain? Everything tends to the supposition that they are memoirs, of which the author was so morbidly jealous that he created a writing peculiar to himself for the purpose of transcribing them. And this author is known; but he died a little while ago. He was an architect, very skillful in his profession and much consulted, M. H. Legrand, to whose pen are due some important works—not in manuscript—that indicate a man of perfectly serious tastes. How, then, can we find an explanation of these many volumes in which are deposited the secrets of his inmost thoughts, destined to die with himself? And in the first place, where did he find time for writing them? I do not exaggerate in saying that by the perfection of its calligraphy this collection represents more than two years' labor. If it be a mystification, we must allow that it has been carried out with rare patience; but for my part I prefer to attribute it to a wild and pleasing mania. I feel convinced that M. H. Legrand owed the best moments of his life to his solitary and mysterious occupation."

THE ORIGIN OF CROQUET.

CROQUET is not, as many suppose, of modern birth, but it may be traced through its various stages to Persia as far back as the eighth century. Its origin was polo, which the Persians played with a long-handled mallet called *chugan*. In the ninth century the game made its way into the Eastern empire, the original mallet changing its form into a long staff ending in a broad bend filled with net-work of gut strings.

"Thus," says a writer on the subject, "there appeared in the East as belonging to the great sport of ball play on horseback the first shapes of two implements which remodeled the whole play life of medieval modern Europe, the *chugan* being the ancestor of the mallets used in croquet, and of an endless variety of other playing clubs and bats, while the bent staff, with its net-work, was a primitive racket." We find that the original ball games in which sticks were used were played on horseback, and instead of polo being an outgrowth of these sports played on foot the latter are the changes made in the Persian game of *chugan*, which, as has been said, was the parent of all our games in which artificial means are used to propel the ball. The transition from the *chugan* of Persia to the short-handled mallet used on foot was easy and natural, and the substitution of a club came by gradual changes, the hand being probably the original implement, which was superseded by a rounded stick.

THE BROADSWORD DANCE.

A WONDERFUL SWISS HEALTH RESORT.

IT is well known that in Europe mountain resorts for Winter as well as Summer are now on trial. Those most noted are at Goerbersdorf, Falkenstein and Davos. The village of Davos am Platz, in Switzerland, is situated on a large plateau 5,000 feet above the sea level, and completely surrounded by mountains, which screen it from high and penetrating winds. Like that of almost all corresponding altitudes, the air is very dry, its humidity being less by two-thirds than that of Nice or Cannes. This gives it a property of elasticity, or, as it is sometimes called, electric tension, which modifies in a remarkable manner the sensations of heat and cold. Persons often sit in the open air, even after sunset, with the mercury below freezing, without overcoats, without the slightest discomfort, and most of these invalids at that. The daylight at Davos is very short in Winter, the sun overtopping the mountains about 10.30 A. M., and sinking behind their summits from 3.30 to 4 P.M.; but the sunshine, while it lasts, is very bright, and the heat of its direct rays is intense, rising to 100° or over, and at the same time the temperature in the shade will vary from 22° to 30°. The average temperature for Davos for January, 1878, was 16° most of the nights, and many days marking zero or below. A writer says: "The sun will almost boil one's back, while icicles from his breath will form on his mustache and beard, and, changing front, his face will be actually sunburnt. From the constant sunbronzing to which they are subjected, invalids soon lose all appearances of delicate health. The food generally is not inviting, nor even well cooked, but an enormous appetite is established after a few days' sojourn; and the rule, to which there are but few exceptions, is that everybody gains more or less rapidly in flesh. The doctors drive everybody out of doors—it is not too much cold, but too much heat, that they dread. The recreations are walking, sledding, coasting, skating, snow-balling and eating. An excursion of ten miles on foot soon becomes a bagatelle to delicate women who at home could not be induced to walk a fourth of that distance. In the evenings there are hops, amateur theatricals and various entertainments—but all by medical direction—of short duration, which is even extended to the Sunday service, which is restricted to one session of one hour. Persons who have had hemorrhages cease to bleed, coughing and expectoration rapidly diminish—in fact, there will be more coughing in an average country church than in one of these assemblies of invalids.

TOM DONOHOE WINNING THE FOOT-RACE.

NEW YORK CITY.—ANNUAL GAMES OF THE NEW YORK CALEDONIAN CLUB AT JONES'S WOOD AND WASHINGTON PARK, SEPTEMBER 4TH.

Digitized by Google

WHOSE WAS THE THIRD CHAIR?

"AS for me," said Doctor Cairnes, "I am a Spiritualist!"

"Aha!" cried his guests, gleefully, in chorus. They drew up their chairs to the smoldering embers, pushed by the decanters and glasses, lighted jubilantly their cigars, and turned again to their host.

"A Spiritualist," they said, "and why?"

"Because," said the doctor, in a dreamy, hesitating tone, "my experience has taught me there is something in it—that is soul satisfying. We all know that the world is composed of matter of various kinds; looked at with the eye of a scientist, these different varieties of matter are classed almost from Divinity down to mere crustacea. This is perhaps interesting, but unsatisfying to human egotism. We find that from certain upheavings of the ocean, lovely islands have been formed; that from an ugly seed a great, glowing, lustrous flower bursts forth; but this only leads us to look for more——"

The doctor paused. His friends wondered what all this had to do with Spiritualism. They had been invited here upon this Christmas Eve in question to enjoy the hospitality of one of the choicest spirits of the age in a bodily shape, and some of the finest in a liquid variety. The latter had been partaken of modestly, according to the wont of these gentlemen, who were sybarites of the soul as well as the body, and would not have spared this night from study or given it over to pleasure, had they not expected, and in a manner demanded, other than an ordinary revelry.

"He's a grand fellow," said Professor Bates, when he opened his invitation. "A little queer, perhaps, but that is a capital fault." The professor neither drank nor smoked, therefore he was to jog the halting voice of Doctor Cairnes.

"Your experience in Spiritualism was soul-satisfying, you say?" he insinuated.

"Yes," said the doctor, starting out of a reverie, "it was, indeed!"

"There was, in fact, something in it?" pursued the professor.

"Yes," repeated the doctor, "there was, indeed," and relapsed into his reverie again.

"And would it be intrusive to ask," said a young medical student, "what in thunder that 'something' was?"

"It was a woman," said the doctor, looking at him dreamily.

The six gentlemen hitched their chairs nearer to the fire, exchanged an unctuous glance with one another; the professor wiped his spectacles, and put them again upon the bridge of his nose.

"And a man," added the doctor.

Then they all waited quietly—it was evident to these kindred souls that the doctor's spirit was getting *en rapport* with his theme, and they concluded to give it time.

"When I was a young man," said the doctor, at length, "I was connected with a hospital situated in one of our seaport cities. It was a gloomy pile of buildings, infested with vermin of every kind, lighted wretchedly, and poorly ventilated. Through the great, gloomy corridors—wind-swept and icy cold in Winter, dark, damp, moldy in Summer—there seemed to stalk the phantoms of those lonely and desolate wretches whose bitter fate it was to die here, uncared for and unattended, save by men given over to the pursuit of science, or creatures possessed by a sordid brutality. The windows, covered with dirt and cobwebs, effectually kept out the sunshine at all seasons, and life there was a dreary business at the best. I should have speedily got away if it had not been that I fell violently in love with one of the occupants."

"The woman?" murmured the guests.

"No," said the doctor, "the man! He was, however, the victim, or one of the victims, of the woman!"

"There is something interesting in that word 'victim,'" said the student.

"You will allow, gentlemen," continued the doctor, "that there are grades of friendship, as there are grades in the different varieties of matter I alluded to—for instance the diamond is only matter, yet it is more precious than mud——"

"And clearer," suggested the student, with a subtle fling at the doctor's story.

"I have the honor," said Doctor Cairnes, "to call you my friends."

"The honor is on our side," said the student, determined not to be outdone in politeness.

"But for Paul Wayne, the young physician I found in the hospital on the coast, I held the profound sentiment which, when it reaches the exaltation of love, passeth that of woman. His face suited his form, and both matched his spirit, and all were supremely beautiful! I see him now as he passed with his firm, light step through the gloomy corridor, his blonde hair falling about his high white brow, his glowing eye full of a wild enthusiasm, the ominous red spot in his cheek burning and paling fitfully, his lips shaping unconsciously the thoughts that surged from his overwrought soul."

"Was he a madman?" inquired the student.

"He was a Spiritualist," said the doctor. "He believed that soul could be brought into communication with soul without the aid or incumbrance of the body, and that the power of the will was absolute.

"He was not long in making me a convert to his wild but beautiful belief, and I accepted with heart and soul the exquisite future he held out to me of a love that can neither be belittled by envy or jealousy, debased by passion, nor defrauded by time or death.

"It was infinite, unbounded, immortal:

"Heaven knows how many hours we squandered thus happily, wandering up and down the old corridors, his arm thrown lovingly about my shoulders, for he was many inches taller than I——"

"He must have been a giant," murmured the student.

"He was indeed a giant," said the doctor, "at least in will; what he desired he endeavored to attain at any risk. Once having determined upon a course of action, he never paused in pursuing it, and, by mere contagion of will, saved many poor wretches from sinking into the jaws of death. 'Determine you will endure the operation,' he would say; 'will to subdue the fever. Live! Come, I am certain you will arise from this bed and walk,' he said, one day, to a poor patient that everybody had given up, and the man is still alive.

"But when we were one evening taking our usual stroll in the corridor, he confessed to me he had met, the night before, with the woman he had so long prayed to see—longed to hear, yearned to meet. The woman of all the world made for him, the one supreme creature given by a gracious, bountiful, omnipotent Nature for the full fruition of all the wild hopes he had dared indulge in. 'You know, Harold,' he said, 'I have not allowed myself to suppose it possible I should meet her body and spirit; I *knew* in some future state we should belong to each other, but to enjoy this happiness here, now, without delay, oh, heaven! it is too much, Harold.' He pressed his hand to his heart, became deadly pale and trembled. I supported him in my arms, and he soon regained composure and strength.

"'I have not seen her,' he hastened to add; 'she was the sibyl of a meeting I attended, and the first sound of her voice made me tremble; there was that of feeling, of delicacy, of melody in it that went straight to my soul. I loved her, Harold, as I love her now, as in ages ago I loved her, as I shall love her in centuries to come.'

"Then he told me of all she had said, of the poetry of her language, of the music of her voice, filling the darkened room with a melody and light of its own.

"I became enraptured with the mortality of the creature he had shown me.

"'She is beautiful, Paul,' I said, 'she is worthy of you. She is slight of form, infantile in face, her skin is transparent, her eyes great and dark and glowing; she is always pale, but her spirit burns and glows and radiates through her voice.'

"'Yes, yes,' he murmured; 'friend of my soul, you have painted her!'

"We went together that night to the meeting, and I came away scarcely less in love with her than was my friend; in truth, it seemed that her presence overpowered all that entered it, but Paul alone dared to love her.

"To love, with Paul, was no mere passive, negative state of being, he became the embodiment of passion. Egeria was here upon the earth; she was made for him; time, nor circumstance, nor place, nor position should separate them. She must be his forthwith—his, since it was the custom of a weak age by the bond of the law, human and divine.

"But Egeria refused to marry him.

"Not that she did not love him, that was simply impossible; to look upon him was to love him; but for some secret reason she refused to let him look upon her, to let the light shine upon their interviews. They communed in darkness, and it proved the strength of fascination which the soul of Egeria possessed that at every interview we came away more enraptured than ever. For Paul allowed me to share his love and his life. I was no hindrance to their happiness. I loved them with that purity and strength that my being was merged with theirs, and they forgot in a manner I was in the room with them. Night after night passed away. Entranced by her divine presence, I could have lingered on for ever. But it was different with Paul; he became restless, dissatisfied, gloomy; an eager craving dawned in his face which, day by day, increased to a positive hunger.

"'Egeria,' he exclaimed, one night, in reply to one of her fervid, impassioned sentences, 'I must see you—I demand it as a right—as a necessity!'

"'Impossible,' said Egeria, with a shudder in her voice.

"'Is it,' said Paul, 'that your soul is jealous of your body? Can't you trust me? Come, I have seen you already.'

"Egeria started.

"'Tell her, Harold,' said Paul, 'that a friendship like yours and a love like mine can not be deceived.'

"'You have seen me?' murmured Egeria; 'why, that would be happiness indeed—you have seen me, and yet you love me?'

"There was a latent terror in that musical voice that struck a chill to my heart, but Paul cried out with a passionate fervor that could not be denied, 'You are beautiful, Egeria,' and then paused, for a low sob escaped from her lips—she started to her feet as if to flee.

"'Stay,' I cried. 'Paul does not mean the common type of beauty, a mere combination of flesh and color that ordinarily serves as a bait for the senses.'

"'What in heaven's name does he mean?' said Egeria, in a voice that blended a trifle of hope with an immensity of despair.

"'He means that he loves you,' cried Paul, throwing himself at her feet; 'pale and fragile as you are, is it not meet the spirit should overpower the body? But your eyes are the windows of your soul, and they are great and dark and glowing.'

"'Oh!' cried Egeria, 'I cannot stand this! Oh, this is terrible! Any agony is better than this!'

"She walked rapidly to the mantel; suddenly we heard the quick, sharp scratch of a match, and in a moment she stood in the full blaze of a lamp suspended from the ceiling. Paul leaped upon his feet. At last we saw her."

The doctor paused and sighed heavily.

"Well, out with it at once!" cried the young student. "What was she? A hunchback, a mermaid with the head of a woman and the body of a fish, a ghoul with her chopsticks on the mantel?"

"She was none of these," said the doctor. "She was a woman."

"Beautiful as Venus, or hideous as Hecate?"

"Neither one nor the other. She certainly was not beautiful, but I don't think she was hideous. How can I describe her? She was simply not Egeria, that was all—that was enough!"

"Egeria slipped out of the room, and this other woman took her place," suggested the student, for at this point of the story Doctor Cairnes became so absorbed with memory and thought that he needed somebody like the student to urge him on.

"No," said the doctor; "the soul of Egeria was imprisoned in the body of another woman."

"The deuce!" said the student. "That complicates matters a little. Describe the usurper. Let's hear what she was like."

"She was tall, heavy-framed; her feet were broad, her hands bony and large, her arms were muscular, her skin red, with that peculiar scaly appearance that denotes a scrofulous affection of the glands; her physique suggested power, but lacked grace; her forehead was low and protruding, from which the hair, of a dull, leaden color, was pulled back without crinkle or curl, and fastened in a knot behind. Her eyes, small, deep-set, and of a cold, pale blue, seemed to hold a twinkle of ferocious glee over the horror of my poor Paul; a singular scar with a few freckles over the bridge of the nose gave it the appearance of a well-manipulated dislocation——"

"Oh, Lord!" interrupted the student, "don't describe her any more. You've given her to us quite graphically, I assure you. How did your friend bear it?"

"He covered his face with his hands, gave vent to a low, terrible cry, and rushed from the room."

"And you?"

"I followed him," said the doctor.

"That was rather rough on Egeria, wasn't it?" said the student.

"Not at all," said the doctor. "For a time the bodily presence that enveloped the soul of Egeria was omnipotent, but only for a time. I confess that for my part the disillusion was final. The cord that bound Egeria's spirit to mine was one of friendship, and it wasn't strong enough to bear the strain upon it. It succumbed to the weight of this ponderous body that was thrust before us, and I never again was able to infuse enough strength in that cord to enable it to be worth anything. With Paul it was different; the cord with him was one of love, and love, my friends, is all-powerful—at least it was with Paul. I have said before that he was a man of iron will and rather enjoyed the surmounting of obstacles that lay in his path.

"For a time Paul became a prey to despair. We continued our walks up and down the dreary corridors of the hospital, but they were oppressed by silence and haunted by the phantom of defeated hope and the ghost of a happiness which was the more terrible to lose that it seemed perfect.

"'It is too much,' he cried to me one night, in agony—'it is not to be borne.'

"I shook my head mournfully, for I didn't see what could be done in the matter.

"'Of course,' said Paul, 'you must know that I have not yielded to this monster.'

"I was weak enough not to understand him, and asked him what monster?

"'This fiend,' he said, 'that has taken possession of the soul of Egeria.'

"'You think, then,' I said, 'that that was not Egeria?'

"'Having known Egeria, do you suppose it possible?' he asked, with an accent of contempt for my faculty of provision.

"'Her divine soul,' continued Paul, 'has become the prey to this corporeal matter. This is the lion, Harold, that lies in the path of joy, and this is, no doubt, the test to my title to her affinity. Think you unalloyed happiness is gained without a struggle? I do not shrink from the combat, Harold; there is no cowardice in my soul; but I do not yet know the means to be employed. I cannot yet tell how her spirit shall be freed from this terrible tyranny; but it shall be done, Harold, I promise you.'

"I told him that I wasn't in any hurry to have his power vindicated in this way, and suggested that time, perhaps, would bring about the desired solution to our difficulties. He glared upon me, muttered the word 'craven,' and fled away out of my sight through the dark corridor.

"Paul was wrong to accuse me of either stupidity or cowardice. My encounters with thought and judgment were not so rapid and vigorous in their results as his, but they were in the main conclusive. Having grappled with the idea he suggested to me, I understood it thoroughly and accepted it—the more readily that it had been a sore abomination to me to believe it possible so beautiful a soul could belong to so repelling a body. It was altogether, however, an abstract theory with me, and had nothing personal in it. I have said before that from the moment that match was lighted and that large figure loomed up before me the cord that bound my spirit to Egeria's was as effectually riven as it would have been by the application of a match to a string of any kind less spiritual in its nature.

"The peculiar bulkiness of the figure, the chuckle on the thin lips, and the leer in the deep-set eye, were more effectual in their way than a lion of any kind. I had but the one desire—to get away from the whole combination, body and spirit, and never encounter the one nor the other again. It proved a weakness upon my part which I am sorry to confess, but there are grades in the matter of humanity as well as all other matter."

"Yes, yes," said the student, anxious that the doctor shouldn't begin his classification of matter again.

"And Paul," continued the doctor, "had reached that supreme state of manhood when all the perfection that is found in the different attributes of nature centres itself in man as a masterpiece.

(To be concluded in our next.)

DINNER-TABLE ABLUTIONS.

THE history of dinner-table etiquette, as far as the cleansing of the fingers goes, has caused a great deal of discussion. In "Notes and Queries" some information was asked about it a number of years ago, but not any very satisfactory responses were received. Table manners and table equipage have been derived from the French. Strange as it may seem, a great many dinner amenities owe their origin to the East. Bibliophile Jacob says somewhere that the napkins during a repast were possibly brought into use in Europe after the Crusades. Oriental habits at dinner, where the Turk of the old school to-day, having no knife or fork, plunges his fingers in the pilau, is but a continuation of customs of the time of Saladin. The Oriental is excessively clean in his habits, and between the fingering of the viands and some of the manipulations of a cook with his dishes, really the difference is only this, that the Turk who picks out a peculiarly nice tidbit to offer to his guest does it in view of every one, while the cook's prior actions are not seen. As fountains were ever spurting and gurgling in *Haroun al Raschid's* banqueting halls, opportunities to cleanse one's fingers in the flowing waters must have been ever at hand. Oriental people retained the habit of hand or finger washing after dinner. The method is not, perhaps, adapted to our customs, yet it is a very sensible one. A servant, after the repast, makes the round of the table, (the guests are seated on low cushions on the floor,) holding a copper vessel, provided with a very long but narrow spout. In the other hand he carries a wide, deep copper basin. A tiny stream of water is poured over the fingers of the guests into the basin, while another servant follows with a towel. The first portion of the performance is proper enough; but as one towel usually serves for all the guests, a kind of universal jack towel, delicate-minded Europeans rather dislike the custom.

It is not necessary to go further back, and refer to the Biblical habits before and after partaking of food. As to the more modern custom, Brillat Savarin, whose book on the *Physiologie du Gout* was written in the early part of this century, inveighs against the finger-bowls. He says: "It was about forty years ago that some people in good society—they were almost always women—commenced to wash out their mouths (*rincer la bouche*) after their meals." Brillat Savarin deprecates the custom, and calls it useless, indecent, and disgusting, rather directing, however, his criticism against the mouth-rinsing than finger dipping. It is useless, he writes, "because the mouth is in excellent condition at the end of a repast, when fruit has been partaken of, or a last glass of wine or water has been imbibed." Say what one may, the cleaning of the mouth after dinner is a disgusting habit, and no screening of this operation, by placing the hand before the mouth, can conceal its objectionable features. If an after-dinner ablution has to be performed, especially when fruit is eaten, it should be restricted to the use of the finger-bowl alone. The smaller goblet then introduced in the finger-bowl should be discarded, unless, in order to add completeness, a tooth-brush were added to the paraphernalia.

A SWABIAN HARVEST FESTIVAL.

NOVEL DRAMATIC PRESENTATION OF A HISTORIC INCIDENT.

THE Swabian Volksfest, held at Ridgewood Park, Long Island, during four days of last week, was an occasion of great interest to the Würtembergers of New York, Brooklyn and Long Island. The festival opened on Sunday, the 7th, when the procession, marching to the park, gathered first around a singular pillar that stood in the open field of the park. It was about thirty-five feet high, and covered with every variety of vegetable that flourishes in the soil of Long Island. They were not rudely fastened on, but were arranged according to an artistic design. Cabbages, pumpkins, and other large vegetables covered the base, and turnips, corn, onions, etc., in sections, covered the rest of the pillar. A wonderful cornice, in which huge watermelons predominated, crowned the top, and over all was a generous sheaf of ripe wheat. The black-and-red flag of Würtemberg, and the colors of the United States and of Germany, were a part of the decorations. About midway up the shaft four shields were fastened, bearing the names of the provinces of Würtemberg, namely, Neckar, Black Forest, Danube and Jaxt. The entrance to the grove was spanned by an arch that bore the words "Welcome, all Würtemberg." Beneath was the coat-of-arms of the kingdom.

After the formal opening the day was given up to general enjoyment, the programme being almost exclusively musical. The day was devoted, as far as historical reminiscence was concerned, to the famous composers of Germany, and especially those of Würtemberg, Uhland, Gluck, and Silcher. On the second day there was a historical procession, the programme culminating in the marriage of two young Swabians in the costumes and according to the peculiar rites of their fatherland.

On the third day the great event was the dramatic presentation of a well-known historical incident. In 1140 Conrad, King of Würtemberg, after a protracted siege, captured the City of Weinsberg, and with it Count Wolf the Sixth. The victory was a significant one, and it had a romantic termination. The women of the captured city presented themselves before King Conrad and begged a single favor. It was that they might take away with them that which they held most dear. The request was granted. The women thereupon marched to the guard-house and each took her husband on her back and bore him out of the city. Some of the King's retainers protested against this unusual way of redeeming captives, but the King kept his word, though he admitted that he had made a mistake. This was on the 21st of September, and the celebration of the event has been made a feature of the harvest festival. It was this incident which was acted out at the Ridgewood festival, in the presence

Digitized by Google

of a delighted multitude. We illustrate the scene on page 56. The last day of the festival, which was most enjoyable throughout, was devoted to athletic and equestrian sports.

"RESCUED" AT BOOTH'S THEATRE.

MR. BOUCICAULT'S "adaptation" of Booth's is an increasing success, and many in the audience leave the theatre more gossipy over the *encouragee* than over the performance. The contrasts and harmonies are so vivid, yet so subtle, so startling yet so satisfying, that the mind's eye revels in them long after the physical organ has lost sight of their crimsons and golds. Given this exquisite framework, it should be a dull play indeed that would fail to please an audience comfortably settled down to enjoyment; and as "Rescued" possesses all the qualifications that insure unqualified success, an evening at Booth's becomes an intellectual treat of the very highest order. Mr. Boucicault has again displayed his marvelous powers of weaving golden tissue from out the ordinary threads of human and very clayey passion, and of entangling and disentangling with a dramatic manipulation as deft as it is ingenious. A train-robber, possessed of imagination and minus principle, forges a will, and assumes the condition of a Russian noble. The counterfeit passes as good coin, and the Muscovite swell is accepted by the Upper Ten of Mayfair and Belgravia as though he were a Romanoff. He is met at every turn of his little game by the word "check," uttered by one *John Weatherby*, who, as the forged will was but a clumsy piece of business after all, turns up as a *bona fide* inheritor, and who, by falling in love with the *Lady Sibyl Ferrers*, still further forces the hand of the unscrupulous Muscovite. The *Count* resolves upon uniting himself to *Lady Sibyl*, one of the conditions of the forged will, while another stipulates that in default of her ladyship's consent she will forfeit one-half the fortune which is to come to her so soon as she is declared heiress by the removal of such relations as stand between her and the estates. The Muscovite resolves upon clearing away all obstacles, but is eventually defeated, and *John Weatherby*, "the iron man," marries the *Earl's* daughter. This is but the motive of the piece, the incidents and situations being in the highest degree effective, while the dialogue is crisp, clean cut and sparkling. The under plot is full of color, the characters of the newsboy and his twin-sister stand out in wondrous relief, while the *Phœnix O'Reilly* of Mr. John Brougham is a portrait "after nature." The acting of Miss Rose Coghlan as the *Lady Sibyl* is all womanly, and Mr. Clayton, as *John Weatherby*, true to his artistic instincts, presents us with a masterful creation. "Rescued" is put upon the stage in a manner worthy of the æstheticism of the management. Our illustration represents the *Earl* and his daughter leaving *John Weatherby* in possession of Mount Audley.

COD-FISHING OFF NANTUCKET.

COD-FISHING is the special industry of Nantucket, farming and fishing being the chief occupation of the people. The surrounding waters literally abound with fish of various kinds, and on the treeless island there are several ponds containing a large variety of the finny tribe. At Siasconset, one of the two first towns of Nantucket, everybody fishes, from the aged grandparents to the tiny toddlers. An infant's first play-toy is a float or broken rod, and boys of five and six years of age are experts. Our illustration represents a fisherman, accompanied by an expert, topping the wave on his return to shore. The boats put out for about a mile, and to a novice it is one of the most exciting and picturesque sights imaginable to see the fishing-boat—manned by a man and a boy, occasionally a little girl—plunge through the leaping, bounding, rolling, frothing surf. On the return a suitable billow is selected, and, with a dexterity begotten by years of practice, the fisherman spins his stout little boat into its crest, and is borne like a flash to the tawny sands.

THE UPRISING IN AFGHANISTAN.

Difficulties and Perils of the British Occupation.

THE revolt of the Afghan regiments in Cabul, and the slaughter of the members of the British Embassy and their escort, has produced a profound excitement throughout Great Britain. All accounts agree that Major Cavagnari and others were killed while making a sortie upon the enemy from the burning Residency. The buildings being entirely of wood, the besieged could make no defense against fire. Major Cavagnari's force made a gallant attack upon twelve Afghan regiments but were overpowered by numbers, after having slain not less than 250 of the enemy. The defenders of the Embassy fought bravely until exterminated by the Afghans. With a view of avenging the outrage, large reinforcements of troops are to be dispatched to India to operate in Afghanistan, and the troops already there will as soon as possible advance on Cabul. But this advance will be delayed by a variety of circumstances. Twenty-five per cent of the native troops on the frontier are on furlough. The season has been a sickly one, the hospitals are full of men unfit for service by fever and hardships of the campaign. There are very few infantry regiments in the Trans-Indus provinces which could muster 500 men, and there is probably not a cavalry regiment in the Punjab which could put 300 men on parade. The transport departments have been broken up and their reorganization will be difficult. Upward of 60,000 camels are officially reported to have perished in the late campaign. This great loss has made it almost impossible since then to obtain a sufficient supply of these animals for ordinary uses, to say nothing of the exigencies of a campaign. There are few horses in Afghanistan, and camels are absolutely indispensable to any extended military operations. General Roberts may have sufficient mules and camels to admit of the hasty advance of a brigade in light marching order; but the Government of India will have to strain every nerve to guard his communications and keep him provisioned. Unfortunately the regiments in India nearest to Afghanistan have mostly suffered from cholera and are numerically weak, the men being debilitated, and they will require heavy draughts to bring them up to their war strength, and it is thought that at least two months must elapse before men to recruit the regiments can arrive from England.

A dispatch from Allahabad says that, though some trustworthy sources give the assurance that General Roberts will be at Cabul in a fortnight, it is said in military circles at Simla that the 9th of October is the probable date of the beginning of a forward movement because of the deficiency in wheeled transportation.

A correspondent at Simla also fears that there will be no forward movement in force before the end of September. By those who know the position of things an advance is declared to be impossible.

At the latest advices, the insurrection seemed to be spreading, and the impression is gaining ground in England that a well-organized rebellion is on foot, and that it is traceable to Russian influence. The entire country between the capital of Afghanistan and the Indian border is said to be well stocked with Russian emissaries and Russian money. Although that portion of the British army in India which is composed of native Hindoos appears anxious to be led against the Afghans, their enthusiasm is regarded as much too great to be natural and genuine. They are, therefore, objects of suspicion, and their conduct is closely watched. This fact has led to much uneasiness in India, as well as in Afghanistan, and English residents refer with gloomy forebodings to the great Sepoy revolt of 1857 and 1858. The situation is further embarrassed for the English troops by the lack of transportation for army stores and guns.

A dispatch from Bombay, dated September 11th, says: "Serious riots are proceeding in Cabul, and many traders and citizens have been killed. Messages have reached Candahar from Cabul urging a general rising against the British on September 15th. Similar messages have been dispatched to other Afghan cities. The frontier tribes are still quiet."

A dispatch from Lahore says: "Shikarpore merchants trading with Central Asia report that the revolt in Cabul is due to Russian intrigues. Russian agents have been most active at Herat. They have for some months urged the Ameer's brother to declare against him, promising the support of the Heratee regiments. They were charged by the Ameer's brother with being the cause of the revolt against the Ameer and the English."

Special dispatches from India say that two regiments of Highlanders and two regiments of native troops are moving up the Khurum Valley, and that two regiments of native cavalry and one British and two native regiments of infantry are now on their way to the Khurum Valley.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Last Accident to the King of Spain.

On returning from the funeral services over the remains of the Infanta Dona Maria del Pilar at the Palace of the Escurial to La Granja, the state traveling carriage, containing the King of Spain, his sisters and General Echagne, was overturned on the road, which is difficult of travel on account of the ruts and holes. The King's arm was dislocated and the General's wrist sprained, but the Princesses escaped with slight contusions and considerable fright. In consequence of this accident His Majesty was obliged to carry his arm in a sling during the one hour's courtship with his future wife, the Archduchess Marie Christine of Austria.

The Emperor of Morocco.

The English Minister at Madrid, Mr. Sackville West, recently had a conference with M. Salvela, Minister of Foreign Affairs, on the subject of the protection of the European residents in Morocco, now threatened by the religious fanatics of that State. A dispatch from the Moorish town of Safi, received via Cadiz, has been received, stating that the Emperor of Morocco, Muley Hassan, had barely escaped falling into the hands of the rebel fanatics while passing with a part of the royal army from Morocco to Fez. He owed his safety ultimately to the support of a contingent of troops led by an English ex-officer, Captain McLean, who is reported to have drawn the men from the mixed population of Gibraltar. The Emperor escaped, but the strong Mohammedan partisans are reported to have elected another ruler, in private council of the leading sheiks, at Fez, and a religious war is feared.

The New Eddystone Lighthouse.

In our last issue we gave an engraving of the new structure to be erected on the Eddystone rocks, fourteen miles off the shore of Plymouth, in the British Channel, and an account of the brief ceremony of laying the foundation-stone in the coffer-dam, by the Duke of Edinburgh, as Master of the Trinity House Corporation, assisted by the Prince of Wales. The ceremony itself is shown this week, together with a view in the great stone-cutting establishment at the Oreston granite quarries, near Plymouth, which will supply a large portion of the stone material for the new lighthouse. In this engraving the architect is testing the shape of the granite blocks to ascertain if they will interlace correctly when placed in position. We may here add that the building now in course of erection is expected to be completed in about four years, and that Her Royal Highness the Duchess of Edinburgh has promised to lay the top stone. Its height will be 130 feet above high water at Spring tide, and its light will be visible at a distance of more than seventeen miles.

Expulsion of Jews from Roumania.

The latest intelligence concerning the Jewish question in Roumania is to the effect that Prince Gregorie Sturdza has arrived at Bucharest to assume the leadership of the various parties opposed to the emancipation of the Jews. It is proposed to consolidate these different factions into an organization identical in principles with the former American party known as "Know-Nothings." According to Articles Five and Forty-one of the Treaty of Berlin, religious liberty and the open profession of every form of worship were assured to all the natural subjects of the new States of Bulgaria and Roumania, yet there is an antipathy to the Jews which is increasing daily, one proof of which is furnished by our illustration, showing a party of Israelites being escorted to the frontier by representatives of the authorities.

A Buck Hunt with General Wood.

"Marching along these solitary wastes," says Doctor Doyle Glanville, to whom we are indebted for this sketch, "but few signs of life are visible—not even a bird, save now and then when we kill some, and the vultures mysteriously appear. Occasionally we come across the track of some startled hare, or perhaps a buck, when the excitement is for the moment tremendous. My sketch represents a little incident in yesterday's march, when a buck sprang up and ran through the column. In an instant a lot of soldiers and natives went pell-mell after it, many coming to grief and sprawling over the ant-bear holes that abound in the long grass. The numbers were too much for it; the game was duly bagged, and the happy hunters were rewarded at their dinner by a change from the usual fare, which consists of trek-ox, which rivals in toughness the leather of the plain domestic boot."

COLLEGE CHAT.

THE annual convention of the Delta Kappa Epsilon Fraternity will be held with the Dartmouth College Chapter the first week in October.

CALISTHENICS and military drill have been made compulsory in the public schools of Montreal, but the same time devoted to them is to be taken from the Saturday holiday.

REV. ALFRED OWEN, D. D., of Chicago, has been appointed President of Denison University (Baptist), Ohio. Dr. Owen is a graduate of Colby University and Newton Theological Seminary.

NO RESPONSE is yet received from Dr. Tucker, of New York, as to accepting the professorship of sacred rhetoric, but the hope is confidently expressed that he will join the Andover faculty.

THE Peabody Normal School, at New Orleans, is the only normal school for colored people in the world, and was established by Hon. R. M. Lusher. It is supported by the Peabody Educational Fund.

THE first Siberian University will be opened this year; it will be at Tomsk; great numbers of students have been exiled, it will be remembered, from connection with the political opposition to the Government.

THE Jubilee Singers, who have been giving concerts in America and Europe in aid of Fisk University for several years past, have earned for that institution the net sum of $150,000, besides receiving valuable works of art as gifts for the university.

EX GOVERNOR RICE says that he has returned from Kansas and Colorado, profoundly impressed with what the great West is doing for the education of its communities. He found in Colorado that the largest, most imposing buildings in the cities and towns are the schoolhouses.

PRESIDENT BARNARD, of Columbia College, is in favor of co education. It may be safely said that no man in the country takes broader views than this venerable man. He believes the time will come when every college will open its doors to women the same as to men.

THE sum of $500,000 has been appropriated in Texas to carry the school work through the remainder of the year; $300,000 had already been distributed. San Antonio has the most successful educational system of all the Texas cities. The great need in that State is good trained teachers.

AT Wesleyan University, the entire mathematical and astronomical departments have been transferred to Observatory Hall, where two large rooms have been fitted up, one for a laboratory, the other for a mathematical recitation room. Professor Burke, lately of Wilbraham Academy, and a grandson of this college, is to assist Professor Van Vleck in this department.

THE *North China Daily News*, published at Shanghai, speaking of the departure of the Chinese professor for Harvard College, who has just arrived, says: "Should the United States Government, as it is believed it will, promise a permanent position in its Legation and Consulates to students of Chinese from Harvard, not only may the friendly relations of the two countries be strengthened, but the high hopes entertained by the American manufacturers of success with their wares in this Empire will probably not fail to be advanced as well."

RICHARD GATEWOOD, of Virginia, who graduated No. 1 in the class of cadet engineers at the Naval Academy last June, and F. T. Bowles, of Massachusetts, No. 3, made application to be allowed to attend the Royal Naval College at Greenwich, England, in order to study naval engineering, architecture, etc. That college is allowed to take a number of private students, including two from each foreign nation. The request has been granted without their undergoing the usual examination, their certificate of graduation at the Naval Academy being considered sufficient by the English Government. They will enter the Royal Naval College at the October term.

THE SEASON OF THE FAIRS.

THE Georgia State Fair will be held at Macon, October 27th to November 1st.

LOUISVILLE, Ky., began the annual exhibition of her industries September 24, and will close October 18th.

THE second annual opening of the Golden Gate Agricultural Fair occurred at San Francisco, September 1st.

THE annual fair of the New Jersey State Agricultural Society was opened at Waverley on September 15th, for six days.

THE forty-eighth exhibition of the American Institute of New York opens September 17th, and lasts until November 22d.

ON September 10th the Seventh Industrial Exhibition of Cincinnati was opened in the permanent buildings, to close October 11th.

THE colored people of North Carolina will hold their first industrial fair at Camp Russell, Raleigh, November 17th, 18th, 19th and 20th.

PATRONAGE of the Iowa State Fair, which opened at Des Moines, September 1st, has been unprecedented. Races were run every day.

THE annual exhibition of fruits, flowers and vegetables of the Massachusetts Horticultural Society was held in Boston, September 9th-12th.

PRESIDENT HAYES and suite have promised to attend the opening of the Michigan State Fair at Detroit, on September 17th. It will close on the 20th.

THE eleventh annual fair of the Southeastern Indiana Agricultural Society closed at Aurora, September 6th, after a most successful exhibition in every particular.

THE first annual fair of the Kentucky State Agricultural, Mechanical, Zoological and Botanical Association was held at Louisville, September 9th, 10th, 11th and 12th.

IN the great Exhibition Building in Fairmount Park, Philadelphia, the Pennsylvania State Agricultural Fair was opened September 9th. Many relics of the Centennial are seen.

GOVERNOR ST. JOHN of Kansas has received a letter from President Hayes accepting the invitation to be present at the agricultural fair to be opened at Neosho, September 25th.

A FEATURE of the St. Louis Fair and Exposition, which opens September 22d, will be the elaborate manœuvres of the military, for which $5,000 worth of prizes are offered.

AMONG the attractions of the Rhode Island State Fair, opened at Providence September 9th, were the champion steer, weighing nearly 4,000 pounds, and the Centennial Queen of Cattle.

THE fifty-first annual exhibition of the Pennsylvania Horticultural Society opened in Philadelphia, September 15th, and will close with a promenade concert and reception on Friday evening.

THE Board of Managers of the International Dairy Fair Association have decided upon a second exhibition, to be held at the city of New York during the second and third weeks in December of the present year.

FARMERS generally complain of the horse racing attractions of agricultural exhibitions, claiming that they do not belong in any sense to an exposition of mechanical, industrial, agricultural or artistic interests, and that they distract attention from the legitimate objects.

AT HOME AND ABROAD.

—THE Spanish Government will dispatch 5,000 troops to Cuba in October and 5,000 more later.

—TWELVE years ago Texas shipped only 75,000 bales of cotton. Last year she shipped 1,600,000 bales.

—GROUND was broken, September 12th, for a theological building at Vanderbilt University, to cost $65,000.

—THE State of Ohio stands fourth in manufactures, the value of the annual product being valued at $270,000,000.

—QUITE a brisk demand for American windmills has sprung up in the British colonies, West India Islands and South America.

—SHAVINGS from a planing-mill in Chicago are, by an air-blast, blown 700 feet through a 15-inch sheet-iron pipe to a distillery, where they are burned for fuel.

—RUSSIA has offered to restore to China the northeastern portion of the occupied territory, provided the Kirghiz Nomads who fled to China may be sent back to Kuldja.

—SAVANNAH never before made such an exhibit in general business as she does to-day. She is not only the second cotton port, but the second in naval stores, lumber and rice.

—AN extra issue of the Canadian official *Gazette*, contains an order in Council extending the time for the prohibition of American cattle into the Dominion until the 15th of October.

—THE *Mark Lane Express* estimates that England will require of America 72,000,000 bushels of wheat this year—a quantity equal to the entire import of the United Kingdom five years ago.

—AN experiment at acclimatization is now being made in Holland. Ten thousand salmon fry from California have been put down in the Meuse, at Blorick, and 20,000 others are about to be added.

—THE Institute of International Law, now in session at Brussels, has voted in favor of a resolution recommending that the various States agree that the destruction or injury of submarine telegraph cables is an offense against the law of nations.

—PERFECT tranquillity prevails in the republic. The difference with Spain has been satisfactorily adjusted. Santo Domingo will salute the Spanish flag, the Spanish war-ships will return the salute, and the Governor of Puerto Plata will be removed.

—IT is announced in Dublin that Mr. Parnell and other persons interested in the land question contemplate shortly the issue of an appeal to the Irish people in all parts of the world to aid in the creation of a class of peasant proprietors in Ireland.

—THE Manchester *Guardian* says it is estimated that 30,000 persons are still out of work in Glasgow. The iron trades only are doing well. The building trades are in the worst condition, and it will be necessary again to make provision to assist the unemployed during the coming Winter.

—TRENTON'S manufacturers of pottery never knew business to be so brisk. The capacity has been doubled within the last six months, and new kilns are being put in by almost all the firms. Eighty-four kilns are now in operation, and these have in the last half-year turned out $1,035,000 worth of goods.

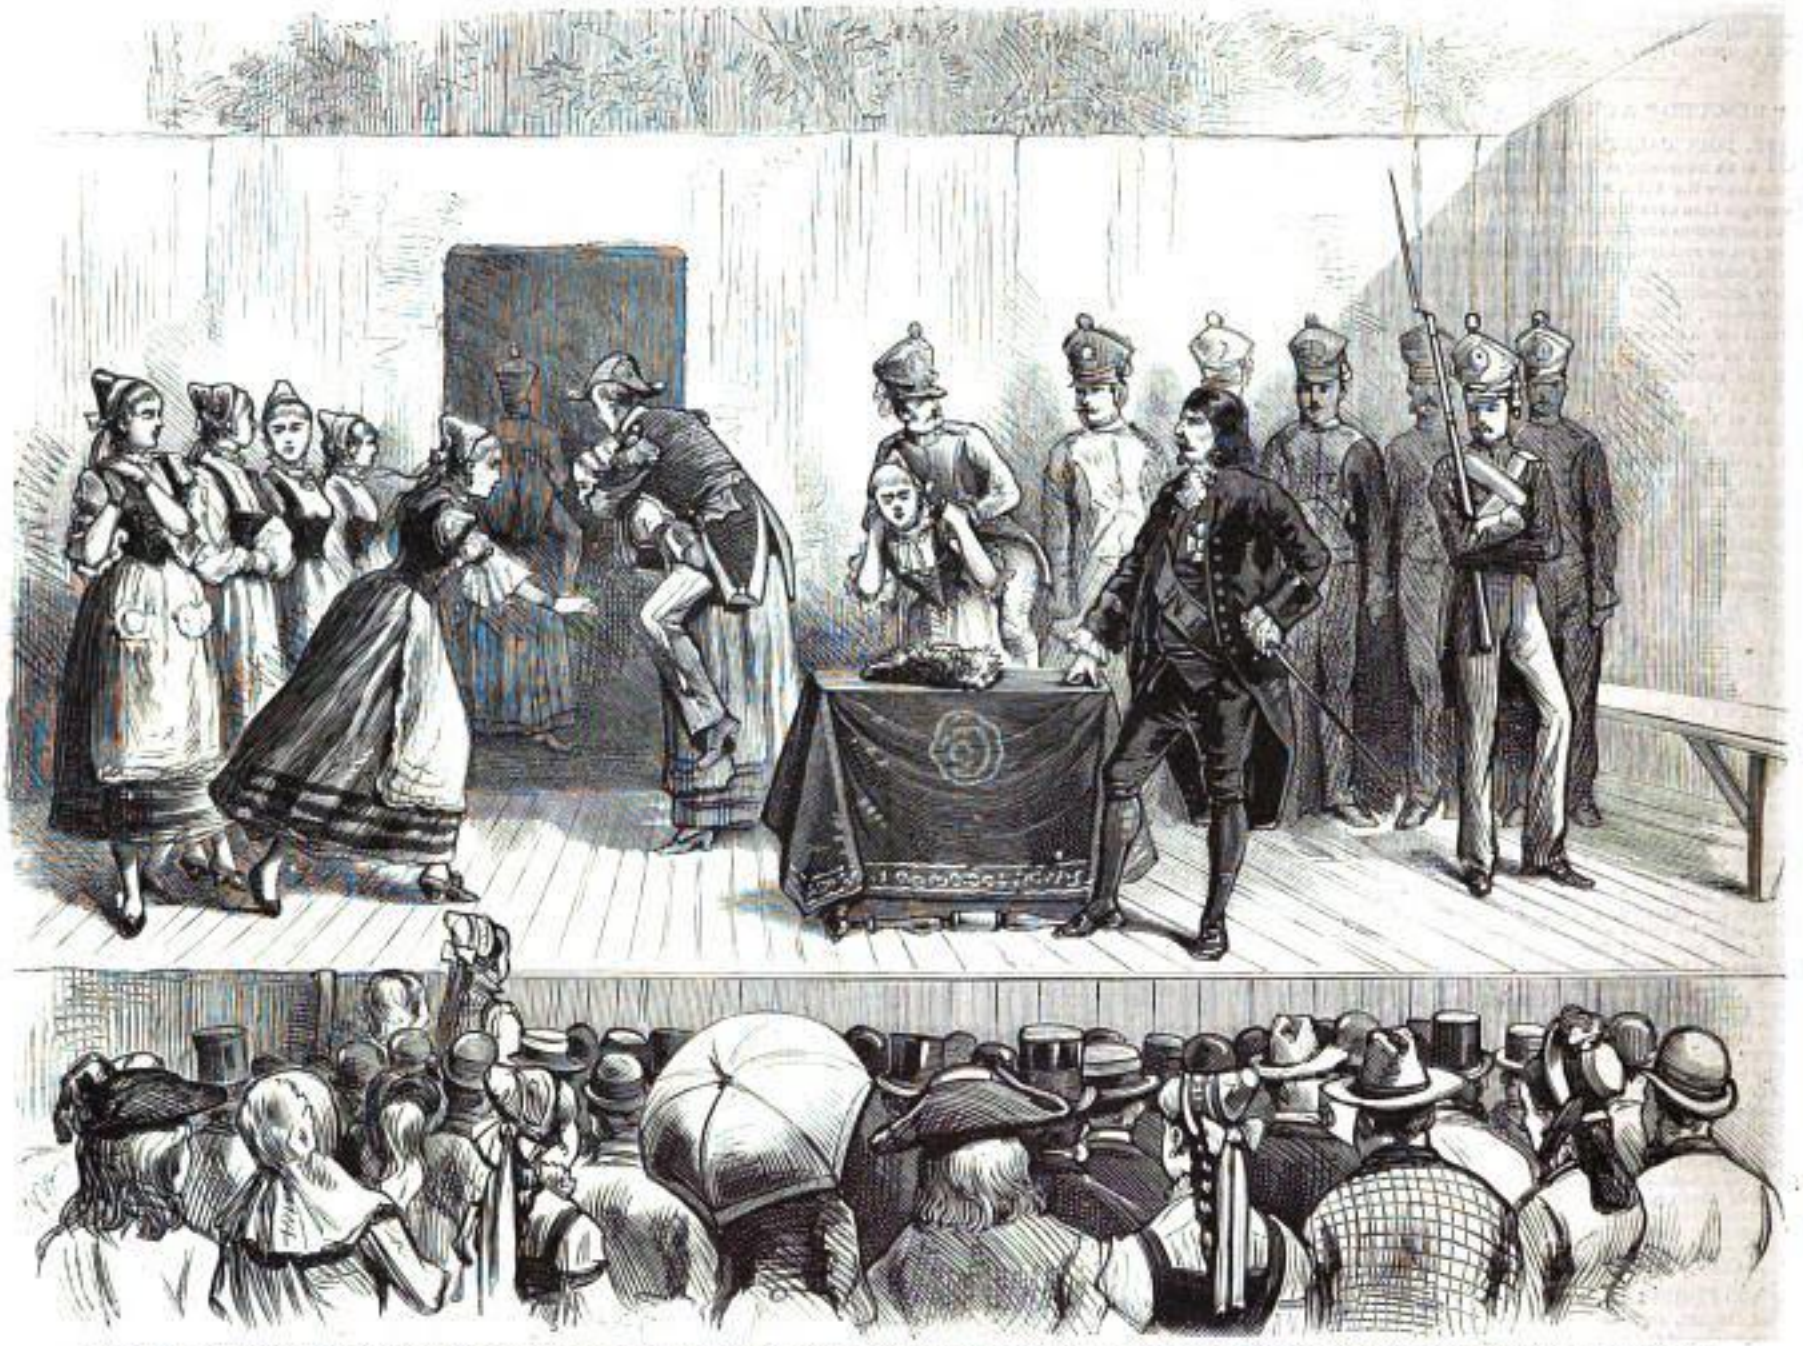
—MONTANA during the past sixteen years has produced $153,000,000 of gold and silver. Of this sum $147,000,000 was in gold. This makes Montana rank next to California as a producer of gold. There are already 200 quartz mines in the territory. Iron and lead mines have been opened, and coal is plentiful.

—THE extent of the bituminous fields by which Pittsburg is surrounded is equal to 5,000,000 acres. Estimating the upper seam at eight feet in thickness, it would contain 53,516,420,000 tons, which, at $2 per ton, or a little over seven cents per bushel, would be worth $107,032,860,000; enough to pay the national debt of thirty times.

—TEN arrondissements of Paris are now furnished with small popular libraries, open for two hours in the evening to the public, and the other arrondissements are taking measures with a view to being similarly provided. The average number of readers who frequented these libraries during the first half of the present year was 4,500.

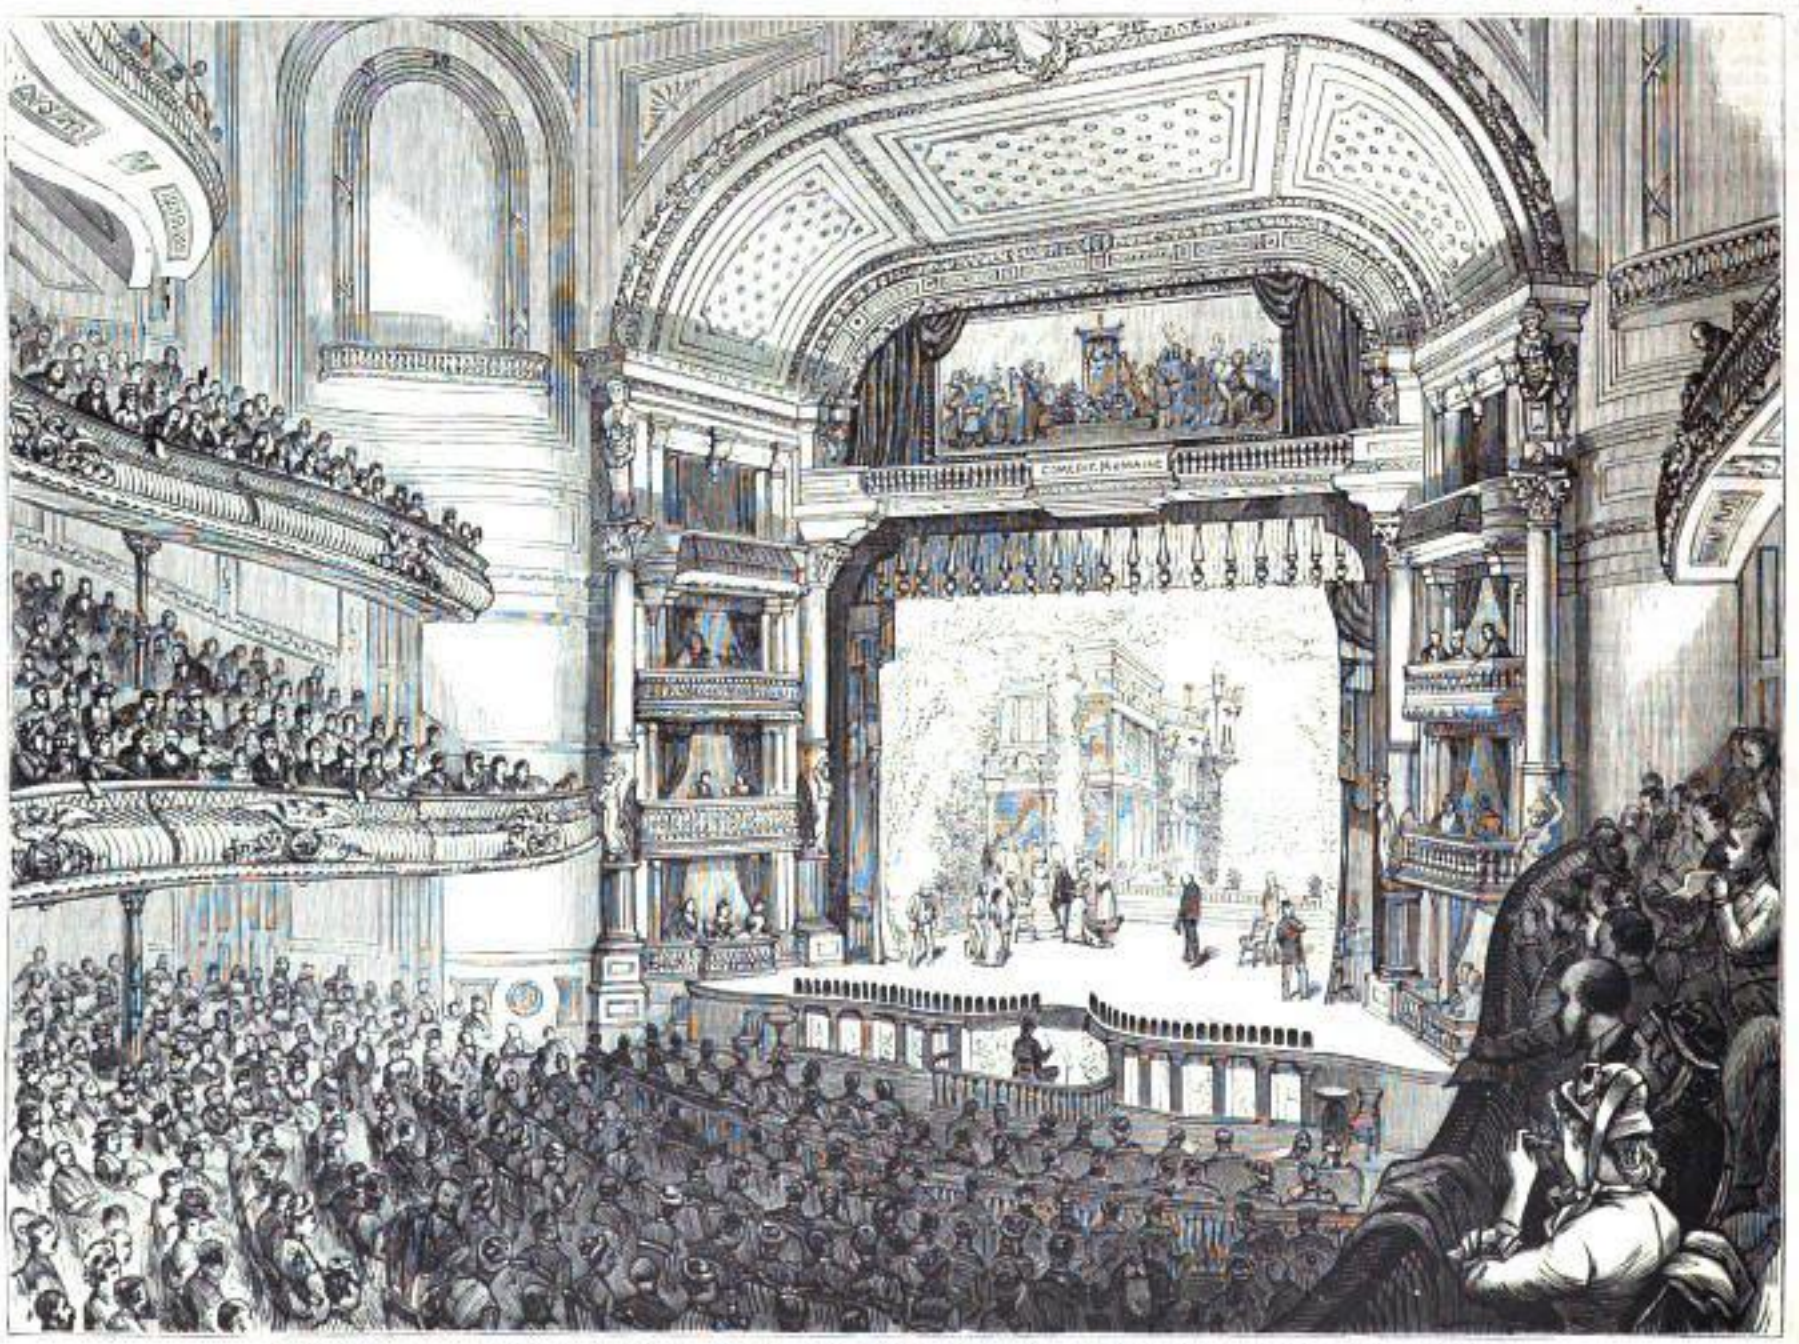
—THE Liverpool Town Council have decided, in accordance with a numerously signed requisition, to establish a horse fair in Liverpool every three months. The fair is expected to prove a very great convenience to team-owners in Liverpool and the district, who have hitherto often had to scour the country in search of animals to suit their purposes.

—ACCORDING to official statistics furnished by the French War Office, 769,140 men will spend more or less time under the flag this year, in conformity with the new military law. The active army is set down at 479,100 men; the reserve of the active army at 144,510 men and 2,880 officers; the territorial army at 117,360 men and 6,870 officers.



—THE President of the Norfolk Oyster Packing Association says that 3,000,000 bushels of oysters will be taken from the Virginia waters this year, and more than one-third of these will be handled by the packers of Norfolk and Portsmouth. The average value of the oysters is thirty-five cents a bushel, making the oyster trade of Norfolk something like $350,000 a year. The business has been built since the war, and is steadily increasing.

—THE cattle of Texas are not afraid of a man, nor are they afraid of a horse; but they are afraid of a man on a horse. They do not understand, at least they do not seem to understand, that a man on horseback is a combination of animals. Apparently they regard the two as one animal, and one that is too powerful for them. To get off a horse in a herd of wild Texas cattle is almost worth a man's life, and an experienced herder will never do it.



—SHIPBUILDING in Maine appears to be carried on just now with considerable activity; in fact, that State is doing pretty much all of the sailing-vessel building contracted for in American yards. Steel as a substitute for iron in the construction of hulls is exciting some discussion. It is claimed that steel is lighter and in the long run much less expensive than iron. It is believed that its introduction in shipbuilding will work a revolution in that art and turn the tide of business into our shipyards. It is stated that a steel boat is to be built for one of the Hudson River lines.

—A LARGE gun, captured many years ago by the Turks in a war with the Persians, occupies a prominent position in the city of Bagdad, being placed on a kind of scaffold and illuminated at night by four lanterns. This gun is firmly believed to possess the miraculous power of curing fever and warding off its attacks. Accordingly, when fever is most prevalent, dense crowds push and struggle with each other with the object of reaching the gun and rubbing themselves against it. Of late, owing to the scarcity of quinine, the gun has been rubbed against with unusual vigor, and it is credited with miracles of healing that more than atone for any amount of destruction it may have effected in days of yore.

THE LISTENING OAK.

SHE found the old familiar spot,
Beneath the old oak tree,
She sighed, she sighed, "He loves me not!
And I'm alone! ah, me!"
It watched her there, the fond old oak,
For trees have eyes like other folk;
It whispered, whispered, "*Hearts may yearn,*
But, late or early, Love comes home!"

He stood where they so oft had met,
He flung away her flowers.
"Ah me!" he cried, "Coquette! coquette!
To love me but an hour!"
But loudly sang the angry oak,
For trees have hearts, like other folk;
And chiding, chiding was the song,
"*The heart that loves believes no wrong!*"

There's some one stealing through the chace,
And some one's arms thrown wide,
And some one's heart is some one's place
At happy eventide.
The tears, the doubts, are gone, are gone,
And gayly now the oak looks on,
And sings to them of joy and rest,
"*The love that's tried is happiest!*"

BLUE EYES AND GOLDEN HAIR.

By ANNIE THOMAS.

CHAPTER IV.

THERE is a great deal of diplomatic talent displayed the next day both by Miss Bertram and her niece. The former has made up her mind that Daisy shall be out of the way when this very superfluous young squire of Glenholme calls. And Daisy has made up her mind that nothing short of physical force shall get her out of the house while there is a possibility of his coming to it. She takes her morning ride contentedly enough, for she knows that there is no chance of her missing him at that hour. Indeed, she half hopes to find the stalwart young Apollo leaning over the rails again. She cannot help experiencing a pang of disappointment when, after riding up and down twice, she fails to find him among the crowd. "He ought to have taken it for granted that I should be here again to-day," she says, poutingly, to herself, and then she blushes a conscious burning blush, as it flashes across her that perhaps he is not sufficiently interested in her to take the trouble to haunt any particular spot for the sake of seeing her. "I am a goose," Daisy says to herself; "because he seemed glad to see me yesterday, I fancied he might care to try and see me again this morning, when I ought to have known that he would have been just as glad to see papa, or Tartar, or any one from Burnsleigh." Then she resolves not to think a bit more about Harry Poynter, and carries out her resolve by thinking of him vigorously for the remainder of her ride. It is after luncheon that the aunt and niece develop their respective diplomatic powers. Miss Bertram, who, in the ordinary course of things, never thinks of driving out before four o'clock in July, announces to-day that she will go out at three, and that Daisy must accompany her, to choose some rich lace she designs shall decorate Daisy on a very special occasion.

"Aunt Bertram, if we go out at three we shall fall victims to *coup de soleil*, and I shall be unable to go to Lady Beauton's to-night," Daisy says, speciously; and Miss Bertram's resolution begins to waver.

Then she remembers that "this Mr. Poynter" is imminent, and says:

"My dear Daisy, the sun is no fiercer at three than at four, and there's no saying how soon this lace may be wanted. Did Sir Bolingbroke make a special point of your being at Lady Beauton's to-night?"

"He seemed to wish me to be there," Daisy says.

She feels slightly remorseful about the way in which she is using Sir Bolingbroke as an instrument to work out her design of staying in to see Harry Poynter. Still, remorseful as she feels, she uses him.

"Then we will go," Miss Bertram says, decidedly; "but a little quiet drive won't hurt you. We'll settle about the lace, and go down to Covent Garden to order in any new plants we may see, and then we will go to the park. I will let you off going to Mrs. Granville's 'afternoon' and won't ask you to make a single call to-day, if you're ready to go with me at three."

"Aunt Bertram——" Daisy pauses for a moment or two. She is about to plead that she "must stay at home to write to mamma," but the honesty of her nature prevents her making any more false excuses. "Aunt Bertram, I want to stay at home this afternoon to see Harry Poynter," she says, suddenly. "Don't think me bold and forward, and everything of the kind, for saying so; but I feel it would make me very unhappy to go out when I know that he is coming. We were boy and girl together, you know, and he gave me Tartar, and till you know Tartar you can't understand what a strong claim the gift of the dog gives Harry on my gratitude; and we shall both of us be living down at Burnsleigh again by-and-by; and don't you see that it's impossible that I should behave discourteously to him?"

Daisy sinks on a low stool by her aunt's side as she says this, and wheedles the old lady to the utmost of her wheedling power.

But Miss Bertram remembers all that Daisy may lose through an inopportune display of interest in Mr. Poynter. She has found out from Mrs. Granville that the Glenholme property is only worth two thousand a year. Daisy must not be permitted to fling herself away on such a pittance, when Sir Bolingbroke's twenty thousand per annum may be at her disposal if only she is wise. "I should not be doing my duty to her family," Miss Bertram says to herself, "if I encouraged her in hankering after this young man. He will do for one of her less pretty sisters; but my girl must make the success of the season."

Fraught with this feeling, she opens her affectionate battery upon her young charge.

"Mr. Poynter will scarcely expect you to run to meet him in such an extremely marked manner, Daisy. He would probably feel nothing but surprise if he came here and found you had upset our daily routine for the sake of receiving him. My dear child, the thing can't be done; if he were your accepted lover even, I wouldn't permit you to renounce society for the sake of staying at home to sentimentalize like a village school-girl; and I have got to learn that he stands on that footing with you."

Daisy crimsons, ceases from wheedling, and starts up in a moment.

"I have told you exactly what he is, and how I regard him. I wish you hadn't said that about his being my accepted lover, Aunt Bertram. You have put a thought in my head that has never been there before about Harry Poynter, and it may make me awkward when I meet him. However, I'll do as you please now; after what you have said, I'd rather not see him to-day."

The girl is hurt, unmistakably hurt; and Miss Bertram feels a little sorry for the pain she has unavoidably inflicted. But she stands acquitted in her own mind of having employed any other than the most justifiable means to compass her praiseworthy end. She loves Daisy dearly; a little because Daisy is of her own flesh and blood, a little because Daisy is so lovely that she has brought reflected lustre to Miss Bertram, and a great deal because, by the grace of Sir Bolingbroke Bray, Daisy may be leader of society next year. Still, loving Daisy dearly as she does, she does not repent having wounded the poor child, since the pain inflicted has caused Daisy to take the course her aunt deems desirable. "It's just as well that girls should see their conduct with other people's eyes at times," she says, suavely. "Of course I know that you would have had no ulterior object in staying at home to receive this young man; but he might have thought you had. Young men are so apt to be deluded by their vanity."

So Daisy lets herself be carried off to look at the pattern of lace flounces which her Aunt Bertram is well disposed to order for her; and Daisy is not in the mood to see the beauty of the most beautiful lace to-day.

"You had better save your money, Aunt Bertram," she says, when she hears the price, which appears appalling to her. "What good will that lace be to me at Burnsleigh? I shall be afraid to wear it, because Mrs. Granville will turn and rend me for presuming to possess anything so much better than she has herself."

"It's more than probable that, if you ever wear it at Burnsleigh, you will be in such a position that Mrs. Granville will not care to cavil at anything you may please to wear," Aunt Bertram replies, with an air of mysterious sagacity that is extremely annoying to Daisy, since the latter dare not openly demand the reason of it.

"I mustn't do anything to make Aunt Bertram work back to the subject of Sir Bolingbroke," the girl thinks. "If I do, there's no knowing what she may not taunt me into doing or promising to do; she is quite capable of even saying that I have given my heart to Harry Poynter before he has asked me for it." Somehow or other the thought of Harry Poynter carries her almost complacently through the weary work of shopping, which her aunt insists upon her performing this afternoon.

In all matters connected with the adornment and further gracing of her niece's most graceful person Miss Bertram has been liberal, not to say lavish, all through Daisy's brief campaign. But this day she outdoes all her former efforts at munificence, and still Daisy fails to feel as grateful as she fancies she ought to feel. Instinctively she understands that her aunt is not giving her rich gifts because she loves her—and generosity towards the object is the natural outcome of love—but because there is a probability of her making a brilliant marriage and occupying a prominent place in society. Moreover, all that Miss Bertram does for Daisy, and all that she gives to Daisy, is done and given in the overpowering and semi-patronizing way in which rich people invariably bestow boons upon their poor relations. The poor girl's heart and soul are in revolt when her aunt puts bracelets and necklets of gold and jewels of price about her. "If she would only give me the money and let me send it to poor mamma," Daisy thinks, with tears in her eyes, "then I could say 'Thank you,' with my whole heart; but as it is, I don't thank her a bit in reality; she only does it in the hope that it may redound to her own honor and glory."

The shopping is over at last, and as it is nearly five o'clock, and Daisy looks so pale and tired, that Miss Bertram is alarmed for her appearance this night at the Marchioness of Beauton's, she consents to waive the drive in the park for once. "That young man from the wilds will have been and gone before now," the aunt tells herself; and the niece is simultaneously thinking. "Harry is sure to think that I'm so elated by this brief London experience of mine, that my head is turned to the extent of making me forgetful of old friends. And if he thinks that he will despise me and never come near me again."

This consideration takes the bloom off her cheeks, robs her eyes of their starry light, and depresses her so thoroughly altogether, that it is a very pallid and sad looking Daisy who looks up, when the carriage stops at her aunt's door, to see Mr. Poynter standing on the doorstep.

In a moment all her views of life in general, and of her aunt's conduct in particular, undergo a change. She forgives Miss Bertram the drive, Sir Bolingbroke, the jewelry and laces, the patronage, and all her other enormities. How can she feel other than forgiving and beneficent now that he is here, showing his gladness and pleasure at the sight of her so openly and eagerly? Even Miss Bertram, disgusted as she is at having been outwitted by chance in this way, cannot make up her mind to do other than accord a civil welcome to the brilliant looking, gracious-mannered young fellow. She even goes so far as to acknowledge in the recesses of her own heart that Harry Poynter would have her casting-vote if there were not such a mighty disproportion between his income and Sir Bolingbroke's. "As it is, Daisy must not see any more of him after this," she determines; "no man I know can stand a chance while he is in the field."

Happily for the young pair they are unconscious of this determination on Miss Bertram's part, and so an hour slips away very pleasantly over afternoon tea in Miss Bertram's drawing-room. The room is large, and is one of those earthly paradises—a room full of nooks and corners. Miss Bertram is not very æsthetic in many of her tastes, but she is the possessor of a large collection of old china and *bric-à-brac*. Harry Poynter blesses the cups and saucers, the old Florentine brass-work and Venetian mirrors, as they give him an excuse for loitering round the room, penetrating into the nooks, and disappearing round the corners with Daisy while she describes the various *objets d'art* to him. Miss Bertram sits and seethes at the sight, but she is compelled to seethe silently. She cannot show such a want of confidence in her niece as to order her to sit down; and she cannot, as a civilized hostess, curb that young man's apparently irrepressible desire for instruction. Nor can she get up and follow them about. "It must never happen again, it shall never happen again," she says, in nervous agitation, to herself, as the sound of their voices, now in whispered colloquy, now in merry laughter, reaches her from the other end of the room. Once she does make an attempt to rout the enemy by saying:

"I'm sure you must be boring Mr. Poynter, Daisy. Young men never care for china."

"I should care for anything that Daisy showed me," he replies, blithely enough, and the tone of intimate assurance makes Miss Bertram wince. She feels absolutely guilty of disloyalty to Sir Bolingbroke, to whose cause she has pledged herself, in permitting even this much intercourse between this exceedingly detrimental young man and the Daisy whom Sir Bolingbroke desires to gather. "I will give him a hint this evening to be prompt. It's no use his being a laggard in love if he wants to secure Daisy; and I'll take care this sort of thing doesn't occur again."

Meanwhile all her plans are being quietly defeated by the young pair, who are unconscious that she is making them.

"I'll be in the Row to-morrow at twelve, and you won't let that fellow who was with you yesterday cut into the conversation I want to have with you about Burnsleigh, will you?" he says, appealingly, to Daisy, and Daisy gives him her promise delightedly. "I was so surprised to hear from St. Briac to-day that Willie is tutor to St. Briac's young brother, Gerald."

"Yes; isn't it a good thing for Willie? So you know St. Briac? Will you be there to-night?"

"At Lady Beauton's? Yes. Will you?"

"I will; and it will be the happiest of all my balls," the girl cries, frankly. "Do you remember, when you were home the last time, how we used to waltz in the schoolroom every evening? I've often thought of it since I have been up here; and I've never had such a partner as you ever since."

"We always went together well, didn't we?" he responds.

It makes him very happy to find that even his waltzing, which was not specially good at the time to which Daisy refers, is glorified in Daisy's memory. It makes him even happier to feel that he will be able to give her many opportunities to-night of discovering the improvement which has taken place in his "manner of going" since then.

He proceeds to improve the shining hours by seeking to engage Daisy at once for the first two round dances. But Daisy is conscientious. She is engaged to Lord St. Briac for the first, and to Sir Bolingbroke for the second, and, as disagreeable as it will be to dance with the latter now, she will stand to her engagements.

His eyes grow anxious as she announces this; for brief as has been his sojourn in the gay, reckless, brilliant, money-loving world of London, he has learnt enough to know that Sir Bolingbroke, despite his antecedents, is a dangerous rival. About St. Briac he has no alarm, for it is well known that he has promised his family that he will surrender to the charms of Miss Millard's money-bags. Moreover St. Briac did not express the faintest or most ordinary admiration for Daisy when he was speaking of her brother this morning, whereas Harry had seen with his own eyes the light in which Sir Bolingbroke openly regarded her. So, in blissful ignorance of where the real danger lies, Mr. Poynter makes up his mind to devote all his energies to keeping her apart from the baronet this night at the ball.

"I wish we were both back at Burnsleigh," he whispers; and she looks at him shyly, and he sees that his wish is reflected in her eyes and echoing in her heart. If he will only speak out now to his old playfellow and early love, all will be well with them. But he does not know this, and he fears his fate a little too much, and Miss Bertram calls him in a peremptory manner to her side, and the opportunity is over. But his hand clasps hers very lingeringly when he bids her good-by, and he associates himself in a way that is grievous to her aunt by saying: "You'll help me make out a programme of the rejoicings that Lincoln insists must take place when I go home, won't you, Daisy? The days for roasting bullocks whole are over; we'll do something very quaint and curious in the way of village festivities if you will only help me."

"Does the whole village belong to you, then?" Miss Bertram asks, bluntly.

"Not at all; Granville is the monarch of nearly all that is to be surveyed down at Burnsleigh. Glenholme is a pretty little place though—isn't it, Daisy?—and I hope I shall have the pleasure of welcoming you to it some day, Miss Bertram."

There is something so joyous and thorough about him that Miss Bertram cannot snub him for his audacity, as she longs to do. She even suffers a severe smile to play over her virgin lips as she replies:

"Thank you; but I am not likely to visit Burnsleigh—the air in that part of the country never did agree with me. Scotland and the North of England suit me much better. I am looking forward to spending part of the Autumn up in the Highlands with my dear niece."

Now, Sir Bolingbroke Bray's estates, as all men know, are up in Scotland. No wonder that after Miss Bertram fires this parting shot at him Mr. Poynter takes his departure with the fixed idea in his mind, namely, that Miss Bertram is a manœuvring, match making, malignant old woman, from whose clutches it behooves him to rescue Daisy as soon as possible.

Everything is in full swing at Lady Beauton's ball this evening, when Miss Bertram and Daisy gallantly and gaspingly force a passage through the crowd that throngs the staircase and anterooms. Miss Millard and her mamma have been received with the most flattering expressions by the Marchioness of Beauton, who, before their arrival, had implored her son, with tears in her eyes, to rid her of that appalling old woman without unnecessary delay, immediately after their advent.

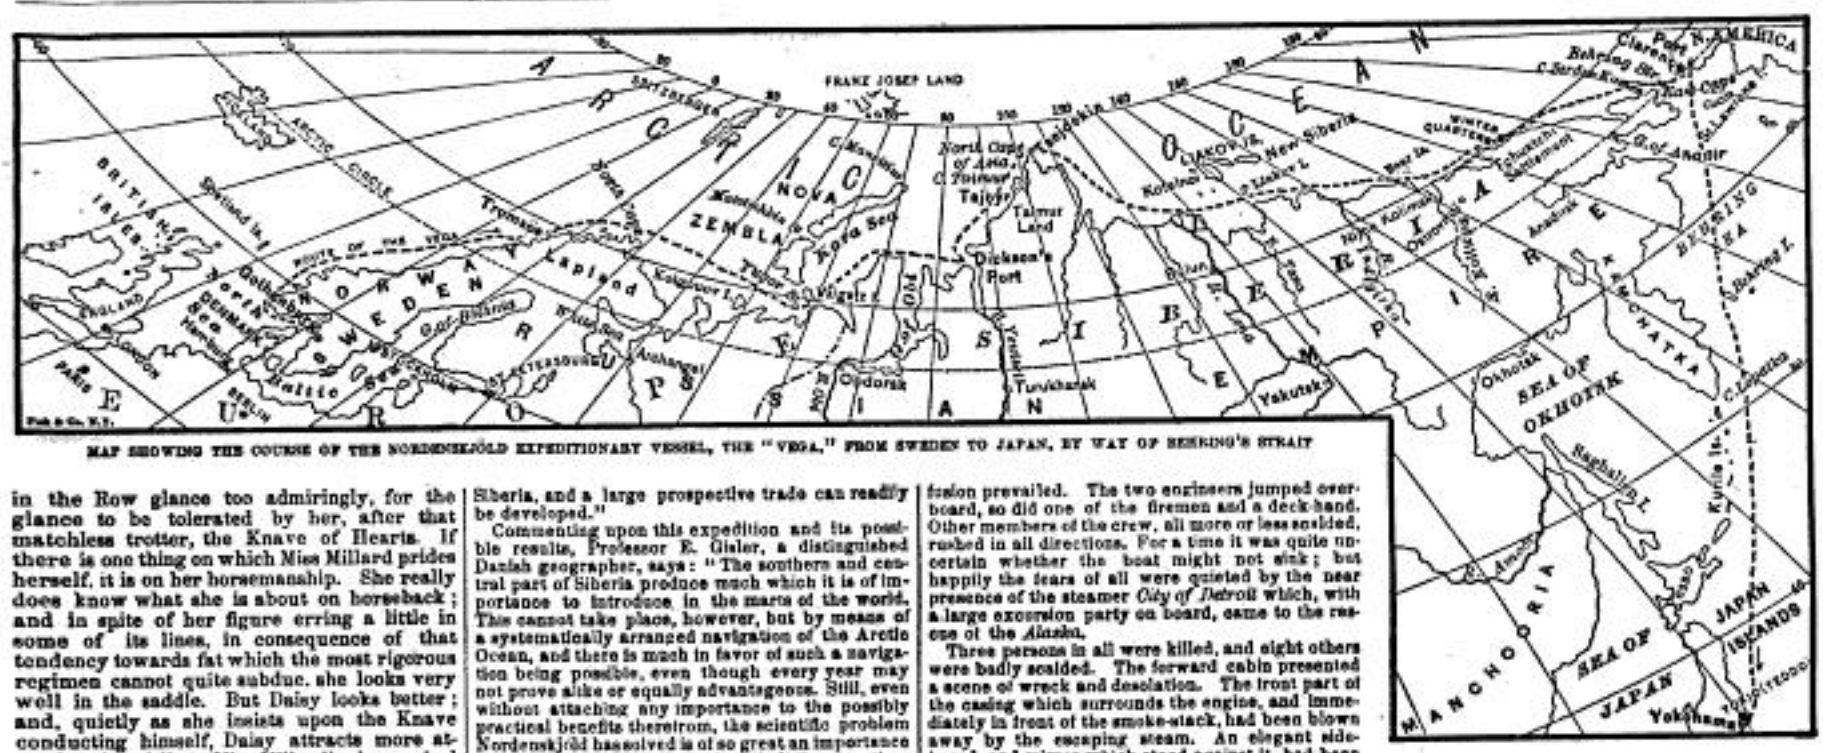
"For your sake, dear boy," the affectionate and devoted mother had said, "I am prepared to go any length as far as the girl is concerned; but the mother! St. Briac, you must make her understand that she is not to come near me *once* after I have received her. I feel my health giving away every time she approaches me; and, as I don't want to break down before your marriage, you must really keep her away from me."

"Yes, if you can only weather out the storm till I have won my gentle bride, we'll smother the old lady comfortably under some of her own cotton bales afterwards," St. Briac laughs.

"And you will come to a conclusion with Miss Millard to-night, St. Briac?" his mother asks, somewhat nervously; for the Millard alliance is one that will restore the rather emaciated fortune of the house of Beauton. Accordingly, though Miss Millard is only a few degrees less detestable than her mother in the eyes of the marchioness, the understanding of the marchioness teaches her that Miss Millard is a highly-desirable wife for her son. There is a touch of asperity, as well as anxiety, in the tone in which she asks the young man who has been playing the big fish for some months now, if he intends to land it to-night.

"Well, yes; it's in the bond that I do so, I suppose," he says, with a sigh. And as he pledges himself anew to pursue the course which is to recoup the fortunes of his house, he thinks of a girl who had not shone out like a star in society when he first gave in his adhesion to society—a girl whose fair beauty and rare grace and sweet stately charms would grace a coronet, or a crown for that matter—and his heart and his taste revolt against the bride he is sworn to win as he remembers Daisy.

The deed has to be done this night, and St. Briac sets about the preliminaries which have to be gone through with the best grace he has at command. He is a fine specimen of a young patrician, and he looks a very knight of courtesy as he advances to Miss Millard and claims that young lady's hand for the dance and attention to his deserts. And as she yields to him both he thinks of Daisy again—thinks of her with a thrilling mixture of intense admiration and yearning regret.



Miss Millard is not the sort of girl to be married for her money only; for she is a bonnie-looking creature of the fair, fresh, rather fat order. Her face is a very comely one, full of good temper (when nothing occurs to put her out), and expressive of a fair amount of intelligence and resolution to have a full recognition accorded to her merits. She has ruled a little queen in every coterie into which she has hitherto gone, both in Cottonapolis and London. But this season she has been taught that there are realms in which she may not hope to reign. She has been sought by great ladies of the Marchioness of Beauton's clique; but they have, one and all, taught her that in their society she can have no sovereignty, no place, nor favor, indeed, of any kind, unless she and her gold come among them indorsed by the approval, which marriage is supposed to express, of such a one as Lord St. Briac.

She has accepted their dicta readily enough; indeed, she is a consenting party to the scheme which has been propounded for St. Briac's benefit. She likes St. Briac very well for himself—that is to say, she has seen no one whom she likes better than St. Briac. But she *loves* the prospect of being a marchioness, and she is quite contented to see her mother ignored and put into the shade by those *grandes dames*, while she herself is graduating for the place she is eventually to hold among them.

But she is not quite contented to be put in the shade herself by a "mere penniless nobody" like Daisy Eldon. If a duke's unmarried daughter cuts the ground from under her feet, Julia Millard bears the shock heroically; but that an obscure country girl, without a farthing to bless herself with, should execute the same feat unintentionally is a very bitter drop in the cup which fashionable life is holding to Miss Millard's lips just at present.

St. Briac had been in pretty constant attendance on her lately; but she has seen him

MAP SHOWING THE COURSE OF THE NORDENSKJÖLD EXPEDITIONARY VESSEL, THE "VEGA," FROM SWEDEN TO JAPAN, BY WAY OF BEHRING'S STRAIT

in the Row glance too admiringly, for the glance to be tolerated by her, after that matchless trotter, the Knave of Hearts. If there is one thing on which Miss Millard prides herself, it is on her horsemanship. She really does know what she is about on horseback; and in spite of her figure erring a little in some of its lines, in consequence of that tendency towards fat which the most rigorous regimen cannot quite subdue, she looks very well in the saddle. But Daisy looks better; and, quietly as she insists upon the Knave conducting himself, Daisy attracts more attention than falls to Miss Millard's share. And so there is something of bitterness in the *bonhomie* with which Miss Millard says:

"Do you know who that marvelously handsome man is who chained Daisy Eldon to the rails in the Row the day before yesterday? She made quite an exhibition of her eagerness to talk to him."

(*To be continued.*)

THE SWEDISH ARCTIC EXPEDITION.

SOLVING THE PROBLEM OF THE NORTHEAST PASSAGE.

THE arrival of the Swedish exploring steamer *Vega*, belonging to the Nordenskjöld Expedition, at Yokohama, Japan, September 2d, having successfully accomplished the Northeast Passage, is an event of great importance both to the commercial and the scientific world. The *Vega* sailed from Gothenburg, in Sweden, on July 4th, 1878. A four days' sail brought it to Tromsöe (a Norwegian port on an island of the same name), where the outfit of furs and necessaries for the high latitudes was completed. Here the *Vega* was joined by the companion steamer, the *Lena*. On July 25th both vessels sailed from Tromsöe, passing through the Yugor Strait (south of Nova Zembla) on August 5th. There was not a particle of ice to be seen between Waigatsch (Vaigatz, a Russian island) and the Continent. The Kara Sea, hitherto dreaded by all sailors in the Arctic regions, was equally free from ice, and anchor was cast at Port Dickson, near the mouth of the Yenesei, on August 6th. After a three days' delay there the two steamers of the expedition steered northeast towards the dreaded Taimar land and the North Cape. The ice arrested their passage, and they were compelled to remain at Tajoyr (Cape Taimar?) four days. On August 19th, Tseljekie, the extreme northern point of Asia, was reached, where a short rest was taken. The *Vega* coasted the peninsula, very little ice being encountered, and anchored at the mouth of the Lena River on August 26th. To the northeastward were the islands of New Siberia, which were soon sighted, but the adventurers were unable to explore them because of the great field of ice that girt their shores. The mouth of the Kolwya River (latitude 69 degrees 30 minutes, longitude 161 degrees 30 minutes), a broad estuary, was found open, and the vessels hastened to make all possible progress eastward. Their difficulties soon began, however, and increased daily. They were delayed much by the ice between Cape Cook and Van Karema. They crossed Kolintschin Bay on September 27th with comparative ease, but were imprisoned on the 28th near a Tchuktchi settlement (latitude 67 degrees 7 minutes north, longitude 177 degrees 24 minutes west). Professor Nordenskjöld's account of the expedition says of its subsequent experiences:

"We wintered in the pack-ice at this point, one mile from land. The entire ship's company maintained the best of health and spirits. Not a single case of scurvy occurred on board. During the shortest day the sun was above the horizon less than three hours, and then only the upper limb was visible. At this point much time was devoted to interesting scientific and ethnographic studies. There were 4,000 inhabitants in the several villages near by, who subsisted by fishing and sealing. They are called the Tchuktchi, and are a very agreeable class of people for an exploring party to meet. They supplied the expedition with bear and reindeer meat. The cold was intense, averaging 36 centigrade (72.2 degrees below Fahrenheit). The game was abundant in the Spring, wild fowl being taken in large numbers. We were detained in the ice at this point 264 days, but were released on July 18th, and passed East Cape into Behring Straits on the 20th. Such is the story of our voyage.

"I fully accomplished the object for which the expedition was sent out by Dr. Dickson, namely, a practical proof of the existence of a Northeast Passage. Then the Asiatic coast was followed and St. Lawrence Bay was crossed to Port Clarence, Alaska. Thence we crossed to Koniyan, dredging carefully in order to determine the formation of the bottom of the sea, many specimens of the fauna and flora being obtained. The location, breadth, velocity and approximate volume of the currents of the Arctic and Pacific Polar currents were charted and calculated. Having touched at St. Lawrence Island, we next proceeded to Behring Island, where we received the first news from Europe through the resident agent of the Alaska Trading Company. The fossil remains on Behring Island are of immense variety. A new marine animal was here discovered, which we named *Rhytina stelleri*. The *Vega* left the island on August 19th. All are well, and no deaths have occurred during the voyage.

"The *Vega* is the first vessel to make the passage, and I think the voyage from Europe to Asia by Behring Strait is certain and safe, with very little more experience of navigation in the Northern seas. From Japan to the mouth of the Lena River there are no difficulties in the proper season for experienced sailors. The Lena River taps Central Siberia, and a large prospective trade can readily be developed."

Commenting upon this expedition and its possible results, Professor E. Gisler, a distinguished Danish geographer, says: "The southern and central part of Siberia produce much which it is of importance to introduce in the marts of the world. This cannot take place, however, but by means of a systematically arranged navigation of the Arctic Ocean, and there is much in favor of such a navigation being possible, even though every year may not prove alike or equally advantageous. Still, even without attaching any importance to the possibly practical benefits therefrom, the scientific problem Nordenskjöld has solved is of so great an importance that his expedition is deserving of all the attention, with which it has been followed by the public. And the daring he has exhibited is worthy of the greatest admiration—to be a pioneer is ever coupled with dangers."

CONFEDERATE MEMORIALS IN STONEWALL CEMETERY.

THE first soldiers' cemetery spoken of North or South, and the first finished, was Stonewall Cemetery, it having been completed and dedicated October 25th, 1866, with imposing ceremonies, in the presence of a vast concourse of people. In this cemetery have been placed, in separate coffins, the 2,500 dead soldiers' remains, most of whom fell in battle, from numerous localities over an area of twenty miles radius from Winchester. The dead from each State were placed in a separate lot, designated by a wooden shaft, bearing the name of the State. In the centre, under one large mound, were buried 828 dead. These are designated as the "Unknown Dead," and upon the mound over them has been placed the larger of the two monuments, inscribed "To the Unknown and Unrecorded Dead." The other monument, smaller in size, but beautiful in design and workmanship, is erected by the ladies of the "Virginia Shaft Association" over the 398 soldiers interred in the Virginia lot.

The monument erected to the "Unknown Dead" is a column bearing on its top a statue of a private infantryman at "rest on arms," and on the front of the die an enlarged *fac-simile* of the seal of the Confederate States, with its motto, "Deo Vindice." It is 40 feet high, weighs about 65 tons, resting on a foundation below the surface of Virginia Valley limestone 11 feet square and narrowing to 8½ feet square. The base is of Richmond granite, 8½ feet square, and the rest of the structure Italian marble. The design of the monument is historic rather than allegoric, the main features of which are the seal of the Confederate States in the front of the die, and the Jacksonian infantryman surmounting all. On the remaining three sides of the die are the insignia of the several arms of the service: the crossed cannon representing artillery—the heavy sabres with helmet, cavalry; and a stack of muskets in front of two vacant tents, infantry. On the four sides of cap of die are different emblematic wreaths. Over Confederate seal, laurel, signifying glory; over artillery, oak, strength; over infantry, ivy, lasting remembrance; over cavalry, olive, peace. On the front of the base, under the seal, in large sunken letters, is, "To the Unknown and Unrecorded Dead." On the right of the base are inscribed the words:

"Erected A. D. 1879, by the people of the South to the 829 Unknown Confederate Dead who lie beneath this mound, in grateful remembrance of their heroic virtues, and that their example of unstinted devotion to duty and country may never be forgotten." On the left of the base:

"Who they were none knew,
What they were all know."

On the rear of the base is:

"On Fame's eternal camping ground
Their silent tents are spread,
While glory guards with solemn round
This bivouac of the dead."

The smaller monument, erected over the 398 dead in the Virginia lot, with General Turner Ashby at their head, is a beautiful shaft 23 feet 6 inches high and weighs 9 tons. It has a Richmond granite base 4 feet square, 2 feet high; molded base of Italian marble, with word "Virginia" on front, 2 feet 2 inches by 16 inches; die, with Seal of Virginia bas relief on it, is 2 feet 8 inches square by 3 feet 6 inches high. The shaft is 20 inches square at bottom, 10 feet 6 inches high. Sword and belt in relief on front of shaft, surmounted by a handsomely carved cap, on which rests a draped urn, with blaze inscription on right side: "In memory of the 398 Virginia soldiers lying in this cemetery, who fell in defense of constitutional liberty and the sovereignty of their State from 1861 to 1865, A. D." On left side: "Erected by the ladies of the Virginia Shaft Association of Winchester, June 6th, 1879." On the far side: "*Dulce et decorum est pro patria mori.*"

These monuments were unveiled with impressive ceremonies on Memorial Day last, June 6th.

EXPLOSION OF THE "ALASKA" ON LAKE ERIE.

WE give on page 61 an illustration of the explosion which occurred on the steamer *Alaska*, on Lake Erie, September 5th. The *Alaska* is one of the finest steamers running out of Detroit, and made daily trips to Put-in-Bay and Sandusky. On the day named she was on her way to these places with a number of passengers, when suddenly the steam dome of her boiler exploded with a terrible concussion. Instantly she was filled with steam so dense that it was impossible to see a distance of a foot away, and the greatest confusion prevailed. The two engineers jumped overboard, so did one of the firemen and a deck-hand. Other members of the crew, all more or less scalded, rushed in all directions. For a time it was quite uncertain whether the boat might not sink; but happily the fears of all were quieted by the near presence of the steamer *City of Detroit* which, with a large excursion party on board, came to the rescue of the *Alaska*.

Three persons in all were killed, and eight others were badly scalded. The forward cabin presented a scene of wreck and desolation. The front part of the casing which surrounds the engine, and immediately in front of the smoke-stack, had been blown away by the escaping steam. An elegant sideboard, and mirror which stood against it, had been blown into fragments. The furniture in this cabin was scorched and blistered as if it had passed through a conflagration. The windows were broken, in some instances the cases having been torn out bodily. The tables were overturned and broken. The carpet was covered with ashes and cinders blown from the furnace. The hurricane-deck was littered with bits of iron blown from the boiler. In the engine-room all was confusion. The disaster created great excitement in Detroit, and there was a general expression of satisfaction that its results were not more serious.

SCIENTIFIC INTELLIGENCE.

The Decomposition of gun-cotton in closed vessels gives rise to products which are few in number and very simple, namely, carbonic acid, carbonic oxide, hydrogen and nitrogen.

Herr Hagel, of Gotha, has, it is stated, found that artificial plates of Portland cement may be used with advantage in lithography as a substitute for the costly Solnhofen stone.

The Edison Company has just obtained from Government permission to establish telephone communication between the various quarters of Paris. On payment of a monthly subscription a telephone will be installed in private houses, just as water and gas.

C. Schwanitz, of Berlin, uses glycerine in the preparation of vulcanized rubber, in order to secure it from injury by fats and oils. He also passes the finished mass between warmed rolls in a glycerine bath, in which it is exposed to steam under a pressure of two or more atmospheres.

Ozone, when properly applied, is a most effective and convenient agent for restoring books or prints that have become brown by age or been soiled with coloring matter, only a short time being required to render them perfectly white, without injuring in the least the blackness of the ink.

Dr. J. Fr. Brandt, the veteran Russian naturalist of St. Petersburg, has just died at the age of seventy-seven. He has been for many years director of the Imperial Museum of Geology in the Russian capital, and is author of many important memoirs in the transactions of the Imperial Academy.

A Thousand Bushels of Wheat were recently run through a spout of Washburn "B" Mill, Minneapolis, which had been provided with magnets, and there were found adhering to them seventy-one pieces of iron, consisting of tacks, nails, irregular fragments and scales from badly worn machinery.

The Meeting of the American Association of Science at Saratoga was one of the most successful since the society was organized. The attendance was large and the papers read were generally on novel and important subjects. Professor Pierce's theory of meteors and Mr. Edison's inventions were among the most interesting topics presented. The address of retiring President Marsh was listened to with great attention.

Messrs. Newton, Wilson & Co., London, have introduced a pen which they call the borograph, and which resembles Edison's electric pen, with this difference, that the needle at the point is driven by clock-work, which has to be wound up every fifteen minutes. The whole apparatus is very simple and can be carried in the pocket. The copying and reproduction of the clichés after the drawing is made is accomplished in the same manner as with Edison's or the pneumatic pen.

Mr. Cushing, of the Smithsonian Institution, has succeeded in making flint and obsidian arrow-heads, daggers, knives, and other sharp instruments, with no other tools than sticks and stones such as the prehistoric races must have used. After numerous trials he found that by pressure with the point of a stick he could break stone, flint and obsidian in any shape he chose, and soon succeeded in making implements quite as good as any ancient specimens in the possession of the museum.

The Old Question of the distinction between animal and human intelligence was discussed at the recent meeting of the British Association by Professor St. George Mivart and Sir John Lubbock. Professor Mivart argued that concerted action is impossible to the lower animals. To this Sir John replied that he placed a blue-bottle fly near an ants' nest and pinned it fast, and that an ant pulled at it for about twenty minutes, and then went to the nest, bringing back with him ten other ants, who joined in the effort to pull away the fly. He thought it only fair to take away the pin, when the party of eleven carried off the blue-bottle in triumph to the nest. If that was not concerted action, what was it?

The Celebrated Astronomer and physicist Arago was born February 26th, 1786, at Estagel, near Perpignan, in the Pyrenees, and died in Paris, October 2d, 1853. The citizens of Perpignan have caused a statue to be erected to his memory in his native town, which was to have been inaugurated September 21st, to be followed by a three days' *fête*. The principal address of the occasion was confided to M. Paul Bert, the physiologist. Why some astronomer or physicist was not selected for this office does not appear. Arago was a staunch republican, and steadfastly refused to take the oath of allegiance to the traitor Louis Napoleon, and he denounced the betrayal of his country by this adventurer in no unmeasured terms.

PERSONAL GOSSIP.

EDISON'S quadruplex telegraph system will soon be placed in use between Paris and Brussels.

PROFESSOR JOHN TYLER has just returned from his three years of study in Germany to take the chair of biology at Amherst.

GENERAL FRANCIS WALKER is said to be in favor of having ladies, in many places, make the canvass in taking the census.

MR. J. M. LANGSTON, Minister to Hayti, says that the Haytians are a brave and courteous people, refined and desirous of the best education.

THE Queen will remain at Balmoral till the third week in November, returning then to Windsor for a short time, and spending Christmas at Osborne.

A NATURAL daughter of the late Duke of Brunswick has, by a recourse to law, obtained one-fourth of his vast property, all of which he bequeathed to the city of Geneva.

SENOR CANOVAS DEL CASTILLO has been charged with the mission of officially asking the hand of the Archduchess Marie Christine of Austria in marriage with King Alfonso.

REV. NEWMAN HALL'S new church in London cost $320,000, all of which, except $22,503, has been paid. The church has 1,225 members, and carries on much benevolent work.

THE Prince Imperial of Austria has been appointed commandant of the Thirty-sixth Regiment of Infantry, and will study the administrative service in garrison with it at Prague.

PRINCE LOBANOFF has been appointed Russian Ambassador to London, and Prince Labouroff, the present Minister at Athens, will succeed Prince Lobanoff as Ambassador at Constantinople.

THE President of the British Association this year is Professor G. J. Allman, long Professor of Natural History at the University of Edinburgh, and one of the first authorities of the day in marine zoology.

A YOUNG American, the son of General Viele, of New York, has distinguished himself at the College Stanislaus, in Paris, having taken the grand prize for the Concours at the Sorbonne, and thirteen others, including first Greek and Latin.

DON PHILIPPE DE BOURBON, the son of the Count of Aquila, uncle to the ex-King Francis II. of Naples, and grandson of Dom Pedro I., Emperor of Brazil, is about to lead to the altar an exceedingly wealthy American heiress, now residing in Paris.

THE Pope has written an autograph letter to the Emperor William, summing up the results of the late negotiations between the Vatican and Germany, and suggesting the Emperor's direct intervention, in the way of clemency, as the only way to re-establish harmony. It is reported that Prince Bismarck knew and approved of this step beforehand.

LEONTINE NICOLLE, the Frenchwoman who takes the prize for virtue this year at the Academie, has been a nurse in a lunatic asylum for twenty years. She went there when a young girl in order to watch her mother, who had lost her reason, and has been devoted to her work ever since. M. Jules Simon, in his address, stated that through the devotion of this living martyr, no less than five hundred insane men and women had regained their senses and their liberty.

A LETTER has been received from General Grant, dated Nikko, Japan, July 23d, in which he reiterates his purpose to go directly to his home in Galena after he completes his visit on the Pacific Coast. If he visits Oregon it is not thought that he will arrive at Galena before the last of October. His house there has been put in complete repair, inside and out, and all will be in readiness to receive him. In the letter referred to, the General speaks of his travels in China and Japan, and of the latter country in the most glowing terms.

GEORGE C. PERKINS, the Governor-elect of California, is a native of Maine, and his age is forty. Not liking life on his father's farm, he made several voyages as a cabin-boy. In his eighteenth year he landed in California and settled in Oroville, Butte County, where he found employment at farming, mining and clerking in a store, the latter ultimately falling into his possession. He erected and for several years conducted the flouring mills in Oroville, and gradually amassed a fortune. For two years he represented Butte County in the State Senate. He is still in business and considered a representative merchant.

THE obituary record of the last few days contains the names of Sir George Stephen, Q. C. of Melbourne, the first knight created by Queen Victoria, aged 85; William M. Hunt, the well known American artist who committed suicide September 8th, at the Isle of Shoals; Count Amédée de Noé, the French caricaturist, better known by his *nom de crayon* of "Cham," aged 60; the Baron Isidore S. J. Taylor, the distinguished French traveler, Senator and Member of the Institute, aged 80; the Rev. Dr. William Patton, of New Haven, aged 81; Dr. Clement A. Finley, ex-Surgeon-General United States Army, aged 82; John Shillito, the dry-goods prince of Cincinnati, aged 71.

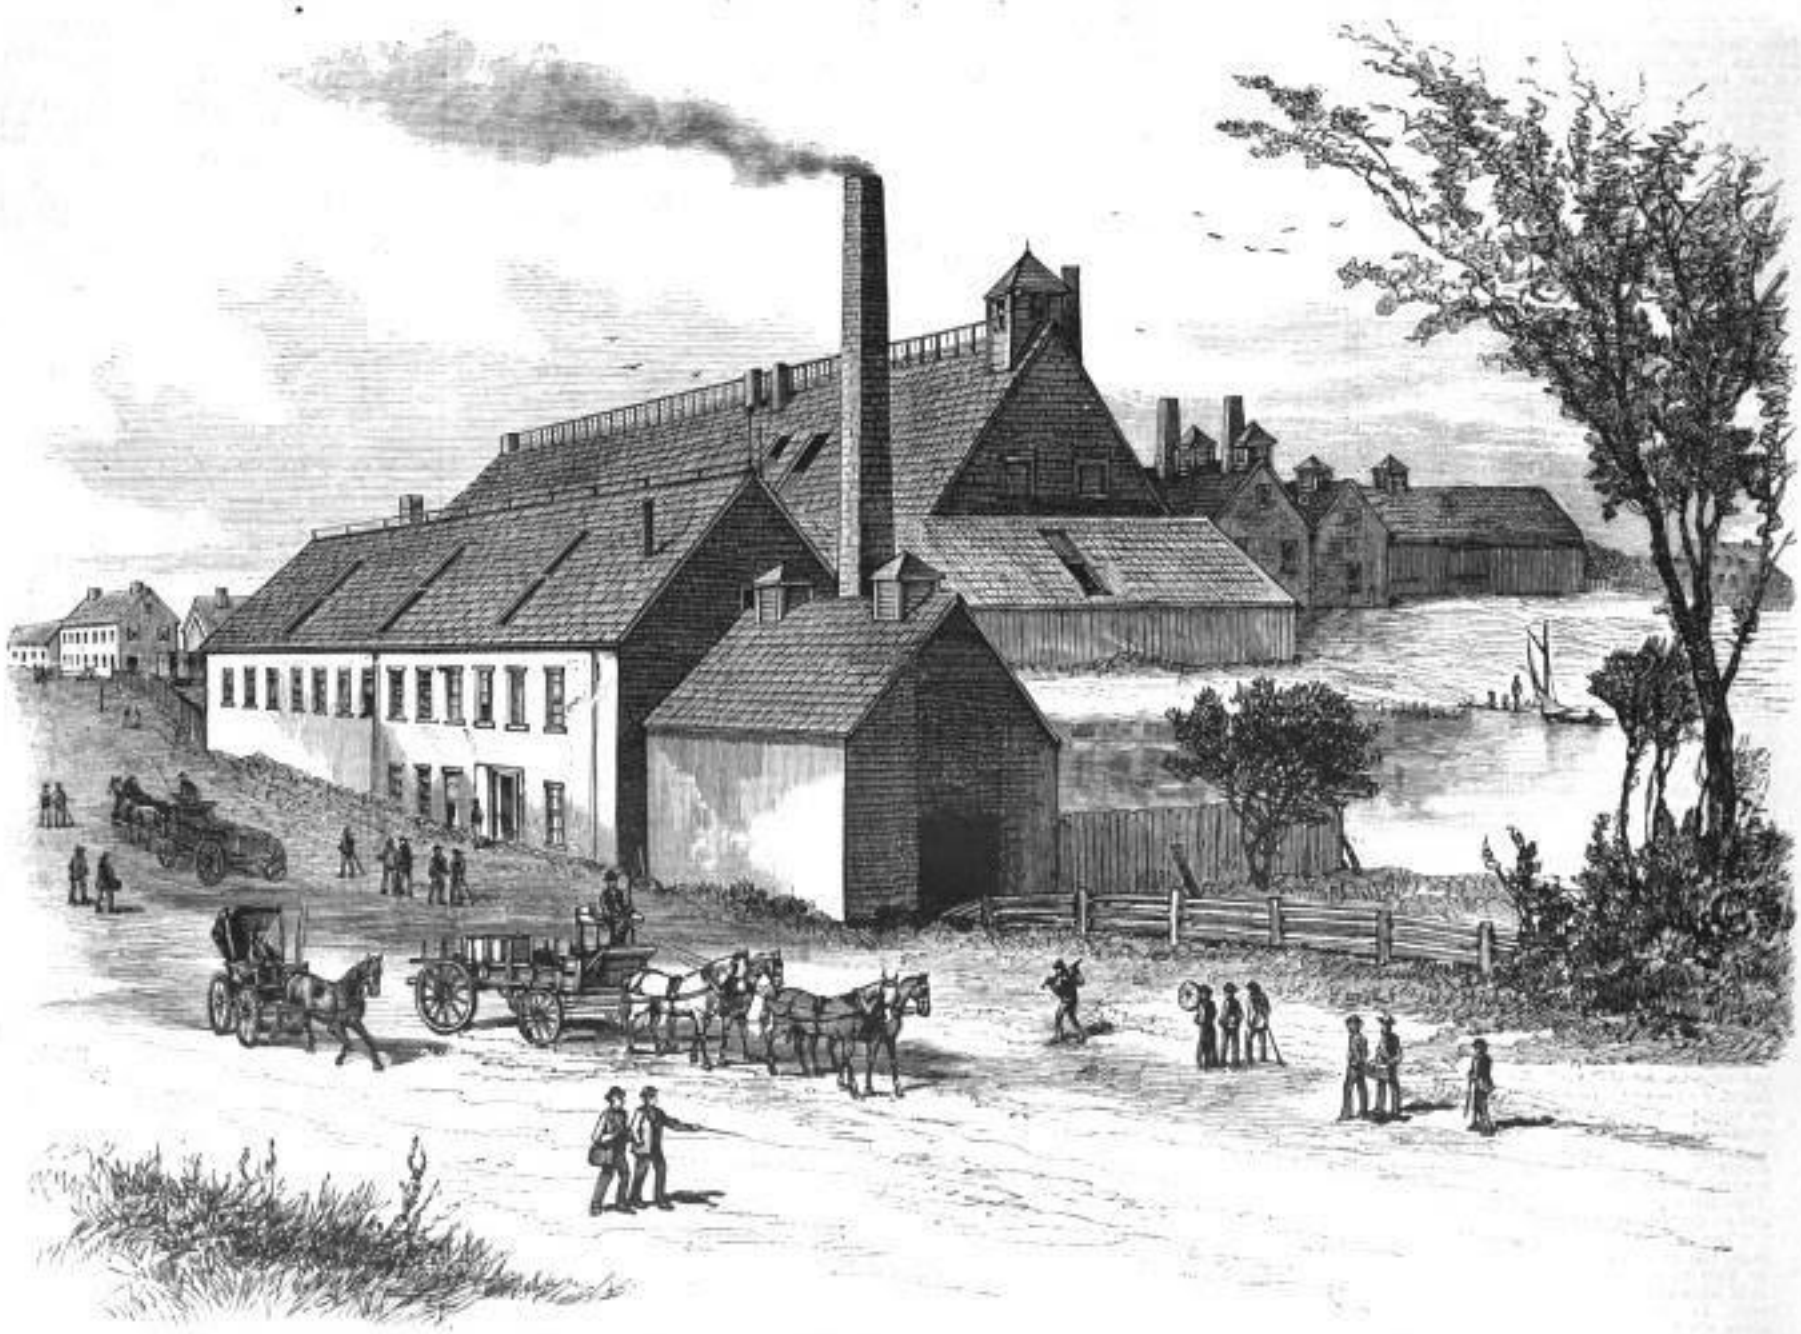
VIRGINIA.—MONUMENT ERECTED AT WINCHESTER TO THE UNKNOWN AND UNRECORDED DEAD.—SEE PAGE 59.

SHADE-TREES DRAPED IN WHITE SILK.

STRANGE as it may seem, it is nevertheless true that many of the large shade-trees in New York are at this moment draped and loaded down with cocoons of beautiful white silk. All along Broad Street and the lower part of the city, where there are ailanthus-trees, thousands and tens of thousands of the handsome Chinese silkworms (*Attacus cynthia*) may be seen either eating their leaves, or the chrysalids safely ensconced in their large silken cocoons, which often hang in clusters of half a dozen or more from a single twig.

The ailanthus-tree upon which we find them feeding is a native of China, and was introduced into the United States many years ago, and for a long time it was said to have no insect enemies, as the caterpillars of our native butterflies and moths refused to touch its leaves. But it had long been known to entomologists that in China a silkworm fed upon it, and some twenty years ago a few eggs were sent to France by a missionary from the province of Shang Tung, and from these were reared the first stock of this worm seen in Europe. In 1861, Dr. Thomas Stewardson, of Philadelphia, Pa., introduced this insect into the United States, with the hope that it might prove of value and afford our people an opportunity of developing a new industry. The moths were soon let fly in the streets of Philadelphia and Brooklyn, and from the latter city they crossed over to New York, and now they may be said to have become thoroughly naturalized, and only awaiting the day when some man or society shall take hold of them in earnest, and establish breeding grounds and cocooneries for the production of ailanthus silk. It has long been used in China, where it is said to be so durable that a dress made from it descends as an heirloom for generations.

As the ailanthus-tree thrives on poor, light soil, the barrens of Long Island or sandy soils of New Jersey might be planted with it, and as soon as the trees were two or three years old, or three or four feet high, the worm can be put to work, and when ready the cocoons may be gathered and sent to the silk-mills to be worked up. This raising of the ailanthus silkworm might all be done by children, and as it is perfectly hardy, cocoons enough for the next season's supply might be left on the trees or bushes over Winter, or gathered and laid away in some cool building. One objection to this species of silkworm has been that the silk could not be readily wound from the cocoons, but M. Christian Le Doup, of France, claims to have recently discovered a process of unwinding the silk with the ordinary reel, and it is now thought that the raising of this silkworm will soon become a highly remunerative industry in France, and there is no good reason why it should not in this country. Very fine specimens of the silk wound by M. Le Doup's process were recently exhibited at a meeting of the Paris Acclimatization Society, and they attracted very general attention. But should the reeling of the silk prove to be too expensive, it may still be utilized by carding or producing floss silk, the same as is done with the damaged or cut cocoons of the common silkworm (*Bombyx mori*). This ailanthus silkworm will also thrive on the castor-oil plant, and this might be used while waiting for the ailanthus-trees to grow if a person was desirous to make a beginning in this branch of industry as soon as possible.



The moth of this species of *attacus* is quite large, the wings spreading four to five inches, the broad, feathered antennæ, or feelers, indicating the sex. The female moth is quite similar, but with narrower antennæ. The color of the wings is a dull yellow, handsomely marked with white.

"ICHABOD CRANE" AND "ELIZABETH VAN TASSEL."

WHO is not familiar with the calf-love of *Ichabod Crane*, the semi-demented schoolmaster of Sleepy Hollow, for the pert, *piquante*, coquettish daughter of Baltus Van Tassel? How oddly he wooed her, how spasmodically he addressed her, how idiotically he behaved in her presence! In the play of "Wolfert's Roost," now running so successfully at Wallack's, *Ichabod* is depicted in a masterly way by Mr. John T. Raymond, while the part of *Katrina Van Tassel* is portrayed with considerable archness by Miss Kate Forsyth. Our illustration represents *Ichabod*'s school and the Old Dutch Church at Sleepy Hollow. *Katrina* has repaired hither ostensibly to receive a music-lesson, but actually to tease the luckless pedagogue. The pair are seated in the rustic garden; the music-book is open. *Ichabod*, tuning-fork in hand, strikes the keynote, and whines forth a dismal sound in imitation; but his malicious pupil, after delivering one note, stops suddenly short, and refuses to proceed until she has dived further into the book, to the utter discomfiture of *Ichabod*. The scene is admirably set, and the acting of both *Ichabod* and *Katrina* mirth-provoking to the very last degree. The production of "Wolfert's Roost" adds an additional laurel leaf to the Wallack chaplet.

COCOON OF A CHINESE SILKWORM FOUND IN NEW YORK.

RHODE ISLAND.—OUR NATIONAL INDUSTRIES—THE RUMFORD CHEMICAL WORKS, AT RUMFORD, NEAR PROVIDENCE.—FROM A SKETCH BY OUR SPECIAL ARTIST.

Digitized by Google

RUMFORD CHEMICAL WORKS.

WE present on the opposite page an illustration of the thriving manufacturing establishment located at Rumford, near Providence, R. I., known as the famous Rumford Chemical Works. Rumford is in the northerly portion of the town of East Providence, where the first settlements in that section of the country were made. It was here, on the east side of Seekonk River, that Roger Williams first settled after being driven from the Massachusetts Colony.

The first general permanent settlement where Rumford is now located was made in the Spring of 1631 by a colony of fifty-eight men, with their families, under the leadership of Rev. Samuel Newman, who called the place Rehoboth, because of the "great open plain" there. The houses of this colony were built in a semicircle around "Seekonk Common," now Rumford, opening towards Seekonk River, with the church and parsonage in the centre.

The country surrounding the buildings is so level that it is impossible to obtain a view which will show their extent. Our artist obtained the highest elevation attainable by mounting a fence.

The corner-stone of the Rumford Chemical Works was laid in 1854 by Messrs. George F. Wilson and Eben N. Horsford, under the name of George F. Wilson & Co. In 1858 they organized the corporation of the Rumford Chemical Works. At that time Mr. Horsford filled the chair of Rumford, Professor of Chemistry in Harvard University, and from that circumstance the works derived their present appellation. The works are located easterly of the city, on what is known as "Seekonk Plains," once a barren waste, but now covered with fertile fields.

Here they own about two square miles of land, the whole being within three miles of the centre of the city. Through it passes the Boston and Providence Railroad, the eastern branch of the Providence and Worcester Railroad, and Ten-Mile River, on which they own all the manufacturing privileges in the town, the whole comprising some fifty-six feet fall, and equivalent to several hundred horse-power, while the western part of the estate rests on the tide-waters of the Seekonk River, accessible to vessels drawing over ten feet of water.

In the City of Providence are their main offices, their packing and printing rooms. They give employment to a very large number of persons, their buildings covering an area of nearly eight acres.

About the year 1854, at the solicitation of parties largely engaged in the manufacture of yeast, or baking-powders, as they are called in Boston, Professor Horsford commenced an investigation on the subject, which resulted in the production of an acid phosphate of lime as a substitute for cream of tartar, which, when introduced into the flour with bi-carbonate of soda, leaves phosphate of lime, which is an essential constituent of all grains, and phosphate of soda, which has not been found to disagree with the alimentary organs; and both of these together constitute indispensable elements not in the construction of bones only, but of all animal tissues. It is well known that a deficiency of phosphate of lime in food is a common cause of ill-health, and of defective development and retarded growth in children.

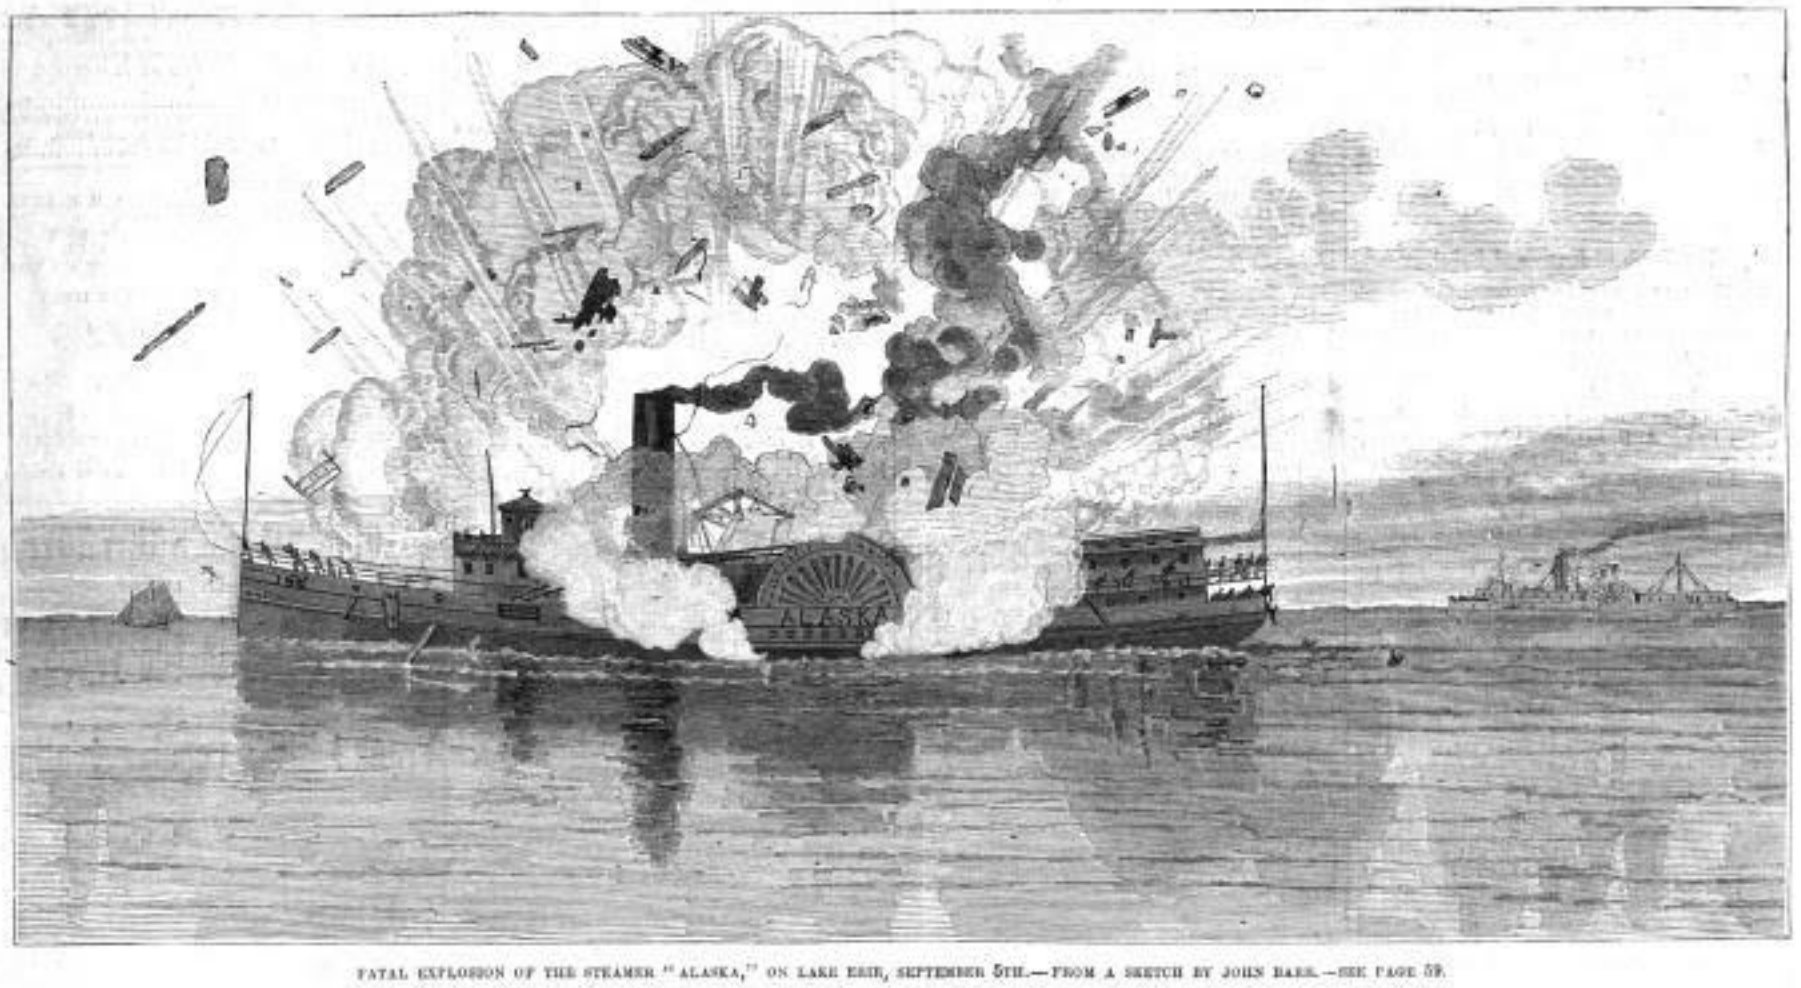
Now, by the use of common or brewer's yeast in the making of bread, carbonic acid is obtained at the expense of certain nutritious elements of the flour. While by the process laid before the public by Professor Horsford, the flour is not decomposed, its nutritious constituents are wholly saved, and it becomes, by the addition of the acid phosphate of lime, more easily digestible. It restores a portion of the phosphates which were in a larger or lesser degree removed with the bran in the process of bolting.

Briefly, the Horsford method preserves the nutritious constituents of the flour, restores the phosphates removed with the bran, secures a uniform, excellent result, furnishes a bread which retains its moisture longer and is more digestible than yeast-bread, while its accuracy reduces the measure of skill required to a minimum.

The Rumford Chemical Works were established for the purpose of manufacturing this acid phosphate, and the progress made in its production and sale, when all the obstacles that have been met and overcome are taken into consideration, is truly wonderful.

These works and their productions are of national importance, and have commanded the attention of the most learned men all over the world. The late Baron Liebig, one of the greatest chemists of modern times, said of this bread preparation, "I consider this invention as one of the most useful gifts which science has made to mankind. It is certain that the nutritive value of flour will be increased ten per cent. by your phosphatic bread preparation."

This product is packed for market in several forms, viz., Horsford's Cream Tartar, Horsford's Bread Preparation and Rumford Yeast Powder. The acid phosphate is also prepared in liquid form as Horsford's Acid Phosphate, which is used largely by physicians in cases of mental and physical exhaustion, diseases of the stomach, etc.



The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country.

There is no fact in physiology better established than this: that a great strain upon the nervous and muscular system, through long continued mental labor, increases the quantity of phosphatic salts taken from the system nearly fifty per cent. beyond what is eliminated under ordinary mental and physical exertion. It, now, the food taken into the system cannot supply this extra demand for repair and waste, derangement of the system must follow.

There seems to be no difference of opinion, in the high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as Horsford's Acid Phosphate. It is

NEW YORK CITY.—"THE MUSIC LESSON" IN ACT II. OF "WOLFERT'S ROOST," NOW BEING PERFORMED AT WALLACK'S THEATRE.

FATAL EXPLOSION OF THE STEAMER "ALASKA," ON LAKE ERIE, SEPTEMBER 5TH.—FROM A SKETCH BY JOHN BASS.—SEE PAGE 59.

Digitized by Google

not nauseous, like most of the preparations of phosphorus, but agreeable to the taste. No danger can attend its use. It is the same acid that is found in wheat and other cereals. If we take into the system more than is needed, it is expelled with the secretions of the body, as has been fully and experimentally demonstrated by scientific observers, and this question does not now admit of controversy.

The Rumford Chemical Works is one of the marked establishments of this country, and its success should give satisfaction to all.

A SUCCESSFUL SOCIETY JOURNAL.

WHAT the *Court Journal* is to Belgravia and Mayfair the *Home Journal* of New York, conducted by Morris Phillips, is to Gotham and the Hub. It is a faithful chronicle of the doings of the refined, the educated, the wealthy, the in-dwellers of that little world to reside within which is the happy privilege of so few, and, *helas*, the unrealized yearning of so many. The *Home Journal* converses with its readers in a charmingly gossipy way, taking them into its confidence in a most seductive *entre nous*, and one feels while perusing its columns of *causerie* that its editor has in nowise been guilty of calling upon his imagination for his facts. Mr. Morris Phillips is essentially an exceptional man. He is a versatile and cultured writer, a deep thinker on moral and social problems, and a conversationalist worthy of Dick's Coffee House. His bright intellectual face leaps into light when he is addressed upon some favorite topic in which he feels interested, and as he glows over it, the listener instinctively learns that "brain wordiness" has not utterly passed away from the nineteenth century. Mr. Phillips, socially, is an acknowledged success. He has conducted the journal over which he presides with signal ability, and Society is largely the debtor of one who contributes so graciously to her most urgent need, that of learning all about herself.

THE THEATRICAL SEASON.

OPERA BOUFFE at its best is being given at the Fifth Avenue Theatre by Mr. Maurice Grau's exceptionally brilliant corps of artists, and Offenbach, Lecocq and Hervé, in the hands of Paola-Marie and Capoul, simply means perfect vocalism, superb acting, and intense verve. Mr. Grau presents us with a *menu* as *piquante* as that of a *petit souper* at the Maison Doré.

At Haverly's the Criterion Comedy Company are drawing "formidable" houses by the sparkling comedy "Our Daughters."

The Loochoo Islands.

A QUARREL has arisen between China and Japan as to the ownership of the Loochoo Islands. For many years past the islanders have maintained a government under the joint protection of their two great neighbors, paying an annual tribute to each; but recently the Japanese Government took possession of the islands, established a new form of administration, and sent notice to the Chinese that hereafter no tribute would be paid. The Chinese minister at Tokio has addressed a long and somewhat threatening note to the Japanese Government, insisting that the seizure is in violation of a well, established understanding, and that the Emperor of China will not allow himself to be thus deprived of his rights. The Japanese had not at last accounts made any answer to this remonstrance, but their actions indicate clearly that they weighed the possibility of incurring the hostility of the Chinese before they made the seizure, and are, therefore, prepared to defend their claim to the islands, if need be, by force of arms. A number of war vessels have recently been built for the Japanese Navy, in England, with special regard to river navigation, and as China is the only country whose inland waters they would care to navigate, this precaution certainly indicates that in a quarrel between the two Governments the Japanese would not back down in consequence of the bullying tone which the Chinese diplomatists usually adopt in negotiations with their Asiatic neighbors. In the matter of naval equipments the Chinese have not been backward, for Sir William Armstrong has recently built for them a number of very fast steam gun-boats, at a cost of $150,000 each. These vessels will carry one 35-ton gun each, and will also be provided with arrangements for the discharge of torpedoes. A Chino-Japanese war would be a naval one, as neither side possesses the facilities for transporting an army of invasion.

The Tomb of Jonah and Babel.

MR. HORMUZD RASSAM has returned to England, having completed the work of his second Assyrian expedition. He brings with him a rich collection of objects which have been acquired during the year. The results of the last journey are of a more varied character than those of any expedition which has taken place since the early explorations conducted by Sir A. H. Layard. Commencing operations on the mounds of Nineveh, Mr. Rassam succeeded in exploring a site which was regarded as forbidden ground. This was the mound of Nebby Yunus, the supposed tomb of the prophet Jonah. In this mound he discovered remains of palaces erected by Esdarhaddon and Sennacherib. His labors on the mounds of Nineveh have resulted in the recovery of a large number of inscriptions, many of extreme interest. Passing southward, he visited Nimroud, where he continued his labors in the Temple of Venus. This building, which he discovered in his former expedition, was now thoroughly examined, and found to be a large open temple containing shrines of several deities. There were also found a number of seats arranged in parallel rows, forming a centre aisle from the chief altar. The plan now recovered seems to favor the idea of its having been a species of forum where religious and other councils were held. The explorations in Assyria have discovered many valuable monuments. Mr. Rassam extended his operations into fields untouched since the time of Sir A. H. Layard's expedition, and he was able to carry out a series of explorations on the mounds of ancient Babylon. Here his discoveries have been most brilliant. In a mound hitherto untouched he discovered a palace of Nebuchadnezzar's, with rich enameled columns, beams of Indian wood, and every indication of having been a most splendid edifice. His excavations in the mound of the Birs Nimroud, the site of the supposed Tower of Babel, have proved that the destruction of this great edifice was due, not to lightning or hostile attack, but to a volcanic eruption, which had torn and shattered the edifice.

FUN.

ONE of the gunners returning from the marshes was asked if he had shot anything. He said, "No, but had given the birds a good serenading."

LANDLORD (to tenant, who had given up farming at the end of his lease to await better times): "Well, Jackson, how do you like living on your capital?" *Farmer:* "Not too well, my lord; but I find it cheaper than letting you live on it!"

INTELLIGENT SERVANT.—*Bridget* (to caller): "Will ye kape still a minit while I look at ye?—No, Missis hain't to home. She told me if a woman come with a wart on the end of a red nose to say she wa'nt to home, and there's no mistaking that wart."

ONE day a petty-officer met an old shipmate named Broome. Said the P. O.: "Hullo! old chap, how are you?" "I'll thank you to put a handle to my name, my good fellow: I'm no longer a petty officer." "Oh! well, then—good morning, *Mr.* Broom-handle." After the display of such ready wit it was hard lines on that petty officer to be tried and reduced!

THE baby rolls upon the floor,
Kicks up his tiny feet,
And pokes his toes into his mouth—
Thus making both ends meet.

The dog, attached to a tin pail,
Goes howling down the street;
And, as he madly bites his tail,
He maketh both ends meet.

The butcher slays the pensive pig,
Cuts off his ears and feet,
And grinds them in a sausage big—
Thus making both ends meat.

The farmer coops his skinny hens,
And feeds them with choice wheat;
The means must justify the ends,
And so he makes them eat.

"CAN I have half this seat?" "No, sir!" shouted the occupant, who was trying to spread himself over the whole of it. "I represent a whole church, and am on my way to Pelonkey to camp-meeting!" "Now, you look a here!" said the man, as he reached over and secured two terrible grips on the selfish man's body: "I don't represent nobody nor nuthin', and 'stead of bein' on my way to camp-meeting, I 'spect I'm on the high road to blazes, but you want to yell out mighty quick which half of this seat you didn't pay for!" It wasn't thirty seconds before the man on the high road to blazes had all the seat he wanted.

MESSRS. HENRY F. GILLIG & Co., 449 Strand, London, England, are authorized to receive advertisements and subscriptions for any of the Frank Leslie Publications.

CUTICURA REMEDIES

Have achieved the most noted success of any medicines of modern times. They consist of CUTICURA, the great skin cure; CUTICURA RESOLVENT, a powerful blood purifier, and CUTICURA SOAP, the most soothing, healing and refreshing before the public.

PREFERENCE for different hotels, like everything else in this varied world of ours, is a matter of taste, but the suffrages of the majority would unquestionably fall in favor of that best of New York hotels, the ST. NICHOLAS. This grand old favorite retains, even surpasses, its old-time excellence, and the *bon vivant* finds in its *cuisine* everything to gratify his fastidious tastes. The rates have been cut down again to the old figures.

NO HEALTH with inactive liver and urinary organs without HOP BITTERS.

ANY of our lady readers who will send their address to THE TOILET MASK CO., 1,164 Broadway, New York, and state that they are readers of FRANK LESLIE'S ILLUSTRATED NEWSPAPER, will receive, without charge, a descriptive treatise explaining how to obtain a radiant and faultless complexion without the aid of poisonous cosmetics, powders, etc. We hope that every one of our lady readers will send for this treatise.

NOTHING purifies and enriches the blood and destroys all poisons in the system like HOP BITTERS.

MURRAY & LANMAN'S FLORIDA WATER is probably the simplest and purest perfume ever made, being absolutely nothing more than the delicious fragrance of rare flowers, preserved and made permanent, and it is doubtless to this purity of composition that its immense popularity is in a great measure to be ascribed.

HALFORD'S TABLE SAUCE is capital for dyspeptics; gives tone to the stomach. Physicians recommend it.

In reply to numerous inquiries from various parts of the country we give below the names of merchants in prominent cities who keep in stock a full line of H. W. Johns Asbestos materials:

Byrne & Fitzsimmons, 451 Broadway, Albany, N. Y.
Philadelphia Branch, 416 Arch St.
San Francisco Branch, 5 First St.
C. W. Trainer & Co., 150 Oliver St., Boston, Mass.
E. & T. Fairbanks & Co., St. Johnsbury, Vt.
E. G. Marvin, 86 Main St., Buffalo, N. Y.
F. H. Wilson, 37 Light St., Baltimore, Md.
W. M. Bird & Co., Charleston, S. C.
A. P. Loffkin, Galveston, Texas.
T. S. & A. J. Kirkwood, 171 Lake St., Chicago, Ill.
Parker, Wise & Co., Cincinnati, Ohio.
S. W. Hempsted & Co., Columbus, Ohio.
Moore & Kerrick, Indianapolis, Ind.
C. A. Parker & Co., New Orleans, La.

The H. W JOHNS MANUFACTURING COMPANY are sole manufacturers of genuine Asbestos Liquid Paints, Roofing, Boiler Coverings, etc., etc., 87 Maiden Lane, New York.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1 Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

Frank Leslie's

LADY'S JOURNAL.

The Best and Handsomest Ladies' Paper in America.

This favorite periodical has commenced its Sixteenth Volume, and will be conducted on the same general plan which has secured for it its great popularity, and rendered it so welcome a visitor to American homes. Early and accurate reports are given, with illustrations, of the prevailing Fashions at home and abroad.

Colored and Plain Fashion Plates are imported monthly from Paris exclusively for this journal.

Elaborate Articles are also given descriptive of "What New Yorkers are Wearing."

The Literary Contents comprise brilliant Serials, attractive Short Stories, Sketches of Life, Character and Scenery, Fashion and Society Gossip, etc., etc. Its art and other miscellaneous engravings are selected with a view to variety, interest and beauty.

It is a novel of rare strength and beauty, with a powerfully drawn plot and admirable dialogue and descriptive.

Published every Friday. For sale by all newsdealers. Price 10 cents per copy; annual subscription, $4, postpaid.

THE BAY STATE SPIDER.

OLD LADY.—"*Drat that spider! he's never done spinning his web. I've tried for years to drive him out of the house, and here he is just as busy as ever.*"

Horsford's

SELF-RAISING

Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

Dr. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahneman Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

If your grocer has not got it send a three cent stamp to the manufacturers for a sample.

Rumford Chemical Works,
PROVIDENCE, R. I.

An overdose of Dinner often deranges the system, brings on flatulence and wind colic, and subjects the patient to great bodily suffering. A single dose of

Tarrant's Seltzer Aperient

Will correct the acidity, relieve the pain, carry off the offending cause, and save sometimes a long spell of illness. Its effects are gentle and thorough, and its general use would prevent much suffering.

SOLD BY ALL DRUGGISTS.

ROGERS, PEET & CO.

THE INFLUX OF GOLD.

As the stars in their courses fought against Sisera, so it would seem that the forces of nature and the laws of trade are now fighting against the Greenbackers. Short crops in England and in France have conspired with abundant harvests in our own country, and with the revival of productive industry, to create in our favor a balance of trade which can no longer be struck by the barter of raw materials but calls as well for the influx of the precious metals to establish the equilibrium of commerce between the United States and Europe. It is stated that the shipments of gold from London and Paris to the port of New York have reached the amount of not less than $17,500,000 within the last seven weeks, being at the average rate of $2,500,000 per week. Since the greater part of these shipments has been made in advance of the annual influx of gold produced by the export of our cotton crop, it is safe to calculate, in the absence of any unforeseen and disturbing force, that this rate of gold importation will be liable rather to increase than to diminution during the remaining months of the year.

As it would be absurd to deny that many natural causes combined with the administrative skill of Secretary Sherman to facilitate the resumption of specie payments, so it would be equally senseless to deny that the present current and tendency of international trade are well calculated to maintain the present parity between our paper and gold, while at the same time measurably serving as a check against the menaced ascendancy of a depreciated silver currency. Whatever tends to promote the influx of gold into our country tends to promote an "inflation" which brings satisfaction to the friends of honest money; and if this is a kind of "inflation" which brings confusion to the political hopes and plans of the paper-money fanatics, while promoting the solid prosperity of the country, it is only so much the worse for the Greenbackers and so much the better for the country, both financially and politically considered.

In the light of the facts now passing before the eyes of the people we can discern the signal advantages which have already accrued to the nation from placing ourselves abreast with the enlightened commercial nations of Europe as regards the purchasing power of our currency. We now trade with these nations on the terms of a monetary equivalency, and therefore without suffering the damage and loss which must everywhere and always result from using a clumsy implement of exchange. Money, in the scientific definition of the term according to its actual use in the figure of society, is nothing but a tool which men employ for facilitating exchanges that cannot be effected by simple barter; and experience has shown that gold is the best of all *tools* for this purpose.

Between countries which have comparatively superior and inferior currencies, the commercial advantages of trade must necessarily be on the side of the country that has the superior currency, whether the inferior currency be made of wampum, of cowrie shells or of irredeemable paper. It is not simply that the very use of an inferior and cumbersome currency argues a want of financial skill on the part of those who use it—a fact which everybody sees—but also that the use of such a currency sets its employers at an absolute disadvantage in the competitions of trade. In the first place, it isolates them from the fellowship of the most advanced commercial nations, who naturally use the most convenient instrument of exchange because they are the most advanced, and who are, also, the most advanced because they use it. Between these nations the currents of trade run in natural channels without obstruction and without friction. In times of monetary dearth there is among them an opportunity for replenishment to the best possible advantage, and in times of monetary excess there is an opportunity for depletion without loss of productive strength. In times of prosperity there is the opportunity of reaping the largest possible gain; in times of adversity there is an opportunity for escaping with the least possible damage. All the natural forces conspire to help and not to hinder.

In the second place, the use of an inferior currency always and inevitably leads to an enhancement of prices, and whatever leads to an enhancement of prices leads to an absolute increase in the cost of production as compared with the cost of production in countries which have a staple and solid currency. There is no exemption from the economic law (discovered by King Solomon, and converted by him into a proverb because of its universality), that "the destruction of the poor is their poverty." The poor woman who plies her needle to the dolorous "Song of the Shirt," because she is too poor to buy a sewing-machine, does not exemplify this law more strikingly than the nation which is too poor, or too ignorant, to employ the most available implement of exchange in the conduct of its trade and commerce. During our late civil war we were, or deemed ourselves, too poor to afford the possession of what we knew to be the best possible tool for the facilitation of exchanges, and now that by the bounty of Providence, co-operating with the not overwise skill of our politicians, we are again placed in possession of the tool approved by the best experience of the civilized world, there are some men among us so infatuated with the ineptitude begotten by the paper-money frenzy, that they actually profess to like poor money better than good, and clamor for the former when the nations of Europe are pouring the latter into our lap. Could the force of folly further go?

It is the function of men to discover the laws of trade and to work in harmony with them if they wish to work without contracting damage and loss. And that now, when the cosmopolitan forces of commerce are bringing us again into visible and tangible communion with the trade of the world, there should be men in Ohio and elsewhere who would fain segregate themselves and their country from quickening contact with this golden current, is a marvel of absurdity that is without parallel in the annals of politics.

THE DANGER TO OUR HARBOR.

In a recent article on the miserable condition of our docks and piers, we referred with some satisfaction to the fact that within the last few years, and particularly under the management of the present Dock Commissioners, there has been some positive improvement in the right direction, and expressed the hope that by a liberal policy in the future the metropolis might not only fully utilize its water-front but make it what it should be in point of appearance. Simultaneously, however, with the progress of the improvement which inspired this hope as to the development of our water-front, an evil has been growing in another direction which, if not promptly checked and remedial measures applied, will certainly render our water-front useless, because it will close up the channel, and make it impossible for vessels of heavy tonnage to reach the inner bay. It is unnecessary to dwell upon the details of this abuse. It has been abundantly proved that for years it has been the practice to empty into the bay the garbage, the street-cleanings and other filth of the city. This, however, is not all. It appears that it is a regular custom with the dredging companies to tow their scows, filled with mud taken from the bottom of one or the other of the rivers, far down the bay, and then to dump them into the channel. On the 17th of August it was calculated that from eight scows filled with such matter, and towed down the bay by the *Alonzo Sumner*, there were dumped into the channel in the near neighborhood of Buoy 16, not less than 300 tons of permanent obstruction. This work has been going on daily and for several years. It is easy to see that if such a state of things is allowed to continue the channel will be completely blocked, and New York, so far as shipping is concerned, will be left in the position of an inland city.

It is quite plain that the dumping of such matter into the bay is unlawful, and that legislation has already made provision for the adequate protection of the harbor. By a law of the State, it is forbidden to cast any dead animals, carrion, offal or other putrid or offensive matter into the New York Bay or into Raritan Bay within the jurisdiction of this State. It does not say that it shall be lawful to cast such substances into the bay at any one point, and unlawful at any other. It especially and distinctly prohibits all such dumping in *any* water which may be called the harbor or bay of New York. The enforcement of these rules and regulations is intrusted to the Shore Inspector. "It shall be the duty of said Inspector diligently to investigate and report without delay to the proper magistrate, court or other authority, any and every violation of any of the provisions of this Act." It would thus appear that the evil has grown up, not because there was no law to prevent it, but because the law was not enforced, and it must be concluded either that the Shore Inspector was ignorant of his duties or willfully failed to perform them. In either case, he is without excuse. But the fault lies not with the Shore Inspector alone. It lies with the Mayor of the city, with the Dock Commissioners and with the Police Commissioners as well. It is the business of the City Government to care for the welfare of the city; and surely the welfare of the city cannot be separated from the condition of the harbor.

It will not be surprising if it shall be satisfactorily shown that this abuse of the harbor is another result of the unhappy system which prevails of governing this city from Albany—another proof of the evils connected with the system of government by commissions. And the evil will not be unmixed with a certain element of good if its exposure shall lead to a restoration of the city's rights. In any case, it is the duty of every good citizen to see to it that the laws which have for their object the protection of the harbor, shall be rigorously enforced, and that those whose duty it is to enforce those laws are held to a strict account. It will be well, also, if the present agitation shall lead to a wiser and more economical disposal of the city garbage, street-sweepings and other refuse. The time has surely come when the example of many cities in the Old World in this respect should be followed by New York, and when that which now threatens the destruction of our noble harbor, and is in many ways a source of discomfort and disease, should be converted into a source of wealth.

SECRETARY SCHURZ AND THE INDIANS.

No member of President Hayes's Cabinet has exhibited higher qualities of practical statesmanship in dealing with the questions coming within the scope of his Department than Secretary Schurz. Condemned and satirized at the outset by many over-hasty critics as a mere theorist and visionary, he has throughout conducted his branch of the public service upon the strictest business principles—eliminating abuses, introducing reforms, and securing efficiency and the application of practical common-sense methods where from time immemorial incapacity and charlatanism have marred and debauched everything within their reach. This has been especially true as to the Indian service, which is now for the first time placed on a basis of efficiency, integrity and good faith. It was no easy matter to tear up by the roots the corruption, jobbery, and fraudulent practices of every sort which had become intrenched in our so-called Indian policy, and the fact that Secretary Schurz has achieved this result is alone sufficient to mark his administration of the Interior Department one of the most memorable in our history.

In pursuance of his policy of looking personally into the details of every matter requiring his attention, the Secretary has recently made a visit of inspection and inquiry to the Indian reservations in the far West, traveling by primitive conveyances through a country which no Government official had ever visited. The results of his visit to the Spotted Tail Agency, on the Rosebud River, eighty-seven miles beyond the Missouri, seem to have been eminently satisfactory—the Brulé Sioux being found in a contented and prosperous condition and presenting many indications of genuine progress. Many of them are engaged as freighters, and others are becoming farmers, manifesting the utmost eagerness to acquire land. Under the Sioux Treaty of 1868, the head of each family is entitled to 320 acres of tillable land, and as rapidly as they are surveyed the lands are pre-empted by the Indians, who put down their stakes to make sure of their possessions. At a council in which 1,200 Indians participated, Spotted Tail expressed great gratification at the presence of Secretary Schurz, and testified to the fidelity with which all the promises he had ever made had been fulfilled. This fair dealing of the Government had inspired the Indians with confidence, and, he added:

"They had already gone to work, and were now earning money for themselves. When settled upon their farms, the Indians would rapidly increase in numbers, and would need all the land which was set apart for their use. He wanted schools established that the young people might be taught English. He wanted English taught, so that his people would be able to deal directly with the whites, and thus avoid the necessity of agents and interpreters. He also wanted the young men to be taken into the agency shops and taught to be carpenters, blacksmiths and harness-makers, so they might be able to build their own houses and mend their own tools and implements."

These are significant words; but a still more remarkable feature of the interview was the entire absence of complaint, particularly as the Secretary invited them to make known to him any grievance which needed correction and redress.

The vigor and decision of Secretary Schurz's Indian policy is well illustrated by his treatment of the contractors who were engaged in freighting supplies to the Brulé and Ogallala bands. The story is thus told by a correspondent of the *Times*:

"When the removal of these bands was made from the Missouri to the present locations, which were selected by the Indians themselves, the contractors combined and demanded exorbitant prices for transporting the Indian supplies from the river. The question of transportation was very important, and one upon which the public peace depended. The Indians must have their supplies promptly, and no satisfactory explanation for delay can be made to them. The contractors knew this, and believing they could force the Government to accede to their demands, stubbornly refused to make any compromise or abatement in the charges adopted by them. When it is known that the supplies for Spotted Tail had to be transported by wagons 97 miles and those for Red Cloud 100 miles, and that to fail to have them at the agencies at the appointed time would lead to serious trouble and perhaps war, the gravity of the situation will be appreciated. Determined not to submit to the imposition of contractors, Secretary Schurz boldly decided to make the Indians transport their own supplies. Upon investigation it was discovered that 400 wagons and 800 sets of double harness could be purchased, and that the Indians could be paid for hauling their supplies for one year for less money than was demanded by the contractors. The wagons and harness were accordingly purchased, an arrangement was made with the Indians by which they were to receive one per cent. per 100 pounds for each 100 miles of transportation, the Indians to furnish their own horses, and an Indian freight line is now successfully and permanently established.

The country may well felicitate itself upon the fact that it has at length secured at the head of its Indian Service a man who not only knows how to do his duty, but is honest and brave enough to do it, spite of all hostility from whatever source.

PRESIDENT HAYES ON THE POLITICAL SITUATION.

PRESIDENT HAYES signalized his participation in the reunion of his old regiment, the Twenty-third Ohio, at Youngstown, on the 17th of September, by a calm and statesmanlike address on the political issues of the day, and especially on the significance of those events in Congress and some of the Southern States which have revived the discussion of the objects and results of the Civil War. The main argument of the address was in refutation of the doctrine of State Rights as still insisted upon by many Southern statesmen, and it concluded with the following summary of the situation as it now exists:

"No one can overstate the evils which the country must suffer if lawless and violent opposition to the enjoyment of Constitutional rights is allowed to be permanently successful. The lawlessness which today assails the rights of the colored people will find other victims to-morrow. This question belongs to no race, to no party, and to no section. It is a question in which the whole country is deeply interested. Patriotism, justice, humanity, and our material interests, all plead on the right side of this question. The colored people are the laborers who produce the cotton which, going abroad to the markets of the world, gives us that favorable balance of trade which is now doing so much for the revival of all business. The whole fabric of society rests upon labor. If free laborers suffer from oppression and injustice, they will either become discontented and turbulent, destroyers of property, and not producers of property, or they will abandon the communities which deprive them of their inalienable rights. In either case social order and the peaceful industries upon which prosperity depends are imperiled and perhaps sacrificed. It will not do to say that this is an affair which belongs solely to the distant States of the South. The whole country must suffer if this question is not speedily settled, and settled rightly. Where the two races are numerous, prosperity can only exist by the united and harmonious efforts of both the white people and the colored people. The only solid foundations for peace and progress in such communities are equal and exact justice to both races.

"Happily, in the very communities where lawlessness has been most general and most successful, there are editors of newspapers and other influential citizens who speak out and denounce these crimes against free government. It is plain that a sound public opinion is forming where it is most needed. No community can afford to allow any of its citizens to be oppressed—to lose their rights. To be indifferent on the subject is to disregard interest and duty. The Union citizens and soldiers can do much to remove the evils we are considering. Let it be understood that no public man in any party will be sustained unless he will undertake to carry out in good faith the pledges made in all our platforms in regard to the rights of colored citizens; unless he will support laws providing the means required to punish crimes against them; and unless he will oppose the admission of any man to either House of Congress, whose seat has been obtained by the violation of the Fifteenth Amendment. The right of suffrage is the right of self-protection. Its free exercise is the vital air of republican institutions.

"To establish now the State rights doctrine of the supremacy of the States, and an oligarchy of race, is deliberately to throw away an essential part of the fruits of the Union victory. The settlements of the war in favor of equal rights and the supremacy of the laws of the nation are just and wise and necessary. Let them not be surrendered. Let them be faithfully accepted and firmly enforced. Let them stand, and, with the advancing tide of business prosperity, we may confidently hope, by the blessing of Divine Providence, that we shall soon enter upon an era of harmony and progress such as has been rarely enjoyed by any people."

EVENTS ABROAD.

THE principal event of the week abroad is the capture of Cetewayo, the fugitive Zulu King, by a squadron of dragoons who had surrounded him in the bush. With the savage chief in their clutch, and his armies broken and scattered, the British may now, at last, be considered absolute masters of the situation, and the work of pacification can be carried forward without serious interruption. Whether Sir Garnet Wolseley will prove himself able and wise enough to repair the blunders of the war by a policy of conciliation and fair play, and so introduce South Africa into the family of civilized communities, is yet to be seen. So far there has been little in the management of the war by the British which is calculated to inspire confidence in their sagacity or sense of justice. The war, if not begun in wantonness, was certainly without real justification, and it is impossible not to respect the Zulu King, savage as he is, for

Digitized by Google

the courage with which he resisted the demands which Sir Bartle Frere made upon him without warrant or excuse. If Beaconsfield brought "peace with honor" from Berlin, as he claimed, it will scarcely be pretended that the outcome in Zululand, whatever it may be, will justify any such high-sounding felicitation.

Further details of the massacre of the British Residency at Cabul seem to confirm the suspicion that the Ameer was not so innocent of complicity in the outrage as he pretended. It is certain that when called upon by Major Cavagnari for assistance, he failed to furnish it. The situation still remains a critical one for the British, who, owing to the want of transportation and other causes, have not yet been able to relieve the points threatened by the insurgents. It is stated that all the approaches to Cabul are covered by hostile tribes, and there are intimations that strong bodies of Afghans will dispute the British advance, which will be made by a force of 2,500 Europeans and 3,000 natives. The Afghan regiments at Herat mutinied, September 6th, and murdered, it is reported, all the military and civil officials. Herat is the most important city in Western Afghanistan, and on account of its position has always been regarded as the possible point of contention between England and Russia. The district of Kohistan is also said to have revolted. Meanwhile, Russian semi-official organs are urging the Government to embrace the opportunity to strike a blow at British authority in Central Asia, and it is not impossible that serious complications may yet arise out of the new situation of affairs.

There does not appear to be any real ground for the rumor of a misunderstanding between Russia and Germany, but the newspapers keep up a steady fire of sensational statements, and the indications of alarm are quite generally prevalent. The London *Times* ascribes the reports to "a ring of interested speculators in confusion," and adds:

"For the Russian and German nations at present the difficulty appears to be to manufacture reasons for flying at each other's throats. Their interests are in no respect opposed; neither owns territory coveted by the other. Yet the press on both sides is taking it for granted that, sooner or later, the sword will have to be drawn. We believe that much of this flourishing of swords will be found to be merely exercises of the fencing schools, but it is time that the masters should come forward and reassure mistrustful Europe."

Rumors of the death of the Czar last week greatly disturbed political and commercial circles for a day or two, but they were found to be wholly unfounded, the Emperor being in perfect health. The vigorous measures against the Nihilists are still maintained. The new rules for the government of universities where lectures have been begun forbid the students to belong to societies of any kind, hold meetings, complain of or orally disapprove existing regulations, give private lessons, or have their lectures printed.

The land agitation in Ireland grows in intensity. Generally throughout the United Kingdom the labor troubles continue and the trade prospect is most discouraging. It is mentioned as significant of the changing conditions of trade that during the past fortnight one of the largest firms of agents in Lancashire have taken more orders for American cloth for India than they received during the same period for all the English firms which they represent.

Fresh attempts have been made upon the life of the Sultan, and he is menaced also in another direction. Russia has called the attention of the Powers to the recent conflicts between the Musselmans and Christians in Eastern Roumelia, and blames the Porte for sending back the refugees to their homes in a destitute condition. She points out that if further disturbances should occur the Porte would sacrifice the right of sending Turkish troops into Eastern Roumelia. At Constantinople, however, it is argued that the Porte's right to send back the refugees, of whom 150,000 are still awaiting transportation, and dispatch an army to Eastern Roumelia in the event of a massacre of Musselmans, is incontestable.

There is an intimation that unless the Cuban difficulties shall be speedily composed, Martinez Campos will return to the island and resume the direction of affairs. It is hinted—but the intimation is probably without foundation in fact—that the Spanish Government would have submitted a Bill to the Cortes abolishing slavery in Cuba forthwith, but it was feared that serious trouble to agriculturists would ensue from a lack of laborers. Late Cuban dispatches represent that the slaves of Cienfuegos, in the Cinco Villas, have risen in rebellion against the Spaniards, and have joined the Cuban patriots, taking with them a large proportion of their masters' cattle. Captain-General Blanco has issued a decree declaring the province of Santiago de Cuba in a state of war.

The negotiations between Egypt and Abyssinia are said to be taking a more favorable turn, and may result in a satisfactory adjustment of the existing disputes.—Some parts of Hungary, owing to the bad harvest and numerous floods, are threatened with famine, the distress being already very great.—It is probable that Germany will shortly call a fresh monetary congress, to be held in Berlin.—A Liverpool paper says there is no prospect that the bi-metallic congress, which the United States proposed should be held in London, and to which the British Government provisionally assented, will meet this year.—The dictatorship in San Domingo has terminated, and the republic will return to the constitutional form.—Count Ledochowski, ex-Archbishop of Posen, has been condemned by a Prussian tribunal to a fine of 2,000 marks or seventy days' imprisonment, for excommunicating unlawfully a Catholic priest who had obeyed the May laws, but as he is not within Prussian jurisdiction, the sentence will not cause him much inconvenience.—The Emperor William was received coldly on his visit to Strasburg, and there is said to be a growing anti-German feeling among the people of Alsace-Lorraine.—Russian engineers have commenced the works by which it is intended to unite the Black and Caspian Seas by connecting various rivers. The accomplishment of this work would give Russia a water-way to the frontier of Afghanistan.

THE political struggle in Ohio is taking on the form of a struggle over the United States Senatorship, the Democrats being apparently persuaded that the Governorship is already lost to them. It is said that General Ewing will make a vigorous effort, in the event that the Legislature is Democratic, to secure the seat in the Senate now occupied by Mr. Thurman.

PROMINENT officials of the Treasury Department declare that the management of the New York Custom House under Collector Merritt is more efficient than it has been for many years. "The Government is better served, the revenues are collected with greater economy and the business of the establishment moves more smoothly than ever before." This is high praise, but it is no doubt fully deserved.

THE supporters of the Florida ship-canal project will make an earnest effort to secure from Congress such legislation as will insure a preliminary survey of the proposed route early next Spring. On the other hand, the railway corporations whose business would be seriously affected by the consummation of the scheme are industriously engaged in working up an active opposition, and have, it is said, so far succeeded, that the Florida Legislature will probably refuse to grant a charter to the capitalists who are pushing it.

THE appeal of the Committee of the Chamber of Commerce appointed to solicit funds in aid of the yellow-fever sufferers should meet a prompt and generous response. The condition of Memphis is still deplorable, the treasury of the Howard Association is entirely exhausted, and unless aid is furnished immediately the association must abandon to their fate the sick now under their charge. Deaths are still numerous and the distress steadily increases. New York, enjoying a prosperity unparalleled in recent years, cannot better testify her appreciation of the improved condition of affairs than by contributing liberally to the relief of the communities smitten with destitution and death.

THOSE persons who have insisted that resumption was not really accomplished because legal-tender notes were redeemed only in New York, will find it difficult to persist in their pretense now that Secretary Sherman has directed that gold as well as silver and notes shall hereafter be paid out from all subtreasuries, in all the ordinary disbursements of the Government, and that gold coin shall be furnished in exchange for legal-tender notes in the sum of $100 or multiples thereof. A more decisive proof of the completeness of resumption and of the confidence of the Government in its stability could not be furnished than is afforded in this latest order of our financial Secretary.

THE little knot of infidels who resolved in convention at Cincinnati, the other day, that all religion is a farce, that the Bible is filthy and obscene, and that its circulation should be prohibited unless the diffusion of "uninspired" books, pamphlets and papers of an obscene character is permitted through the mails, are not likely to find much of a following in their effort to establish a new political party. The common people, to say nothing of men and women of culture and conscience, have a sublime contempt for the atheists and free-thinkers who seek to thrust God out of His own universe and give the world over to the domination of vice, appetite and passion; and any movement to incarnate this monstrous sentiment in a positive political organization will inevitably cover those engaged in it with failure and disgrace.

A SIGNIFICANT illustration of the despotism of trades-unionism comes to us from the antipodes. Recently all the men employed in the shipyards at Sydney, New South Wales, struck for higher wages. They were receiving at the time three dollars per day of eight hours and fifty-six cents per hour overtime, and the cause of the strike, under these circumstances, was wholly unintelligible to the public. It now turns out that the strikers did not quit work of their own free will, but because of an edict of the Laborers' Society to which they belong. Thus an important industry, upon which the prosperity of Australian commerce and trade largely depends, is brought to a standstill merely to gratify the caprice or animosities of a few arrogant and impudent marplots who are incapable of discerning that the interests of capital and labor are necessarily mutual.

A LETTER has been written by Jefferson Davis to the editor of a Mississippi newspaper, authorizing the announcement that "his name will not be, with his consent, included among the candidates for the United States Senate from that State." The letter embodies an argument in support of the doctrine of State Rights, the maintenance of which is declared to be "essential to secure the liberty, safety and happiness of the people of the States and their posterity." The writer believes, however, that some other representative in the Senate could be more useful than himself in advancing these views, and he, therefore, stands aside. It does not follow that he may not be chosen as Senator, in spite of his declination, the ultra reactionary element having control of all the party machinery in Mississippi, and being determined, apparently, to make no concessions in any respect whatever to the sentiment of the more moderate portion of the Southern people.

PRESIDENT HAYES, in a recent conversation on political topics, expressed the belief that Senator George H. Pendleton is the strongest and most available man the Democrats can nominate for President. "His abilities are of the first order, and he has fewer enemies than any public man in the party." The President, in reply to an inquiry as to whether, in his opinion, the national bank question will be made a national issue in the next campaign, remarked:

"The question that will be all-important in the next campaign will be national supremacy, not national banks. The national banking system is so much superior to any State or private banking system that the country has ever enjoyed that it will not be ready to give it up, no matter how much it may be attacked by politicians. If it were abolished State banks would spring up all over the country, because some banking system is necessary to the wants of the people, and every system except this has always resulted in a wild-cat, irresponsible currency. With the national banks issuing the paper money there is absolute security to the holders, and no danger at any time of their notes becoming depreciated."

THE migration of the blacks for the North still continues, and is now a great deal more systematic than at the outset. Plans have been carefully matured to direct emigrants to the points where labor is needed, and idleness and suffering will thus be avoided. The demand is much greater than is supposed, one gentleman who has been connected with the migratory movement from the outset having received applications for no less than 20,000 colored laborers, mostly for farms. Over one-fourth of this number will find homes and employment in one Western State alone. This extraordinary demand for labor is said to be caused largely by the drain of farm laborers to the mining regions further West whither they are attracted by the prospect of higher wages and the hope of suddenly bettering their condition. A conference of prominent persons is to be held in Philadelphia on the 15th of October for the purpose of forming a national association to assist the exodus and protect the emigrants from imposition.

THERE is a steady growth in the Chinese population of New York and the contiguous cities. The *Herald*, which has been investigating the subject, states that there are now in the city over three hundred Chinese laundries, fifty groceries, twenty tobacco stores, ten drug stores, six restaurants and a variety of other establishments controlled by Mongolians. Over seventy-five have gone into domestic service. In Jersey City there are three factories which employ Chinese labor alone. In Brooklyn there are about fifty laundries, six cigar stores and one grocery, owned and managed by Chinamen. The total number of Chinese in New York is over 2,500, ninety-five per cent. of whom are regularly engaged in some honest employment. For the benefit of this community, three schools are maintained by private charity. Owing to the absence of Chinese women, the males have intermarried with the whites, and it is said that there are nearly 300 Chinamen in this city who have white wives, mainly Spanish and Irish women. Should the anti-Chinese feeling continue in California, it is expected that considerable numbers of Celestials from that State, and especially of those hereafter reaching there, will become residents of this and other Eastern cities.

LORD BEACONSFIELD is an optimist, and therefore credulous. He has given many proofs of this tendency, but none which is so calculated to excite ridicule as that offered by his address at a recent agricultural banquet at Aylesbury. We quote:

"Referring to American competition with Great Britain, he said the greatest apprehension was felt in the United States that they could not compete with Canada, owing to their high taxation and high wages. Since the surrender of the territories of the Hudson's Bay Company, Canada had become possessed of an illimitable and fertile wilderness. Nearly all the chief landholders in the extreme Western States of America had sold out, gone to that wilderness and begun the work of cultivation there. He had heard on high authority that Canada expected to outstrip the United States in the competition for the European markets. He therefore advised the farmers of England not to be precipitate."

That the Premier of Great Britain should exhibit such dense ignorance of America as is here displayed is as remarkable as it must be humiliating to all intelligent Englishmen. The statement that "nearly all the chief landholders in the extreme Western States of America have sold out, gone to the wilderness of Manitoba, and begun the work of cultivation there," is so utterly preposterous that one feels it to be unworthy even of derision.

NEWS OF THE WEEK.

Domestic.

ALL attempts to form a new coal combination have so far failed.

SILVER certificates are going into circulation at Washington the same as paper currency.

ANOTHER batch of 317 Mormons arrived at this port last week, and at once proceeded to Utah.

THE sum of $9,000,000 will be paid out at Washington for arrears of pensions in the next five weeks.

ROBERT GOELETY, one of the family of eminent merchants of that name, died at his residence in this city, September 22d.

THE forty-eighth annual exhibition of the American Institute opened September 17th, at the building corner of Third Avenue and Sixty-third Street, New York.

GOVERNOR WALLACE of New Mexico has asked for authority to raise volunteers to suppress Indian disorders, but the Government is reluctant to grant the authority.

THE Senate Committee charged with the investigation of the allegations of bribery and corruption against Senator Ingalls of Kansas, met at Topeka, September 20th.

A MEETING of the National Democratic Executive Committee was held in Washington, September 18th, for the consideration of the political situation in New York and Ohio.

MR. JAMES REDPATH, the well-known manager of lyceum lectures and other popular entertainments, has been missing for over a fortnight, and fears for his safety are entertained.

THE Republicans of Colorado have nominated William E. Beck for Supreme Court Judge. The Convention resolved to support Grant for the Presidency if he should be a candidate.

OFFICIAL returns from Humboldt County, California, show that Berry (Dem.) is elected to represent the Third Congressional District. Keuna's (Rep.) election was considered sure.

THE Wisconsin Deaf and Dumb Institute, located at Delavan, was destroyed by fire, September 16th. There were 147 pupils in attendance, all of whom escaped with their baggage. The loss is $100,000.

REV. SAMUEL S. HARRIS was consecrated as Bishop of the Protestant Episcopal Diocese of Michigan, at Detroit, September 17th, in the presence of a notable company of clergy, lawyers, and prominent citizens.

THE Republicans have a majority of thirty-seven on joint ballot in the Maine Legislature. Under the Constitution the Legislature, on joint ballot, will choose the Executive Councilors and all other State officers.

THE Rev. Dr. Joseph P. Thompson, for many years pastor of the Broadway Tabernacle, in this city, and more recently one of the best-known Americans living in Germany, died September 20th at Berlin, of apoplexy.

GENERAL RAUM, the Commissioner of Internal Revenue, has issued orders to his subordinates in North Carolina to adopt vigorous measures against the "moonshiners" who have recently manifested a violent spirit of defiance to the laws.

THE Comptroller-General of Georgia has been found guilty on eight articles of the seventeen preferred against him by the Court, and dismissed from office. The lower House of the Legislature has decided to prefer articles of impeachment against Treasurer Renfroe.

THE twenty-fifth anniversary of the organization of the Republican party was celebrated at Worcester, Mass., September 18th, by a notable jubilee. Speeches were made by General Banks, Senators Dawes and Hoar, ex-Governor Rice, General Burnside, and several others.

THE quarter-centennial of the settlement of Kansas was celebrated at Lawrence, September 16th. The occasion was marked by great enthusiasm, over 20,000 people participating. A number of addresses by prominent anti-slavery men of the period of the Kansas-Nebraska struggle were given.

PRESIDENT HAYES attended the reunion of the Twenty-third Ohio, his old regiment, at Youngstown, Ohio, September 17th, and made an elaborate speech. On September 18th he visited the Michigan State Fair at Detroit, and made a speech on the revival of business and the business prospects of the country.

THE record of the contestants in the great walking match at 9 A. M. on Tuesday morning was as follows: Rowell, 157; Guyon, 144; Merrill, 138; Hart, 132; Hazael, 125; Ennis, 114; Crochot, 126; Jackson, 121; Weston, 119; Krohne, 108; Ferdemeyer, 102; Taylor, 81. Dutcher was compelled to retire from the contest after making 23½ miles.

THE Republicans of Massachusetts have nominated John D. Long for Governor, and Byron Weston for Lieutenant-Governor. The other places on the State ticket were filled by renomination of the present State officers. The platform reiterates the Republican doctrines of National supremacy, free and fair elections, the exclusion of armed men from the vicinity of voting places, and hard money.

THE convention of the Butler Democracy of Massachusetts, held at Worcester, September 17th, nominated the following ticket: For Governor, Benjamin F. Butler, of Lowell; for Lieutenant-Governor, A. C. Woodworth, of Chicopee; for Secretary of State, Michael J. Donahoe, of Somerville; for Treasurer, B. N. Phillings, of Winchester; for Auditor, D. J. King, of Boston; for Attorney-General, William D. Northend, of Salem. A convention of "Independent" Republicans subsequently nominated the same ticket.

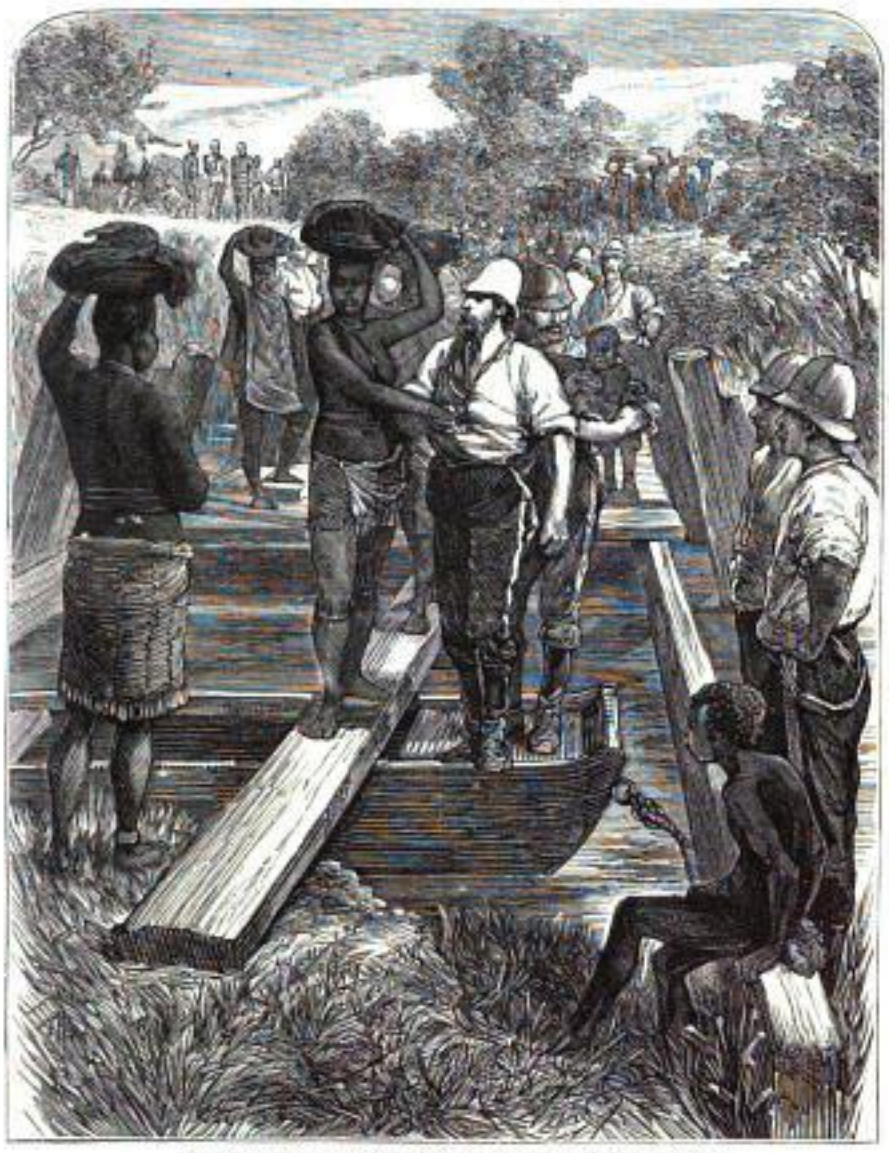
Foreign.

THE Italian budget for 1880 shows a deficit of 6,000,000 lire.

THE town of Ekaterin-Oslan, in South Russia, has been greatly damaged by fire.

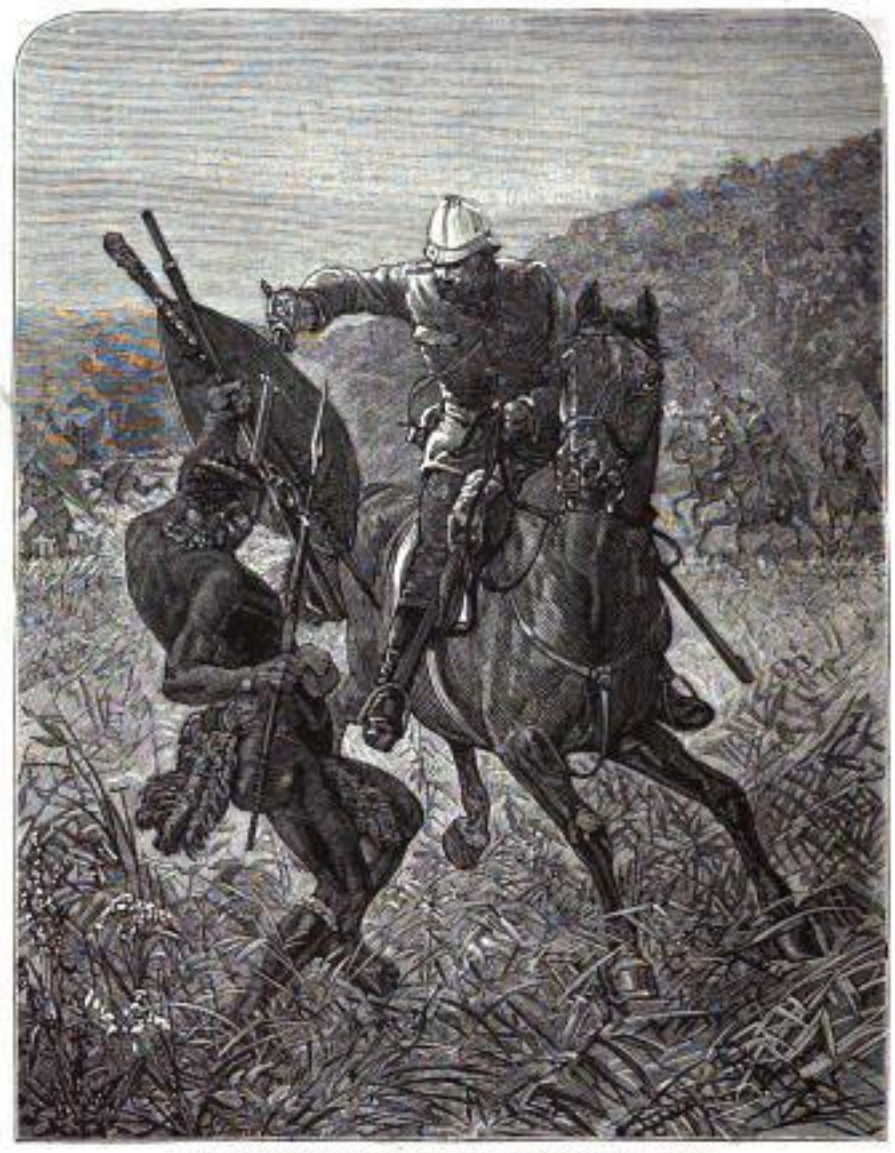
THE Governors of important Mexican States have assured President Diaz that they will maintain order.

IT is estimated that England will have to send this country $30,000,000 in gold to adjust the balance of trade against her.



AT the forthcoming visit of Prince Bismarck to Vienna, Germany and Austria will conclude an agreement mutually guaranteeing each other's territory.

EIGHTY Cuban insurgents have surrendered. The Governor of the province of Santiago de Cuba has published a proclamation offering pardon to all insurgents who lay down their arms.



THE Kuldja Treaty, which Russia has just concluded with China, settles satisfactorily a dangerous dispute at an opportune moment. Relieved from apprehensions of a conflict with the Chinese, the Russians may now concentrate their attention on the momentous interests at stake in Central Asia.

[Concluded from last week.]

WHOSE WAS THE THIRD CHAIR?

"I HAD the happiness, at last, to notice a favorable change in Paul. Gradually his brow became calm, his breathing regular, a soft, joyous light beamed in his eyes, his voice took the tender inflection that told of a spirit given over to rest after a conflict gained.

"His arm once more was flung about my shoulders. I was permitted to enjoy the sweet and tender confidences of his soul.

"One night he confided to me that the deed was done—Egeria was free!

"'It is matter,' he said, 'and matter cannot be destroyed; but it can be resolved into another shape; it can in this case be even reduced to gas and ashes. I shall cut it up in small pieces, remove the gristle, ligaments and sinews, saw the bones into trifles, and submit the whole thing to the crucible.'

"For a moment I was aghast—my blood ran cold.

"'Gracious Heaven!' I said, 'Paul, you haven't killed her? You have not taken her life?'

"'You forget, Harold,' he replied, coldly, 'that what you say is impossible. Life cannot be destroyed!'

"'I beg of you, Paul,' I cried, in an agony of fear, 'tell me what you have done to Egeria.'

"'I have compelled the mass of matter which took the form of a body and imprisoned the soul of Egeria to disorganize and take other shapes.'

"'What have you done, Paul,' I repeated, wildly—'what have you done?'

"He waved his hand impatiently.

"'I wouldn't have believed I could have been fond enough of you to endure this stupidity. Follow me;' and thus saying, he led the way with quick, nervous strides, down the stone steps of the staircase, one, two, three flights, and I discerned, with a chill that went to the marrow of my bones, that we were approaching the dissecting room.

"We entered the gloomy portal, and stood before the long tables, upon one of which immediately before us lay the motionless body of the sibyl.

"It was quite dead and cold, and thus gained a nobility that never could have belonged to it in life. The large white lids shut down upon the eyes, quenched even the memory of their chuckling ferocity, and the heavy features, composed and stern, wore a sculptured grandeur that commanded respect. I looked upon it without horror, even with a species of admiration; and afterwards, in dissecting it, we found much to interest us in the peculiar formation of the heart, which being 'the sensual servant of the soul, is 'the sun of our body, the king and sole commander of it, the seat and organ of all passions and affections.'

"After dissection, we took it to the laboratory, and submitted it piece by piece to the crucible. Slowly, and after laborious but patient toil, we had the satisfaction of knowing that all possible trace of that organization was obliterated.

"I hope I am not tiring you, gentlemen," said the doctor, finding his visitors a little uneasy.

"Not at all," they replied, with a blandness that partook of heroism, the student adding that he was particularly interested in *the sweet and tender confidences of Paul.*

"Having thus reached an important stage of progress," the doctor continued, "I was prepared to find Paul patient for the result. He had done all that was possible for the advancement of his theory, and nothing remained now but the fulfillment of his promised happiness. Indeed, he so well described to me the realistic formation of his basis for future felicity, that I didn't think of doubting it.

"'You know, Harold,' he said, 'the soft marrowish white substance that forms the brain, and is protected by the *dura mater* within the skull; when that was taken away, the soul of Egeria burst through the *pia mater*, and escaped, saying to me at parting, 'I will meet you a year hence, Paul, a year from to-night!'' You see he was permitted to see all this, and to hear the voice of Egeria thus hold forth to him an ecstatic future.

"But he declared that at that moment his vision was blinded by a stream of light, and he couldn't quite see the form that Egeria was permitted to assume.

"This uncertainty chafed his spirit, and at last he became haunted by the fear that when they met she might again be enshrined in the ponderous body that confronted us under the the lamplight that night.

"As days glided into months, he became more restless, dissatisfied and gloomy than of old. The twenty-seventh night of November was the date of Egeria's deliverance, and this night, so long looked forward to as the completion of Paul's happiness, wore a sinister aspect as the Summer waned.

"He spoke of the subject no more, but day by day and week by week he grew more and more melancholy—absorbed in gloom he paced the dreary corridors, desolate and alone, while I, watching him from a distance, felt my soul melt within me from pity and dread.

"He lay awake hour after hour, and when exhaustion brought sleep it was murdered by unhappy dreams; he would stretch out his arms, not in delight and ecstasy, but with a species of fear and horror that is indescribable, and cry out, in a loud agonized voice, 'She is here! she is here!'

"I began to wish we had never met the sibyl, or, having met her, had been contented with her whole formation, and had not attempted to deliver her from what after all was a respectable tyrant; it was neither the matter pertaining to a hunchback, a mermaid, or a ghost as our young friend here suggested, but a big, brawny mass of flesh and blood that I fervently wished had been powerful enough to protect itself from the prisoner within its gates.

"I became sorely tempted to take refuge in skepticism, and persuaded myself that we had done with Egeria and the tyrant for ever.

"'The fact is,' I said to Paul, 'it was a scientific experiment, and liable to failure as everything of that kind is—if the spirit was freed, it would have come to you at once—we are forced to believe then, that, owing to some little flaw in the theory or the mechanism, the result was abortive. As for me,' I continued, encouraged by a gleam of hope that flitted across the gloomy visage of my friend, 'I don't believe we'll be troubled with Egeria in any shape.'

"But Paul shook his head mournfully.

"'Wait,' he cried, with a bitter smile, 'till the twenty seventh night of November!'

"'See here, Paul,' I said, 'if you go on in this way, you'll either be dead or a maniac when that time comes. I'm going to take the matter in my own hands and cure you of this fantasy. Will you give yourself over to me for the next few months?'

"Is it only a few months?" said Paul, with the accent of a poor wretch doomed to the gallows.

"'Don't you know the day of the month?' I asked, with trembling expectancy.

"'No,' he replied, 'nor the month of the year! I don't want to count the days—but I *shall* know, Harold, when the twenty-seventh night of November comes. Steep me to the lips with opiates, shroud me in gloom and darkness, hide from me time and light and sensation; when that awful night comes I shall know it, Harold. Oh,' he groaned, 'would to heaven it were to-morrow, that I could grasp the agony and have done with this terrible suspense!'

"I took him in my arms and dragged him to my room. With faint and dusty radiance, a beam of the sun struggled through the begrimed window and fell upon the lustrous hair of Paul. It lingered there as if loath to leave the one fair spot in this gloomy den, but I pulled down the heavy curtain and shut out the fleeting ray. The room became suddenly shrouded in darkness and remained so as far as sunlight was concerned, but I caused the shutters to be closed and barred upon the outside. All necessary air was forced through the room by means of a ventilator.

"I don't suppose those shutters were ever opened again. As for Paul, he bade farewell then and there to the light of day. Fearing he might have deceived me in his pretended unconsciousness of time, I kept him asleep for thirty-six hours. I was with him a portion of every hour of the day and night, sleeping at odd hours to deceive him—all the time I could spare from my hospital duties were given over to him as my special patient. A regimen of action was agreed upon—we were to read sparingly and of light literature—to smoke rarely, to endeavor to become interested in backgammon, to argue none, to converse jocularly if possible, at all events cheerfully, and to devote ourselves mainly to dreams of the future.

"Oh, the resolves that were made for health and sanity, the abandonment of fancies and theories and beliefs of all kinds, save those that presented themselves gayly and innocently in the shape of trust and faith and patience to wait the development of nature's plans in our behalf. We determined that when we should shake the dust from our feet in escaping this gloomy prison, journeying away to foreign lands for recreation and delight, we would leave all doubt and dread and grief as part and parcel of this dreadful place. For, I need not tell you, gentlemen, that at times we suffered a species of remorse. Divested of scientific interest and spiritualistic heroism, the affair became troublesome to the mind and memory. I leave you to imagine our feelings when we were compelled to acknowledge that we had innocently committed a deed which might be construed into a crime."

"A censorious world," remarked the student, "would very likely even call it a murder."

The doctor looked at him sternly.

"I hope," he said, "you have no fault to find with our motive—why, suppose it were possible," continued the doctor, turning to his guests, "that I had invited you here to-night with the apparently sinister motive of shooting you all to death with a pistol that is in this drawer beside me—the result would be a cause of consternation and grief to many, but in some mysterious way a bountiful nature, having ordered the sacrifice, would profit by it—you would reluctantly, perhaps, be the humble instruments of an element of success in the great inscrutable mechanism of the universe."

"Nevertheless," said the student, with rather a ghastly smile, "I have no desire to be singled out for this partiality."

The other gentlemen were very grave, and watched Doctor Cairnes with an interest that savored of awe.

"Days glided into weeks," continued the doctor, "weeks into months, and the twenty-seventh of November was close at hand. So even had been the temperature of the room, so completely excluded the light of day, so perfect the resemblance of hour to hour, that it was with difficulty I could myself keep count of time. Paul professed to have lost all idea of time or light, or heat or cold; called himself laughingly a species of fungi, declaring that it would be impossible to detach him safely from his shell—that he didn't think somehow he'd ever get to go to those foreign lands but, he was quite content and happy with everything as it progressed at that time. 'Anything,' he added, with a sudden pallor and touch of agony, 'is better than the past.'

"As the night of the twenty-seventh approached I devoted myself utterly to my undertaking, and resolved that, come what might, I would free Paul from this monomania that had taken possession of him body and soul. The dreaded night once happily past, we were safe from fear and fantasy for the future, and I studied even the minutiæ of detail to effect this end. So sanguine was I of the result that I made all arrangements for our immediate departure upon the following morning; and no wretch languishing in gyves and fetters longed for the hour of his deliverance more eagerly than I.

"At last the twenty-seventh came, and with it a storm of wind and rain and fury of the elements that turned light into darkness. At three o'clock the afternoon was so dark that I could have led Paul into the outer air to convince him it was already night. But I refrained from any departure from the monotonous rule of our lives. The hours wore away; we ate and drank, smoked, walked around and about the room, played several games of backgammon (we had agreed to abandon chess-playing), chatted about two or three cases of severe illness in the hospital, and at length Paul leaned his head back upon the cushioned chair and enjoyed his cigar in silence.

"I watched him furtively; his eyes held a dreamy look of abstraction, but they were still happy with the joy of calm; and, although the wind howled through the corridor and shook the casement with a shriek that was almost human, although the bricks toppled from the chimney and a storm of sleet blew down, almost extinguishing the flames of the fire and causing the bright lamplight to pale and grow dim, Paul remained unmoved, and said, quietly:

"'A wild night, or a wild day—which is it, Harold?'

"'Upon my soul, I've forgotten which, and it don't matter in the least,' I replied.

"'No,' he said, in a peculiar tone, 'not in the least.'

"Then he looked over at me and smiled. I declare to you, gentlemen, I cannot tell you what there was in that smile, but it made me long to go over to him and clasp his hand and feel the dear old familiar fling of his arm about my shoulder.

"I wish I had! I wish I had!" cried the doctor, getting up from his chair and walking nervously about the room. (His uneasiness was contagious, and his guests each and all changed their position—they seemed unconsciously to move nearer to the door.)

"It was a singular thing, gentlemen," pursued the doctor, "a very singular thing. Paul suddenly fell asleep with the cigar in his hand, the smile on his lips. He fell asleep, and I was glad, for the hour was near. I have not had occasion to mention the furniture in the room. It was plain, old-fashioned, and extremely heavy. Besides the ordinary accessories of a bed-chamber there was a lumbering old bookcase. There were but three chairs in the room; mine and Paul's were drawn up on either side of the fireplace, the other one was wedged in between the bookcase and wardrobe. It was filled with books and pamphlets so full that some had toppled over on the floor. I would like you to notice, gentlemen, that the chair in question was almost a fixture, and only used as a receptacle for books and rubbish that will collect in the shape of reading matter.

"The moments glided on. I looked at my watch; it was nearly ten o'clock. Two hours more—two little hours more—and all would be well.

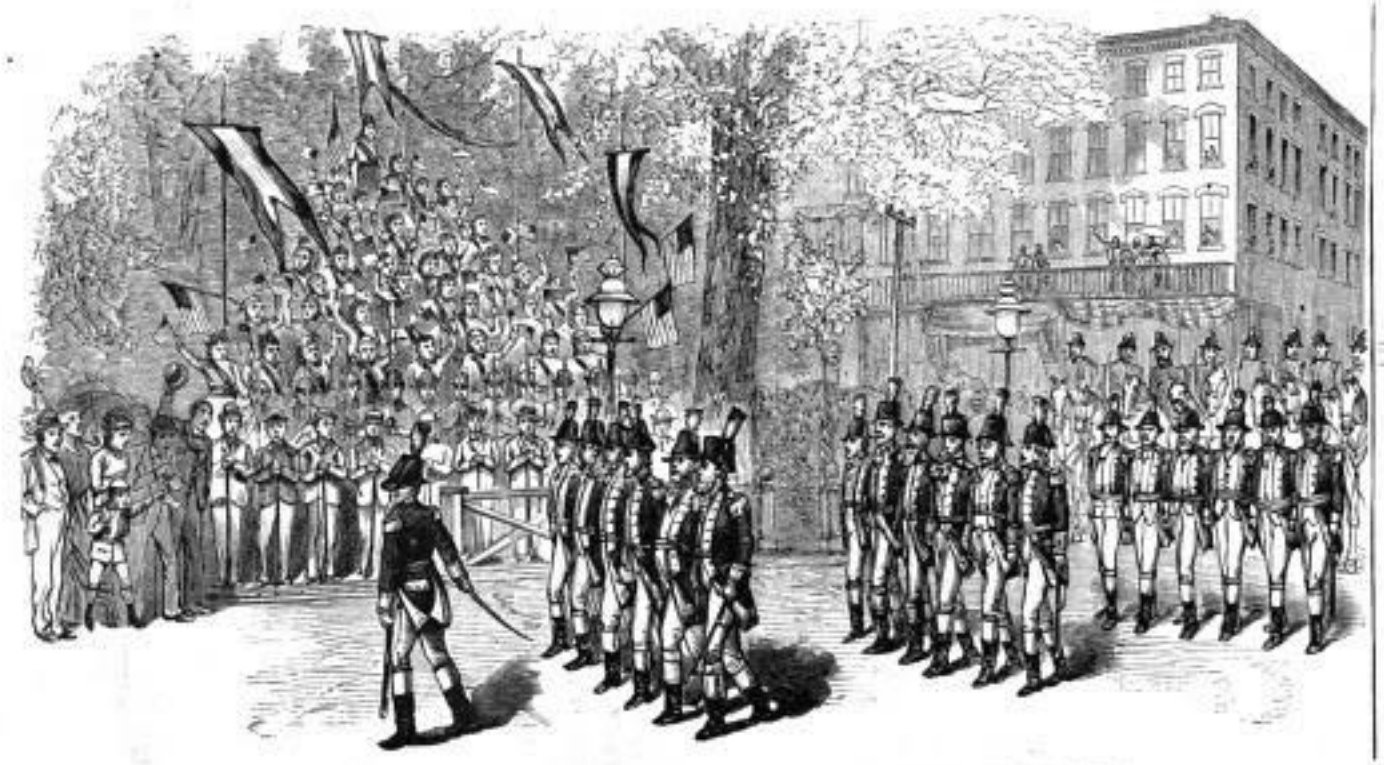
"In the meanwhile this silence became oppressive. I went to the door, locked and barred it; took off my coat, picked up a number of the *Lancet*, and was soon deep in an article on surgery. How was it, gentlemen, that I also fell into a slumber, deep, profound, lasting? I awoke with a cold, creeping sensation, a feeling of paralyzed energy. I opened my eyes and struggled, fought to free myself from this terrible, this agonizing nightmare, bathed in a cold perspiration, trembling in every limb. I endeavored to cry out, and the room echoed a hoarse murmur; I tried to get upon my feet; and I struggled thus far. It was no nightmare then, but terrible reality, and it was really Paul that crouched in the chair opposite, his head bent forward, his hands extended, his lips still open with the cry that first escaped them, and head and body and lips were all bent upon one object that rested immediately between us—between Paul and me. *It was that third chair*, gentlemen, the only other chair that the room contained. The books were thrown in masses on the floor, and the chair was drawn up to the fireside between Paul's and mine. Paul was gazing upon it—but he was dead, quite dead! He had been dead perhaps an hour; his head was yet warm with the lingering vitality of heat. I looked at my watch; it was one o'clock! The terrible night had come and gone and Paul had been borne away with it. My experiment was a failure; but his theory was proven beyond a doubt. I cannot tell you what shape Egeria assumed. Paul's face was like that of a sphinx; it spoke neither terror nor calm, injury nor despair. But that chair—ah! that chair was eloquent in itself. It tilted forward triumphantly, almost with a leer in the foremost leg; it held a comfortable position before the now charred embers. Heaven forgive me! but I could almost discern a resemblance in the peculiarly carved knob on the top of the chair to the shape of the head and the dull, leaden hair of the creature I thought we had dissected. It was a *souvenir*, a monument, a courteous reminder. Call it what you will, gentlemen, but tell me, if you disbelieve in Spiritualism, *whose was the third chair?*"

The doctor looked around for an answer from his guests. They had all disappeared. One by one they had vanished out the door and down the stairs, the student sliding down the balusters in his haste to depart; and none of them ever went to see that queer, grand fellow, Doctor Cairnes, again, or evinced any pleasure in the subject of Spiritualism.

CIVILIZING THE SIOUX INDIANS.

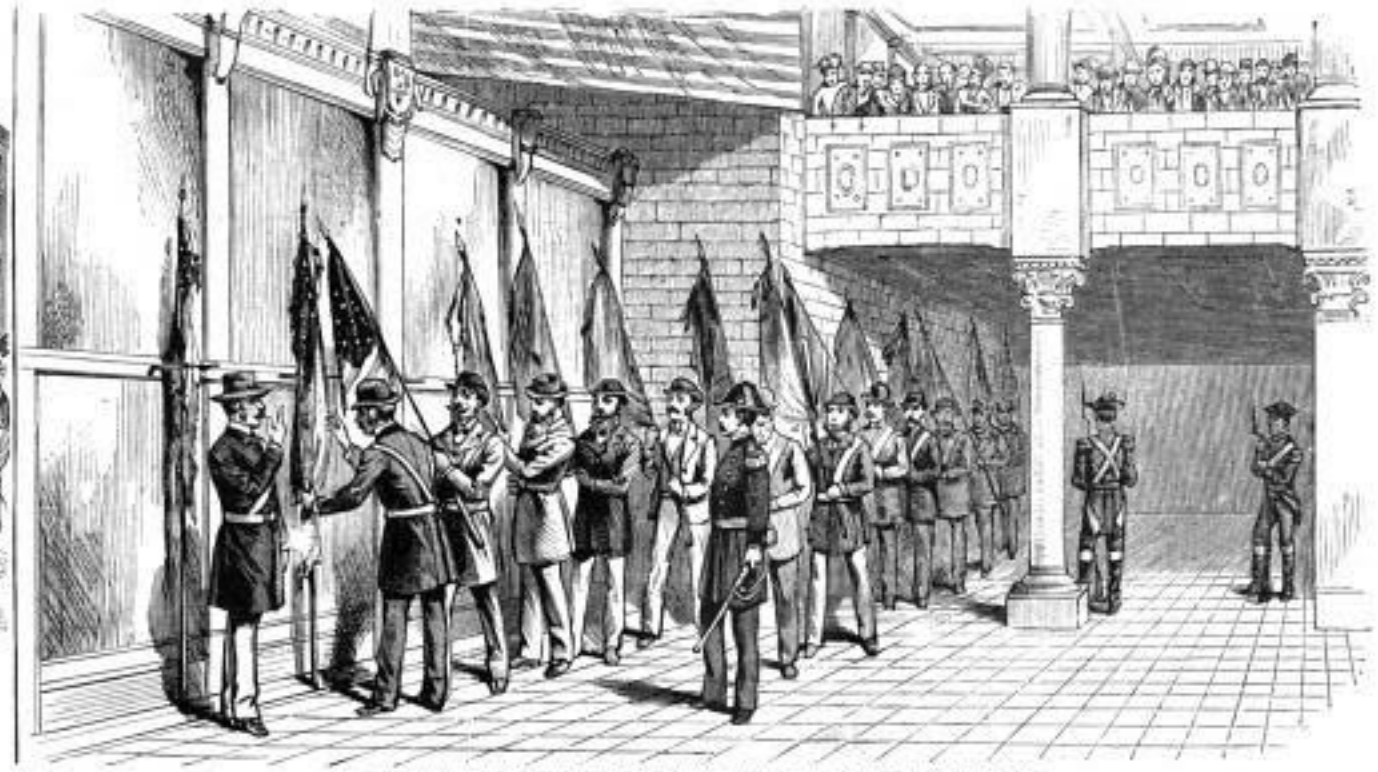
SECRETARY SCHURZ'S VISIT TO THE SPOTTED TAIL AGENCY.

THE details of the recent visit of Secretary Schurz to the Spotted Tail Indian Agency, which is elsewhere referred to in our columns, are full of interest and attraction as illustrating the improved methods of dealing with the Indians and the gradual decay of the savage influences and customs of their life. Secretary Schurz and his party left the Missouri River at Rosebud Landing on August 28th, and on the same evening reached the Agency, having traveled the entire distance of eighty-seven miles in wagons in fourteen hours, with one relay of horses. The soil is generally a rich, sandy loam, most of it is tillable, and all of it is excellent for herding. In the entire eighty-seven miles between the Missouri River and the Rosebud, upon which the Spotted Tail Indians are now living, there is only a single habitation, and that is occupied by a Frenchman named Cologne, who has resided among the Brulé Sioux for many years. He has an Indian wife and several children, and with their assistance maintains a sort of half-way house, where meals may be obtained by those engaged in hauling the supplies from the river to this and the Red Cloud agencies. Cologne cultivates a few acres of corn and potatoes, and cuts hay sufficient to supply his herd of cattle during the Winter. At this particular time, when the Sioux may be said to be in transition from barbarism to civilization, the force of the example of such men as Cologne is invaluable, and will go far toward assisting the Government in the efforts now being made to raise the Indian to a self-supporting position.



The Indians had known for some time of the purpose of the Secretary to visit them, and had been looking forward to it with great interest and satisfaction. Along the road was passed a large number of wagons, in charge of Indians, carrying supplies, all of whom saluted the party in passing with their peculiar guttural "How," and in many cases addressed words of welcome. Early on the morning of the 29th, Spotted Tail and Two Strike, the two leading Brulé chiefs, called upon the Secretary, and, after a brief conversation, arranged for holding a grand council on the following morning. This council was a grand affair. The Indians came to the Agency in large numbers, dressed in all their barbaric splendor, and mounted upon their best ponies. Those present numbered at least 1,200, of whom about 300 were women. Some of the warriors were dressed and painted with taste, but, according to a correspondent who describes the scene, "the larger portion of them were hideous with paint and repulsive in dirty garments. Several were in strict war costume, omitting the war paint (which is black), their only garments consisting of a breech-cloth and blanket, the latter being thrown carelessly over one shoulder in order to expose their painted and naked bodies. Before the council assembled, the young bucks of the various bands congregated upon the surrounding hills and gave frequent exhibitions of their splendid horsemanship by racing their ponies at breakneck speed across the intervening valleys, and in full view of the assembled multitude. The congregation of 1,200 wild Indians, nearly all of them mounted, dressed in gay colors, their faces painted and their long black hair ornamented with feathers and gay streamers, was a novel and picturesque spectacle. Many of the women and children were mounted, in some instances two being upon one pony. These ride almost as well as the men, and in the same fashion. No attempt is made to decorate the horses, and generally they were caparisoned in the most primitive manner. The saddles are made by the Indians, and consist of a piece of hard wood, shaped after the common saddle in use among white people, and covered with a hide which they dry themselves. The number without stirrups was about equal to those with such useful appendages, but their absence made no perceptible difference in the ease and grace with which the riders sat upon and rode the ponies. Very many were without saddles, and in their stead used a blanket held on the horse by a strap."

The council was held outside of the Agency inclosure, where a stand had been erected, upon which were seated Secretary Schurz, the gentlemen who accompanied him, and the interpreter. The Indians formed themselves in a semi-circle in front of the stand, a large number being seated upon the ground in rows, and the remainder sitting in rear of those upon their ponies. Spotted Tail occupied a chair placed in the centre of the vacant space between the Indians and the platform. He was dressed in plain blue, without ornament of any kind, and instead of a blanket wore a heavy white linen toga, which depended from his left shoulder, and which he held about his body and legs with his left hand, leaving his right free for gesticulation. The speaking was commenced by the Secretary, who congratulated the Indians upon the good reports received from them and the progress they had made in freighting and herding, and earnestly urged them to encourage and assist the effort to establish schools for the education of their children.



In reply, Spotted Tail expressed the great gratification the presence of the Secretary gave his people, and assured him that the counsel given by the Secretary would be followed. He referred with satisfaction to the progress already made by his people, and expressed a strong desire for the increase of school facilities, in order especially that the Indians might acquire the English tongue. After the council adjourned, the Indians pressed forward and shook hands with the Secretary, with many expressions of gratitude and good will, which could not, of course, be understood, but about the character of which their smiling faces and earnestness of manner left no room for doubt.

The Indians of the Spotted Tail Agency manifest great eagerness to become farmers, and maps of the survey are now being made. But these will not be completed for some months, so that farms may be taken up, but the anxiety for their possession is so great that the Indians are already driving their stakes, and in riding about, painted board signs are met with, which inform all concerned that a certain spot is "White Thunder's farm"; that another is the "Hay claim of Charging Eagle"; that another has been selected as the future home of "Fill the Pipe." A correspondent remarks that "the importance and significance of these painted signs cannot be too highly appreciated. They mark the first step in the civilization of the most numerous and warlike of our Indian tribes, and if Congress will read them aright and give the Indian

WAITING.

"SHALL I have long to wait, dear love?"
He asked, and smiled to see her hair.
She bent and kissed him from above;
His face felt all her soft blonde hair.

He watched her calm, little loveliness
In silence up the stairway pass,
The rippling movement of her dress
Like zephyrs on the Summer grass.

He held his breath till out of sight
She gained her dainty, curtained room,
Then forth he sauntered through the night
That had for him no tinge of gloom.

She closed her chamber-door and stood
Before the mirror queen-like, calm;
Her sad eyes' mute solicitude
Was like a penitential psalm.

"And I could sell his love," she said,
"For what I know is veriest dross.
One hair upon his loyal head
Outweighs this gain that is my loss.

"But he shall learn I am the queen
Himself hath called me; he shall know
That death can surely stand between
His queen and shameful overthrow."

Her white throat choked a little sob,
Her sweet mouth quivered with a sigh;
Her soft hand stilled her heart's quick throb,
The eyelid drooped on either eye.

She stooped her royal head to write,
Her name she signed, and kissed the place;
Then in her night-robes' fragrant white
She took a last look at her face.

* * * * *

Next morn, his heart on fair dreams fed,
He took the old familiar way—
He found his dear love lying dead,
And had no heart to curse or pray.

He read, half-dazed, the words she left;
He bent and kissed her calm, pale face;
Then forth he went as one bereft,
For whom there is no hope or grace.

But ever as the slow years pass
He hears an echo from above,
In every wind that stirs the grass,
"Shall I have long to wait, dear love?"

JOHN MORAN.

BLUE EYES AND GOLDEN HAIR.

By ANNIE THOMAS.

CHAPTER V.

"DAISY ELDON is incapable of making 'an exhibition of herself' in anything but a charming way," Lord St. Briac replies, and something in his tone makes Miss Millard glance sharply at him.

Rumor has told her already that, if Daisy had been endowed with one-half the wealth which is to be her (Julia Millard's) portion, Lord St. Briac would not have dallied in his wooing. So she glances sharply at him now as she detects the tremor in the tone in which he speaks of Daisy's name.

She looks at him at an unlucky moment.

Daisy has just come into the room with her aunt, and St. Briac's eyes are fixed upon her with a look of such ardent, irrepressible admiration and regard that Julia, the heiress, tingles with jealousy. Daisy, in a dress of creamy-white silk, with pearls on her neck and arms, and a sash of flowers, is looking lovelier than ever this night.

The unmistakable love-sight is in her eyes as she looks shyly around the assembled throng in search of the one without whose presence now the most brilliant scene would seem dull and tame to her. The love-sight is in her eyes; and Miss Millard, who is neither stupid nor devoid of experience, recognizes its sympathetic fire, and mistakingly supposes that it is burning for St. Briac. There is not a particle of love in the fair Julia's breast for her lordly suitor, nevertheless she thrills with rage as she sees his eyes riveted on Daisy's bonnie beauty.

A dozen men are crowding around the latter, eagerly seeking to inscribe the name of the beauty of the season on their cards. But presently she is whirled off by one who is a stranger to the majority of those present; and St. Briac, recalling himself to a sense of his duty towards Miss Millard, turns to her and pursues his own train of thought aloud, without regarding the fact that she may not have watched Daisy's proceedings with a tender interest equal to his own.

"I wonder how Poynter has got to know her already," he says, meditatively. "Did you see? He took her off in a sort of old-familiar-friend style that looks like having known her a long time; and that can't be the case, for he's only just back from six or seven years in Australia."

"He was the handsome man I was telling you about—the one Miss Eldon was making an exhibition of herself about in the Row this morning. You didn't seem to like the phrase, but I couldn't think of any other that would fittingly describe the situation."

"Shall we take a turn?" he interrupts. He has no desire to hear anything about Daisy from Miss Millard just now, and especially has he no desire to hear more about Daisy's intercourse with "that good-looking young fellow," Poynter, whose handsome face, as St. Briac is liberally willing to admit, is sufficient to win him the favor of any woman.

"The room is getting too crowded to dance comfortably," Miss Millard says; and she indicates that she wished to be led into the cool and low-lighted shades of a conservatory which they are passing at the moment. It is well understood by them all that the offer is to be made to-night, and Miss Millard thinks the the sooner the better now, as, when once she has plighted her maiden troth to him, she will have the right to reprimand him as sharply as she desires for his ill-concealed tender feelings for Daisy Eldon.

"It is no use kicking against the pricks," he tells himself, as he leads her along between alleys of the choicest exotics to a seat at the further end of the conservatory. His fate is before him, and he must fulfill it. Not such a bad fate after all, as times go. Miss Millard will bring him a hundred thousand a year, and is in herself the sort of girl to deserve a very warm regard for the man she marries. She is affectionate, quite clever enough, and good-looking enough for every day life; and it is not her fault that she appears to be made of very common clay, indeed, by the side of that delicate piece of porcelain, Daisy Eldon. "Besides," the young heir to the marquisate of Beauton tells himself, "it would, perhaps, be a bore to marry a girl one was very much in love with." He feels sure that when Julia is Lady St. Briac she may follow the fashion of the day and flirt as only young matrons seem free to do, without causing him one jealous qualm. Whereas, if he could only afford to marry Daisy he would surely grudge every look and word she gave to any other man. Even as he thinks this he sees Daisy and Harry Poynter saunter into the conservatory by a side door, and sit down in a nook where they are half-hidden by the gracious screen of foliage and flowers, and though she is not his wife he feels the jealous qualm with sickening intensity.

"How silent you are!" Miss Millard says, pettishly. She did not bring him in here to see him watching Daisy Eldon in dumb anguish. "He may moon and spoon about her and after her as much as he likes after we are married," the practical girl tells herself; "but I won't stand any sentimental nonsense about her now. I'll give him to understand before we move from here that he must choose between us without further delay."

He cannot tear his eyes and attention from Daisy, whom he sees listening with joyful eyes to something Harry Poynter is saying to her; but he answers, courteously enough, the charge of silence which Julia has brought against him.

"Don't you know there are some moments when the thoughts of the heart 'fill the silence like—like a speech?'"

"That is only the case, I should think, when one is very much in love or in debt," she answers; and St. Briac is afraid that his indifference to this girl may merge into possible dislike before he has taken the decided step which all his family expect him to take. She is more than a little out of temper now, and, as is invariably the case with an underbred woman, she relinquishes all efforts at being either courteous or kind when she is annoyed. Her tone is sharpened, her eyes sparkle vindictively, and there is altogether an air of defiance, not to say swagger, about her which revolts him as she says: "Perhaps, if you want to ponder on either of the themes I've mentioned, you will be good enough to take me back into the ballroom first; I may amuse myself better than I am doing here."

For a moment he is tempted to take her at her word, lead her back to her mother, and go to his mother with the statement that he found it impossible to swallow the pill, gloriously as it is gilded. Then he reminds himself of his debts and of the futility of his hankering after Daisy, and so, though he will not throw the handkerchief just yet, he waves it before Miss Millard's eyes.

"Before this night is over you will know what the feeling was that chained my tongue, and I think you will forgive me."

He murmurs this just as though he were really in love with her; and, as she is quite as well contented with the semblance as the reality, she relents, relapses into smiles, and prepares herself to say "Yes" at once.

But he feels that he cannot bind himself till he has had one dance with, and said a few words to, Daisy Eldon. So he rises and offers his arm to Miss Millard, with the words, "We'll come back here again by-and-by, won't we? And then you shall hear the secret of my silence," and leads her up the side to where Daisy and Harry Poynter are still sitting.

"Miss Eldon, you defrauded me of my waltz; may I have the honor of another? This next—may it be mine?"

"I am engaged for it to Har—Mr. Poynter," she says, hesitatingly.

"Poynter, be a good fellow; let me have one turn with Miss Eldon," St. Briac pleads, so eagerly that both Harry and Daisy find themselves agreeing to his request.

The four stroll back to the ballroom together. Their progress in company is a very brief one; but, brief as it is, and satisfied as Miss Millard now feels that St. Briac will formally surrender to her to-night, she cannot resist firing one shot at her rival.

"Are you going to Hurlingham to-morrow, Miss Eldon?"

"I believe not. Aunt Bertram does not enjoy polo, and I am not interested on either side to-morrow," Daisy answers.

"Not interested on either side? Oh, you incorrigible little flirt! How can you say you are not interested when we all know that Sir Bolingbroke Bray will be playing on his famous pony, 'Daisy'?"

"I wish men would not give their horses and dogs girl's names!" Daisy says, in genuine distress.

She has been spending the last three-quarters of an hour in coming to an "understanding" with Harry Poynter; that is to say, they have toyed with the subject of their "interest in each other," and have trenched on very tender ground indeed several times in the course of their conversation. They have agreed to be "great friends," and never to let any interlopers come between them; and Harry has told her something that sounds very sweetly in her ears, though, of course, in reality it is no concern at all of hers. He has told her that, in common with every other boy and young man, he has found a dozen faces fair and loved them "for a week, a month, or a day," as the case might be. "But," he has added, "do you know, Daisy, I never cared about one of them enough to want to kiss her; because kissing a girl with me means wanting her and asking her to be my wife. Are you glad?"

And to this question Daisy has given him no answer—in words—yet. But they are both so happy that he has asked it.

It is while they are steeped in the silence which is golden after this speech of Harry's that St. Briac and Miss Millard break into their solitude. And so it comes to pass that poor Daisy feels she may be lowered in Harry Poynter's estimation when Miss Millard calls her an "incorrigible little flirt," and speaks of Sir Bolingbroke Bray and his "famous polopony Daisy," as if she, Daisy Eldon, had a vested interest in both. Her partner, St. Briac, takes her "the one turn" for which he has pleaded so eloquently, but he seems by no means disposed to relinquish her at the termination of it. On the contrary, he persuades her to cross the corridor with him to look at a picture that he vows resembles Daisy in his mother's boudoir; and when they reach it he breathes more freely than he has breathed before this night, for he knows that Miss Millard dare not invade its sacred seclusion. St. Briac knows well that this girl, for whom his heart is sick, is not for him, and that Miss Millard is. Nevertheless, he cannot resist trying to wake Daisy's interest, and feeling for a few minutes how sweet life would be for him if only Daisy had the filthy lucre that is needed at this juncture to regild the Beauton coronet. He is, as has been said, a very fine specimen of a young English patrician; and as our English patricians are the finest result of breeding, training, blood and culture to be found in this hemisphere, he may be accepted without further explanation as a man to whom any girl's heart would naturally seriously incline. It is currently said of him that his brains are far too good for that place in the Upper House which he must eventually fill, and already he is known widely, and not ridiculously, as a vigilant detector of anything in art, though the state of the family exchequer has sometimes cramped his efforts at collecting. Altogether, Daisy may be forgiven (in spite of all that has passed between Harry and herself) for thinking Miss Millard "a very lucky girl," after ten minutes of unrestrained intercourse with Lord St. Briac. He is quite resolved upon one thing, and that is that the girl who has struck the only genuine chord of love that has ever been struck in his heart shall "know what he thinks about her" before they part this night. He tells himself in a spasm of chivalric feeling that he will not attempt to win any responsive words from her; but "By Jove, she shall know that I love her," he says, "and that I would ask her to be my wife if it were not for want of the hawbees."

He begins giving the information to Daisy in the most guarded and proper way imaginable. He tells her how he has always watched her approvingly on the Knave of Hearts.

"That's a pace not one girl in a thousand could take as easy as you do," he remarks; and Daisy answers with apparent carelessness, but in reality because she has been nettled by Miss Millard.

"The little Knave! I'm glad to hear a good word said of him by you. Miss Millard always derides him for being more showy than fast."

"If Miss Millard could only sit him as you do, and get him to sit, she'd frame him in gold as an advertisement of her proficiency in the noble art of equitation," St. Briac laughs.

"I wish she would frame some of her speeches in gold, because gold is a true metal and wouldn't frame a false impression," Daisy replies. "She knew I should be annoyed at the way in which she jumbled up polo and Sir Bolingbroke Bray and his pony, Daisy, and myself just now, and yet she did it. Why should she have gone out of her way to annoy me?"

"Because she knows that I would go a good deal out of my way to try and please you," St. Briac says, bluntly; and Daisy lures him on undesignedly, by asking:

"And why shouldn't you go out of your way to please me?"

"Because I am bound hand and foot in vile fetters of need," he exclaims. "Don't you understand? Mayn't I try and make you understand it all? She sees what every one is welcome to see as far as I am concerned—and that is that I love you, Daisy."

He casts aside all consideration for Miss Millard, all recollection of the way in which he has half-pledged himself to her and wholly pledged himself to his family to snare her to-night. He only sees Daisy, he only cares for Daisy, he only remembers that if he loses Daisy he will lose "the light that ne'er will shine again on life's dull stream." She wavers like a reed shaken by the wind for a few moments. St. Briac is such a nice fellow; so many girls whom she has known during the season have sighed in vain for him. For many weeks she has been hearing him spoken about; and when a girl hears a man's name constantly, she cannot help thinking a good deal about him. She has heard Miss Millard (whose probable good fortune has been widely and openly discussed) in turns pitied for being sought for her money, and envied for being sought at all by Lord St. Briac. It is unnatural, it is unwomanly in Daisy to palpitate with pleasure, to forget Harry Poynter for the moment, and to give St. Briac a shy, grateful glance in return for that avowal of his that he loves her. As for him, he feels that he has gone over the border, and that he is as much on his honor now to "go on" with Daisy as he felt himself to be half an hour ago to "go on" with Miss Millard. She, in her sweet unconsciousness, tempts him in a way that would have been too much for St. Senanus, and that is altogether too much for St. Briac. Having told her that he loves her, he finds himself madly desirous of winning a like confession from her. He forgets the resolution he came to just now of laying bare his feelings to her, and at the same time refrain from proving the state of hers for him. Having ascertained that fact, he will take time to consider what step it behooves him to take.

He is an ardent, impetuous young fellow, and he has really lost both his heart and his head for Daisy.

"I didn't know how hard hit I was myself till that girl coupled your name with Bray just now," he goes on, madly; "then I felt it was no use pretending even to myself that I could resign you without a struggle. Daisy darling, tell me that I haven't made a mistake; tell me that you do care for me a little, and that you'll be my wife." He has got hold of both her hands, and is pressing them with a passionate force that makes her feel that he is not to be trifled with—however unjustifiable in fact the expression of his love may be, the love itself is a real true thing. She does like him very much, indeed; better, far better, than she has ever liked any one but Harry Poynter. And there are many things that make his wooing her a very sweet tribute to Daisy Eldon. She is "essentially human," and she feels a wicked little flutter of gratified vanity as she reflects that this man is willing to cast away a hundred thousand a year for her sake. Ought she to reject such genuine devotion as this, she asks herself. Then she thinks a little of the Beautons' disappointment if the great heiress is lost to them by reason of their son's infatuation for herself. She thinks a little of their disappointment and a great deal of Harry Poynter, and she answers as she ought:

"I do care for you a great deal—too much to do you the wrong it would be to marry you, Lord St. Briac. You know what a bad thing it would be for you if I were weak enough to be flattered by the great honor you have offered me into accepting it; and—you mustn't be angry with me for reminding you of Miss Millard—all the world looks upon you as half-engaged to her."

"If I were wholly engaged to her it would make no difference now," he says, recklessly. "I love you, Daisy; nothing but your own will—nothing but your own declaration that you care more for some other fellow, will part us now."

He has lifted her hand to his lips, and is pressing kisses upon it; in another moment he will put her beyond her power to say him nay by touching her pure young lips. His whole heart is in the work of gaining this girl now; and, if courage will carry her, she shall be carried.

"Say you will be my wife, Daisy—say you love me!" he pleads desperately; and Daisy, with a mighty effort, frees herself from his clasp, and says:

"I can't! I could a week ago; but since then, Lord St. Briac, I've seen some one I like better than I do you, much as I really like you."

"It's Bray, after all," he says, in bitter accents.

"No, it's not Bray a bit. It's some one who may never know I like him, and never care to find out."

"Don't give me up for an idea," St. Briac interrupts. Having committed himself to the statement of caring for Daisy, he is ready to overcome every obstacle in the way of obtaining her. Surely, he argues, if he has been ready to cast a hundred thousand a year to every other consideration aside for her, she might reasonably and readily overcome any light fancy she might have imagined herself into entertaining for this other man, who is ignorant of the honor she has done him. "Don't give me up for an idea," he repeats, ardently. "Look you, Daisy; my name's a good one. I don't come to you dishonored, like some fellows are who are presuming to aspire to you. And I love you, Daisy! I love you in a way that ought to win a kinder answer from you than the one you have given me."

He has never been balked of one thing on which he has set his heart in his life, and that Daisy should hesitate now about proclaiming him triumphant is a sore trial to him. That she does hesitate, that she has not quite decided for or against him, is evident. St. Briac's earnestness, the way in which he is ready to relinquish the largest fortune of the year for her penniless sake, is very touching to her. Moreover, St. Briac has about him that air of bravery and gentleness which is the result of many generations of culture and refinement. He is a splendid lover, and she is in a paroxysm of doubt as to whether it would not be well for her to love him in return. But, as she wavers, she hears distinctly, as if Harry were speaking them close to her ear at the moment, the words, "But do you know, Daisy, I never cared about one of them enough to want to kiss her." She has "recollected him" so vividly that she cannot forget him again, though Lord St. Briac goes on pleading his warmest; and so it is a definite refusal of the honor he has done her which St. Briac has to bear at last.

But Daisy, in her outspokenness and genuineness, refuses him in a way that binds him to her far more closely than Miss Millard's acceptance of him will have the power to do.

"Just a week ago I liked you better than any one else in the world," she says, apologetically; "but since then I have thought of some one else, and liked to listen to some one else, and he ought to be the first and only one a girl has thought of for a minute."

"I shouldn't mind you having thought of a dozen before, if you'll only think of me now."

"And that I can't do, and though I'm sorry for it in one way, I'm glad in another. If I had said 'Yes' what a grief it would be to your family, and what a pity it would be for you! And now we'll go back." She opens the door as she speaks, and is out in the corridor on her way back to the ballroom in an instant, and he has no choice but to follow her. His

mother's eyes are upon him anxiously, and on Daisy rebukingly, as they enter the room, and the girl knows that she is being hardly thought of by her hostess for a fault she has not committed. She is trying to get across to her aunt, of whom she catches a glimpse in a far off corner, in order to implore that she may be taken away from the bustle and the rarve show, when her progress is arrested most inopportunely by Sir Bolingbroke.

"I have been hunting for you everywhere," he says; "where have you hidden yourself?"

"I have been looking at a picture in Lady Beauton's boudoir; some one said it was like me, and I like to know what I am like," Daisy says, trying to speak as if she were not anxious to work her way from him to her aunt.

"Don't be so impatient. I have been looking for you everywhere," he murmurs. "Do you see or have you heard that Miss Millard has defied the Beautons on their own ground, and flung St. Briac over for the returned colonial?"

"What nonsense!" she answers, scornfully.

"But true nonsense, nevertheless. This young 'scion of an ancient but decayed house,' as old chroniclers would call him, has done a good thing for himself by stopping in town on his way from the bush. When a man can once make up his mind to marry Miss Millard, she's not a bad sort of a girl. The next is mine, if you please; you ought to give me so much poor compensation for my bitter disappointment the other day." She scarcely heeds what he does, and so suffers him to whirl her off without a protest. She tells herself that there is no truth in his statement relative to Harry and Miss Millard, and yet it goes on ringing in her ears. How promptly, if it is true, he has perjured himself after those "unspoken vows" he offered her just now in the conservatory! Ah, but has she not been on the brink of committing a like offense? Did she not incline more than favorably for a few moments to St. Briac?

Those thoughts fatigue her more than the waltzing, and she pauses to recover her breath. As she stands, her hand still on her partner's arm, Harry Poynter and Miss Millard walk slowly by, close to her, without perceiving her. He is bending his head down low in earnest endeavor evidently to catch every word that falls from the heiress's lips: and she is speaking in clear, resolute accents, that fall distinctly upon Daisy's ear:

"You must call to-morrow morning. I will prepare mamma for the news, and she will plead the cause we have at heart with my father. He cannot stand out against us three."

"I am rested," Daisy says, turning a white face up towards her partner. And when they pull up after the next round she has pledged herself to become Lady Bray.

(*To be continued.*)

"BATTLE-FLAG DAY" IN HARTFORD.

AN anniversary to be known henceforth as "Battle-flag Day" was inaugurated on Wednesday, September 17th, at Hartford, Conn., with ceremonies of the deepest interest. In February last a resolution was offered in the House that the Comptroller, Adjutant-General and Quartermaster-General be a board to have charge of the State's battle-flags, and that they be directed to have suitable cases prepared in the new Capitol for the flags to be placed in. The resolution went through both Houses and was approved.

The veterans of the war were invited to take part in the removal of the flags, and General Joseph R. Hawley accepted the post of chief marshal for the occasion. Up to last week the battle-flags of the different regiments were kept in the old State Arsenal on Main Street.

In the ceremony of the 17th, representatives of thirty regiments appeared, besides the State militia and the entire force of the State authorities. It was one o'clock before the procession was in line, and at that hour a national salute began. This was the signal for the start, and as the first gun sounded, the First Division marched out of the park into High Street. This comprised the militia of the State, and veterans of the war belonging to other States, who had fought in Connecticut regiments. In this division, also, were Governor Andrews and his private secretary, in a carriage, followed by his staff, mounted. The Governor kept his head bared during the entire march, and he was greeted by rousing cheers from the thousands who lined the sidewalks along the line. The staff of ex-Governor Buckingham was in this division also. The Second Division, under the command of Colonel Jacob L. Greene, formerly of the Sixth Michigan Cavalry, now President of the Connecticut Mutual Life Insurance Company, comprised the Union Battalion, and the prominent guests in carriages. Among the latter were General J. M. Schofield, General Burnside, of Rhode Island; ex-Governors Jewell, Hubbard and Cleveland, of Connecticut; General Smith and staff, the Judges of the Supreme Court of Connecticut, Mayor Sumner, of Hartford, and the members of the city government. The fourth and last division was the great feature of the day. It was composed entirely of the veteran soldiers of Connecticut, and embraced fully 10,000 men, with representatives from all the regiments from the First to the Thirty sixth. This division was headed by Major-General Joseph R. Hawley, the chief marshal of the day, and his staff. The men were dressed in citizens' clothing, but many wore the hats of the Grand Army of the Republic, and all wore badges or medals. Some were lame, some had lost an arm, and two men hobbled along on wooden legs. Carriages were provided for the veterans who could not walk, and these were used by all except the two mentioned. These two followed the march until their battle-flags had been taken from the Arsenal, and then they joined their comrades in the carriage.

Some of the old flags, which number eighty, were nearly whole; others were so far gone that they had been caught with ribbons to the staff at frequent intervals, lest the slight breeze should make them float in shreds to the pavement. Some of them have histories that are known to the Connecticut folk; and when they were borne along the cheering became a hoarse roar, and all hands fluttered handkerchiefs or waved hats. The throngs went wild over the remnants of the old Sixteenth's flag, which was torn into squares and hid in the uniforms of the men or burned when they were taken prisoners at Plymouth, N. C., in '64, which were carried concealed through military prisons, and were finally collected and pieced together in the form of a shield on a new banner.

The line of march was through High Street to Main, up Main to the Arsenal, where the battle-flags were taken, and then down Main to Washington Street, and thence to the new Capitol. The buildings in the streets through which the procession moved were literally hidden in bunting. The magnificent building of the Connecticut Mutual Life Insurance Company, one of the finest in the city, was decorated profusely and with great taste. Among other displays were those of the Phœnix Mutual Life Insurance Company, and of the Phœnix National Bank, two of the solid institutions of Hartford. The Travelers Insurance Company suspended from their modest building a magnificent national flag, and displayed a draped portrait of Connecticut's "War Governor" Buckingham, who was a director in the company. In front of the residence of M. G. Bulkeley, President of the Ætna Life Insurance Company, a fine arch spanned the street. It was a pretty combination of artistic materials and had entwining it a broad ribbon bearing the names of Connecticut's dead heroes—Sedgwick, Lyon, Mansfield, Foote, and others. The centre piece was the State coat-of-arms, above which was a trophy of weapons of war, drums, etc., and above all the American colors. Across Main Street three arches were erected, decorated with red, white and blue, and surrounded with evergreen devices. On these the names of all the battles in which the Connecticut regiments have taken part were emblazoned, and the word "Welcome," worked in evergreen, depended from one. Flags were thrown across the street, and in many houses were pictures of Lincoln or Grant, and sometimes both together. Whenever these pictures were seen by the veterans they cheered long and lustily. The stoops and lawns in front of the private houses were thronged with people, and in many cases little girls and boys were found representing patriotic characters. On the balcony of one house in High Street were two small boys, one dressed as a midshipman, and sitting on a coil of rope, and the other as a soldier, standing guard. At South Green a pyramid of 200 girls, ranging in age from four to twelve years, all dressed in white, and wearing red, white and blue sashes, greeted the veterans with waving handkerchiefs and fans. At the base of the pyramid was a cordon of boys, dressed as soldiers and carrying muskets, standing on guard. This was the great feature of the display. The Capitol was reached at four o'clock, and here the ceremony of transferring the flags was performed. There were fully 50,000 people on the grounds. A stand had been erected in front of the main entrance, and here Governor Andrews and the guests assembled. General Hawley presented the flags to the State in a brief speech, and Governor Andrews accepted them. Then the color-bearers of each regiment ascended the steps and faced the veterans; a cannon boomed a salute, and the blare of trumpets mingled with the reverberation; and the flags were successively given to the custody of the State, to be deposited in the cases erected for the purpose in the vestibule of the magnificent Capitol.

After the ceremonies the veterans marched down the hill to the green, where they partook of luncheon. In the evening the State House lawn was illumined by electric lights placed on the dome of the Capitol, and the city generally was lurid with the glare of all kinds of lights. The electric light was furnished by the Willimantic Spool Cotton Co., of Willimantic, the same being used in their extensive mills at that place, and was under charge of their electricians.

ALESSANDRO LIBERATI.

SIGNOR LIBERATI, the cornet soloist whom thousands of people have met at Brighton Beach during the past season, has steadily risen in the estimation of the public ever since his first appearance. He came unheralded into the lists where two prime favorites, Levy and Arbuckle, bid defiance to competition. His modest merit and artistic excellence have placed him in the front rank of musical artists. Liberati was born in Frascati, Italy, July 7th, 1847. His father was a fine musician, and was celebrated for his playing upon the trumpet, with keys, which had just been invented. Alessandro first commenced playing on the cornet when twelve years old. In the year 1864 he played the E-flat cornet in the Chasseur Band, in the Papal army, and was bugle-major with Garibaldi. He afterwards played a solo cornet in concerts at Naples, Florence, Milan, Nice, Paris and other leading cities in the Old World, and was cornet soloist in the band of the First Infantry Regiment of the Italian army.

In 1872, after a varied experience in Europe, he resolved to emigrate to America, and in June of that year he arrived in the city of Boston. Not finding a suitable engagement there, he went to the capital of Canada, and was engaged as band-master of the Ottawa Brigade Garrison Artillery Band; there he remained till 1875, and became very popular as leader and cornet soloist. Signor Liberati was the leading attraction in the band of the Detroit National Guard on their visit to the Centennial Exhibition at Philadelphia. On their way to and from Philadelphia they were received with honors in the several cities through which they passed. He had tempting offers to induce him to return to Ottawa, but he preferred remaining in the United States. He went from Detroit to Boston, and became cornet soloist for the Cadet Band of that city. He soon afterwards came to New York, and became a resident of Brooklyn. Since his arrival there he has been performing on the cornet in many public places and concerts, and with great satisfaction to a gratified audience.

THE MAN WHO BAGGED CETEWAYO.

MAJOR RICHARD J. C. MARTER, who captured the Zulu King, belongs to the First (King's) Dragoon Guards—not the First Dragoons, as cabled, which is really the Eleventh British Cavalry Regiment, there being three regiments of the Household and seven of Dragoon Guards senior to it—and always belonged to it from his first entrance into the army. This is unusual in the cavalry. A large majority of the officers are men of means, and, preferring Pall Mall, the clubs, yachting and home pleasures generally to distant service, are in the habit of exchanging with the less fortunate, who, for a consideration in hand and the difference between Indian or colonial and home pay, are often glad enough of the arrangement. Some officers in India have several times exchanged from regiments going home to regiments arriving. Marter stuck to his old regiment wherever it went, was with it in China on the advance to Pekin, and when the old K. D. G.'s got to Banzalore, India, was made Adjutant-General of the Myrore Division of the Madras Army, under Major-General Haines, now General Sir Frederick Paul Haines, G. C. B., Commander-in-chief of India. Marter retained this position for a little while after his regiment returned to England in 1866, but only for a little while. He is a great horseman, something of a "welter" weight, and, while holding his own in a steeplechase, is not of much use for a flat race. But he has the keenest eye for the good points of a horse, and his stable was always the admiration of the station. Bangalore is a charming place, 4,000 feet above the level of the sea, with a delicious climate, famous for its flowers and its racecourse, a sort of Southern India Saratoga, and, being a large military post, is always very gay. Marter was always at the foremost of any festivities wherein the horse was concerned, from a fox-hunt to a steeplechase, and one of these diligent and invaluable men who go into the dismal and thankless work of preparation ere move. It is one thing to be a steward of a race-meeting, in all the glory and importance of the position, before assembled beauty and fashion, and quite another to go through the drudgery of getting everything ready and keeping everything straight for weeks and months beforehand. His chum and right-hand man in all these matters, and partner in ownership of several crack horses, a modest gentleman, was Major (now Colonel) Theodore Austin, of the Twenty-second Madras Native Infantry, reputed to be one of the best gentleman jockeys that ever rode. One horse they owned in common, Nuseeb (Fate), a spirited, but gentle and playful, satin-skinned beauty, with elastic muscles of steel, was probably the handsomest ever seen out of Arabia, and won them on many occasions a "pot of money."

Marter is about forty-five years old now, and as it was the destiny of Cetewayo to be caught, he was lucky in his captor, who would be certain to treat him well.

THE LAST FOX-HUNT OF THE SEASON.

NEWPORT, in addition to its manifold attractions, has had its hunting-season, yes, veritable fox-hunting, and men who have ridden with the Pytchley and Quorn eagerly plunged into pink, despite the chaff awaiting them "at the other side," to enjoy a run with Reynard—tell it not in Bath—in the month of September. The last meet of the Queens County Hunt, which took place on September 12th, was a superb social success. All Newport—that is, all of Newport worth mentioning—mustered at the meet, the road to Southwick's Grove being literally choke-full of vehicles of every sort, shape, size and description, while cavaliers and equestriennes, mounted à cheval, dotted the carriage-line; nor were the stereotyped "mud-crushers" in anything like a minority. The M.F.H. was to the fore, and, next to horsemanship as he is in appearance, he was a fair example of the truth of the Leicestershire maxim, that the best-dressed man is sure to be the hardest rider. Beside him rode Mr. Fairman Rogers, whose get-up reminded one of a picture by Herring. There were other good "workmen" in pink, notably Messrs. Griswold and Peters, who sat their horses with a grip as tight as their own leathers. The ladies, too, were en évidence in the most eel-like habits and the sauciest hats, and many a manly heart beat high in the hope of bearing off the brush in order to place it in some dainty hand now incased in buff leather and viciously grasping a wicked little cutting-whip. The mounts were exceptionally good, and the appearance of the grove prior to the hounds being laid on was bright, animated and picturesque to the very last degree. At length the "Gone away" came from the stentorian lungs of the huntsman, and the long-wished-for whimper of the "beauties" was heard. A shrill "View hollos" next greeted the field, informing all whom it concerned that the "rascal" had stolen away, and in a few seconds the hounds were racing to a merry chorus over a heavy country, over impracticable fences, over bullinches, over stake and wire, over a bit of plow; away, away, the field following at a respectful distance, and until the huntsman might well say, joyously, "Catch them who can now," as they fly up wind, far in advance of the foremost riders. The ladies were carefully piloted, but one or two, regarding Pallasrus as Sinbad viewed the Old Man of the Sea, elected to steer for themselves, and bravely pounded on, "sticking" more than one "workman" and cutting down their less plucky sisters, in their mad, wild desire to spin in at the death. In doing a wall the horse of Mr. Burrel, of New York, "showed saddle-girth to the sun," rolling over its spirited rider, who lay stunned on the greensward, till the good Samaritans dismounted by the wayside—a crucial trial to your hunting men—but no bones were broken; and perhaps one or two who remained with the "off mas" were rather thankful for the excuse, as the pace was now a pretty stiff one, and the field only lighted by a "short six." Many were the croppers fetched; many were the bullfinches reined; many the gaps made; many the horses "kicked along," while the huntsman, well settled down to his work, was all eyes for his music-giving pack. Whoop! whoop! away the beauties streamed, Mr. Griswold, Mr. Fairman Rogers, Captain Candy and Mr. Zoborowski riding straight and cunning, while Mr. Wadsworth fetched a cropper on the run home that stunned him. For a brief ten minutes the fun was fast and furious, and then the "rascal" was overhauled and his brush handed to Mr. Rogers, whose plucky riding was worthy of the Galway "Blazers," while pads were presented to Miss Havermeyer and Miss Oouthout, who rode from the burst to the death, boldly, knowingly and well.

SCIENTIFIC INTELLIGENCE

Common Resin prevents the formation of acetic acid in fermented liquids, without disturbing the process of alcoholic fermentation, and it is thought that the peculiar effect of the hop is due rather to its resinous matter than to its oils. The Greeks add resin to their sweet wines.

An Electric Target—that is, a target which, by means of electricity, shows instantaneously upon another target, set up at the firing station, the exact spot where a bullet strikes, and thus does away with the necessity of employing a marker to signal the result of each shot—has been lately perfected, after eight years of labor, by a Swiss locksmith.

A New Fire-damp Detector has been invented in France. It consists of a common lamp surmounted by a little camera obscura, provided with a slit. In the common state of the lamp no flame is visible, but if a hydrogen compound be added to the air a blue flame shows at the slit. The larger the flame the greater the amount of fire-damp present.

Fireproof Paper and Fireproof Ink can be made as follows: The paper from a pulp consisting of one part of vegetable fibre, two parts of asbestos, 1·10 part of borax, 1·5 part of alum. The ink is made from 85 parts of graphite, 0·8 parts of copal varnish, 7·5 parts of copperas, 30 parts of tincture of nut-galls and a sufficient quantity of indigo carmine.

Professor S. F. Peckham informs the editors of the *American Journal of Science and Arts* of the fall of a meteorite in Iowa. It exploded and fell in full daylight at five P. M., at Estherville. One fragment of the mass, weighing 500 pounds, was dug up from a depth of fourteen feet. Another portion, weighing 150 pounds, which fell about two miles distant from the larger mass, has been obtained for the University cabinet.

The Great Iron Works of Creusot, France, covers, with its various sheds, furnaces, engine-rooms and workshops, about 2,750 acres, and the length of rails laid down for the convenience of the factory is 200 miles. The number of workmen is upwards of 15,500, who, together with their families and the camp-followers, form a population of 26,000 souls. A superb statue of M. Schneider, the founder of the works, has just been erected in the city.

Bleaching Sugar by Ozone.—Professor Albert R. Leeds, of the Stevens Institute, Hoboken, has been trying the action of ozone on colored sugar solutions, and finds that they are rapidly and completely bleached by this agent. He also finds that the coloring matter of leaves and flowers are partly or wholly destroyed by ozone; but a considerable percentage of ozone is required to produce this result, or if such small amounts as are obtained in the customary methods of ozonizing air by phosphorus are employed, a large volume of ozonized air must be used and a considerable interval elapse before bleaching is effected.

On the Occasion of a balloon ascent at Nancy, August 4th, the altitude of the car was taken by officers from the garrison with a theodolite, and signals were exchanged with the ground during the ascent. The signals were given by the aeronauts with a flag and by the officers with a reflecting mirror placed in the end of a tube and mounted as a telescope. The officers directed the rays of the sun on the balloon, and intercepted rays with a key in order to use the Morse alphabet. The signals could be seen at a distance of over six miles. The experiment showed that in a besieged town, a passing balloon could be used for giving orders to or receiving news from friendly forces.

PERSONAL GOSSIP.

MATTHEW and JOHN G. VASSAR will erect a ten-thousand-dollar laboratory at Vassar College.

BISHOP STEVENS, of the Diocese of Pennsylvania, is very ill with congestion of the lungs.

A SUM of over 57,000 francs has been collected to build a memorial chapel in honor of the Prince Imperial in Paris.

A ROMAN countess, profoundly learned in the Greek and Latin languages, has just been elected a member of the Academy of Lincei, in Rome.

THE Crown Prince of Germany has been ailing for some time, and has been ordered by his physicians to pass the Winter in Italy. The Emperor is very well.

MR. G. F. FAIRCHILD, sometime professor of higher English in Michigan Agricultural College, has been elected president of the Kansas State Agricultural College.

BOSTON has decided to order a bronze copy of Mr Greenough's marble statue of Governor Winthrop, now in the Capitol at Washington. The cost will be $4,500.

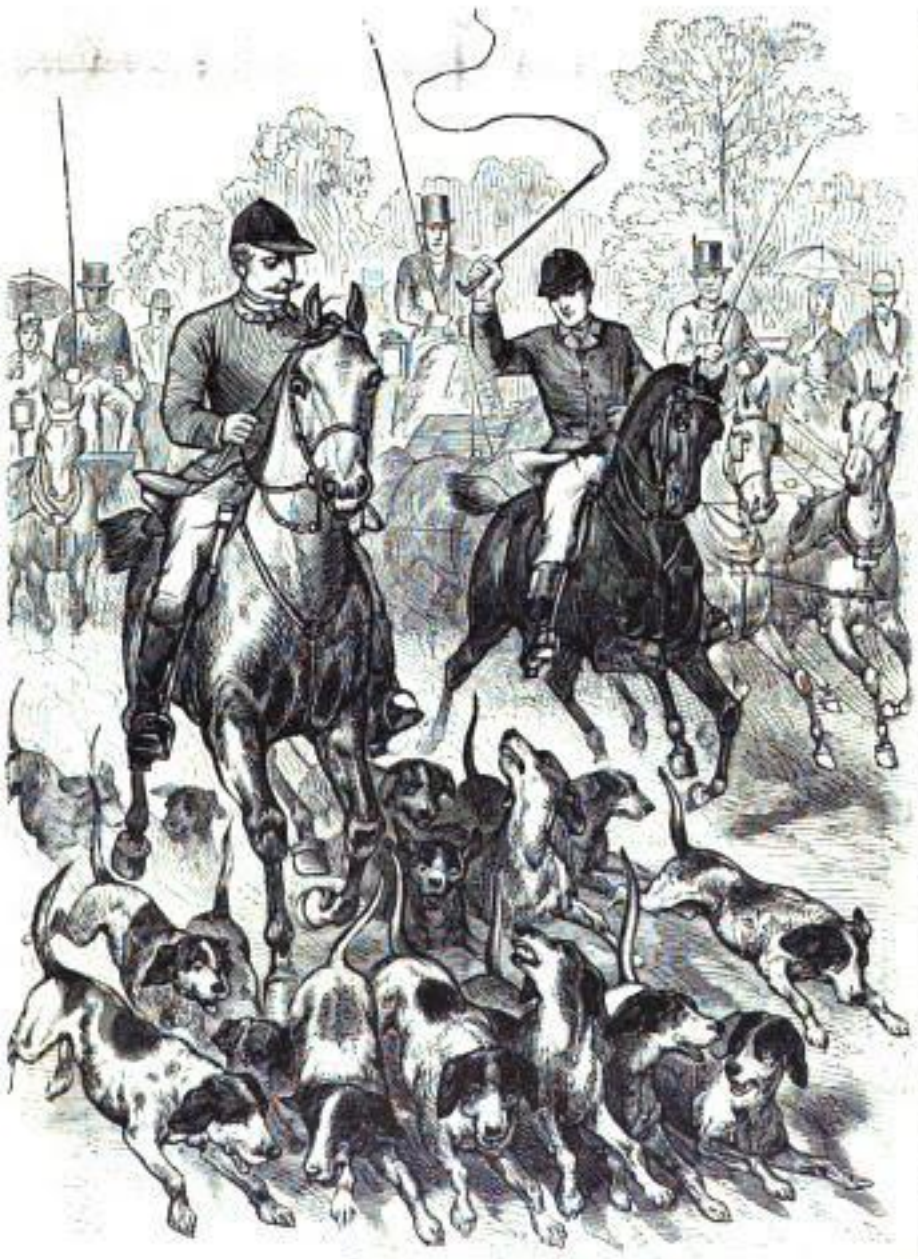
MR. ASA PAYNE, of Scott County, Kentucky, the son of General Payne, of the war of 1812, is said to be the oldest living graduate of West Point. He is ninety one years old, and was a member of the first class

KING ALFONSO and the Archduchess Maria Christina will be married at Madrid on the 28th of November. The bride and her mother will sail from Trieste to Barcelona on an Austrian war ship, convoyed by a Spanish squadron.

IT is officially announced that the Duke of Osuna and the Duke of Medina-Sidonia will go to Vienna, instead of Señor Canovas del Castillo, to ask officially the hand of the Archduchess Marie Christine of Austria in marriage with the King of Spain.

KING JOHN of Abyssinia writes to the mercantile firm representing him in London, stating that he has written to Queen Victoria complaining that the outlets of his territory are closed by the Egyptians. He says that General Kirkham, the English General in his service, was poisoned at Massowah while on his way to England with letters to the Queen. A later dispatch from Cairo says it is expected that the negotiations between Egypt and Abyssinia will be successful. King John has consented to an interview with Colonel Gordon.

CAPTAIN CAREY has written a reply to the address from Plymouth, and he states that from all ranks of the army in Zululand, and also during his journey through Natal, he received the most sincere kindness and sympathy; he has done nothing to be ashamed of, and he desires that a full account of the proceedings of the court martial may be made public. He feels that his honor and character as a soldier and an English gentleman have now been vindicated. Captain Carey has received official information of the findings of the court-martial.



A CABLE dispatch from Rome announces the following clerical changes in this country: First—the Right Rev. F. X. Leray, hitherto Bishop of Nachitoches, has been made Administrator of the Archdiocese of New Orleans, with the right of succession as Archbishop; second—the Rev. Mark S. Gross, priest of Wilmington, N. C., has been appointed Vicar Apostolic of North Carolina; third—the Rev. John Baptist A. Brondel, priest of the Diocese of Nesqually, in Washington Territory, has been made Bishop of Vancouver's Island, replacing the Most Rev. Archbishop Seghers, who has accepted and entered on his promotion to Coadjutor cum jure of the Most Rev. Archbishop Blanchet, Archbishop of Oregon City.

A VERY brilliant family wedding occurred at Gilbertsville, Otsego County, in this State, September 24, the high contracting parties being Mr. Fitch Gilbert, son of Mr. George T. Gilbert, and Miss Caroline Lathrop Gilbert, daughter of Mr. J. H. Gilbert. The marriage ceremony took place in the Presbyterian Church, which was finely decorated, and was enlivened by a large concourse of friends, among whom were Mrs. Charles Thorp Gilbert, Mrs. Anita Gilbert, and Miss Fannie Gilbert. Some of the toilets were very striking. The mother of the groom, Mrs. G. T. Gilbert, appeared in old gold satin with black lace, and the mother of the bride, Mrs. J. H. Gilbert, in black satin and white lace. The wedding gifts were rare, unique, and beautiful, including a set of Silvres from the French Exposition bearing the portraits of the Royal family of Louis XVI.

THE obituary record of the past week contains the names of Gustavo H. Roger, the famous French tenor, aged 64; Austin Burchard, uncle of President Hayes, aged 86; Zeras C. Whipple, founder of the Whipple Home for Deaf Mutes at Mystic River, Conn.; John Carlyle, a younger brother of the historian; Rear-Admiral Charles Boarman, U.S.N., aged 83; Frederick Valeire, French painter and engraver; the Rev. Dr. John F. Wright, a well-known Methodist clergymen of Cincinnati, aged 84; the Right Rev. Charles Baring, D.D., ex-Bishop of Durham, aged 71; Bernard Cotta, distinguished German geologist, aged 71; the Very Rev. Charles I. H. Carter, Vicar-General of the Archdiocese of Philadelphia, aged 76; Daniel Drew, aged 82; Violet Le Duc, French architect, aged 65; the Rev. R. H. Neale, D.D., of Boston, oldest Baptist minister in New England, aged 72; the Rev. D. K. Thomasos, ecclesiastical writer, of Harlem, N. Y., aged 84.

THE LATE DANIEL DREW.

THE venerable Daniel Drew died suddenly at the residence of his son in East Forty-second Street, New York City, on Thursday evening, September 18th, after complaining of a severe pain in his heart. He was born in Carmel, Putnam County, N. Y., on July 29th, 1797, his father being a farmer, who was able to give him only the ordinary district school education of the period. When seventeen years of age he hired himself out as a substitute for a drafted garrison soldier, his company being stationed at Fort Ganseveoort, on the Hudson. When peace was declared, Daniel returned on foot to Carmel, and with the little money he had saved purchased a few head of cattle, which he drove to New York and sold at a good profit. He continued to deal as a cattle speculator, gradually extending his business, and always meeting with success. His purchases were made in the rich grazing country around the head-waters of the Croton, and his customers met him at stated times at a once celebrated cattle-yard, on a part of which the Bowery Theatre now stands. Among those who dealt with him was Henry Astor, a brother of John Jacob Astor, but everywhere better known as "Butcher Astor." From him Drew borrowed a few thousand dollars in 1820, and entered more extensively into the cattle trade. He became the largest dealer in the northern country, and leased the old Bull's Head Tavern, at the northwest corner of Third Avenue and Twenty-fourth Street, where he reigned for some years as King of the Drovers, and won a reputation as a landlord second to that of no publican in the land. His career was one of uninterrupted prosperity; and when, in 1835, Isaac Newton, the Hudson River steamboat pioneer, cast about for a partner, Drew came forward, and the two established a line of steamers between New York and Albany, in opposition to a line run by Cornelius, then plain Captain, Vanderbilt. Vanderbilt was charging $3 fare from New York to Albany. At Drew's suggestion five new boats were added to Newton's line in rapid succession, and the fare was put down to a dollar. Vanderbilt saw that in Daniel Drew he had a long-headed opponent to deal with; so he proposed that the two

MAJOR R. J. C. MANNER, THE CAPTOR OF CETSWAYO.—SEE PAGE 75.

Digitized by Google

lines should be consolidated. His proposition was accepted, and out of the compromise grew the well-known "People's Line," of which Isaac Newton was the first president and Daniel Drew the treasurer. On the death of Newton, Drew became president.

To follow the career of Mr. Drew through all his great and sometimes marvelous stock and bond operations—now with a "solid" and then with a "fancy"; now with a "trunk" and again with an insignificant "side" line of railway; now as a director in half a dozen roads and next as a wrecker of the very same enterprises—would be to follow and describe transactions with which even the present generation is not unfamiliar, and which in narrative would fill a volume. His career was like that of almost every other "railway king" who had preceded him, and like that of many associates who did not have always the luck or prudence of a Vanderbilt. There have been several years during which he was both a pauper and a millionaire and the idol and the execration of the Street.

Twelve years ago there began a series of stock complications in Harlem, Erie and Western railways into which he was either drawn or pushed, and which were accompanied by litigations that also concerned the late James Fisk, Jr., and Mr. Jay Gould and the late Commodore Vanderbilt. These complications and suits not only worried but finally impoverished the veteran operator, then turned of seventy years of age. His daily life for several years was one of struggle and turmoil, and it finally ended in his bankruptcy and in not a little personal humiliation at the suit of creditors, and, indeed, old friends and recipients of his favors.

Mr. Drew, from an early age, identified himself with the Methodist Episcopal Church; in a more marked degree as his wealth accumulated. In his native village he erected a stone church at a cost of $20,000; also a church at Sharon, a few miles distant. To the church in New York of which he was a member he contributed $50,000. But it is in connection with the founding of the Drew Theological Seminary, at Madison, N. J., that his name is most widely known in religious circles. At the centennial anniversary of the establishment of the Methodist Episcopal Church in this country, Daniel Drew announced his intention of appropriating the sum of $500,000 in order to found the seminary. One hundred and fifty acres of land and appropriate buildings were purchased, other buildings were added, and the seminary was soon in successful operation.

Mr. Drew always displayed the greatest interest in the institution, though he very wisely abstained from any personal interference in its government.

THEATRICALS.

MONDAY, October 20th, is likely to be numbered in the kalends, for on that date the monarch of managers, Colonel Mapleson, commences his operatic season at the Academy of Music. With Colonel Mapleson a promise means a promise; and the manner in which he kept faith with the public last season, despite the host of difficulties that beset him, and before which any ordinary impresario would have gone under, speaks with trumpet tongue. He has arranged to bring before the American public the best available talent from Europe, including nearly every leading vocalist, and, with true artistic perception, has made provision that the minor rôles shall be "excellently well filled," so as to insure a perfect ensemble. He has increased the strength of his magnificent chorus, while his superb orchestra, under the magic baton of Arditi, has also received considerable reinforcement. We shall again be enchanted with the marvelous vocalization of Gerster, while a débutante, so far as this country is concerned, and over whom the musical critics gush rapturously, Mlle. Alwina Valeria, is announced. The other *prime donne soprani* are Mlle. Lido, Mlle. Robiati, Mlle. Stecchi and Mme. Emilie Ambré. The *prime donne contralti* are Mme. Labiache and Mlle. Annie Louise Cary. The tenors are the ever-welcome Campanini, and Signori Aramburo, Runcio, Rinaldini and Grazzi. The baritones are Del Puente, Revere and Galassi, while the *bassi* include M. David, of the Grand Opera, Paris, Herr Behrens—what a voice!—and Signori Monti and Tobaldi, and Mr. Broderick, all unknown to Gotham. "La Traviata" opens the season with Runcio's *Alfredo*, Galassi's *Germont*, and Emilie Ambre's *Violetta*. It speaks well for the good taste and æstheticism of the Empire City that New York is already deep in the box-office books. To Colonel Mapleson something even more than a bumper is unequivocally due.

To Mr. Max Maretzek we shall be indebted for the production of an American opera, which will be performed for the first time on any stage at the Academy of Music, on Saturday, the 27th inst. The opera, in three acts, is entitled, "Sleepy Hollow," the libretto being founded on Washington Irving's inimitable story. The first act will consist of an introductory chorus—song of Van Ness (baritone); entrance of Ichabod Crane and the ballad of the "Headless Horseman"; entrance of Frau Van Spuyten (contralto)—chorus and concerted piece; ballad of Brom Bones (tenor); aria and chorus of Katrina Van Tassell (soprano); finale of first act—country dance, chorus, storm on the Hudson, appearance of the Headless Horseman. In the second act we have a pastoral; a spinning song—Katrina Van Tassell; a duet, Katrina Van Tassell and Brom Bones; a melodrama-duet—Captain Kidd and Ichabod Crane, with a chorus of pirates, fairies and demons, and roundelay of Fairy Queen and concerted piece. The third act contains a drinking-song, of which those who are behind the scenes speak in terms of enthusiastic praise. The production of "Sleepy Hollow" should prove a landmark in the annals of our stage, and we look forward with considerable interest to the ringing in of the opera.

PARALYSIS,

Which so often arrests the steps of business men and hard brain-workers after they have passed middle life, might in most cases be prevented by an occasional use of COMPOUND OXYGEN. Nature usually gives a timely warning of the approach of danger from this direction, and they are wise who heed it. Get our "Treatise on Compound Oxygen," and learn all about this new cure. It is sent free. Address, DRS. STARKEY & PALEN, 1112 Girard St., Philadelphia, Pa.

FUN.

A REVENUE cutter—ye clipper of coupons.

THERE is a 'bus-y time at railroad depots when the trains arrive.

THE latest thing in carpets is the moth that took up his abode there while the mistress was off summering.

SOW all the wild oats you have on hand between now and January 1st. Then—why, do as you did last January.

PHYSICIAN (to Government Clerk): "Well, what do you complain of?" *G. C.*: "Sleeplessness, doctor." *Physician*: "At what time do you go to bed?" *G. C.*: "Oh, I don't mean at night, but during office hours!"

SANDY, delighted with his countrymen for having won the Echo shield: "Oh, ay, I was quite share they wid get it this time!" *Pat*: "An' sure an' we wid bate ye clane if we had Volunteers in Ireland an' got practice." *Sandy*: "I'm share ye needna complain o' want o' practice; ye get plenty o' that, shootin' landlords."

"HERE, sergeant, arrest me!" exclaimed an excited individual, as he rushed into the nearest station-house. "I have shot a man; he is, perhaps, dead by this time, and I have come to give myself up." "Well! if this isn't too much!" said the indignant officer. "Now, you go home, I tell you, and mind your own business and wait till we find you."

EX-GOVERNOR TILDEN had been absent a long while from Albany. He suddenly returned, and was seen walking up the aisle of his favorite church with his large party of friends. The eloquent clergyman was in the midst of reading the scriptural selection, and just as the long-missed and much-gazed-at Governor reached his pew the good preacher loudly cried: "Rejoice with me, for I have found the sheep I had lost!" It is believed that the Governor wished at that moment that his favorite preacher were not so good an elocutionist.

A NEW DEPARTURE.

A NEW system of protection has been devised which, without doubt, will supersede old life insurance, securing its members as effectually as a national bank bill is secured, and in a similar manner, giving perfect security for the first time in the annals of life insurance. It is indorsed by the highest insurance authority—the Hon. ELIZUR WRIGHT. The following letter from the Insurance Commissioner of Tennessee is conclusive evidence of its superiority:

"The safety-fund system of the Mutual Benefit Life Company, of Hartford, combines the cheapness of the co-operative societies, with a strength, security and soundness heretofore unknown in life insurance. M. T. POLK,
"Treasurer and Insurance Commissioner of Tennessee."

THE SPIRAL DESCENSOR.

TESTIMONIALS FROM CHIEF ENGINEERS.

WASHINGTON, D. C., Sept. 12th, 1879.

WE, the undersigned, Chief Engineers and delegates to the Seventh Annual Convention of the National Association of Fire Engineers, take pleasure in testifying to the utility and simplicity of the Standard Portable Fire Escape or Spiral Descensor, manufactured by the firm of De Lamotte & Marchand, 240 Broadway, N. Y., and was exhibited before us by Edward J. La Place. Several descents were made from the roof and windows of the Riggs House and other hotels, descending with ease and safety and rapidity. The apparatus is simple, easily understood and managed, and from what we saw we can heartily recommend the SPIRAL DESCENSOR as a safe and sure means of descent to the ground from the upper parts of hotels, factories and dwellings, and we are glad to give these gentlemen this approbation and certificate. A. C. Hendricks, New Haven, Conn.; W. Nixon, Newburg, N. Y.; George W. Frantz, Louisville, Ky.; John A. Bennett, Cleveland, Ohio; W. H. Johnson, Philadelphia; John Gallihan, Omaha, Nebraska; H. Heinmiller, Columbus, Ohio; W. Stockell, Nashville, Tenn.; Isaac B. Mackey, New York; R. E. Kinney, South Norwalk, Conn.; S. S. Dollyer, Pawtucket, R. I.; W. M. Brackett, Minneapolis, Minn.; W. N. Jeffries, Burlington, N. J.; I. F. Deatrich, Defiance, Ohio; Almon Boys, Ithaca, N. Y.; John D. Paige, Marshall, Joliet, Ill.; F. Loyd, Vicksburg, Miss.; I. N. Evans, Pittsburg; —— Bulwincle, Chicago; Henry Hills, Secretary, Dallas.

The Spiral Descensor referred to above is the same which was so successfully exhibited from the *Tribune* building's tower, in this city, a few days since, and was the only portable fire-escape recommended at the convention. Descents were made from a six-story house in forty-nine seconds.

WEAKNESS and sickness changed to health and trength with HOP BITTERS, always.

THE fame of the ST. NICHOLAS hotel is known from St. Petersburg to San Francisco. This great reputation has been purchased by the utmost care and study of the most fastidious wants of guests. The same superb table and appointments exist today, and every modern improvement is kept pace with by the indefatigable manager who caters for the public pleasure. From foreign tourist to commercial traveler there is one voice of praise of this great caravansary. Special attention is called to the moderate rates.

A LUCKY TWAIN.

A TAILOR AND A YOUNG LADY DRUGGIST DRAW THE SECOND CAPITAL PRIZE IN THE ELEVENTH DRAWING OF THE COMMONWEALTH DISTRIBUTION CO.—NEXT DRAWING SEPTEMBER 30TH.

LOUISVILLE, KY., September 3d, 1879.—This will certify that we jointly held ticket No. 23,368, which drew the second capital prize of $10,000 in the eleventh drawing of the Commonwealth Distribution Company, August 30th, and the same was promptly paid on presentation by check on Third National Bank of Louisville, Ky.
V. E. MORERA, No. 40 Main Street.
ALCENE VANDERHEYDT, No. 202 Preston Street.

Next drawing September 30th, the same splendid scheme, viz.: $112,400 in cash prizes. Tickets, only $2; Half Tickets, $1. Send orders at once to T. J. COMMERFORD, Secretary, *Courier-Journal* Building, Louisville, Ky., or same at 163 Broadway, New York.

PROFESSOR GEORGE M. ANGELL, of Boston, made, at the recent meeting of the Social Science Association at Saratoga, a startling exhibit of the extent to which many of the common articles of food and drink are adulterated. In wines no security of purity is found, except in the standard American brands, like the "AMERICA" EXTRA DRY Champagne of A. WERNER & Co. of this city. No harmful ingredient has ever been found under the most searching analysis in this well-known wine, which has received the unqualified indorsement of the ablest physicians and chemists.

HALFORD TABLE SAUCE, unrivaled by any relish intended for family use. Recommended by the best families.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

CUTICURA REMEDIES.

THE success attending the use of these great remedies in the treatment of affections of the skin and scalp with loss of hair is astonishing. From every part of the country come the most grateful acknowledgments of what might be called miraculous cures. Messrs. WEEKS & POTTER extend their thanks to all who have spoken a good word for CUTICURA. CUTICURA SOAP and CUTICURA RESOLVENT, and will thankfully receive reports of new cases wherever they occur.

BEFORE you start, insure against accidents by a yearly policy in the THE TRAVELERS, of Hartford.

ASK fifty ladies in succession what perfume they consider the most delicate, the most pure and salubrious, the most permanent and in all respects the most desirable, and forty-nine of them will answer MURRAY & LANMAN'S FLORIDA WATER.

HOP BITTERS strengthens, builds up and cures continually, from the first dose.

The greatest success ever attained in the production of materials for structural purposes has been attained by the H. W. JOHNS MANUFACTURING CO., 87 Maiden Lane, N. Y., in the production of their Asbestos Liquid Paints, which are not only in use upon the finest and largest structures in this country, among others the Metropolitan Elevated Railroad, the United States Capitol at Washington, etc., but are also rapidly taking the place of all others for dwellings on account of their superior durability and beauty, which renders them the best and most economical paints in use.

The Secret Key to Health.—"The Science of Life, or Self Preservation," 300 pages; price, only $1 Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

Beware of Counterfeits and Imitations

BOKER'S BITTERS.

The best Stomach Bitters known, containing most valuable medicinal properties in all cases of Bowel Complaints; a sure specific against Dyspepsia, Fever, Ague, etc. A fine cordial in itself, if taken pure; it is also most excellent for mixing with other cordials, wines, etc. Comparatively the cheapest Bitters in existence.

CATARRH

Is a Terrible Disease. Its fearful effects—corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, digesting odors, nasal deformities, and finally consumption. From first to last it is ever aggressive. Ordinary treatments are worse than useless. If neglected while a cure is possible, it may rapidly develop into quick consumption. The most thorough, successful and pleasant treatment is **Dr. M. W. CASE'S**

CARBOLATE OF TAR INHALANT

It does not require ten minutes to demonstrate the value of Carbolate of Tar, the most healing remedial agent known to science. Balsams and Cordials of the most healing and soothing properties are so combined with Pine Tree Tar, that the more breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. **No heat, no hot water,** simply inhaling or breathing it, and you feel its healing power **at once.** This treatment is endorsed by physicians everywhere, and highly commended by thousands, who have used it with perfect satisfaction. **FULL TREATMENT** sent. *SATISFACTION ALWAYS GUARANTEED.* Address,

SILVER TEASPOONS

At Less than Manufacturer's Cost Prices.

The utter worthlessness of the stuff advertised by a number of firms in New York, Cincinnati and Philadelphia as Silverware, compels the world-renowned Tremont Spoon Co., of Boston, to offer during the next thirty days to every one in the United States a sample-set of their **VERY BEST SPOONS,** at a price much lower than any jeweler pays for them at wholesale. We make this offer simply to introduce our goods thoroughly in all parts of the country.

FOR 30 CENTS, or ten 3-cent postage-stamps, which covers cost of the spoons as well as postage and packing, we will send by mail, prepaid, *One Set of Six Teaspoons,* finely and heavily plated with *Pure Nickel and Coin Silver,* or a new metal called *Alfenide,* which is very similar to the finest English white steel. They will wear for years. **Two sets for Fifty Cents.** Order at once, and address plainly,

TREMONT SPOON CO., Boston, Mass.

A BRILLIANT NEW NOVEL!

ENTITLED

"The Wages of Sin,"

BY

Mrs. METTA VICTORIA VICTOR,

AUTHOR OF "THE DEAD WITNESS," ETC., ETC.,

Will be commenced in No.

762 762 762 762

OF

Frank Leslie's

CHIMNEY CORNER,

Issued Monday, Oct. 13th.

"THE WAGES OF SIN"

is a story full of movement and life; with scenes of great pathos and tenderness. It is sensational, but is altogether free from the stale tricks of sensationalism. It is sensational as real life is, with its tragedies, its temptations, its sins, its struggles, and its love "stronger than death."

"Be it ever so homely,
There's no place like home."

THE BATTLE-FLAGS

Were not carried past the

MODEST HOME OFFICE

OF

"The Travelers,"

Because the Grand Marshal of the day well knew the street where we live would be rendered impassable by the immense crowd seeking the protection of

ACCIDENT INSURANCE.

All honor to the

10,000 VETERANS

Who bore the war-stained banners to their final resting-place; and we will not forget the

550,000 VETERANS

who have carried Accident Policies under the old banner of

"THE TRAVELERS."

On their roll of killed and wounded are the names of

39,000 Valiant Men

Who were insured against accidents, thus securing to themselves and their families cash benefits to the amount of over

$3,300,000.

Moral—Insure in The Travelers.

Horsford's

SELF-RAISING

Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

Dr. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahnemann Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

If your grocer has not got it send a three cent stamp to the manufacturers for a sample.

[Concluded from last week.]

WHOSE WAS THE THIRD CHAIR?

"I HAD the happiness, at last, to notice a favorable change in Paul. Gradually his brow became calm, his breathing regular, a soft, joyous light beamed in his eyes, his voice took the tender inflection that told of a spirit given over to rest after a conflict gained.

"His arm once more was flung about my shoulders. I was permitted to enjoy the sweet and tender confidences of his soul.

"One night he confided to me that the deed was done—Egeria was free!

"'It is matter,' he said, 'and matter cannot be destroyed; but it can be resolved into another shape; it can in this case be even reduced to gas and ashes. I shall cut it up in small pieces, remove the gristle, ligaments and sinews, saw the bones into trifles, and submit the whole thing to the crucible.'

"For a moment I was aghast—my blood ran cold.

"'Gracious Heaven!' I said, 'Paul, you haven't killed her? You have not taken her life?'

"'You forget, Harold,' he replied, coldly, 'that what you say is impossible. Life cannot be destroyed?'

"'I beg of you, Paul,' I cried, in an agony of fear, 'tell me what you have done to Egeria.'

"'I have compelled the mass of matter which took the form of a body and imprisoned the soul of Egeria to disorganize and take other shapes.'

"'What have you done, Paul,' I repeated, wildly—'what have you done?'

"He waved his hand impatiently.

"'I wouldn't have believed I could have been fond enough of you to endure this stupidity. Follow me;' and thus saying, he led the way with quick, nervous strides, down the stone steps of the staircase, one, two, three flights, and I discerned, with a chill that went to the marrow of my bones, that we were approaching the dissecting room.

"We entered the gloomy portal, and stood before the long tables, upon one of which immediately before us lay the motionless body of the sibyl.

"It was quite dead and cold, and thus gained a nobility that never could have belonged to it in life. The large white lids shut down upon the eyes, quenched even the memory of their chuckling ferocity, and the heavy features, composed and stern, wore a sculptured grandeur that commanded respect. I looked upon it without horror, even with a species of admiration; and afterwards, in dissecting it, we found much to interest us in the peculiar formation of the heart, which being the sensual servant of the soul, is 'the sun of our body, the king and sole commander of it, the seat and organ of all passions and affections.'

"After dissection, we took it to the laboratory, and submitted it piece by piece to the crucible. Slowly, and after laborious but patient toil, we had the satisfaction of knowing that all possible trace of that organization was obliterated.

"I hope I am not tiring you, gentlemen," said the doctor, finding his visitors a little uneasy.

"Not at all," they replied, with a blandness that partook of heroism, the student adding that he was particularly interested *in the sweet and tender confidences of Paul.*

"Having thus reached an important stage of progress," the doctor continued, "I was prepared to find Paul patient for the result. He had done all that was possible for the advancement of his theory, and nothing remained now but the fulfillment of his promised happiness. Indeed, he so well described to me the realistic formation of his basis for future felicity, that I didn't think of doubting it.

"'You know, Harold,' he said, 'the soft marrowish white substance that forms the brain, and is protected by the *dura mater* within the skull; when that was taken away, the soul of Egeria burst through the *pia mater*, and escaped, saying to me at parting, "I will meet you a year hence, Paul, a year from to-night!"' You see he was permitted to see all this, and to hear the voice of Egeria thus hold forth to him an ecstatic future.

"But he declared that at that moment his vision was blinded by a stream of light, and he couldn't quite see the form that Egeria was permitted to assume.

"This uncertainty chafed his spirit, and at last he became haunted by the fear that when they met she might again be enshrined in the ponderous body that confronted us under the the lamplight that night.

"As days glided into months, he became more restless, dissatisfied and gloomy than of old. The twenty-seventh night of November was the date of Egeria's deliverance, and this night, so long looked forward to as the completion of Paul's happiness, wore a sinister aspect as the Summer waned.

"He spoke of the subject no more, but day by day and week by week he grew more and more melancholy—absorbed in gloom he paced the dreary corridors, desolate and alone, while I, watching him from a distance, felt my soul melt within me from pity and dread.

"He lay awake hour after hour, and when exhaustion brought sleep it was murdered by unhappy dreams: he would stretch out his arms, not in delight and ecstasy, but with a species of fear and horror that is indescribable, and cry out, in a loud agonized voice, 'She is here! she is here!'

"I began to wish we had never met the sibyl, or, having met her, had been contented with her whole formation, and had not attempted to deliver her from what after all was a respectable tyrant; it was neither the matter pertaining to a hunchback, a mermaid, or a ghost, as our young friend here suggested, but a big, brawny mass of flesh and blood that I fervently wished had been powerful enough to protect itself from the prisoner within its gates.

"I became sorely tempted to take refuge in skepticism, and persuaded myself that we had done with Egeria and the tyrant for ever.

"'The fact is,' I said to Paul, 'it was a scientific experiment, and liable to failure as everything of that kind is—if the spirit was freed, it would have come to you at once—we are forced to believe then, that, owing to some little flaw in the theory or the mechanism, the result was abortive. As for me,' I continued, encouraged by a gleam of hope that flitted across the gloomy visage of my friend, 'I don't believe we'll be troubled with Egeria in any shape.'

"But Paul shook his head mournfully.

"'Wait,' he cried, with a bitter smile, 'till the twenty seventh night of November!'

"'See here, Paul,' I said, 'if you go on in this way, you'll either be dead or a maniac when that time comes. I'm going to take the matter in my own hands and cure you of this fantasy. Will you give yourself over to me for the next few months?'

"Is it only a few months?" said Paul, with the accent of a poor wretch doomed to the gallows.

"'Don't you know the day of the month?' I asked, with trembling expectancy.

"'No,' he replied, 'nor the month of the year! I don't want to count the days—but I shall know, Harold, when the twenty-seventh night of November comes. Steep me to the lips with opiates, shroud me in gloom and darkness, hide from me time and light and sensation; when that awful night comes I shall know it, Harold. Oh,' he groaned, 'would to heaven it were to-morrow, that I could grasp the agony and have done with this terrible suspense!'

"I took him in my arms and dragged him to my room. With faint and dusty radiance, a beam of the sun struggled through the begrimed window and fell upon the lustrous hair of Paul. It lingered there as if loath to leave the one fair spot in this gloomy den, but I pulled down the heavy curtain and shut out the fleeting ray. The room became suddenly shrouded in darkness and remained so as far as sunlight was concerned, but I caused the shutters to be closed and barred upon the outside. All necessary air was forced through the room by means of a ventilator.

"I don't suppose those shutters were ever opened again. As for Paul, he bade farewell then and there to the light of day. Fearing he might have deceived me in his pretended unconsciousness of time, I kept him asleep for thirty-six hours. I was with him a portion of every hour of the day and night, sleeping at odd hours to deceive him—all the time I could spare from my hospital duties were given over to him as my special patient. A regimen of action was agreed upon—we were to read sparingly and of light literature—to smoke rarely, to endeavor to become interested in backgammon, to argue none, to converse jocularly if possible, at all events cheerfully, and to devote ourselves mainly to dreams of the future.

"Oh, the resolves that were made for health and sanity, the abandonment of fancies and theories and beliefs of all kinds, save those that presented themselves gayly and innocently in the shape of trust and faith and patience to wait the development of nature's plans in our behalf. We determined that when we should shake the dust from our feet in escaping this gloomy prison, journeying away to foreign lands for recreation and delight, we would leave all doubt and dread and grief as part and parcel of this dreadful place. For, I need not tell you, gentlemen, that at times we suffered a species of remorse. Divested of scientific interest and spiritualistic heroism, the affair became troublesome to the mind and memory. I leave you to imagine our feelings when we were compelled to acknowledge that we had innocently committed a deed which might be construed into a crime."

"A censorious world," remarked the student, "would very likely even call it a murder."

The doctor looked at him sternly.

"I hope," he said, "you have no fault to find with our motive—why, suppose it were possible," continued the doctor, turning to his guests, "that I had invited you here to-night with the apparently sinister motive of shooting you all to death with a pistol that is in this drawer beside me—the result would be a cause of consternation and grief to many, but in some mysterious way a bountiful nature, having ordered the sacrifice, would profit by it—you would reluctantly, perhaps, be the humble instruments of an element of success in the great inscrutable mechanism of the universe."

"Nevertheless," said the student, with rather a ghastly smile, "I have no desire to be singled out for this partiality."

The other gentlemen were very grave, and watched Doctor Cairnes with an interest that savored of awe.

"Days glided into weeks," continued the doctor, "weeks into months, and the twenty-seventh of November was close at hand. So even had been the temperature of the room, so completely excluded the light of day, so perfect the resemblance of hour to hour, that it was with difficulty I could myself keep count of time. Paul professed to have lost all idea of time or light, or heat or cold; called himself laughingly a species of fungi, declaring that it would be impossible to detach him safely from his shell—that he didn't think somehow he'd ever get to go to those foreign lands but, he was quite content and happy with everything as it progressed at that time. 'Anything,' he added, with a sudden pallor and touch of agony, 'is better than the past.'

"As the night of the twenty-seventh approached I devoted myself utterly to my undertaking, and resolved that, come what might, I would free Paul from this monomania that had taken possession of him body and soul. The dreaded night once happily past, we were safe from fear and fantasy for the future, and I studied even the minutiæ of detail to effect this end. So sanguine was I of the result that I made all arrangements for our immediate departure upon the following morning; and no wretch languishing in gyves and fetters longed for the hour of his deliverance more eagerly than I.

"At last the twenty-seventh came, and with it a storm of wind and rain and fury of the elements that turned light into darkness. At three o'clock the afternoon was so dark that I could have led Paul into the outer air to convince him it was already night. But I refrained from any departure from the monotonous rule of our lives. The hours wore away; we ate and drank, smoked, walked around and about the room, played several games of backgammon (we had agreed to abandon chess-playing), chatted about two or three cases of severe illness in the hospital, and at length Paul leaned his head back upon the cushioned chair and enjoyed his cigar in silence.

"I watched him furtively; his eyes held a dreamy look of abstraction, but they were still happy with the joy of calm; and, although the wind howled through the corridor and shook the casement with a shriek that was almost human, although the bricks toppled from the chimney and a storm of sleet blew down, almost extinguishing the flames of the fire and causing the bright lamplight to pale and grow dim, Paul remained unmoved, and said, quietly:

"'A wild night, or a wild day—which is it, Harold?'

"'Upon my soul, I've forgotten which, and it don't matter in the least,' I replied.

"'No,' he said, in a peculiar tone, 'not in the least.'

"Then he looked over at me and smiled. I declare to you, gentlemen, I cannot tell you what there was in that smile, but it made me long to go over to him and clasp his hand and feel the dear old familiar fling of his arm about my shoulder.

"I wish I had! I wish I had!" cried the doctor, getting up from his chair and walking nervously about the room. (His uneasiness was contagious, and his guests each and all changed their position—they seemed unconsciously to move nearer to the door.)

"It was a singular thing, gentlemen," pursued the doctor, "a very singular thing. Paul suddenly fell asleep with the cigar in his hand, the smile on his lips. He fell asleep, and I was glad, for the hour was near. I have not had occasion to mention the furniture in the room. It was plain, old-fashioned, and extremely heavy. Besides the ordinary accessories of a bed-chamber there was a lumbering old bookcase. There were but three chairs in the room; mine and Paul's were drawn up on either side of the fireplace, the other one was wedged in between the bookcase and wardrobe. It was filled with books and pamphlets so full that some had toppled over on the floor. I would like you to notice, gentlemen, that the chair in question was almost a fixture, and only used as a receptacle for books and rubbish that will collect in the shape of reading matter.

"The moments glided on. I looked at my watch; it was nearly ten o'clock. Two hours more—two little hours more—and all would be well.

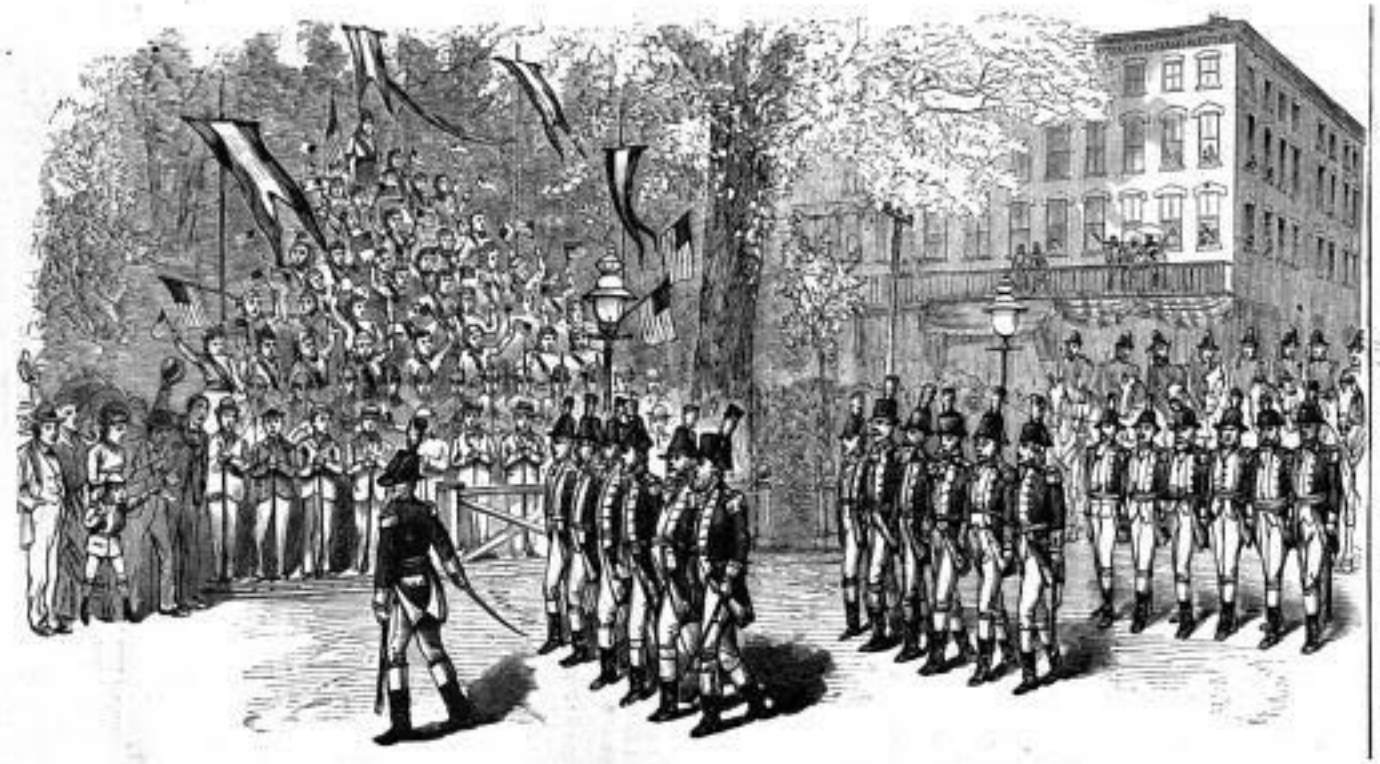
"In the meanwhile this silence became oppressive. I went to the door, locked and barred it; took off my coat, picked up a number of the *Lancet*, and was soon deep in an article on surgery. How was it, gentlemen, that I also fell into a slumber, deep, profound, lasting? I awoke with a cold, creeping sensation, a feeling of paralyzed energy. I opened my eyes and struggled, fought to free myself from this terrible, this agonizing nightmare, bathed in a cold perspiration, trembling in every limb. I endeavored to cry out, and the room echoed a hoarse murmur; I tried to get upon my feet; and I struggled thus far. It was no nightmare then, but terrible reality, and it was really Paul that crouched in the chair opposite, his head bent forward, his hands extended, his lips still open with the cry that first escaped them, and head and body and lips were all bent upon one object that rested immediately between us—between Paul and me. *It was that third chair*, gentlemen, the only other chair that the room contained. The books were thrown in masses on the floor, and the chair was drawn up to the fireside between Paul's and mine. Paul was gazing upon it—but he was dead, quite dead! He had been dead perhaps an hour; his head was yet warm with the lingering vitality of heat. I looked at my watch; it was one o'clock! The terrible night had come and gone and Paul had been borne away with it. My experiment was a failure; but his theory was proven beyond a doubt. I cannot tell you what shape Egeria assumed. Paul's face was like that of a sphinx; it spoke neither terror nor calm, injury nor despair. But that chair—ah! that chair was eloquent in itself. It tilted forward triumphantly, almost with a leer in the foremost leg; it held a comfortable position before the now charred embers. Heaven forgive me! but I could almost discern a resemblance in the peculiarly carved knob on the top of the chair to the shape of the head and the dull, leaden hair of the creature I thought we had dissected. It was a souvenir, a monument, a courteous reminder. Call it what you will, gentlemen, but tell me, if you disbelieve in Spiritualism, *whose was the third chair?*"

The doctor looked around for an answer from his guests. They had all disappeared. One by one they had vanished out the door and down the stairs, the student sliding down the balusters in his haste to depart; and none of them ever went to see that queer, grand fellow, Doctor Cairnes, again, or evinced any pleasure in the subject of Spiritualism.

CIVILIZING THE SIOUX INDIANS.

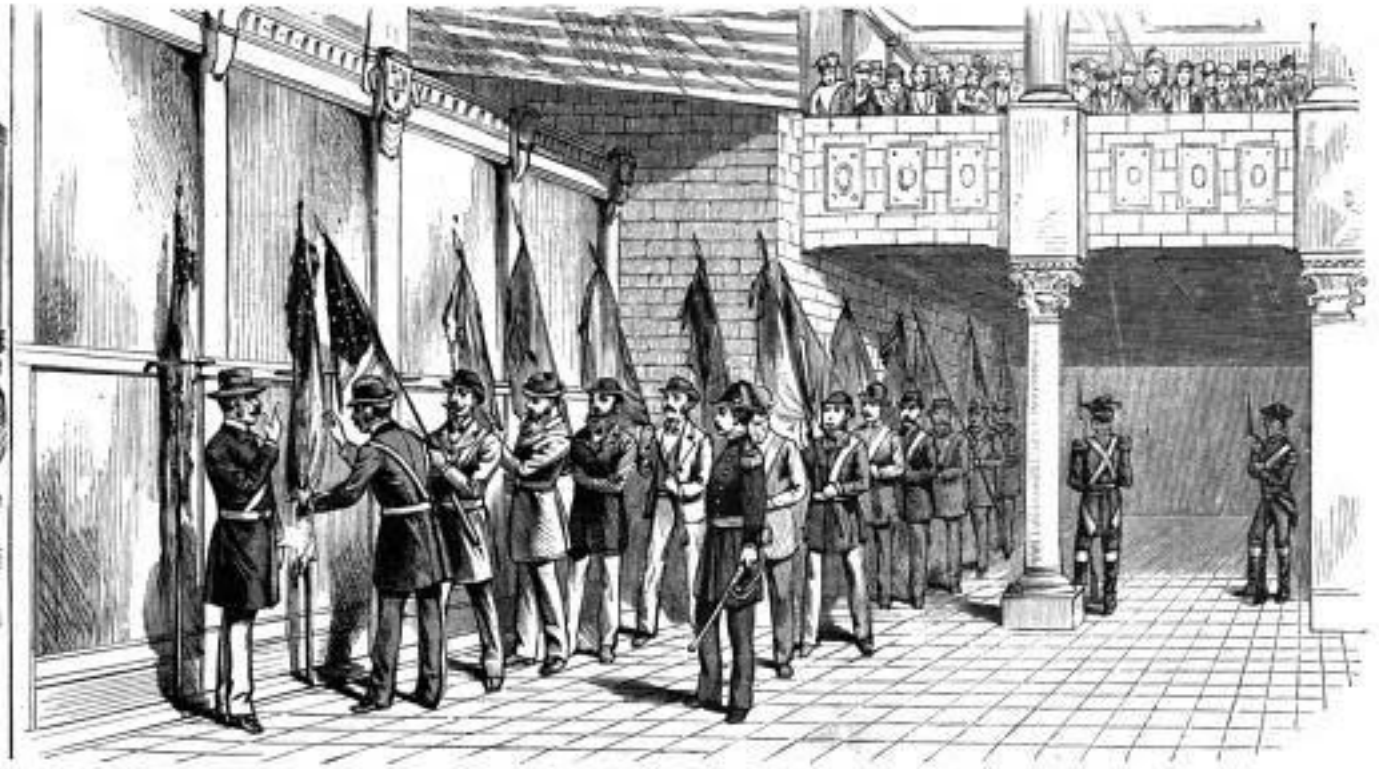
SECRETARY SCHURZ'S VISIT TO THE SPOTTED TAIL AGENCY.

THE details of the recent visit of Secretary Schurz to the Spotted Tail Indian Agency, which is elsewhere referred to in our columns, are full of interest and attraction as illustrating the improved methods of dealing with the Indians and the gradual decay of the savage influences and customs of their life. Secretary Schurz and his party left the Missouri River at Rosebud Landing on August 28th, and on the same evening reached the Agency, having traveled the entire distance of eighty-seven miles in wagons in fourteen hours, with one relay of horses. The soil is generally a rich, sandy loam, most of it is tillable, and all of it is excellent for herding. In the entire eighty-seven miles between the Missouri River and the Rosebud, upon which the Spotted Tail Indians are now living, there is only a single habitation, and that is occupied by a Frenchman named Cologne, who has resided among the Brulé Sioux for many years. He has an Indian wife and several children, and with their assistance maintains a sort of half-way house, where meals may be obtained by those engaged in hauling the supplies from the river to this and the Red Cloud agencies. Cologne cultivates a few acres of corn and potatoes, and cuts hay sufficient to supply his herd of cattle during the Winter. At this particular time, when the Sioux may be said to be in transition from barbarism to civilization, the force of the example of such men as Cologne is invaluable, and will go far toward assisting the Government in the efforts now being made to raise the Indian to a self-supporting position.



The Indians had known for some time of the purpose of the Secretary to visit them, and had been looking forward to it with great interest and satisfaction. Along the road was passed a large number of wagons, in charge of Indians, carrying supplies, all of whom saluted the party in passing with their peculiar guttural "How," and in many cases addressed words of welcome. Early on the morning of the 29th, Spotted Tail and Two Strike, the two leading Brulé chiefs, called upon the Secretary, and, after a brief conversation, arranged for holding a grand council on the following morning. This council was a grand affair. The Indians came to the Agency in large numbers, dressed in all their barbaric splendor, and mounted upon their best ponies. There present numbered at least 1,200, of whom about 300 were women. Some of the warriors were dressed and painted with taste, but, according to a correspondent who describes the scene, "the larger portion of them were hideous with paint and repulsive in dirty garments. Several were in strict war costume, omitting the war paint (which is black), their only garments consisting of a breech-cloth and blanket, the latter being thrown carelessly over one shoulder in order to expose their painted and naked bodies. Before the council assembled, the young bucks of the various bands congregated upon the surrounding hills and gave frequent exhibitions of their splendid horsemanship by racing their ponies at breakneck speed across the intervening valleys, and in full view of the assembled multitude. The congregation of 1,200 wild Indians, nearly all of them mounted, dressed in gay colors, their faces painted and their long black hair ornamented with feathers and gay streamers, was a novel and picturesque spectacle. Many of the women and children were mounted, in some instances two being upon one pony. These ride almost as well as the men, and in the same fashion. No attempt is made to decorate the horses, and generally they were caparisoned in the most primitive manner. The saddles are made by the Indians, and consist of a piece of hard wood, shaped after the common saddle in use among white people, and covered with a hide which they dry themselves. The number without stirrups was about equal to those with such useful appendages, but their absence made no perceptible difference in the ease and grace with which the riders sat upon and rode the ponies. Very many were without saddles, and in their stead used a blanket held on the horse by a strap."

The council was held outside of the Agency inclosure, where a stand had been erected, upon which were seated Secretary Schurz, the gentlemen who accompanied him, and the interpreter. The Indians formed themselves in a semi-circle in front of the stand, a large number being seated upon the ground in rows, and the remainder sitting in rear of those upon their ponies. Spotted Tail occupied a chair placed in the centre of the vacant space between the Indians and the platform. He was dressed in plain blue, without ornament of any kind, and instead of a blanket wore a heavy white linen toga, which depended from his left shoulder, and which he held about his body and legs with his left hand, leaving his right free for gesticulation. The speaking was commenced by the Secretary, who congratulated the Indians upon the good reports received from them and the progress they had made in freighting and herding, and earnestly urged them to encourage and assist the effort to establish schools for the education of their children.



In reply, Spotted Tail expressed the great gratification the presence of the Secretary gave his people, and assured him that the counsel given by the Secretary would be followed. He referred with satisfaction to the progress already made by his people, and expressed a strong desire for the increase of school facilities, in order especially that the Indians might acquire the English tongue. After the council adjourned, the Indians pressed forward and shook hands with the Secretary, with many expressions of gratitude and good will, which could not, of course, be understood, but about the character of which their smiling faces and earnestness of manner left no room for doubt.

The Indians of the Spotted Tail Agency manifest great eagerness to become farmers, and maps of the survey are now being made. But these will not be completed for some months, so that farms may be taken up, but the anxiety for their possession is so great that the Indians are already driving their stakes, and in riding about, painted board signs are met with, which inform all concerned that a certain spot is "White Thunder's farm"; that another is the "Hay claim of Charging Eagle"; that another has been selected as the future home of "Fill the Pipe." A correspondent remarks that "the importance and significance of these painted signs cannot be too highly appreciated. They mark the first step in the civilization of the most numerous and warlike of our Indian tribes, and if Congress will read them aright and give the Indian

WAITING.

"SHALL I have long to wait, dear love?"
He asked, and smiled to see her turn.
She bent and kissed him from above;
His face felt all her soft blonde hair.

He watched her slim, lithe loveliness
In silence up the stairway pass,
The rippling movement of her dress
Like zephyrs on the Summer grass.

He held his breath till out of sight
She gained her dainty, curtained room,
Then forth he answered through the night
That had for him no tinge of gloom.

She closed her chamber-door and stood
Before the mirror queen-like, calm;
Her sad eyes' mute solicitude
Was like a penitential psalm.

"And I could sell his love," she said,
"For what I know is veriest dross.
One hair upon his loyal head
Outweighs this gain that is my loss.

"But he shall learn I am the queen
Himself hath called me; he shall know
That death can surely stand between
His queen and shameful overthrow."

Her white throat choked a little sob,
Her sweet mouth quivered with a sigh;
Her soft hand stilled her heart's quick throb,
The eyelid drooped on either eye.

She stooped her royal head to write,
Her name she signed, and kissed the place;
Then to her night-rober fragrant white
She took a last look at her face.

* * * * *

Next morn, his heart on fair dreams fed,
He took the old familiar way—
He found his dear love lying dead,
And had no heart to curse or pray.

He read, half-dazed, the words she left;
He bent and kissed her calm, pale face;
Then forth he went as one bereft,
For whom there is no hope or grace.

But ever as the slow years pass
He hears an echo from above,
In every wind that stirs the grass,
"Shall I have long to wait, dear love?"

JOHN MONAN.

BLUE EYES AND GOLDEN HAIR.

BY ANNIE THOMAS.

CHAPTER V.

"DAISY ELDON is incapable of making 'an exhibition of herself' in anything but a charming way," Lord St. Briac replies, and something in his tone makes Miss Millard glance sharply at him.

Rumor has told her already that, if Daisy had been endowed with one-half the wealth which is to be her (Julia Millard's) portion, Lord St. Briac would not have dallied in his wooing. So she glances sharply at him now as she detects the tremor in the tone in which he speaks of Daisy's name.

She looks at him at an unlucky moment.

Daisy has just come into the room with her aunt, and St. Briac's eyes are fixed upon her with a look of such ardent, irrepressible admiration and regard that Julia, the heiress, tingles with jealousy. Daisy, in a dress of creamy white silk, with pearls on her neck and arms, and a sash of flowers, is looking lovelier than ever this night.

The unmistakable love-sight is in her eyes as she looks shyly around the assembled throng in search of the one without whose presence now the most brilliant scene would seem dull and tame to her. The love-sight is in her eyes; and Miss Millard, who is neither stupid nor devoid of experience, recognizes its sympathetic fire, and mistakingly supposes that it is burning for St. Briac. There is not a particle of love in the fair Julia's breast for her lordly suitor, nevertheless she thrills with rage as she sees his eyes riveted on Daisy's bonnie beauty.

A dozen men are crowding around the latter, eagerly seeking to inscribe the name of the beauty of the season on their cards. But presently she is whirled off by one who is a stranger to the majority of those present; and St. Briac, recalling himself to a sense of his duty towards Miss Millard, turns to her and pursues his own train of thought aloud, without regarding the fact that she may not have watched Daisy's proceedings with a tender interest equal to his own.

"I wonder how Poynter has got to know her already," he says, meditatively. "Did you see? He took her off in a sort of old-familiar-friend style that looks like having known her a long time; and that can't be the case, for he's only just back from six or seven years in Australia."

"He was the handsome man I was telling you about—the one Miss Eldon was making an exhibition of herself about in the Row this morning. You didn't seem to like the phrase, but I couldn't think of any other that would fittingly describe the situation."

"Shall we take a turn?" he interrupts. He has no desire to hear anything about Daisy from Miss Millard just now, and especially has he no desire to hear more about Daisy's intercourse with "that good-looking young fellow," Poynter, whose handsome face, as St. Briac is liberally willing to admit, is sufficient to win him the favor of any woman.

"The room is getting too crowded to dance comfortably," Miss Millard says; and she indicates that she wished to be led into the cool and low lighted shades of a conservatory which they are passing at the moment. It is well understood by them all that the offer is to be made to-night, and Miss Millard thinks the the sooner the better now, as, when once she has plighted her maiden troth to him, she will have the right to reprimand him as sharply as she desires for his ill concealed tender feelings for Daisy Eldon.

"It is no use kicking against the pricks," he tells himself, as he leads her along between alleys of the choicest exotics to a seat at the further end of the conservatory. His fate is before him, and he must fulfill it. Not such a bad fate after all, as times go. Miss Millard will bring him a hundred thousand a year, and is in herself the sort of girl to deserve a very warm regard for the man she marries. She is affectionate, quite clever enough, and good-looking enough for every day life; and it is not her fault that she appears to be made of very common clay, indeed, by the side of that delicate piece of porcelain, Daisy Eldon. "Besides," the young heir to the marquisate of Beauton tells himself, "it would, perhaps, be a bore to marry a girl one was very much in love with." He feels sure that when Julia is Lady St. Briac she may follow the fashion of the day and flirt as only young matrons seem free to do, without causing him one jealous qualm. Whereas, if he could only afford to marry Daisy he would surely grudge every look and word she gave to any other man. Even as he thinks this he sees Daisy and Harry Poynter saunter into the conservatory by a side door, and sit down in a nook where they are half-hidden by the gracious screen of foliage and flowers, and though she is not his wife he feels the jealous qualm with sickening intensity.

"How silent you are!" Miss Millard says, pettishly. She did not bring him in here to see him watching Daisy Eldon in dumb anguish. "He may moon and spoon about her and after her as much as he likes after we are married," the practical girl tells herself; "but I won't stand any sentimental nonsense about her now. I'll give him to understand before we move from here that he must choose between us without further delay."

He cannot tear his eyes and attention from Daisy, whom he sees listening with joyful eyes to something Harry Poynter is saying to her; but he answers, courteously enough, the charge of silence which Julia has brought against him.

"Don't you know there are some moments when the thoughts of the heart 'fill the silence like—like a speech?'"

"That is only the case, I should think, when one is very much in love or in debt," she answers; and St. Briac is afraid that his indifference to this girl may merge into possible dislike before he has taken the decided step which all his family expect him to take. She is more than a little out of temper now, and, as is invariably the case with an underbred woman, she relinquishes all efforts at being either courteous or kind when she is annoyed. Her tone is sharpened, her eyes sparkle vindictively, and there is altogether an air of defiance, not to say swagger, about her which revolts him as she says: "Perhaps, if you want to ponder on either of the themes I've mentioned, you will be good enough to take me back into the ballroom first; I may amuse myself better than I am doing here."

For a moment he is tempted to take her at her word, lead her back to her mother, and go to his mother with the statement that he found it impossible to swallow the pill, gloriously as it is gilded. Then he reminds himself of his debts and of the futility of his hankering after Daisy, and so, though he will not throw the handkerchief just yet, he waves it before Miss Millard's eyes.

"Before this night is over you will know what the feeling was that chained my tongue, and I think you will forgive me."

He murmurs this just as though he were really in love with her; and, as she is quite as well contented with the semblance as the reality, she relents, relapses into smiles, and prepares herself to say "Yes" at once.

But he feels that he cannot bind himself till he has had one dance with, and said a few words to, Daisy Eldon. So he rises and offers his arm to Miss Millard, with the words, "We'll come back here again by-and-by, won't we? And then you shall hear the secret of my silence," and leads her up the side to where Daisy and Harry Poynter are still sitting.

"Miss Eldon, you defrauded me of my waltz; may I have the honor of another? This next—may it be mine?"

"I am engaged for it to Har—Mr. Poynter," she says, hesitatingly.

"Poynter, be a good fellow; let me have one turn with Miss Eldon," St. Briac pleads, so eagerly that both Harry and Daisy find themselves agreeing to his request.

The four stroll back to the ballroom together. Their progress in company is a very brief one; but, brief as it is, and satisfied as Miss Millard now feels that St. Briac will formally surrender to her to-night, she cannot resist firing one shot at her rival.

"Are you going to Hurlingham to-morrow, Miss Eldon?"

"I believe not. Aunt Bertram does not enjoy polo, and I am not interested on either side to-morrow," Daisy answers.

"Not interested on either side? Oh, you incorrigible little flirt! How can you say you are not interested when we all know that Sir Bolingbroke Bray will be playing on his famous pony, 'Daisy'?"

"I wish men would not give their horses and dogs girl's names!" Daisy says, in genuine distress.

She has been spending the last three-quarters of an hour in coming to an "understanding" with Harry Poynter; that is to say, they have toyed with the subject of their "interest in each other," and have trenched on very tender ground indeed several times in the course of their conversation. They have agreed to be "great friends," and never to let any interlopers come between them; and Harry has told her something that sounds very sweetly in her ears, though, of course, in reality it is no concern at all of hers. He has told her that, in common with every other boy and young man, he has found a dozen faces fair and loved them "for a week, a month, or a day," as the case might be. "But," he has added, "do you know, Daisy, I never cared about one of them enough to want to kiss her; because kissing a girl with me means wanting her and asking her to be my wife. Are you glad?"

And to this question Daisy has given him no answer—in words—yet. But they are both so happy that he has asked it.

It is while they are steeped in the silence which is golden after this speech of Harry's that St. Briac and Miss Millard break into their solitude. And so it comes to pass that poor Daisy feels she may be lowered in Harry Poynter's estimation when Miss Millard calls her an "incorrigible little flirt," and speaks of Sir Bolingbroke Bray and his "famous polo-pony Daisy," as if she, Daisy Eldon, had a vested interest in both. Her partner, St. Briac, takes her "the one turn" for which he has pleaded so eloquently, but he seems by no means disposed to relinquish her at the termination of it. On the contrary, he persuades her to cross the corridor with him to look at a picture that he vows resembles Daisy in his mother's boudoir; and when they reach it he breathes more freely than he has breathed before this night, for he knows that Miss Millard dare not invade its sacred seclusion. St. Briac knows well that this girl, for whom his heart is sick, is not for him, and that Miss Millard is. Nevertheless, he cannot resist trying to wake Daisy's interest, and feeling for a few minutes how sweet life would be for him if only Daisy had the filthy lucre that is needed at this juncture to regild the Beauton coronet. He is, as has been said, a very fine specimen of a young English patrician; and as our English patricians are the finest result of breeding, training, blood and culture to be found in this hemisphere, he may be accepted without further explanation as a man to whom any girl's heart would naturally seriously incline. It is currently said of him that his brains are far too good for that place in the Upper House which he must eventually fill, and already he is known widely, and not ridiculously, as a vigilant detector of anything in art, though the state of the family exchequer has sometimes cramped his efforts at collecting. Altogether, Daisy may be forgiven (inspite of all that has passed between Harry and herself) for thinking Miss Millard "a very lucky girl," after ten minutes of unrestrained intercourse with Lord St. Briac. He is quite resolved upon one thing, and that is that the girl who has struck the only genuine chord of love that has ever been struck in his heart shall "know what he thinks about her" before they part this night. He tells himself in a spasm of chivalric feeling that he will not attempt to win any responsive words from her; but "By Jove, she shall know that I love her," he says, "and that I would ask her to be my wife if it were not for want of the bawbees."

He begins giving the information to Daisy in the most guarded and proper way imaginable. He tells her how he has always watched her approvingly on the Knave of Hearts.

"That's a pace not one girl in a thousand could take as easy as you do," he remarks; and Daisy answers with apparent carelessness, but in reality because she has been nettled by Miss Millard.

"The little Knave! I'm glad to hear a good word said of him by you. Miss Millard always derides him for being more showy than fast."

"If Miss Millard could only sit him as you do, and get him to sit, she'd frame him in gold as an advertisement of her proficiency in the noble art of equitation." St. Briac laughs.

"I wish she would frame some of her speeches in gold, because gold is a true metal and wouldn't frame a false impression," Daisy replies. "She knew I should be annoyed at the way in which she jumbled up polo and Sir Bolingbroke Bray and his pony, Daisy, and myself just now, and yet she did it. Why should she have gone out of her way to annoy me?"

"Because she knows that I would go a good deal out of my way to try and please you," St. Briac says, bluntly; and Daisy lures him on undesignedly, by asking:

"And why shouldn't you go out of your way to please me?"

"Because I am bound hand and foot in vile fetters of need," he exclaims. "Don't you understand? Mayn't I try and make you understand it all? She sees what every one is welcome to see as far as I am concerned—and that is that I love you, Daisy."

He casts aside all consideration for Miss Millard, all recollection of the way in which he has half-pledged himself to her and wholly pledged himself to his family to snare her to-night. He only sees Daisy, he only cares for Daisy, he only remembers that if he loses Daisy he will lose "the light that ne'er will shine again on life's dull stream." She wavers like a reed shaken by the wind for a few moments. St. Briac is such a nice fellow; so many girls whom she has known during the season have sighed in vain for him. For many weeks she has been hearing him spoken about; and when a girl hears a man's name constantly, she cannot help thinking a good deal about him. She has heard Miss Millard (whose probable good fortune has been widely and openly discussed) in turns pitied for being sought for her money, and envied for being sought at all by Lord St. Briac. It is unnatural, it is unwomanly in Daisy to palpitate with pleasure, to forget Harry Poynter for the moment, and to give St. Briac a shy, grateful glance in return for that avowal of his that he loves her. As for him, he feels that he has gone over the border, and that he is as much on his honor now to "go on" with Daisy as he felt himself to be half an hour ago to "go on" with Miss Millard. She, in her sweet unconsciousness, tempts him in a way that would have been too much for St. Scunaus, and that is altogether too much for St. Briac. Having told her that he loves her, he finds himself madly desirous of winning a like confession from her. He forgets the resolution he came to just now of laying bare his feelings to her, and at the same time refrain from proving the state of hers for him. Having ascertained that fact, he will take time to consider what step it behooves him to take.

He is an ardent, impetuous young fellow, and he has really lost both his heart and his head for Daisy.

"I didn't know how hard hit I was myself till that girl coupled your name with Bray just now," he goes on, madly; "then I felt it was no use pretending even to myself that I could resign you without a struggle. Daisy darling, tell me that I haven't made a mistake: tell me that you do care for me a little, and that you'll be my wife." He has got hold of both her hands, and is pressing them with a passionate force that makes her feel that he is not to be trifled with—however unjustifiable in fact the expression of his love may be, the love itself is a real true thing. She does like him very much, indeed; better, far better, than she has ever liked any one but Harry Poynter. And there are many things that make his wooing her a very sweet tribute to Daisy Eldon. She is "essentially human," and she feels a wicked little flutter of gratified vanity as she reflects that this man is willing to cast away a hundred thousand a year for her sake. Ought she to reject such genuine devotion as this, she asks herself. Then she thinks a little of the Beautons' disappointment if the great heiress is lost to them by reason of their son's infatuation for herself. She thinks a little of their disappointment and a great deal of Harry Poynter, and she answers as she ought:

"I do care for you a great deal—too much to do you the wrong it would be to marry you, Lord St. Briac. You know what a bad thing it would be for you if I were weak enough to be flattered by the great honor you have offered me into accepting it; and—you mustn't be angry with me for reminding you of Miss Millard—all the world looks upon you as half-engaged to her."

"If I were wholly engaged to her it would make no difference now," he says, recklessly. "I love you, Daisy; nothing but your own will—nothing but your own declaration that you care more for some other fellow, will part us now."

He has lifted her hand to his lips, and is pressing kisses upon it; in another moment he will put her beyond her power to say him nay by touching her pure young lips. His whole heart is in the work of gaining this girl now; and, if courage will carry her, she shall be carried.

"Say you will be my wife, Daisy—say you love me!" he pleads desperately; and Daisy, with a mighty effort, frees herself from his clasp, and says:

"I can't! I could a week ago; but since then, Lord St. Briac, I've seen some one I like better than I do you, much as I really like you."

"It's Bray, after all," he says, in bitter accents.

"No, it's not Bray a bit. It's some one who may never know I like him, and never care to find out."

"Don't give me up for an idea," St. Briac interrupts. Having committed himself to the statement of caring for Daisy, he is ready to overcome every obstacle in the way of obtaining her. Surely, he argues, if he has been ready to cast a hundred thousand a year to every other consideration aside for her, she might reasonably and readily overcome any light fancy she might have imagined herself into entertaining for this other man, who is ignorant of the honor she has done him. "Don't give me up for an idea," he repeats, ardently. "Look you, Daisy; my name's a good one. I don't come to you dishonored, like some fellows are who are presuming to aspire to you. And I love you, Daisy! I love you in a way that ought to win a kinder answer from you than the one you have given me."

He has never been balked of one thing on which he has set his heart in his life, and that Daisy should hesitate now about proclaiming him triumphant is a sore trial to him. That she does hesitate, that she has not quite decided for or against him, is evident. St. Briac's earnestness, the way in which he is ready to relinquish the largest fortune of the year for her penniless sake, is very touching to her. Moreover, St. Briac has about him that air of bravery and gentleness which is the result of many generations of culture and refinement. He is a splendid lover, and she is in a paroxysm of doubt as to whether it would not be well for her to love him in return. But, as she wavers, she hears distinctly, as if Harry were speaking them close to her ear at the moment, the words, "But do you know, Daisy, I never cared about one of them enough to want to kiss her." She has "recollected him" so vividly that she cannot forget him again, though Lord St. Briac goes on pleading his warmest; and so it is a definite refusal of the honor he has done her which St. Briac has to bear at last.

But Daisy, in her outspokenness and genuineness, refuses him in a way that binds him to her far more closely than Miss Millard's acceptance of him will have the power to do.

"Just a week ago I liked you better than any one else in the world," she says, apologetically; "but since then I have thought of some one else, and liked to listen to some one else, and he ought to be the first and only one a girl has thought of for a minute."

"I shouldn't mind you having thought of a dozen before, if you'll only think of me now."

"And that I can't do, and though I'm sorry for it in one way, I'm glad in another. If I had said 'Yes' what a grief it would be to your family, and what a pity it would be for you! And now we'll go back." She opens the door as she speaks, and is out in the corridor on her way back to the ballroom in an instant, and he has no choice but to follow her. His

mother's eyes are upon him anxiously, and on Daisy rebukingly, as they enter the room, and the girl knows that she is being hardly thought of by her hostess for a fault she has not committed. She is trying to get across to her aunt, of whom she catches a glimpse in a far-off corner, in order to implore that she may be taken away from the bustle and the race-show, when her progress is arrested most inopportunely by Sir Bolingbroke.

"I have been hunting for you everywhere," he says; "where have you hidden yourself?"

"I have been looking at a picture in Lady Beanton's boudoir; some one said it was like me, and I like to know what I am like," Daisy says, trying to speak as if she were not anxious to work her way from him to her aunt.

"Don't be so impatient. I have been looking for you everywhere," he murmurs. "Do you see or have you heard that Miss Millard has defied the Beantons on their own ground, and flung St. Briac over for the returned colonial?"

"What nonsense!" she answers, scornfully.

"But true nonsense, nevertheless. This young 'scion of an ancient but decayed house,' as old chroniclers would call him, has done a good thing for himself by stopping in town on his way from the bush. When a man can once make up his mind to marry Miss Millard, she's not a bad sort of a girl. The next is mine, if you please; you ought to give me so much poor compensation for my bitter disappointment the other day." She scarcely heeds what he does, and so suffers him to whirl her off without a protest. She tells herself that there is no truth in his statement relative to Harry and Miss Millard, and yet it goes on ringing in her ears. How promptly, if it is true, he has perjured himself after those "unspoken vows" he offered her just now in the conservatory! Ah, but has she not been on the brink of committing a like offense? Did she not incline more than favorably for a few moments to St. Briac?

Those thoughts fatigue her more than the waltzing, and she pauses to recover her breath. As she stands, her hand still on her partner's arm, Harry Poynter and Miss Millard walk slowly by, close to her, without perceiving her. He is bending his head down low in earnest endeavor evidently to catch every word that falls from the heiress's lips; and she is speaking in clear, resolute accents, that fall distinctly upon Daisy's ear:

"You must call to-morrow morning. I will prepare mamma for the news, and she will plead the cause we have at heart with my father. He cannot stand out against us three."

"I am rested," Daisy says, turning a white face up towards her partner. And when they pull up after the next round she has pledged herself to become Lady Bray.

(To be continued.)

"BATTLE-FLAG DAY" IN HARTFORD.

AN anniversary to be known henceforth as "Battle-flag Day" was inaugurated on Wednesday, September 17th, at Hartford, Conn., with ceremonies of the deepest interest. In February last a resolution was offered in the House that the Comptroller, Adjutant-General and Quartermaster-General be a board to have charge of the State's battle-flags, and that they be directed to have suitable cases prepared in the new Capitol for the flags to be placed in. The resolution went through both Houses and was approved.

The veterans of the war were invited to take part in the removal of the flags, and General Joseph R. Hawley accepted the post of chief marshal for the occasion. Up to last week the battle-flags of the different regiments were kept in the old State Arsenal on Main Street.

In the ceremony of the 17th, representatives of thirty regiments appeared, besides the State militia and the entire force of the State authorities. It was one o'clock before the procession was in line, and at that hour a national salute began. This was the signal for the start, and as the first gun sounded, the First Division marched out of the park into High Street. This comprised the militia of the State, and veterans of the war belonging to other States, who had fought in Connecticut regiments. In this division, also, were Governor Andrews and his private secretary, in a carriage, followed by his staff, mounted. The Governor kept his head bared during the entire march, and he was greeted by rousing cheers from the thousands who lined the sidewalks along the line. The staff of ex-Governor Buckingham was in this division also. The Second Division, under the command of Colonel Jacob L. Greene, formerly of the Sixth Michigan Cavalry, now President of the Connecticut Mutual Life Insurance Company, comprised the Union Battalion, and the prominent guests in carriages. Among the latter were General J. M. Schofield, General Burnside, of Rhode Island; ex-Governors Jewell, Hubbard and Cleveland, of Connecticut; General Smith and staff, the Judges of the Supreme Court of Connecticut, Mayor Sumner, of Hartford, and the members of the city government. The fourth and last division was the great feature of the day. It was composed entirely of the veteran soldiers of Connecticut, and embraced fully 10,000 men, with representatives from all the regiments from the First to the Thirty-sixth. This division was headed by Major-General Joseph R. Hawley, the chief marshal of the day, and his staff. The men were dressed in citizens' clothing, but many wore the hats of the Grand Army of the Republic, and all wore badges or medals. Some were lame, some had lost an arm, and two men hobbled along on wooden legs. Carriages were provided for the veterans who could not walk, and these were used by all except the two mentioned. These two followed the march until their battle-flags had been taken from the Arsenal, and then they joined their comrades in the carriage.

Some of the old flags, which number eighty, were nearly whole; others were so far gone that they had been caught with ribbons to the staff at frequent intervals, lest the slight breeze should make them float in shreds to the pavement. Some of them have histories that are known to the Connecticut folk; and when they were borne along the cheering became a hoarse roar, and all hands flattered handkerchiefs or waved hats. The throngs went wild over the remnants of the old Sixteenth's flag, which was torn into squares and fell in the uniforms of the men or burned when they were taken prisoners at Plymouth, N. C., in '64, which were carried concealed through military prisons, and were finally collected and pieced together in the form of a shield on a new banner.

The line of march was through High Street to Main, up Main to the Arsenal, where the battle-flags were taken, and then down Main to Washington Street, and thence to the new Capitol. The buildings in the streets through which the procession moved were literally hidden in bunting. The magnificent building of the Connecticut Mutual Life Insurance Company, one of the finest in the city, was decorated profusely and with great taste. Among other displays were those of the Phœnix Mutual Life Insurance Company, and of the Phœnix National Bank, two of the solid institutions of Hartford. The Travelers Insurance Company suspended from their modest building a magnificent national flag, and displayed a draped portrait of Connecticut's "War Governor" Buckingham, who was a director in the company. In front of the residence of M. G. Bulkeley, President of the Ætna Life Insurance Company, a fine arch spanned the street. It was a pretty combination of artistic materials and had entwining it a broad ribbon bearing the names of Connecticut's dead heroes—Sedgwick, Lyon, Mansfield, Foote, and others. The centre piece was the State coat-of-arms, above which was a trophy of weapons of war, drums, etc., and above all the American colors. Across Main Street three arches were erected, decorated with red, white and blue, and surrounded with evergreen devices. On these the names of all the battles in which the Connecticut regiments have taken part were emblazoned, and the word "Welcome," worked in evergreen, depended from one. Flags were thrown across the street, and in many houses were pictures of Lincoln or Grant, and sometimes both together. Whenever these pictures were seen by the veterans they cheered long and lustily. The stoops and lawns in front of the private houses were thronged with people, and in many cases little girls and boys were found representing patriotic characters. On the balcony of one house in High Street were two small boys, one dressed as a midshipman, and sitting on a coil of rope, and the other as a soldier, standing guard. At South Green a pyramid of 200 girls, ranging in age from four to twelve years, all dressed in white, and wearing red, white and blue sashes, greeted the veterans with waving handkerchiefs and fans. At the base of the pyramid was a cordon of boys, dressed as soldiers and carrying muskets, standing on guard. This was the great feature of the display. The Capitol was reached at four o'clock, and here the ceremony of transferring the flags was performed. There were fully 50,000 people on the grounds. A stand had been erected in front of the main entrance, and here Governor Andrews and the guests assembled. General Hawley presented the flags to the State in a brief speech, and Governor Andrews accepted them. Then the color-bearers of each regiment ascended the steps and faced the veterans; a cannon boomed a salute, and the blare of trumpets mingled with the reverberation; and the flags were successively given to the custody of the State, to be deposited in the cases erected for the purpose in the vestibule of the magnificent Capitol.

After the ceremonies the veterans marched down the hill to the green, where they partook of luncheon. In the evening the State House lawn was illumined by electric lights placed on the dome of the Capitol, and the city generally was lurid with the glare of all kinds of lights. The electric light was furnished by the Willimantic Spool Cotton Co., of Willimantic, the same being used in their extensive mills at that place, and was under charge of their electrician.

ALESSANDRO LIBERATI.

SIGNOR LIBERATI, the cornet soloist whom thousands of people have met at Brighton Beach during the past season, has steadily risen in the estimation of the public ever since his first appearance. He came ushered into the lists where two prime favorites, Levy and Arbuckle, bid defiance to competition. His modest merit and artistic excellence have placed him in the front rank of musical artists. Liberati was born in Frascati, Italy, July 7th, 1847. His father was a fine musician, and was celebrated for his playing upon the trumpet, with keys, which had just been invented. Alessandro first commenced playing on the cornet when twelve years old. In the year 1864 he played the E-flat cornet in the Chasseur Band, in the Papal army, and was bugle-major with Garibaldi. He afterwards played a solo cornet in concerts at Naples, Florence, Milan, Nice, Paris and other leading cities in the Old World, and was cornet soloist in the band of the First Infantry Regiment of the Italian army.

In 1872, after a varied experience in Europe, he resolved to emigrate to America, and in June of that year he arrived in the city of Boston. Not finding a suitable engagement there, he went to the capital of Canada, and was engaged as band-master of the Ottawa Brigade Garrison Artillery Band; there he remained till 1875, and became very popular as leader and cornet soloist. Signor Liberati was the leading attraction in the band of the Detroit National Guard on their visit to the Centennial Exhibition at Philadelphia. On their way to and from Philadelphia they were received with honors in the several cities through which they passed. He had tempting offers to induce him to return to Ottawa, but he preferred remaining in the United States. He went from Detroit to Boston, and became cornet soloist for the Cadet Band of that city. He soon afterwards came to New York, and became a resident of Brooklyn. Since his arrival there he has been performing on the cornet in many public places and concerts, and with great satisfaction to a gratified audience.

THE MAN WHO BAGGED CETEWAYO.

MAJOR RICHARD J. C. MARTER, who captured the Zulu King, belongs to the First (King's) Dragoon Guards—not the First Dragoons, as cabled, which is really the Eleventh British Cavalry Regiment, there being three regiments of the Household and seven of Dragoon Guards senior to it—and always belonged to it from his first entrance into the army. This is unusual in the cavalry. A large majority of the officers are men of means, and, preferring Pall Mall, the clubs, yachting and home pleasures generally to distant service, are in the habit of exchanging with the less fortunate, who, for a consideration in hand and the difference between Indian or colonial and home pay, are often glad enough of the arrangement. Some officers in India have several times exchanged from regiments going home to regiments arriving. Marter stuck to his old regiment wherever it went, was with it in China on the advance to Pekin, and when the old K. D. G.'s got to Bangalore, India, was made Adjutant-General of the Mysore Division of the Madras Army, under Major-General Haines, now General Sir Frederick Paul Haines, G. C. B., Commander-in-chief of India. Marter retained this position for a little while after his regiment returned to England in 1866, but only for a little while. He is a great horseman, something of a "welter" weight, and, while holding his own in a steeplechase, is not of much use for a flat race. But he has the keenest eye for the good points of a horse, and his stable was always the admiration of the station. Bangalore is a charming place, 4,000 feet above the level of the sea, with a delicious climate, famous for its flowers and its racecourse, a sort of Southern India Saratoga, and, being a large military post, is always very gay. Marter was always at the foremost of any festivities wherein the horse was concerned, from a fox-hunt to a steeplechase, and one of those diligent and invaluable men who go into the dismal and thankless work of preparation con amore. It is one thing to be a steward of a race-meeting, in all the glory and importance of the position, before assembled beauty and fashion, and quite another to go through the drudgery of getting everything ready and keeping everything straight for weeks and months beforehand. His chum and right-hand man in all these matters, and partner in ownership of several crack horses, a modest gentleman, was Major (now Colonel) Theodore Austin, of the Twenty-second Madras Native Infantry, reputed to be one of the best gentleman jockeys that ever rode. One horse they owned in common. Nusseeb (Fate), a spirited, but gentle and playful, satin-skinned beauty, with elastic muscles of steel, was probably the handsomest ever seen out of Arabia, and won them on many occasions a "pot of money."

Marter is about forty-five years old now, and as it was the destiny of Cetewayo to be caught, he was lucky in his captor, who would be certain to treat him well.

THE LAST FOX-HUNT OF THE SEASON.

NEWPORT, in addition to its manifold attractions, has had its hunting-season, yes, veritable fox-hunting, and men who have ridden with the Pytchley and Quorn eagerly plunged into pink, despite the chaff awaiting them "at the other side," to enjoy a run with Reynard—tell it not in Gath—in the month of September. The last meet of the Queens County Hunt, which took place on September 12th, was a superb social success. All Newport—that is, all of Newport worth mentioning—mustered at the meet, the road to Southwick's Grove being literally choke-full of vehicles of every sort, shape, size and description, while cavaliers and equestriennes, mounted à cheval, dotted the carriage-line; nor were the stereotyped "mud-crushers" in anything like a minority. The M.F.H. was to the fore, and, next in horsemanship as he is in appearance, he was a fair example of the truth of the Leicestershire maxim, that the best-dressed man is sure to be the hardest rider. Beside him rode Mr. Fairman Rogers, whose get-up reminded one of a picture by Herring. There were other good "workmen" in pink, notably Messrs. Griswold and Peters, who sat their horses with a grip as tight as their own leathers. The ladies, too, were en évidence in the most eel-like habits and the sauciest hats, and many a manly heart beat high in the hope of bearing off the brush in order to place it in some dainty hand now incased in buff leather and viciously grasping a wicked little cutting-whip. The mounts were exceptionally good, and the appearance of the grove prior to the hounds being laid on was bright, animated and picturesque to the very last degree. At length the "Gone away" came from the stentorian lungs of the huntsman, and the long-wished-for whimper of the "beauties" was heard. A shrill "View hollos" next greeted the field, informing all whom it concerned that the "rascal" had stolen away, and in a few seconds the hounds were racing to a merry chorus over a heavy country, over impracticable fences, over bullfinches, over stake and wire, over a bit of plow; away, away, the field following at a respectful distance, and until the huntsman might well say, joyously, "Catch them who can now," as they fly up wind, far in advance of the foremost riders. The ladies were carefully piloted, but one or two, regarding Pallinurus as Sinbad viewed the Old Man of the Sea, elected to steer for themselves, and bravely pounded on, "sticking" more than one "workman" and cutting down their less plucky sisters, in their mad, wild desire to spin in at the death. In doing a wall the horse of Mr. Burrel, of New York, "showed saddle-girth to the sun," rolling over his spirited rider, who lay stunned on the greensward, till the good Samaritans dismounted by the wayside—a crucial trial to your hunting men—but no bones were broken; and perhaps one or two who remained with the "off man" were rather thankful for the excuse, as the pace was now a pretty stiff one, and the field only lighted by a "short six." Many were the croppers fetched; many were the bullfinches raised; many the gaps made; many the horses "kicked along," while the huntsman, well settled down to his work, was all eyes for his music-giving pack. Whoop! whoop! away the beauties streamed. Mr. Griswold, Mr. Fairman Rogers, Captain Candy and Mr. Zeborowski riding straight and cunning, while Mr. Wadsworth fetched a cropper on the run home that stunned him. For a brief ten minutes the fun was fast and furious, and then the "rascal" was overhauled and his brush handed to Mr. Rogers, whose plucky riding was worthy of the Galway "Blazers," while pads were presented to Miss Havermeyer and Miss Osothout, who rode from the burst to the death, boldly, knowingly and well.

SCIENTIFIC INTELLIGENCE

Common Hedin prevents the formation of acetic acid in fermented liquids, without disturbing the process of alcoholic fermentation, and it is thought that the peculiar effect of the hop is due rather to its resinous matter than to its oils. The Greeks add resin to their sweet wines.

An Electric Target—that is, a target which, by means of electricity, shows instantaneously upon another target, set up at the firing station, the exact spot where a bullet strikes, and thus does away with the necessity of employing a marker to signal the result of each shot—has been lately perfected, after eight years of labor, by a Swiss locksmith.

A New Fire-damp Detector has been invented in France. It consists of a common lamp surmounted by a little camera obscura, provided with a slit. In the common state of the lamp no flame is visible, but if a hydrogen compound be added to the air a blue flame shows at the slit. The larger the flame the greater the amount of fire-damp present.

Fireproof Paper and Fireproof Ink can be made as follows: The paper from a pulp consisting of one part of vegetable fibre, two parts of asbestos, 1.16 part of borax, 1.5 part of alum. The ink is made from 85 parts of graphite, 0.8 parts of copal varnish, 7.5 parts of copperas, 30 parts of tincture of nut-galls and a sufficient quantity of indigo carmine.

Professor S. F. Peckham informs the editors of the *American Journal of Science and Arts* of the fall of a meteorite in Iowa. It exploded and fell in full daylight at five P. M., at Estherville. One fragment of the mass, weighing 500 pounds, was dug up from a depth of fourteen feet. Another portion, weighing 150 pounds, which fell about two miles distant from the larger mass, has been obtained for the University cabinet.

The Great Iron Works of Creusot, France, covers, with its various sheds, furnaces, engine-rooms and workshops, about 2,700 acres, and the length of rails laid down for the convenience of the factory is 200 miles. The number of workmen is upwards of 15,500, who, together with their families and the camp-followers, form a population of 25,000 souls. A superb statue of M. Schneider, the founder of the works, has just been erected in the city.

Bleaching Sugar by Ozone.—Professor Albert R. Leeds, of the Stevens Institute, Hoboken, has been trying the action of ozone on colored sugar solutions, and finds that they are rapidly and completely bleached by this agent. He also finds that the coloring matter of leaves and flowers are partly or wholly destroyed by ozone; but a considerable percentage of ozone is required to produce this result, or if such small amounts as are obtained in the customary methods of ozonizing air by phosphorus are employed, a large volume of ozonized air must be used and a considerable interval elapse before bleaching is effected.

On the Occasion of a balloon ascent at Nancy, August 4th, the altitude of the car was taken by officers from the garrison with a theodolite, and signals were exchanged with the ground during the ascent. The signals were given by the aeronauts with a flag and by the officers with a reflecting mirror placed in the end of a tube and mounted as a telescope. The officers directed the rays of the sun on the balloon, and intercepted rays with a key in order to use the Morse alphabet. The signals could be seen at a distance of over six miles. The experiment showed that in a besieged town, a passing balloon could be used for giving orders to or receiving news from friendly forces.

PERSONAL GOSSIP.

MATTHEW and JOHN G. VASSAR will erect a ten-thousand-dollar laboratory at Vassar College.

BISHOP STEVENS, of the Diocese of Pennsylvania, is very ill with congestion of the lungs.

A SUM of over 57,000 francs has been collected to build a memorial chapel in honor of the Prince Imperial in Paris.

A ROMAN countess, profoundly learned in the Greek and Latin languages, has just been elected a member of the Academy of Lincei, in Rome.

THE Crown Prince of Germany has been ailing for some time, and has been ordered by his physicians to pass the Winter in Italy. The Emperor is very well.

MR. G. F. FAIRCHILD, sometime professor of higher English in Michigan Agricultural College, has been elected president of the Kansas State Agricultural College.

BOSTON has decided to order a bronze copy of Mr. Greenough's marble statue of Governor Winthrop, now in the Capitol at Washington. The cost will be $4,500.

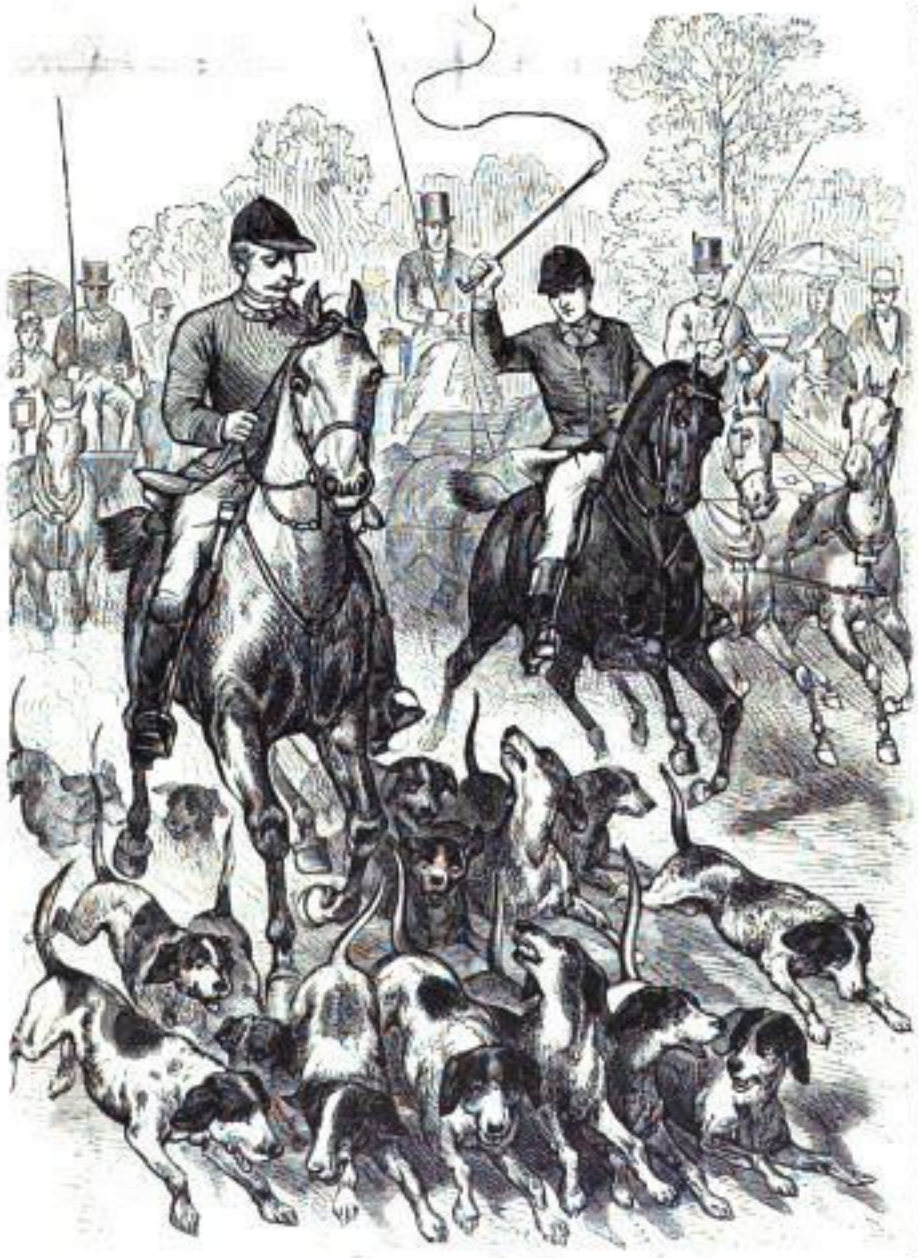
MR. ASA PAYNE, of Scott County, Kentucky, the son of General Payne, of the war of 1812, is said to be the oldest living graduate of West Point. He is ninety-one years old, and was a member of the first class.

KING ALFONSO and the Archduchess Maria Christina will be married at Madrid on the 28th of November. The bride and her mother will sail from Trieste to Barcelona on an Austrian war ship, convoyed by a Spanish squadron.

IT is officially announced that the Duke of Osuna and the Duke of Medina-Sidonia will go to Vienna, instead of Señor Canovas del Castillo, to ask officially the hand of the Archduchess Marie Christine of Austria in marriage with the King of Spain.

KING JOHN of Abyssinia writes to the mercantile firm representing him in London, stating that he has written to Queen Victoria complaining that the outlets of his territory are closed by the Egyptians. He says that General Kirkham, the English General in his service, was poisoned at Massowah while on his way to England with letters to the Queen. A later dispatch from Cairo says it is expected that the negotiations between Egypt and Abyssinia will be successful. King John has consented to an interview with Colonel Gordon.

CAPTAIN CAREY has written a reply to the address from Plymouth, and he states that from all ranks of the army in Zululand, and also during his journey through Natal, he received the most sincere kindness and sympathy; he has done nothing to be ashamed of, and he desires that a full account of the proceedings of the court-martial may be made public. He feels that his honor and character as a soldier and an English gentleman have now been vindicated. Captain Carey has received official information of the findings of the court-martial.



A CABLE dispatch from Rome announces the following clerical changes in this country: First—the Right Rev. F. X. Leray, hitherto Bishop of Nachitoches, has been made Administrator of the Archdiocese of New Orleans, with the right of succession as Archbishop; second—the Rev. Mark S. Gross, priest of Wilmington, N. C., has been appointed Vicar Apostolic of North Carolina; third—the Rev. John Baptist A. Brondel, priest of the Diocese of Nesqually, in Washington Territory, has been made Bishop of Vancouver's Island, replacing the Most Rev. Archbishop Seghers, who has accepted and entered on his promotion to Coadjutor cum jure of the Most Rev. Archbishop Blanchet, Archbishop of Oregon City.

A VERY brilliant family wedding occurred at Gilbertsville, Otsego County, in this State, September 3d, the high contracting parties being Mr. Fitch Gilbert, son of Mr. George Y. Gilbert, and Miss Caroline Lathrop Gilbert, daughter of Mr. J. H. Gilbert. The marriage ceremony took place in the Presbyterian Church, which was finely decorated, and was enlivened by a large concourse of friends, among whom were Mrs. Charles Thorp Gilbert, Mrs. Anita Gilbert, and Miss Fannie Gilbert. Some of the toilets were very striking. The mother of the groom, Mrs. G. Y. Gilbert, appeared in old gold satin with black lace, and the mother of the bride, Mrs. J. H. Gilbert, in black satin and white lace. The wedding gifts were rare, unique, and beautiful, including a set of Sèvres from the French Exposition bearing the portraits of the Royal family of Louis XVI.

THE obituary record of the past week contains the names of Gustave H. Roger, the famous French tenor, aged 64; Austin Burchard, uncle of President Hayes, aged 86; Zerah C. Whipple, founder of the Whipple Home for Deaf Mutes at Mystic River, Conn.; John Carlyle, a younger brother of the historian; Rear-Admiral Charles Boarman, U.S.N., aged 83; Frederick Valerio, French painter and engraver; the Rev. Dr. John F. Wright, a well-known Methodist clergymen of Cincinnati, aged 84; the Right Rev. Charles Baring, D.D., ex-Bishop of Durham, aged 73; Bernard Cotta, distinguished German geologist, aged 71; the Very Rev. Charles L. H. Carter, Vicar-General of the Archdiocese of Philadelphia, aged 76; Daniel Drew, aged 82; Victor Le Duc, French architect, aged 65; the Rev. R. H. Neale, D.D., of Boston, oldest Baptist minister in New England, aged 73; the Rev. D. R. Thomasen, ecclesiastical writer, of Harlem, N. Y., aged 80.

THE LATE DANIEL DREW.

THE venerable Daniel Drew died suddenly at the residence of his son in East Forty-second Street, New York City, on Thursday evening, September 18th, after complaining of a severe pain in his heart. He was born in Carmel, Putnam County, N. Y., on July 29th, 1797, his father being a farmer, who was able to give him only the ordinary district school education of the period. When seventeen years of age he hired himself out as a substitute for a drafted garrison soldier, his company being stationed at Fort Ganseroort, on the Hudson. When peace was declared, Daniel returned on foot to Carmel, and with the little money he had saved purchased a few head of cattle, which he drove to New York and sold at a good profit. He continued to deal as a cattle speculator, gradually extending his business, and always meeting with success. His purchases were made in the rich grazing country around the head-waters of the Croton, and his customers met him at stated times at a once celebrated cattle-yard, on a part of which the Bowery Theatre now stands. Among those who dealt with him was Henry Astor, a brother of John Jacob Astor, but everywhere better known as "Butcher Astor." From him Drew borrowed a few thousand dollars in 1829, and entered more extensively into the cattle trade. He became the largest dealer in the northern country, and leased the old Bull's Head Tavern, at the northwest corner of Third Avenue and Twenty-fourth Street, where he reigned for some years as King of the Drovers, and won a reputation as a landlord second to that of no publican in the land. His career was one of uninterrupted prosperity; and when, in 1835, Isaac Newton, the Hudson River steamboat pioneer, cast about for a partner, Drew came forward, and the two established a line of steamers between New York and Albany, in opposition to a line run by Cornelius, then plain Captain, Vanderbilt. Vanderbilt was charging $3 fare from New York to Albany. At Drew's suggestion five new boats were added to Newton's line in rapid succession, and the fare was put down to a dollar. Vanderbilt saw that in Daniel Drew he had a long-headed opponent to deal with; so he proposed that the two

MAJOR R. J. C. MAUSER, THE CAPTOR OF CETEWAYO.—SEE PAGE 75.

Digitized by Google

lines should be consolidated. His proposition was accepted, and out of the compromise grew the well-known "People's Line," of which Isaac Newton was the first president and Daniel Drew the treasurer. On the death of Newton, Drew became president.

To follow the career of Mr. Drew through all his great and sometimes marvelous stock and bond operations—now with a "split" and then with a "fancy"; now with a "trunk" and again with an insignificant "side" line of railway; now as a director in half a dozen roads and next as a wrecker of the very same enterprises—would be to follow and describe transactions with which even the present generation is not unfamiliar, and which in narrative would fill a volume. His career was like that of almost every other "railway king" who had preceded him, and like that of many associates who did not have always the luck or prudence of a Vanderbilt. There have been several years during which he was both a pauper and a millionaire and the idol and the execration of the Street.

Twelve years ago there began a series of stock complications in Harlem, Erie and Western railways into which he was either drawn or pushed, and which were accompanied by litigations that also concerned the late James Fisk, Jr., and Mr. Jay Gould and the late Commodore Vanderbilt. These complications and suits not only worried but finally impoverished the veteran operator, then turned of seventy years of age. His daily life for several years was one of struggle and turmoil, and it finally ended in his bankruptcy and in not a little personal humiliation at the suit of creditors, and, indeed, old friends and recipients of his favors.

Mr. Drew, from an early age, identified himself with the Methodist Episcopal Church; in a more marked degree as his wealth accumulated. In his native village he erected a stone church at a cost of $20,000; also a church at Sharon, a few miles distant. To the church in New York of which he was a member he contributed $50,000. But it is in connection with the founding of the Drew Theological Seminary, at Madison, N. J., that his name is most widely known in religious circles. At the centennial anniversary of the establishment of the Methodist Episcopal Church in this country, Daniel Drew announced his intention of appropriating the sum of $500,000 in order to found the seminary. One hundred and fifty acres of land and appropriate buildings were purchased, other buildings were added, and the seminary was soon in successful operation.

Mr. Drew always displayed the greatest interest in the institution, though he very wisely abstained from any personal interference in its government.

THEATRICALS.

MONDAY, October 20th, is likely to be numbered in the kalends, far on that date the monarch of managers, Colonel Mapleson, commences his operatic season at the Academy of Music. With Colonel Mapleson a promise means a promise; and the manner in which he kept faith with the public last season, despite the host of difficulties that beset him, and before which any ordinary *impresario* would have gone under, speaks with trumpet tongue. He has arranged to bring before the American public the best available talent from Europe, including nearly every leading vocalist, and, with true artistic perception, has made provision that the minor rôles shall be "excellently well filled," so as to insure a perfect ensemble. He has increased the strength of his magnificent chorus, while his superb orchestra, under the magic baton of Arditi, has also received considerable reinforcement. We shall again be enchanted with the marvelous vocalization of Gerster, while a *débutante*, so far as this country is concerned, and over whom the musical critics gush rapturously, Mlle. Alwina Valeria, is announced. The other *prime donne soprani* are Mlle. Lido, Mlle. Robiati, Mlle. Stecchi and Mme. Emilie Ambré. The *prime donne contralti* are Mme. Lablache and Mlle. Annie Louise Cary. The tenors are the ever-welcome Campanini, and Signori Aramburo, Runcio, Rinaldini and Grazzi. The baritones are Del Puente, Revere and Galassi, while the bassi include M. David, of the Grand Opera, Paris, Herr Behrens—what a voice!—and Signori Monti and Tobaldi, and Mr. Broderick, all unknown to Gotham. "La Traviata" opens the season with Runcio's *Alfredo*, Galassi's *Germont*, and Emilie Ambre's *Violetta*. It speaks well for the good taste and æstheticism of the Empire City that New York is already deep in the box-office books. To Colonel Mapleson something even more than a bumper is unequivocally due.

To Mr. Max Maretzek we shall be indebted for the production of an American opera, which will be performed for the first time on any stage at the Academy of Music, on Saturday, the 27th inst. The opera, in three acts, is entitled, "Sleepy Hollow," the libretto being founded on Washington Irving's inimitable story. The first act will consist of an introductory chorus—song of Van Ness (baritone); entrance of Ichabod Crane and the ballad of the "Headless Horseman"; entrance of Frau Van Spyrten (contralto)—chorus and concerted piece; ballad of Brom Bones (tenor); aria and chorus of Katrina Van Tassell (soprano); finale of first act—country dance, chorus, storm on the Hudson, appearance of the Headless Horseman. In the second act we have a pastoral: a spinning song—Katrina Van Tassell; a duet, Katrina Van Tassell and Brom Bones; a melodrama-duet—Captain Kidd and Ichabod Crane, with a chorus of pirates, fairies and demons, and roundelay of Fairy Queen and concerted piece. The third act contains a drinking-song, of which those who are behind the scenes speak in terms of enthusiastic praise. The production of "Sleepy Hollow" should prove a landmark in the annals of our stage, and we look forward with considerable interest to the ringing in of the opera.

PARALYSIS,

Which so often arrests the steps of business men and hard brain-workers after they have passed middle life, might in most cases be prevented by an occasional use of COMPOUND OXYGEN. Nature usually gives a timely warning of the approach of danger from this direction, and they are wise who heed it. Get our "Treatise on Compound Oxygen," and learn all about this new cure. It is sent free. Address, DRS. STARKEY & PALEN, 1112 Girard St., Philadelphia, Pa.

FUN.

A REVENUE cutter—ye clipper of coupons.

THERE is a 'bus-y time at railroad depots when the trains arrive.

THE latest thing in carpets is the moth that took up his abode there while the mistress was off summering.

SOW all the wild oats you have on hand between now and January 1st. Then—why, do as you did last January.

PHYSICIAN (to Government Clerk): "Well, what do you complain of?" *G. C.*: "Sleeplessness, doctor." *Physician*: "At what time do you go to bed?" *G. C.*: "Oh, I don't mean at night, but during office hours!"

SANDY, delighted with his countrymen for having won the Elcho shield: "Oh, ay, I was quite sure they wid get it this time!" *Pat*: "An' sure an' we wid bate ye chane if we had Volunteers in Ireland an' got practice." *Sandy*: "I'm sharr ye needna complain o' want o' practice; ye get plenty o' that, shoocin' landlords."

"HERE, sergeant, arrest me!" ejaculated an excited individual, as he rushed into the nearest station-house. "I have shot a man; he is, perhaps, dead by this time, and I have come to give myself up." "Well! if this isn't too much!" said the indignant officer. "Now, you go home, I tell you, and mind your own business and wait till we find you."

EX-GOVERNOR TILDEN had been absent a long while from Albany. He suddenly returned, and was seen walking up the aisle of his favorite church with his large party of friends. The eloquent clergyman was in the midst of reading the scriptural selection, and just as the long-missed and much-gazed-at Governor reached his pew the good preacher loudly cried: "Rejoice with me, for I have found the sheep I had lost!" It is believed that the Governor wished at that moment that his favorite preacher were not so good an elocutionist.

A NEW DEPARTURE.

A NEW system of protection has been devised which, without doubt, will supersede old life insurance, securing its members as effectually as a national bank bill is secured, and in a similar manner, giving perfect security for the first time in the annals of life insurance. It is indorsed by the highest insurance authority—the Hon. Elizur Wright. The following letter from the Insurance Commissioner of Tennessee is conclusive evidence of its superiority:

"The safety-fund system of the Mutual Benefit Life Company, of Hartford, combines the cheapness of the co-operative societies, with a strength, security and soundness heretofore unknown in life insurance. M. T. POLK,
"Treasurer and Insurance Commissioner of Tennessee."

THE SPIRAL DESCENSOR.

TESTIMONIALS FROM CHIEF ENGINEERS.

WASHINGTON, D. C., Sept. 13th, 1879.

WE, the undersigned, Chief Engineers and delegates to the Seventh Annual Convention of the National Association of Fire Engineers, take pleasure in testifying to the utility and simplicity of the Standard Portable Fire Escape or Spiral Descensor, manufactured by the firm of De Lamotte & Marchand, 240 Broadway, N. Y., and was exhibited before us by Edward J. La Place. Several descents were made from the roof and windows of the Biggs House and other hotels, descending with ease and safety and rapidity. The apparatus is simple, easily understood and managed, and from what we saw we can heartily recommend the SPIRAL DESCENSOR as a safe and sure means of descent to the ground from the upper parts of hotels, factories and dwellings, and we are glad to give these gentlemen this approbation and certificate. A. C. Hendricks, New Haven, Conn.; W. Nixon, Newburg, N. Y.; George W. Frantz, Louisville, Ky.; John A. Bennett, Cleveland, Ohio; W. H. Johnson, Philadelphia; John Gallahan, Omaha, Nebraska; H. Heinmiller, Columbus, Ohio; W. Stockell, Nashville, Tenn.; Isaac B. Mackey, New York; R. E. Kinney, South Norwalk, Conn.; S. S. Dollyer, Pawtucket, R. I.; W. M. Brackett, Minneapolis, Minn.; W. N. Jeffries, Burlington, N. J.; I. P. Deatrich, Defiance, Ohio; Almon Boys, Ithaca, N. Y.; John D. Paige, Marshall, Joliet, Ill.; P. Loyd, Vicksburg, Miss.; I. N. Evans, Pittsburg; —— Sulwinsle, Chicago; Henry Hills, Secretary, Dallas.

The Spiral Descensor referred to above is the same which was so successfully exhibited from the *Tribune* building's tower, in this city, a few days since, and was the only portable fire-escape recommended at the convention. Descents were made from a six-story house in forty-nine seconds.

WEAKNESS and sickness changed to health and treugth with HOP BITTERS, always.

THE fame of the ST. NICHOLAS hotel is known from St. Petersburg to San Francisco. This great reputation has been purchased by the utmost care and study of the most fastidious wants of guests. The same superb table and appointments exist to-day, and every modern improvement is kept pace with by the indefatigable manager who caters for the public pleasure. From foreign tourist to commercial traveler there is one voice of praise of this great caravansary. Special attention is called to the moderate rates.

A LUCKY TWAIN.

A TAILOR AND A YOUNG LADY DRUGGIST DRAW THE SECOND CAPITAL PRIZE IN THE ELEVENTH DRAWING OF THE COMMONWEALTH DISTRIBUTION CO.—NEXT DRAWING SEPTEMBER 30TH.

LOUISVILLE, KY., September 3d, 1879.—This will certify that we jointly held ticket No. 33,366, which drew the second capital prize of $10,000 in the eleventh drawing of the Commonwealth Distribution Company, August 30th, and the same was promptly paid on presentation by check on Third National Bank of Louisville, Ky.
V. E. MOSHER, No. 40 Main Street.
ALGENE VANDERCEPT, No. 202 Preston Street.

Next drawing September 30th, the same splendid scheme, viz.: $112,400 in cash prizes. Tickets, only $2; Half Tickets, $1. Send orders at once to T. J. COMMERFORD, Secretary, *Courier-Journal* Building, Louisville, Ky., or same at 163 Broadway, New York.

PROFESSOR GEORGE M. ANGELL, of Boston, made, at the recent meeting of the Social Science Association at Saratoga, a startling exhibit of the extent to which many of the common articles of food and drink are adulterated. In wines no security of purity is found, except in the standard American brands, like the "AMERICA" Extra Dry Champagne of A. WERNER & Co. of this city. No harmful ingredient has ever been found under the most searching analysis in this well-known wine, which has received the unqualified indorsement of the ablest physicians and chemists.

HALFORD TABLE SAUCE, unrivaled by any relish intended for family use. Recommended by the best families.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

CUTICURA REMEDIES.

THE success attending the use of these great remedies in the treatment of affections of the skin and scalp with loss of hair is astonishing. From every part of the country come the most grateful acknowledgments of what might be called miraculous cures. Messrs. WEEKS & POTTER extend their thanks to all who have spoken a good word for CUTICURA, CUTICURA SOAP and CUTICURA RESOLVENT, and will thankfully receive reports of new cases wherever they occur.

BEFORE you start, insure against accidents by a yearly policy in the THE TRAVELERS, of Hartford.

ASK fifty ladies in succession what perfume they consider the most delicate, the most pure and salubrious, the most permanent and in all respects the most desirable, and forty-nine of them will answer MURRAY & LANMAN'S FLORIDA WATER.

HOP BITTERS strengthens, builds up and cures continually, from the first dose.

The greatest success ever attained in the production of materials for structural purposes has been attained by the H. W. JOHNS MANUFACTURING CO., 87 Maiden Lane, N. Y., in the production of their Asbestos Liquid Paints, which are not only in use upon the finest and largest structures in this country, among others the Metropolitan Elevated Railroad, the United States Capitol at Washington, etc., but are also rapidly taking the place of all others for dwellings on account of their superior durability and beauty, which renders them the best and most economical paints in use.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

$10 to $1,000 invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

Beware of Counterfeits and Imitations

BOKER'S BITTERS.

The best Stomach Bitters known, containing most valuable medicinal properties in all cases of Bowel Complaints; a sure specific against Dyspepsia, Fever, Ague, etc. A fine cordial in itself, if taken pure; it is also most excellent for mixing with other cordials, wines, etc. Comparatively the cheapest Bitters to advertise.

SILVER TEASPOONS

At Less than Manufacturer's Cost Prices.

The utter worthlessness of the stuff advertised by a number of firms in New York, Cincinnati and Philadelphia as Silverware, compels the world-renowned Tremont Spoon Co., of Boston, to offer during the next thirty days to every one in the United States a sample set of their **VERY BEST SPOONS,** at a price much lower than any jeweler pays for them at wholesale. We make this offer simply to introduce our goods thoroughly in all parts of the country.

FOR 30 CENTS, or ten 3-cent postage-stamps, which covers cost of the spoons as well as postage and packing, we will send by mail, postpaid, *One Set of Six Teaspoons,* finely and heavily plated with *Pure Nickel and Coin Silver,* or a new metal called *Alfenide,* which is very similar to the finest English white steel. They will wear for years. **Two sets for Fifty Cents.**

Order at once, and address plainly,

TREMONT SPOON CO., Boston, Mass.

A BRILLIANT NEW NOVEL!

ENTITLED

"The Wages of Sin,"

BY

Mrs. METTA VICTORIA VICTOR,

AUTHOR OF "THE DEAD WITNESS," ETC., ETC.,

Will be commenced in No.

752 752 752 752

OF

Frank Leslie's

CHIMNEY CORNER,

Issued Monday, Oct. 13th.

"THE WAGES OF SIN"

Is a story full of movement and life; with scenes of great pathos and tenderness. It is sensational, but is altogether free from the stale tricks of sensationalism. It is sensational as real life is, with its tragedies, its temptations, its aims, its struggles, and its love "stronger than death."

THE RAILROAD PROBLEM.

IT will doubtless be within the recollection of many readers that a citizen of Connecticut, in an article contributed only a few years ago to the *Atlantic Monthly*, explained with great minuteness of detail "What it costs to fight a railroad." For what he conceived to be violence and wrong done to his person by the conductor of a passenger train, he entered suit for damages in the court of the State appropriately charged with jurisdiction in the premises. His suit was traversed at every step and stage of its progress by the president of the company, who did not hesitate to admit that in doing so he meant not only to contest the pending claim for damages, but to discourage all litigation against the railroad corporation by making it a luxury too expensive for the average citizen to indulge in, and by thus inculcating, as a useful lesson in economics, that it is better for individuals to endure with patience the wrongdoing of a railroad company than to seek for a remedy in the courts of justice.

The old saying that a corporation has neither a soul to save nor a body to kick is abundantly illustrated in the history of American railroads by the fruitless curses poured on the former and the impotent kicks aimed at the latter by passengers and patrons who suppose themselves to have just grounds of complaint. As the express contract made between the State which charters a railroad company and the company which receives the charter carries with it an implied contract that the company shall deal with customers on the principle of justice and equity, it is plain that a thousand points of contact may arise where these principles are liable to infringement in the practical operations of the road. When we recall the complexity of modern life and consider how much of its movement is due to "the iron rivers," as railroads have been called, we are in a position to appreciate the intricacy and at the same time the breadth and depth of the relations which exist between the railway and modern civilization.

It need not, therefore, be a matter of surprise that the railroad question has come to the front in our current politics. The only wonder is that it should have been so slow and late in emerging into its due prominence. The "Granger movement" which recently crept through the West was a dumb and misguided expression of an unrest that was felt by the whole community. If the leaders in this movement did but beat the air it was because they dealt their angry blows at the railroads without knowing where and how to strike, and so became guilty, in another way, of the very injustice which excited their wrath.

It is plain that the conditions of the railroad problem in the United States must be carefully studied before our rulers in Congress or elsewhere attempt any solution which is entitled to stand the test of scientific scrutiny and of experience. The example of Great Britain—and Mr. Robert Carter has fairly cited that example in the last number of the *North American Review*—may have much to teach us, but our problem must be worked out on our own ground. Both the political and territorial conditions of the problem are more complex in the United States than in Great Britain. The unity of the British Government and the omnipotency of Parliament combine with the compactness of the British railroad system to make the supervision and regulation of the latter a comparatively simple and easy task. For our great trunk lines, running across the continent or over the territory of two or more States, we must needs have a national system of inspection and government, while for exclusively State lines of railroad we must have a State legislation and control. The eternal question of State Rights and of Federal supremacy follows us here, for it is a question implicated in the entire theory of our complex and interdependent political system.

Meanwhile we are glad to know that the question in its Federal and in its municipal relations is under discussion in Congress and in our State Legislatures. The "Reagan Bill," reported and debated in the last House of Representatives, is an index of the discussion in the former, and the legislation already established under this head by States like Massachusetts, and the legislative inquiry already instituted under this same head by States like New York, are signs of a similar agitation which is prevailing in the minds of the people.

Of course, it is easy for demagogues and for political sophisters to give to this agitation the direction of an organized attack upon capital and on confederated wealth embodied in corporations. But any agitation of this kind will play into the hands of capitalists and of monopolists, for it will array on their side the conservative sense of the community precisely in the degree in which they are attacked by a communistic spirit, or a spirit which savors of communism. A railroad company has property rights which the State and the nation, within their respective spheres, are bound to respect, as the people of the State and of the nation have a right of supervision and regulation over the railroads which hold their corporate franchises and privileges as a public trust.

It would be a great point gained if "the sunlight of publicity" could be let in on the operations of every railroad company in the land. The examination now going on into the railway system of New York, as conducted by a committee of the State Legislature, has already disclosed a multitude of abuses which cry aloud for correction and of weak points which call for strengthening. The "cutting of rates" on the great East and West trunk lines leads, at the caprice of a few "railroad kings," to disturbances and anomalies which perplex and confuse the natural laws of trade, and sometimes it seems that these railroad wars may be precipitated within narrower limits by the caprice (or worse) of a local freight agent. And the fact that these "railroad kings" and "freight agents" betray such an ignorance, when put on the witness stand, respecting the profit and loss of their lines, or the grounds on which their through rates and local rates are graduated, would be in itself a sufficient justification for establishing a public scrutiny over all railroads, that the public may know not only what it pays, but what it *ought* to pay for railroad transportation.

GENERAL GRANT'S RECEPTION.

THE reception of General Grant in San Francisco appears to have been entirely free from partisan manipulation. All mere party lines and prejudices seem to have been blotted out in the heartiness of the enthusiasm with which the distinguished American was welcomed to his native land. Considering how prone political managers are to turn all popular demonstrations to their own account, the exception in this instance is especially notable and commendable. General Grant himself apparently accepted the honors done him in the spirit in which they were rendered, and there is no reason to suppose, from anything he has said or done, that he regarded the ovation as having the least political significance. All accounts agree that he has not at any time, or in any way, discussed the question of his nomination for the Presidency, and until there shall be proof to the contrary, his statement to Li Hung Chang, the Chinese Premier, that he would not be a candidate, must be accepted as indicative of his final wishes in the matter. Just now the irreconcilables of the South are doing more than anybody else to make his nomination possible, and if public sentiment should ever come to regard that result as desirable, it will be due largely to the influence of events like the Yazoo assassination which seem to show a necessity for a more vigorously executive policy than has latterly been pursued. We need scarcely say that, in our opinion, the adjustment of party lines in the next national canvass on any such basis as this—the resurrection and revival, in fact, of the sectional passions and exasperations of the war period—would be a deplorable misfortune. Any party, or section, or class, which contributes to such a result will assuredly provoke the stern condemnation of all patriotic men of this and coming generations.

ENGLISH LAND.

THE agricultural distress that has prevailed for the past year in Great Britain has sharply and suddenly called attention to the abuses of the English land system. The alarm and apprehensions aroused by the inability of the English farmer to compete with imported products has been but too well founded, and the additional calamity of poor crops, which has visited England this year, has served to seriously intensify the evil. Here and there a noble landlord has been gracious enough to reduce, or even remit temporarily, the rents of his tenant farmers; but this remedy has been confined to a few localities, and even if it had been universally applied, would only have a trifle bettered the present deplorable condition of the agricultural class. It is becoming recognized that a more sweeping and drastic change must be effected before the old-time prosperity of the English farmer can be restored. The landed interest in Parliament, thoroughly alarmed at the prospect, hastened, under the lead of Mr. Chaplin, to cause a commission to be created to inquire into the causes of agricultural distress; and towards the end of the session there were faint mutterings of the necessity of returning, after all, to a protective policy in the matter of breadstuff and cattle imports. But England has gone too far on the highway of free trade to retreat. She has vaunted it as a great moral standpoint in economical policy; and to propose seriously a return to protection would be to arouse all the formidable hostility of the manufacturing interests which, in England, have long since outstripped in political power those of the farmer. During the debate on the appointment of a commission, John Bright, with all his old brave boldness and ringing eloquence, touched upon the vital cause of the agricultural distress, and sounded the land question to its depths. He had the courage to stand up in an assembly full of British landlords, and to point with warning finger to the land laws which had been placed on the statute-book by landed proprietors to protect their acres from alienation as that cause. These laws have not only kept the land from free circulation for centuries, but they have created and built up the patrician power which is omnipotent in the House of Lords, and is still predominant, at least, in the House of Commons.

It is true that the land laws are not so stringent and restrictive as they were half a century ago. The great electoral reforms of 1832 and 1867 have served to make serious breaches in the bulwarks which hedged about British acres. No longer does the law of primogeniture compel the retention of an estate in the hands of the eldest sons and heirs; no longer can a patrician landlord decree that his estate shall remain *in perpetuo* in the possession of his eldest descendants. Primogeniture is now mainly voluntary; a man can or not, as he pleases, leave all his real estate to his eldest son; but the prescriptive principle still remains. The present law of entail permits the landowner to tie up his land so that it cannot be alienated "for a life in living, and twenty-one years after." That is, he can entail it upon his eldest or other son, and tied-up it must remain until that son has been twenty-one years dead. There is, however, one method by which the entail on an estate may be dissolved; this can be done by the possessor and his heir uniting in a deed breaking the entail. It may then be sold, and reach the general market. This was a concession wrung from the landlord power by the great newly-enfranchised constituencies; and surely it was little enough, considering the absolute necessity to England that her limited amount of land should be absolutely free.

Under the prescriptions of primogeniture and entail, even under the modified forms we have described, English land is withheld, in vast areas, from cultivation. The island teems with an overcrowded population; the soil now tilled in England cannot begin to fill the mouths of its swarming millions. Meanwhile, thousands of rich, arable acres are used for hunting forests and pleasure-parks, meadows lying perpetually unused, and expanses devoted to picturesque effects. Were entail abolished, were land to become free, these acres would fast come into the market; a race of independent small proprietors would be created, the price of land would fall, purchasers would crowd in, the cost of raising breadstuffs and live cattle would be lessened, and relief would slowly but surely come to the distressed agriculturist as well as to the artisan who needs and must have cheap bread and beef. Now, the United States, entering their food-products at British ports free of duty, are able to undersell the native producers. American beef and flour are pouring in, and the English farmer finds that, paying high rents and forcing all he can from the soil, the fruits of his labor are left on his hands or must be sold at an actual sacrifice.

Everything points to the speedy rise of a formidable agitation on the land problem. The Radicals, who at present exercise a large influence in Liberal counsels, are sure to demand broad concessions from the landlord interest; and the Marquis of Hartington, the Liberal chief, has shown some tendency to yield a good deal to their demands. The total abolition of the law of entail, the free circulation of land in the market, a more liberal arrangement of the relations of landlord and tenant, are likely to constitute a political programme to be strenuously urged in the near future. On the other hand, we may expect to see the growth of a party in favor of protection, among the landed proprietors. There can be no question which of these political elements will finally prevail. The contest will be a bitter one; but it is certain that, sooner or later, English land will be released from its restrictions, and its acres thrown open to the free competition of husbandry.

THE AFGHAN SITUATION.

THE British forces in Afghanistan have been put in motion for Cabul. The main body of 6,500 men will be supported by a reserve force of 4,000, charged with maintaining the communications between the advancing columns and Northwestern India, and apparently every possible precaution against surprise has been adopted. But the country to be traversed is one of great difficulties and perils, and if the wild tribes should offer a really stubborn resistance, the invading force will not find the task assigned it an easy one. Should the Ameer be playing a part, as is suspected by some of the British officials, but which he stoutly denies, the embarrassments of the situation will be sensibly increased. Meanwhile, some of the British journals are speaking out in very vigorous terms as to the whole Afghanistan business. *Vanity Fair*, for instance, uses this decisive language as to the outlook:

"Assuming all difficulties to be overcome, what next? Assuming that we have burnt Cabul to the ground and exterminated its inhabitants, what are we to do then? Are we to march back again once more, exterminating as we go, and calling extermination making a lasting peace? Or are we now to annex the whole of Afghanistan up to Herat, duly transporting our present Indian army to Jellalabad, Cabul and Ghuzni, and leaving the British rule in India to be supported by our own very trusting and loving allies, the princes now representing the Mahratta and the Mogul? Or are we to raise another army and keep it on foot, and to depend on the ability of the natives to pay four times as much taxes as they do at present in order to maintain the constant wars and insurrections which this new and magnificent annexation will render chronic? For it must be noted that the Afghans, who, as we boasted, were cowed by our successes, are choosing the exact moment to rise when we are in force on their frontiers.

"The chain of cause and effect as between a succession of Afghan campaigns and an uprising throughout India against the English rule is fearfully shortened now to what it was forty years ago. The crash may come next week, or next month, or even next year; but the truth must be spoken in undisguised language: the allegiance of the Empress-Queen's Eastern subjects hangs by the very slightest thread, and with its severance will come such distress upon these islands as the darkest prophet of evil can scarcely put into fitting language."

The view here taken as to the perils which menace the British rule in India, and the possibilities of the future in regard to it, is shared by many of the most sagacious statesmen of Great Britain; but in the interests of civilization and humanity, it is to be hoped that their forebodings may never be realized.

JUDGES, JURIES AND CRIMINALS.

WHILE the tenacity with which modern peoples cling to ancient institutions is one of the sources of their power, it also often perpetuates considerable evils. To this inherent trait of mind England owes her game laws, primogeniture and established church. Happily we are free from these ancestral legacies, but we retain the old Anglo-Saxon institution of trial by jury, the efficacy of which has been long questioned by many sound thinkers, who are inclined to believe, with the late Judge Oakley, that, as the garments of the boy are not calculated to fit the man without considerable alterations, so an institution that was adopted for a state of society a thousand years ago fails to answer the purpose now. Chancellor Kent said that "law was a greater lottery than marriage, and that between judge and jury no man could be sure of justice, even when the evidence seemed clearest," for when to the ignorance, prejudice and possible corruption of twelve men, constituting the jury, you add the disturbing, bewildering and often erroneous influence of the judge's summing up, the public stand a very remote chance of a just verdict. Herein lies the cause of so much delay in legal proceedings, since the victims, if they possess the means, will not tamely submit to be wronged in this fashion, and demand new trials, which by postponing the result weakens the force of example upon which the efficacy of justice is founded.

Years ago Lord Brougham brought this subject before the House of Commons, and moved for a committee to revise the old system, but that slavery to traditional ways which forms so strong an element in the British character was too powerful to be overthrown. In the course of his argument he related numerous instances of the stupidity and corruption of juries, and of the one-sided charges of the presiding judges. One will suffice as a sample. In a certain county, famous for its fox-hunting proclivities, a farmer, much given to that sport, hung a pair of newly pipe-clayed breeches in his garden to dry. During the night they were stolen. Provoked at the loss, he resolved to risk another pair to catch the thief. Doing so, he watched, gun in hand, ready to shoot the offender when he made his appearance. About midnight he saw a man stealthily approach the bush on which the garment was hanging, and, just as he had secured the prize, the farmer fired, and the thief fell dead with the ill-gotten spoils in his possession. When, on his own confession, the farmer was tried for manslaughter, the verdict of the jury was: "We

Digitized by Google

find the deceased guilty of stealing a pair of leather breeches." Lord Brougham did not say whether the Judge's charge had confused the jury or not, or whether it was the natural stupidity of twelve men chosen at random, with a strong leaning in favor of the man on trial.

Preposterous as this may seem, verdicts equally strange and unjust are given every day in our courts of law, and it is plainly the duty of the Legislature to devise some means to simplify and amend our present system of jury trials, which enables men of a litigious or scheming nature to harass honest men with unjust and vexatious lawsuits.

As we write we observe a case in England which illustrates the present system. In the trial of one Maynewaring, in Derby, for the murder of a policeman, the jury was unable to agree, six being for willful murder and six for manslaughter. After nearly a day's discussion without any result, it was agreed to draw lots, the holder of a blank card to decide. The drawer, however, lacked moral courage to give a decision, and it was finally decided to toss up, which was done, and the man's life was, so to speak, tossed away. So much for this ancient mode of justice, which, as administered at present, is the terror of the good and the safeguard of the criminal.

EVENTS ABROAD.

THERE is an active arrangement of "slates" among the European politicians. Prince Bismarck and Count Andrassy have come to an agreement that the interests of Germany and Austro-Hungary are identical, and that the political aspect of Europe is such that it is believed the two empires will be able to assert those interests, maintaining at the same time peaceful relations with other countries. Salisbury and Waddington have reached an understanding as to the Greek and Egyptian questions, and will act in concert. The result in the former case will be that Austria will pursue her occupation of Bosnia without interruption, and will finally annex, at her own pleasure, the territory she occupies. The alliance embodies, too, a menace against Italy, which looks with discontent upon Austrian aggrandizement, and will some day demand the surrender of her territory now held in the Austrian clutch. Russia, of course, cannot look with complacency upon any consolidation of the German-speaking peoples, and the alliance will be accepted by her as a pretty distinct intimation that Bismarck means to gradually separate her from the rest of Europe, meanwhile holding in check all her schemes to acquire a controlling influence in continental politics. It is stated that Prince Gortschakoff will have an early interview with the Prussian Premier, with the view of correcting any existing misunderstandings. Queen Victoria is said to have written to the Emperor of Austria expressing gratification at the consolidation of good relations between Austria and Germany.

Prince Bismarck has caused an appeal to be made in his behalf to the Prussian electors, in which Catholics, Liberals, the military and upper classes, are assured that their interests will be promoted by returning to the next Landtag "an overwhelming body of members who, on the ground of common economical endeavors, have full sympathy with the Prince and the Government in their efforts for German economical reform." Assurances of mutual good feeling have recently been exchanged between Germany and France, and the existing cordial relations are not likely to be disturbed.

The German Envoy to Japan seems determined to provoke a collision with the Mikado. Recently he directed a German steamer to break the cholera quarantine established at Yokohama. The result has been that Japan is changing the regulations concerted between her and the Christian Powers, and fresh complications cannot well be avoided, as the insolence of the German representative has been increased rather than abated by this proceeding. The United States Minister sides with Japan, and General Grant is known to have expressed himself strongly in favor of her right to make such quarantine regulations as she might consider proper.

It really begins to look as if the system of slavery in Cuba is doomed to destruction. Late advices state that twelve owners of plantations have emancipated their slaves, several thousands in all, and contracted with them for their services for five years, and the indications are that other owners will follow this example. It is said that a number of Deputies in the Spanish Cortes intend to urge the immediate abolition of slavery in the island, without indemnity to the owners, and, with the process of voluntary emancipation already in progress, positive legislation of the character proposed may possibly be enacted much sooner than has been expected.

Russia has encountered a serious check in her campaign against the Turcomans, her advanced column having been defeated at Geok Tepe, with the loss of 700 killed, and compelled to fall back on Beurma. The event derives its importance mainly from the consideration that the objective point of this expedition was supposed to be Merv or Herat, from either of which the Russians would have an effective base of operations against Persia or the British in Afghanistan. But the check is not likely to change the Russian policy as to Central Asia. Similar expeditions have been beaten back by the Turcomans, who are sturdy fighters, in the past; but the determination to secure possession of Merv has never been for an instant abandoned, and the grim persistence which has survived former disasters will rise superior to that now reported, which, indeed, may not, after all, affect the main Russian column, some 20,000 strong.

The terms upon which peace has been concluded in South Africa are given elsewhere. They are such as were to be expected under the circumstances; while nominally leaving the sovereignty of the chiefs intact, they are really made the subjects of Great Britain, which ultimately, no doubt, will absorb all this territory, and make of it, perhaps, a new Australia, for the occupation of the surplus population of the United Kingdom. Cetywayo is a prisoner at Cape Town.—The situation in Burmah does not improve. The King is intemperate, brutal, and has a pronounced dislike for foreigners. The presence of the British Resident has had no effect whatever in checking the cruelties practiced by the Court, and it is understood that he will leave with his party at the first favorable opportunity.—There has been a suspension of hostilities between the Egyptians and Abyssinians, and the latter have withdrawn their troops from the Egyptian frontier.—News comes from Stanley, the explorer, to the 3d of September, on which date he started from Sierra Leone for the exploration of the river Congo.—Two distinguished German geographers, Drs. Graefe and Grasser, have been sent to Africa by the German government on a scientific mission.—Colonel Mapleson and the principal members of his opera company sailed from Liverpool for New York, September 25th.—A banquet was given at Paris, last week, in honor of the Hon. Fernando Wood by the promoters of the Franco-American treaty of commerce.—Prince Jerome Napoleon is to go to Chiselhurst to visit the ex-Empress Eugénie prior to her visit to Scotland, whither she goes at Queen Victoria's invitation.

THERE appears to be a disposition among the Southern Democracy to favor the nomination of some other candidate than Mr. Tilden for the Presidency. A number of the leading party organs are urging the selection of General Hancock, and it seems now as if the distinguished Pennsylvanian may prove a formidable competitor for the preference of that section in the National Convention. But it would be a very unsafe proceeding to undertake to foretell precisely, at this stage of the game, who will come out winner in the end.

THE records of the *Herald* Weather Service for the first six months of the present year show that of the storm warnings cabled to Europe, eighty per cent. were completely and twenty partly fulfilled. The value of such a service to the commerce and agriculture of Great Britain cannot be overestimated, and the fact that it is voluntarily and gratuitously performed challenges, not unnaturally, the highest commendation from foreign scientists and students of meteorology. The proprietor of the *Herald* has contributed largely to the promotion of scientific discovery and geographical exploration in other fields, but in none have the results achieved more fully justified his confidence and liberality than in this.

THE North Carolina papers are wisely urging the establishment of small cotton factories at the more available points throughout the State. Such factories pay elsewhere in the South, and it would seem that the industry, by a proper utilization of resources, might be made a foremost factor in the development of the prosperity of that section. The Wilmington *Star* sums up its argument on the subject thus: "We have the cotton, the water-power, the labor and even the capital. The prosperity of a State depends no little upon the diversity of crops and the multiplicity of industries. New England has grown immensely rich by its manufactures. Let North Carolina awake to its true interests and try small cotton factories."

A DECISION has just been given by Judge Deady, of the United States Court in Oregon, which practically annuls all existing laws and ordinances in that State prohibiting the employment of Chinese labor. The case before the court turned upon the right of a municipality to enforce, in a contract for certain public work, a stipulation that Chinese workmen should not be employed, and the Judge held, "The right to reside in a foreign country implies the right to labor for a living, and a State has no power to interfere with or in any way limit the operation of a treaty of the United States." Whenever this question shall be squarely met in California, the same decision will, no doubt, be rendered, and the new constitution of that State will, as to this matter, be declared inoperative and void. The Oregon case is to be carried to the United States Supreme Court in December, and an early and final determination of the whole question may therefore be reasonably anticipated.

KEARNEY is coming to New York to speak for "the Labor Party." This party seems to be pretty thoroughly saturated with the doctrines and ideas of the Sand lot faction in California. Thus, in a letter to Kearney, the secretary of the organization says: "We are organized on your platform and are devout believers in the principles enunciated in the new constitution of the State of California." And then the writer adds this startling revelation: "The fight for the Governorship of New York is a struggle between the Central and Erie Railroads. Tom Scott, the Pennsylvania Railroad king, owns the legislative, executive and judiciary branches of the Pennsylvania Government. The question the political managers have brought up for the decision of the people is, What railway king will own the Government of New New York." There can be no doubt that Kearney will be perfectly at home in a crowd which can see in the present contest no other or higher issue than that here stated.

IT is said that the United States Grand Jury which is shortly to meet in Salt Lake City will investigate the secrets of the Endowment House, where all polygamous marriages are consummated. The United States District Attorney has been instructed to proceed with a vigorous prosecution of every case presented, and all the evidence which can be obtained from the records of the institution will be used in support of the position of the Government. A test case having already been made with a male Mormon, it is now proposed to make another of a female polygamist, the reputed husbands to be called as witnesses. Should the woman be claimed as a wife she will be prosecuted; should the husbands disclaim her, the illegitimacy of her relationship will be established. It is believed that the moral effect of such a proceeding would be to diminish the further immigration of polygamists, since even the most fanatical would scarcely care to hazard the disgrace and ostracism which such a decision would invoke.

THERE is a probability that something practical will be done during the coming Winter and Spring to so improve the sanitary condition of Memphis as to make the city habitable. It is proposed by the principal property-owners to institute a proper system of sewerage, to take up and remove the rotten Nicholson pavement, and to clean out the bayou upon which the city is situated, all of which, it is believed, can be done at an expense equal to a tax of three per cent. upon the property liable to taxation. Owing to the absence of a system of sewerage, the inhabitants of the city now inhale constantly the foul and poisonous odors of seven thousand outhouses; and until this source of disease and contagion is removed it will be simply impossible to escape epidemic visitations. It is amazing that steps for the purification of the city, in accordance with established sanitary laws, were not taken years ago, but as the work has been delayed, it is to be hoped that when at last undertaken it will be done thoroughly and satisfactorily.

IN his letter accepting the Republican nomination for Governor of New York, Mr. Cornell favors a readjustment of public expenditures, many of which, established during the period of inflation and fixed at rates extravagant now, have become needless burdens upon the taxpayers, and condemns the onerous discriminations which unequal tax laws impose upon our citizens. He says further:

"Particular attention is due also to growing dissatisfaction among the farmers, merchants and other business men of the State in regard to railroad and other corporate institutions. Corporations created by law, exercise within their charters delegated functions, and are subject to the supervision of the power from which they derive their being. Originally endowed for the public benefit, they have no warrant to discriminate against the rights of any class or portion of the people; especially they should not discriminate against the interests of the citizens of New York and in favor of those of other States. The unexampled development of our State and of the country beyond its borders has, in many instances, vastly increased the value of these franchises, the recipients of which should recognize a just accountability to the sovereignty which endowed them with such great and valuable privileges. Legislation adapted to the preservation of the rights of all classes, and to maintaining the commercial primacy of the State of New York, seems to me manifestly just."

THE speeches of President Hayes during his recent Western tour have not been remarkable for originality or brilliancy, but they were characterized by sagacity and good sense, and were valuable as helping to inspire popular confidence in the business future of the country. The President seized every proper opportunity for the presentation of the encouraging facts of the industrial and commercial situation, and the enforcement of sound ideas as to finance, capital and labor. In one of his brief talks in Illinois, where 500 workingmen had assembled, he dwelt upon the community of interest existing between labor and capital, showing that in the long run what is good for the capitalist or the business man or the laborer is good for all the rest. At another point, speaking of agriculture and the currency, he said:

"Whatever may have been wise statesmanship in the past in regard to the currency, our currency has now got up to a level with the currency of the world, so that our dollar, whether paper, silver or gold, is equal in value to the dollar of the world. Our currency should now be let alone. If we are wise we will see that it is based upon principles so sound and so general that it will be upon the same valuation with the currency of the world. If we are wise we will arrange it so that an American dollar will be a dollar all over the globe."

NEWS OF THE WEEK.

Domestic.

THERE is a lively demand from the West for one-cent pieces and small bills.

THE Prohibitionists of Pennsylvania have nominated William L. Richardson for State Treasurer.

A PARTY of twenty-eight prospectors have been massacred by the Indians near the eastern boundary of Utah.

TWO inches of snow fell at Mount Louis, Quebec, September 25th. There were heavy frosts in New England on the 26th.

THE total number of deaths from yellow fever in Memphis this year, up to the 28th of September, is 362, and the total number of cases 1,279.

FEIST, FRANK & Co., wholesale drygoods dealers of San Francisco, have failed, with liabilities estimated at $300,000, half being due in this city.

THE Executive Committee of the trunk line has resolved that after October 1st no rebates or deductions shall be made on east-bound through freights.

PRESIDENT GEORGE J. SEWEY, of the Metropolitan Bank, in this city, has given $50,000 to the Wesleyan University, founded by Daniel Drew at Middletown, Conn.

A FIRE in Belton, Texas, last week, destroyed property valued at $100,000. There were destructive fires September 27th and 28th, at Vincennes, Indiana, and Gloucester, Mass.

REV. MR. LOUNSBURY, of Stratford, Conn., was shot and killed, September 24th, while asleep, by his wife, who is said to have been insane. She admitted her guilt, and was promptly arrested.

THE troops sent in pursuit of the hostile Navajo Indians had an engagement with them at Sierra Blanco Cañon, New Mexico, September 18th, and were compelled to retire with a loss of five killed and one wounded.

ALMOST the entire business portion of the town of Deadwood, Dakota Territory, was destroyed by fire September 26th. Two thousand persons were rendered homeless. The total loss is estimated at from $2,500,000 to $3,000,000.

THE Legislative Committee charged with the investigation of railroad management in this State met in Rochester last week, and received testimony from farmers and produce-dealers as to the effect of railway discriminations in rates.

AN attempt was made recently to assassinate the Postmaster at Blackville, S. C. The Postmaster-General will abolish the office unless the authorities will agree to protect the Postmaster. The murderous attempt seems to have no other inspiration than partisan malice.

THE greater portion of the business centre of Carroll, Carroll County, Iowa, was destroyed by fire September 25th, involving a loss of from $150,000 to $200,000. The Masonic and Odd Fellows' Hall, the Presbyterian Church, and over forty business houses, were burned.

A YOUNG lady of sixteen years, living in Buffalo, was last week abducted by a young man who hoped to secure a ransom of $500 for her release. The girl made her escape, and the offender, Charles E. Schuyler, was arrested. Documents found upon his person showed that he contemplated other exploits of the kind.

THE first public school in Baltimore was opened on September 21st, 1829, and the semi-centennial celebration of that event took place September 25th, at Druid Hill Park. There was singing by a chorus of 12,000 children, 60,000 people in all being present, and speeches were made by Governor Carroll and others.

PRESIDENT HAYES and the party traveling with him visited the county fair at Neosho Falls, Kan., September 23d, at which 12,000 people had assembled. Governor St. John made a speech of welcome, citing many figures in regard to the rapid progress of Kansas. The President then spoke at length and with great acceptance on the question of State rights.

THE pedestrian contest for the Astley Belt ended at Madison Square Garden in this city, on Saturday night, September 27th, Charles Rowell, the Englishman, being the winner, with a score of 530 miles. Merritt was second, having traveled 515 miles, and Hazael was third with 500 miles to his credit. Weston made 455 miles, Hart 482, Guyon 471, Enzle 450, and Krohne 450. Much interest was manifested in the close of the contest by a great number of spectators. The gate money for the week amounted to nearly $74,000. Rowell will take home about $30,000.

SENATOR BLAINE will participate in the Republican campaign in Ohio. It is intimated that he and Secretary Sherman have made an alliance to prevent the nomination of General Grant for President, but the story is probably without foundation.—The New York Democratic State Committee has declared vacant the seats of five Tammany members.—The Prohibitionists of Massachusetts have nominated a full State ticket with the Rev. Daniel C. Eddy for Governor.—The Colorado Democrats have nominated George Q. Richmond for Supreme Judge.—Gen. Fitzhugh Lee, ex-division commander of cavalry in the Confederate Army, has been nominated for the Legislature of Virginia by the debt-payers of Stafford and King George Counties.—The Democrats of Minnesota have nominated Edmund Rice for Governor.—A call has been issued by the "Chairman of the Union-Greenback-Labor Party of the United States" for a National Convention of that party at St. Louis, January 8th next, for the purpose of nominating candidates for President and Vice President.

Foreign.

THE cattle-plague has reached Russian Poland.

IT is again reported that the British Parliament may meet in November.

THE sum of $4,850,000 in gold left Paris, September 24th, for New York.

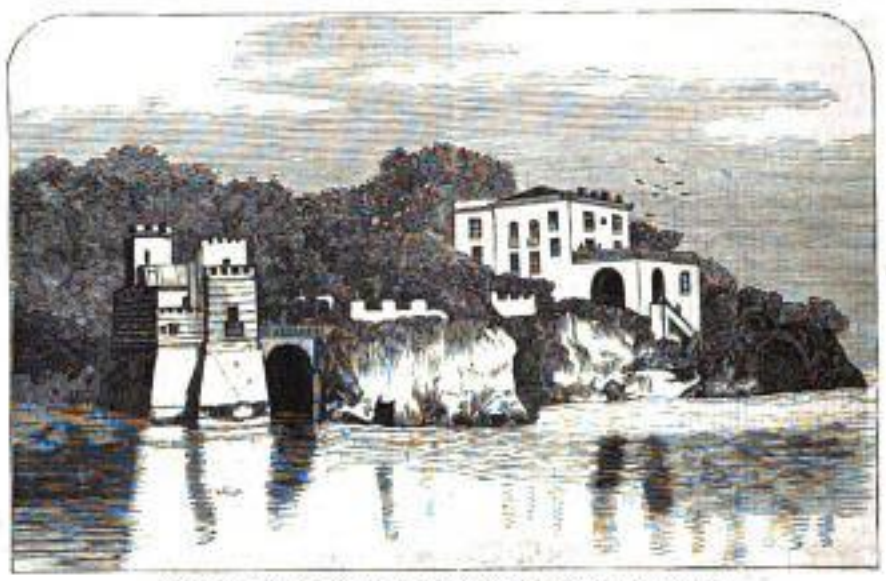
THE Afghan Ameer has arrived with a large escort at the British camp. Cabul is in a state of anarchy.

THE striking cotton operatives at Ashton-under-Lyne have resumed work on the masters' terms, which reduce their wages five per cent.

A FOOT and mouth disease has appeared among the American sheep in England, and their further importation into England will be restricted.

A RUSSIAN official paper says that 2,987 fires occurred in Russia during the month of August, causing damage to property to the amount of $16,090,000.

THE International Exhibition at Sydney, New South Wales, which opened September 17th, is a great success. There are 150 industrial exhibits from the United States.



THE Belgian bishops have instructed the clergy to refuse absolution to the parents of all children frequenting the public schools, and to the teachers and pupils of the normal schools.

NEW YORK.—SCENE FROM MAX MARETZEK'S NEW AMERICAN OPERA, "SLEEPY HOLLOW," AT THE ACADEMY OF MUSIC—THE APPEARANCE OF THE HEADLESS HORSEMAN.

MAX MARETZEK'S OPERA.

"GIVE me something that I can whistle when I am going home." This observation implies success as measured from the standpoint of unlimited gratification, and may be accounted a fair exponent of the wants of the many who, with music in their souls, yearn for melody to a stage setting. The surest critic is the barrel-organ, and when this muchly-abused instrument declares in favor of a composition, it may be conceded that the composition has caught the public and held it. "Sleepy Hollow" is barrel-organy, and, therefore, "Sleepy Hollow" is a success. Mr. Max Maretzek has not emulated Wagner, nor has he copied Lecocq. He has put catching music to catching words in catching situations, and as a result his opera received spontaneous recognition. The story is charming; the characters are full of individuality and verve; the complications, harmonious; and the period romantic. And when the legend is set to bright, merry music, assuredly the opera-goers cannot fail to be satisfied. From the rising of the curtain to its fall, the opera is a succession of gratifying surprises. The chorus music, which, after all, constitutes the ribs of the good ship, was *chic*, full, and well rendered, while the orchestration was admirably held in hand. Miss Annis Montague made a most bewitching *Katrina*, and sang into the very soul of poor *Ichabod Crane*, who, *par parenthèse*, looked the part, her spinning-wheel song being one of the best numbers in the score. Mrs. Florence Rice Knox delivered the music incidental to the part of *Frau Van Spuyden* with admirable effect, while her acting was *piquante* and natural. Mr. Turner is capable of making more of *Brom Bones*, and Mr. Gardiea might have added a little additional color to the part of the half-crazed schoolmaster with effect. Mr. Fink, as *Van Ness*, bowled out, smoothly, "Oh, my name is Captain Kidd," with a true piratical swagger, and this gentleman's singing scored a palpable hit. The opera was well mounted, and the gods had something to whistle going home. Mr. Maretzek was the recipient of an enthusiastic call before the curtain and of floral trophies; and Mr. Gaylor, whose *libretto* bears the stamp of the *littérateur*, was also compelled to "face the footlights." Our illustration represents the *finale* to the second act, when the headless horseman startles the frightened villagers by his ghastly presence.

AN ELECTRIC RAILWAY.

ATTEMPTS have been made to apply the motive power obtained from electricity to the working of locomotives, but no satisfactory result was obtained. However, a step forward has been made in this direction in Berlin with apparent success. There are two lines of rails laid down, which, as in a narrow-gauge line, return into themselves in a ring-shaped curve. The length is about 300 metres. In the middle is an isolated third line, consisting of an upright continuous iron plate. The locomotive carries two rollers, with which it stands in connection with the isolated middle line. The essential portion of the locomotive is formed by an electro-dynamical machine, one pole of which is connected with the middle line, and the other with the pair of outer rails, through the outer wheels. Similarly the machine which produces the current stands in the machine-room in connection through one pole with the middle line and through the other pole with the outer pair of rails. When, therefore, the dynamical machine in the locomotive is on the railway, the electric current produced in the machine soon runs through it and causes it to rotate and to impart its rotatory motion to the wheels of the locomotive, and the latter continues to move until the current is interrupted. Even an imperfect state of isolation on the part of the rails does not materially affect the action of the machine. When the locomotive is moving, its conducting wires form much better conductors than the damp earth. If the current is interrupted, the damp ground is not a sufficient conductor to keep the dynamo-electrical action going. The magnetism of the machines producing the current consequently disappears, and the result is that the subordinate stream through the earth is also interrupted. A great advantage is possessed by the transmission of electric force from the fact that the locomotive, whether moving slowly or quickly, always works up to its full power—an effect which has hitherto been an unsolved problem in mechanics. When the machine that gives the power has to do much work and so goes slowly, the counter-currents it produces are also correspondingly weak, and the current through the conductors thereby undergoes an increase in strength to a similar extent. By this means the electro-magnetism and, corresponding to this, the attractive power, of the machine, are increased. The dynamo-electric locomotive has the further advantage that it carries in itself the power which can be employed as a brake, inasmuch as it becomes itself the primary or current-producing machine when it rotates more rapidly than the actual machine. In judging of the performances of the electric locomotive in the Berlin Exhibition, it must be remembered that it was not constructed for the purpose to which it has been applied—that is, to propel the three elegant Lilie passenger-carriages which are attached to it. Each carriage holds from 18 to 20 persons, and all three are drawn in from one to two minutes round the

circular railway of 300 metres in length. The locomotive was originally made for the purpose of drawing up coals out of the pit. Nevertheless, its performances are very remarkable, and render it certain that there are many cases in which electric locomotives may be employed with advantage. The question of the extent to which electro-dynamic locomotives may possibly be employed is as yet difficult to decide. Apart from the question of the possibility of a sufficient isolation, it depends on the conductive resistance of the rails. According to Dr. Siemens's view, this requisite on long railways may be partly satisfied by setting up from time to time new primary dynamo-electric machines, which would maintain the necessary electric tension between the middle and the outer rails.

THE ONE-ARMED HUNTER.

A STORY OF MINING LIFE IN CALIFORNIA.

IT was a stormy night in the November of 1856 that I left Rabbit Creek to cross the mountains by the Downieville trail. The case was urgent—for I had received private information that afternoon that a rich strike had been made in the neighborhood of Minnesota—and if the news got out before I reached there, every foot of ground would doubtless be staked off, and another chance for fortune would have vanished. I had taken a hand for a decade or more in every gold excitement that had stirred the country. I had rushed down to Kern River and got back to San Francisco flat broke. I had crossed the mountains with a dozen others to prospect the riches of Gold Bluff, and on my return at midwinter had been snowed in about ten miles above Yreka, and was only saved from starvation by finding a quarter of venison hanging up in a hollow tree where I had fortunately sought shelter for the night.

The hunt for gold, with all of its sufferings, misfortunes and disappointments, had not abated my desire one jot, and I was just as ready to take a hand in any new discovery as if the journey was to be made on a first-class railroad, and my nights were to be passed in the delights of a Pullman palace car.

"You've a rough ride before you," said Tom Finly, as he tightened the girth of my saddle. "I wouldn't keer about trying that Portwine turnpike on sich a night as this. It must be suthin' werry umportant as takes you on the road when it's a blowin' sich a storm. Has your mother-in-law arrived in 'Frisco, or hev you got some news from your wife, or maybe we may hear in the morning that the treasure-bags is a missin', and that Lerington's express rider has passed in his checks on the road."

"No, Tom," I replied, "I haven't any mother-in-law. I never was married. I am not engaged in the highway business at present, and, lastly, I think too much of this precious neck of mine to take any chances with the boys that ride the express."

"Well," said Tom, "I ain't your father confessor, and I don't keer about knowin' what's up, but if you places a pertickler wally on that ere neck of yourn, you had better look well to the calks on your mule's shoes when you're a-gettin' down that Portwine trail, for if you ever get started on the side of that mountain, you'll never stop till you fetches up somewhere in China or ——"

"Never mind the rest, Tom," I replied, and jumping into the saddle I gave the mule whip and spur, and dashed out into the night and storm with no more sense of danger or discomfort than if I had been snugly ensconced in my own cabin, with a good pipeful of Virginia plug and a steaming jug of toddy before me.

It was a wild country that lay between me and my journey's end. The mule-path led through the roughest part of the Sierras. High mountain peaks, whose summits are clad with eternal snow, frowned down on deep and terrible gorges, through which the torrents of ages had cleft their way, leaving the beds all ragged and torn, and looking as if the Almighty might have abandoned them in His anger and left them there an eternal monument of ruin.

The rain came pattering down and the wind swept in fitful gusts, wailing through the mountain pines with an almost human voice. I believe we are all of us more or less superstitious, not that we believe in ghosts, goblins or spirits, but there are times when we have an indefinable sense of the nearness of something which no living man can describe. I do not think I am a coward; I have never let any premonition or foreboding of evil stand between me and the performance of my positive and well-defined duty; and now, alone at night in one of the wildest countries on the face of the earth, with my road over trails where a single misstep would hurl me into eternity in an instant, while I felt no fear, it seemed as though there was a sort of weird presence that rode alongside of me, that went fast when I went fast, that went slow when I went slow, that stopped when I stopped; and yet was so near me that if it had been palpable I could almost have touched it with my hand. But, as I said, the feeling was not one of fear; indeed, it was quite the reverse, it was one of wild, exulting, unqualified delight. I have often asked myself if there is any pleasure on this earth equal to the sense of royal freedom experienced by the mountaineer. Not popular applause, nor riches, nor speculation, nor honor, nor anything else that this world bestows can equal that glorious sense of perfect and absolute liberty. My animal was sure-footed and trustworthy, my pistols tolerably sure fire, my poncho kept off the wind, and, with the golden prospects before me, it seemed as if there was nothing further in the way of enjoyment that this world could possibly give.

When I reached St. Louis everything was dark except in the Golden Gate saloon, kept by my old friend, Pete Morris. Pete was leaning over the counter watching four men earnestly engaged in a game of cards. The men were dressed in the rough garb of miners, though the hands of two of them gave but little evidence of labor with the shovel and pick. Their hats were slouched down over their faces as if to conceal their eyes; scarcely a word was spoken, and the floor was covered with cards that had been thrown aside after using them once or twice.

St. Louis was a ragged, straggling little mountain town, nestling under one of the highest peaks of the Sierras, and owed its existence to a number of rich mines, which at this point struck the great Blue Lode. At an elevation of between seven and eight thousand feet the air is always raw and chilly, and there is no night throughout the year, even in midsummer, when a fire is not essential to comfort. In the Winter storms the wind sweeps over these mountain-peaks with wild and terrific violence; and when the snow falls not unfrequently the town is buried completely out of sight, and for miles and miles, as far as the eye can reach, the whole country is wrapped in one vast white winding-sheet.

A cheery "How d'ye do?" from Pete as he grasped my hand gave me the assurance of welcome, and, drawing near the blazing stove, into which the host had stuffed another log, ordering something hot, I sat down to watch the gamesters. One was a large, gaunt man, whose long hair hung straggling on his shoulders, while his red beard reached almost to his waist. Opposite him sat a little fat man, whose chubby face was destitute of beard. But while conveying the sense of being well-fed, still there was something about the small, sharp, tricky eyes that told you at a glance that he was not a desirable acquaintance. The other two men were so like each other that one might have mistaken them for twins. They were of medium height, of light, wiry build, with thin, pale, sinister faces, having that sort of forbidding, State-Prison air which marks the professional gambler everywhere.

"You're riding late to-night," said Pete, as he mixed the steaming toddy. "I expect you'll have to bunk in with me, for Miller's shut up his shop more than an hour ago; and, even if he was open, his house is full to the roof, with twenty shake-downs on the barroom floor."

"No, Pete," I answered, "I shall not bunk here to-night. Do you know anybody who is going down towards Downieville?"

"To Downieville such a night as this? You're crazy! Ride to Downieville to-night! Why, I wouldn't ride that Downieville trail to-night for all Downieville and John Craycroft's saloon thrown into the bargain. Take off your poncho, man, put up your mule, and let this thing lay till to-morrow morning; for if you attempt to ride that trail to-night, as soon as you strike Cape Horn, good-by, John."

"Good-by, John, or good-by, Jim, I'm going to try it this very night," I replied; "and if I can't get any company, it won't be the first time that I have had to ride it alone."

"Well, there ain't no Act of Congress that I knows of agin a man making a fool of himself," said Pete; "so if you are determined to go, let's take another drink."

"I call you," said Bill Moore, for that was the large man's name, who sat playing cards at the table, and the little fat man spread out his hand.

"Tens and kings—a full."

"No good," says Jack Moulton, one of the thin gamblers, "four queens—pass in your checks."

"I go you one better," said Mark Langham, "four aces take the pot," and he flung down his hand with an air of triumph, and reached out to take the money.

Quick as lightning Moore whipped a huge bowie knife from his belt and stuck it quivering in the table among the pile of gold, saying: "Hold on, gentlemen; hold on! I believe the pot ain't lost till all the hands are shown."

"Till all the hands are shown," cried Langham, his whole frame trembling with excitement—"why, you can't beat four aces!"

"With just one thing," replied Moore, sarcastically, throwing his cards upon the table, "with just one thing, and that's a royal flush—and there it is!"

Langham's face—pale and bloodless before—seemed to grow perfectly livid, and stepping back from the table, he thrust his hands in his side-pockets, and, fixing his little ferret eyes on Moore with a look of deadly hate, said in a voice a little above a whisper, while his entire frame trembled like an aspen-leaf: "Look here, Bill Moore, that's my last stake, and the man don't live that can rob me of it with a cold deck."

"Rob you, you thief!" cried Moore, leaning over the table, with one hand upon the hilt of his knife, which was still sticking among the gold, while with his cocked revolver he covered Langham, who stood trembling before him. "Rob you—you who never had an honest hair in your head; you who are a gambler and a thief from the crown of your head to the sole of your foot; you who robbed Jack Keefe of his last dollar and then killed him down at Poker Flat—you talk to me!"

"Come, Langham," said the little fat man, "let him have it, and let us go."

Langham never moved but stood looking steadily at Moore, who covered him with his pistol, pausing for a moment as if to make up his mind whether to shoot or not, he slowly dropped his pistol and returned it to his belt; then drawing his knife from the table with his right hand, he reached out with his left to gather in the money; as he did so there was the sharp report of a pistol. Langham had shot from a Derringer in his pocket, and Moore rolled over dead upon the floor. Quick as lightning Langham seized the golden pieces on the table, then discharging one parting shot into the prostrate body, accompanied by the little fat man and his other companion, he rushed towards the door.

"Quick," said the little fat man, "the miners will soon be upon us," as Langham attempted to return to the table to gather in a few gold pieces that still remained upon it.

"Curse the money, man; let it go if you don't want us all to swing."

The fat man flung the door open wide and pushed Langham into the street. The rush of approaching footsteps seemed in an instant to awaken him to a sense of his danger, and drawing his knife, he cut the halter of my mule who stood tied before the door, and sprang upon his back. I had pulled out my pistol when the conflict commenced, determined not to be drawn into a gamblers' fight as long as there was a chance to remain neutral. But horse-stealing is considered worse than murder in the mountains. So quick as thought I fired, and Langham rolled headlong to the ground. My mule ran towards Pete's stable, where I secured him. Then, without stopping to make any further inquiries, I jumped in the saddle and started on my journey alone.

Many would moralize on this and say I ought to have remained, but every moment was precious to me; these shooting scrapes were matters of nightly occurrence, and a gambler more or less in the census of these mountain towns was a matter of very little consequence.

The storm had increased in violence, and a cold, bitter wind swept in wild and fitful gusts along the mountain ridge. My reflections were not of the pleasantest character; there is something inexpressibly dreadful about the thought of having the blood of a fellow-being upon your hands, no matter how much he may have deserved his death, and although a man has forfeited his life a dozen times, there are not many who would care to assume the office of executioner. Besides all this, there were possible consequences to be thought of. If Langham was killed, his gambling companions would regard revenge as a sacred duty; and if he should survive, I felt that sooner or later, some time or somewhere, there would come a day of reckoning.

A short distance from the town I reached the summit of the mountain, and then commenced the descent of the perilous path that might have appalled a stouter heart than mine. The trail was cut along the steep face of a rugged mountain, just wide enough for a mule to get a foothold. It was a dangerous track under the most favorable circumstances, and in broad daylight; but now, in the blinding darkness of a stormy night, there was something about it almost awful. In many places the path was washed away, and down through the gullies and ravines the water thundered, threatening death and ruin to everything that should come in its way. My mule kept his head low to the ground as he cautiously picked his steps, sometimes slipping to the very edge of the precipice, and then steadying himself, while he trembled at every joint as if fully sensible of the deadly peril that surrounded him.

(To be concluded in our next.)

HOME AGAIN.

ARRIVAL OF THE GREAT CAPTAIN.—THE BEWILDERING RECEPTION OF GENERAL GRANT AT SAN FRANCISCO.

AFTER several days of anxious waiting, General Grant and suite arrived at San Francisco early on Saturday evening, September 20th, and met with a reception unexampled on the Pacific Coast. Vast preparations had been made for the welcome, both in the city and in the harbor, and while the lateness of the hour of arrival prevented the entire programme being carried out, the demonstrations were characterized by a most delirious enthusiasm.

As soon as the steamship *Tokio* was sighted, Alcatraz and Fort Point fairly blazed and trembled with the work of the great guns. The fire-bells of the city and all the other big bells rang out the gladsome tidings from their iron throats. Steam whistles screeched wildly the long-awaited news, and the vast multitude, which for four days had been craning its aggregated neck and standing upon the tiptoe of expectancy, gave one tumultuous shout and rushed pell-mell for the wharves and docks and hills, every fibre of the squirming mass tingling with curiosity and charged with anxiety, every human being possessed of the one idea of seeing the illustrious man whose approach could set a continent wild long before even the vessel that bore him was within a hundred miles of the coast.

Immediately on receipt of the intelligence that the steamer *City of Tokio* was nearing port, the Reception Committee, consisting of Frank M. Pixley, ex-Senator Cole, General Miller and H. B. Cornwall, repaired to the tug *Millen Griffith*, lying, with steam up, at the Pacific Mail dock, and at once started to meet the incoming steamer. The *Millen Griffith* stood well out to sea, and several miles outside the Heads met the *City of Tokio* coming in. The tug drew alongside and the Executive Committee, quarantine officer and customs officials and a number of representatives of the Press, boarded the steamer. No ceremony was observed except a general shaking of hands, and after the committee had announced the object of their visit and informed General Grant of the reception prepared for him, the conversation became general as the *City of Tokio* continued on her course. Soon after the Government steamer *McPherson* came alongside, and Major General McDowell, commanding the Division of the Pacific, accompanied by his staff, boarded the *Tokio* and rejoined his old comrade in arms.

The bay was covered with steamers freighted with sight-seers who wanted to be the first to welcome General Grant. The sight was very fine, some thirty yachts, besides ocean and river steamers, forming an escort to the incoming steamer. At least thirty thousand people were afloat on the bay and two hundred thousand on the street.

The *Tokio* passed up the water-front at a quarter to six P. M., followed by the escorting fleet. The proceedings at the Market Street Ferry Wharf upon the landing of General Grant and party were very interesting. Mayor Bryant, Governor Irwin and staff, the Board of Supervisors, Board of Education and the Executive Marine Committee of the citizens and a few other dignitaries, drove to the wharf. Upon the arrival of the *Tokio* at her anchor, the vast crowd was kept back, and the ferry-steamer *Oakland* was dispatched to the *Tokio* to bring the Grant party ashore. General Grant stepped upon the ferry-apron, on the arm of General John F. Miller, who introduced him to Mayor Bryant. The Mayor, after acknowledging the introduction, addressed General Grant with words of welcome, to which the General replied briefly.

General Grant was then escorted to the carriage in which he rode with the procession. Mrs. Grant occupied another carriage with Hon. Frank Pixley, and Jesse Grant and John Russell Young, of the party, occupied another carriage. Then the Grand Marshal gave out his orders, and the immense concourse of citizens who were ready to take part in the procession were summoned to their places. The line of march was from the Market Street wharf up Market Street to Montgomery, thence to Montgomery Avenue, over Kearney Street back to Market again, up the north side of Market Street, countermarching down Market Street, south side, passing in review at New Montgomery Street. On reaching Sansome Street the procession was dispersed.

The city was brilliantly illuminated and rockets filled the air. The colored balls from Roman candles seemed to rain down from heaven, and a shower of flowers descended from every housetop and balcony along the route upon the heads of the participants in the procession. The streets were made as bright as day by the electric light, and the decorations, fantastic and beautiful as they were under the glare of the sun, looked still more pleasing, rich and elegant under the soft and mellow light of the great lanterns which the greatest of modern inventors has given us. In the line of march a thousand banners flapped in the evening breeze.

The volunteer officers and soldiers and sailors of the War of the Rebellion, including those who had fought with and against the great commander, made a magnificent display and were cheered along the entire line of march. The band played the "Battle Cry of Freedom," and an occasional war-whoop, such as has not been heard since Lee surrendered, resounded through the streets of the city. The Second Brigade, N.G.C., was commanded by General McComb, who was one of the Argonauts of '49. Following them came a light cavalry escort from the beautiful and prosperous city of Oakland, across the bay. Then came the hero himself, at the side of whom sat the Mayor of San Francisco, the Hon. A. J. Bryant. As the General passed, the crowds along the streets fairly shook the buildings with their cheers. He bowed his head, a trifle grayer than it was when he left the country two years ago, and waved his hat left and right to the surging, crazy populace. Never for a moment from the time the procession left the landing until he was taken into the Palace Hotel did his interest in the festivities slacken, or his wonderful presence of mind desert him.

The carriage in which the General was seated was followed by the veterans of the Mexican War from all parts of the Pacific Slope, and then came the regular troops of the United States, the Governor of California and staff, Major-General McDowell and staff, Commodore Calhoun and staff, the Judges of the Supreme Court and other State Judicial officers, the officers of the City and County of San Francisco, United States Senators and Representatives in Congress from the Pacific States, Foreign Consuls, officers of the United States Marine Corps, United States officers of all kinds, etc., and about a mile of charitable and benevolent societies, including Irish, French, German, English, Scotch, Danish, Swedish, Spanish, and all other nationalities. There was not the slightest attempt in the way of banners or mottoes to make the demonstration a political one, or give it a political significance.

The scene within the immense court of the Palace Hotel on the night when General Grant arrived was of surpassing beauty. Electric lights and 500 gas jets lit up the vast interior with a brilliant glow; the dense throngs that packed the court and filled the spacious balconies and corridors surged to and fro in anxious expectancy of the coming guest whom the packed streets had detained. At ten o'clock the wide doors were thrown open and a barouche containing General Grant was drawn within the building. He immediately dismounted, and, crowding his way through the packed mass of human beings, was hurried to his room. As he alighted Madame Fabbre and a chorus of 500 voices opened from one of the balconies with an ode of welcome. The crowd rushed after General Grant when he dismounted, leaving the singers for a moment almost without an audience; but being stopped in their mad chase by a force of police, who blocked the way, they returned to the court, being reassured by the announcement that the General would appear on one of the balconies after he had time to take off his overcoat. As soon as the review was finished and the various divisions had disbanded, the soldiers and sailors, veterans of the late war, repaired to the Sand Lots with a field of battery where they fired a grand salute.

After a chorus was rendered, General Grant, in response to repeated calls, appeared on the balcony of the fourth floor, and, bowing to the shouting crowd, immediately retired. Still the enthusiastic populace thronged the court and refused to leave. Finally Mayor Bryant appeared, and announced that as soon as the General had finished his dinner he would show himself. In a few minutes General Grant appeared, amid deafening and long-continued shouts. Mayor Bryant called the crowd to order, and the General, mounting a chair which was passed over the heads of the surrounding crowd, was again greeted with a succession of cheers. When the noise subsided, he addressed them as follows:

"FELLOW-CITIZENS OF SAN FRANCISCO—After twenty-five years' absence, I am glad to meet you and assure you of my cordial thanks for the kind greeting you have given me. I shall stay in your city long enough to greet you more fully."

The General then withdrew amid prolonged and tremendous cheering, and the crowd, at length, reluctantly scattered.

Sunday was spent in quite a quiet manner, but few callers being received. On Monday evening the party witnessed a performance at the California Theatre, after which a serenade was given at the hotel by the band of the Second Brigade of the National Guard. On Tuesday the General held a reception in the City Hall, attending a ball in the evening, and on Wednesday evening he listened for the first time to a performance of "Pinafore," at Baldwin's Theatre. A public banquet was given him in Oakland on Thursday, when an effort was made to outdo San Francisco in the extent and cordiality of the hospitalities. At one place on the route of the procession were stationed 5,000 school-children, and their 800 singers from the high schools. After the banquet the party drove to Badger's Park, to attend the campfire of the Federal and Confederate soldiers and sailors of Alameda County. The tables were spread in the amphitheatre, and covered with tin plates, cups, knives and forks, and supplied with hard tack, pork and beans, coffee and tobacco. When these had been discussed, L. B. Edwards, chairman of the committee in charge, introduced General Grant to the surrounding throng, and as

Digitized by Google

soon as the prolonged cheers had subsided, General Grant addressed his comrades as follows:

"GENTLEMEN OF THE TWO ARMIES AND NATIONS: I am very proud of the welcome you have given me to-day. I am particularly happy to see the good will and cordiality existing between the soldiers of the two armies, and I have an abiding faith that this good feeling will always exist. Thus united, we have nothing to fear from any other nation in the world. I am satisfied, from my travels in foreign lands, that no country will wish to meet us as a united people. They will be perfectly willing to do us justice without an appeal to arms, and as that is all that Americans want, I am confident that our country has a long career of peace and prosperity before her."

Soon after the speech the General left the park, and took the cars at Brooklyn Station to return to San Francisco. Receptions, serenades, sight-seeing and other pleasurable events occupied the time of the party during the remainder of the week.

The General will not come East for some weeks, being determined to see as much of the Pacific Slope and the West as possible.

Peace in Zululand.

DISPATCHES from Sir Garnet Wolseley announce that he has signed terms of peace with all the Zulu chiefs, and effected a thorough understanding with them, which, in his opinion, will preserve the future peace of South Africa. One of the provisions of this treaty put an end to the Zulu military system, whereby the young warriors of the tribe were not permitted to marry until they had served in battle and distinguished themselves by bravery. The chiefs who have signed the treaty undertake to prohibit the importation of arms into their territories, and the importation of merchandise from the sea coast is also forbidden. The making of war and the succession to a chieftainship will be subject to the approval of the British Government.

When British subjects are accused of crimes, trial and sentence will depend on the Resident's approval. The alienation of land will be absolutely forbidden. In all respects these chiefs will be sovereigns, each in his own territory. A chief will not be compelled to admit missionaries, and the prohibition of the alienation of land will not be relaxed in favor of grants to missionaries. The British Residents will be instructed to advise the chiefs, but to exercise no authority over them.

If the chiefs disregard the terms of agreement, the Residents will report their conduct, but will have no power to give orders. Many of the chiefs receiving territories are representatives of ancient tribes who were subjugated by the Zulus, and they rejoice at the recovery of their independence.

How Parrots Learn to Talk.

THE comparative study of the facts of intercommunication among men and among animals necessitates the admission that animals possess language; and the mechanism and apparatus for articulate speech in those animals which possess it do not differ from those of man. A bird learns to speak by imitation, through the organs of hearing, and in a manner very similar to that in which children learn words and sentences, and the bird speaks on special occasions in consequence of some association or suggestion, "the usual prerogative for set speeches at all periods of human life." A new expression, after having been repeatedly uttered before the parrot, is practiced by it spontaneously, indefatigably working at the sentence by itself. At first it is only able to get out the first word or two: then more and more, until it has the power of uttering the whole. In just the same way a child will learn a French sentence. A sentence is soon lost by the parrot if not frequently uttered, and the last words are lost first; the first words—those most readily acquired—are lost last. Speech of the bird on any given occasion is due to suggestion—the presence of the person or object with which the words were first associated. Of this Dr. Wilkes, in a recent publication, gives several striking instances, as "half-past two," whenever the coachman comes for orders; "go to sleep," when approached after dark; "give me a bit," when dinner appears; and "cheese" when the cheese is put upon the table; a sound like water being poured out whenever a jug of water is brought in. Thus the bird associates words or sounds with objects, and, where the right names have been taught it, may be said to know their names; more, the bird invents names, making a particular sound, which had never been taught, whenever nuts were brought upon the table. The sight of a cat makes the parrot say "mew," as the sight of a train makes a child say "puff, puff." Dr. Wilkes concludes by remarking that the differences between animals and children are much slighter than are the explanations which, on the assumption of instinct in the one case and reason in the other, we put upon them.

The Languages of Africa.

A LECTURE, illustrated by a map and tabular statements, was delivered on Friday night, June 20th, at a meeting of the Philological Society, in the council room of University College, Edinburgh, by Mr. Robert Cust, on the "Languages of Africa." He remarked that our knowledge was imperfect, and that all classification was provisional. Following Dr. F. Müller, of Vienna, he recognized three distinct ethnical divisions, that of the woolly fleecy-haired, woolly tuft-haired, and lank curly-haired, and six linguistic divisions on the continent—1, Semitic; 2, Hamitic (both of which were obvious intrusions into North Africa from Asia); 3, Fulah-Nuba; 4, Negro and Negroid; 5, Bantu; 6, Hottentot Bushman. He proceeded to detail the chief languages of each family. Among the Semitic, some, like the old Punic and old Abyssinian, were dead; others, like the Arabic, Amharic and Tigrea, were living vernaculars. Among the Hamitic, old Egyptian and Coptic were dead, but Berber, Kabyle, Tuwareg, Galla, Somali and others were spoken by millions. The Fulah-Nuba languages were spoken by conquering races, some of whom had adopted Mohammedanism. They stretched from the Atlantic on the northern fringe of the negro races, across the continent to the basin of the middle Nile. The Fulahs had extended into the heart of Negroland and were found everywhere. The negro race extended across the continent south of the Sahara Desert and North of the equator, and reached from the Atlantic to the equatorial lakes. Their languages were numerous, totally distinct from each other, and of many we know little or nothing. The great Bantu race occupied the peninsula of Africa from the equator southward, leaving a corner for the last family. It was a great fact, he said, that the diverse languages of these numerous and powerful races, of whom the Zulu and Caffre are so well known, could be traced back to one common mother language which has perished. The Hottentots and Bushmen represent all that remains of the original earliest inhabitants of the continent. They have been pushed forward by the Bantus and nearly destroyed; their languages are totally distinct from each other.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Ex-Khedive of Egypt at Naples.

Our first view shows the hotel where Ismail Pasha occupies the whole suite of apartments on the first floor front, and his three sons, Hussein, Hassan, and Ibrahim, that of the second. The second is a view of the Villa Maraval, but more commonly called Rocabella, where the female members of the ex Khedive's family are now lodged, after having been kept floating seven weeks since their exodus from Egypt. The Villa Maraval is the property of a Scotchman, who never resides there. It is a most romantic spot among the very picturesque Summer residences of Posilipo. The permanent residence of Ismail Pasha and his numerous suite, however, will be the ex-Royal villa called the Favorita, at Resina (Herculaneum), situated on the road to Pompeii, with Mount Vesuvius in the rear, and the full view of the bay, in front even more extensive than they now enjoy, because from that slope of Vesuvius the Islands of Procida and Ischia are also in view. But this mansion, having been already taken from the list of royal residences, and handed over to the Demanio administration of the Commonwealth, will require at least two months before it will be arranged to suit the Oriental mode of living of these Egyptian guests, whose requirements far exceed the ideas of those who are unacquainted with the habits of Oriental life. Ismail Pasha will perhaps feel more settled in the spacious quarters of the Favorita; but his longing for Constantinople or Cairo will keep him as restless as he has been since his arrival at Naples.

Sir Rowland Hill's Tomb in Westminster Abbey.

The chapel of St. Paul, on the northeastern side of Westminster Abbey, where Sir Rowland Hill was buried on Thursday, September 4th, is rich both in interesting monuments and in architectural beauty, though the beauty is in parts somewhat marred. The lower part of the screen was cut away in the fifteenth century to make way for the tomb of that gallant soldier Sir Humphrey Bourchier, who bore his master's standard at the battle of Agincourt. Other tombs of famous personages are ranged round this truly historic chapel, beneath which no fewer than forty-seven distinguished persons lie buried. The Cottington tomb, with its romantic story, is near that of Sir H. Beaubier, and on the opposite side is the Pickering monument. Overhead hang the dusty banners of bygone Pickerings and Cottingtons. The middle of the chapel is occupied by the curiously-painted alabaster tomb of Sir Giles Daubeny and his wife, and by the colossal marble statue of James Watt by Chantrey. Hence the Chapel was all the more fitting resting-place for the earthly remains of Rowland Hill, who dealt with the postal service as Watt dealt with the steam engine. The preparation of the tomb was no light matter. It was found necessary to bow for three days at a solid mass of concrete before the receptacle was sufficiently large, and in the course of the work a stone coffin, broken and empty, but of great antiquity, was removed to the upper air.

A Kite-flying Festival in China.

On seeing kite-flying in China for the first time, one is struck with the number of devices, and the ingenuity and aeronautical knowledge displayed in their make. The Chinese seem to have studied the art of kite-making almost more seriously than any other subject, and certainly with more successful results. Bamboos are placed in the kites in such a manner as to make a sound resembling the deep swelling notes of the organ, and when a number of kites are in the air together chords are produced which have rather a pleasing effect, coming as they do from high up in the air. Our illustration represents a kite-flying festival termed Ching-Tsong, or Tan-Koon, which is celebrated on the 5th day of the 9th month, and which commemorates the intervention of angels to save a pious teacher named Too-woog-king, who lived about 900 years ago, and who was miraculously instructed to go with his wife and family to the top of a mountain in order to escape an impending calamity.

After Ulundi—Bearing Away the Wounded.

This sketch shows the kind of ambulance or litter in use for the removal of the injured men, whose wounds had been, of course, attended to by the medical officers within the square while the fighting was going on. It was found that most of the wounded were in the rear ranks, the shots, on account of the savages raising the sights of their rifles, coming over the heads of the men opposed to them, and hitting in the back the men on the further side of the square. This singular circumstance is supposed to be due to the erroneous theory of rifle-practice which the Zulus entertain. They know that the British raise the sights in order to fire at a long range. To travel so far they think the bullet must go faster, and therefore hits harder, than at short ranges, and they accordingly give the bullet all the impetus they can by raising the sight as far as it will go.

King Alfonso and his Future Queen.

The Archduchess Christina is romantic and very willful, and wanted to be courted like the heroine of an old-fashioned novel. She proposed that her first interview with Alfonso should take place in the Casino, and be ostensibly a chance meeting. It did not dismade her when she was informed that no subscriber could be excluded for her convenience, and that many of the ladies subscribing were of *le monde comme il n'en faut pas*. Alfonso put an end to the difficulty she had raised by hastening, the moment he had time to dress after his journey, to the Villa Hildegarde to pay a visit. He represented himself in too great haste to see the object of his affections not to, in this instance, disregard her will. Upon entering the room he bent low over her hand and respectfully kissed it. He then proposed a turn in the garden, to which the Archduchess consented, while her stepmother and all the Austrian and Spanish countesses remained in the drawing-room. What passed in the garden, *Sabe Dios*, but when the happy pair re-entered the villa, Christina, who now wore an engaged ring, led the King to her stepmother, saying in French: "I have the honor, madame, to present to you my future husband." Alfonso gallantly kissed the hand of the Archduchess Charles, who he hoped would accept from him the duty of a son. He then took his leave. Next day the lovers went out, attended, of course, but not accompanied by the elder Archduchess, on sail on the calm bay. In the afternoon they clambered up the Telegraph Hill and enjoyed the fine prospect it commands. The young couple had a joyous, breezy row across the "Great Basin" at Arcachon, and, despite the presence of the grave elders, deported themselves as in the fashion of youthful lovers—Christina leaning over the side of the boat and plunging her hand in the caressing foam; Alfonso following suit and clasping that hand within his own, even at the expense of the starch in his royal shirt-cuffs. As the Archduchesses were about to take their departure from Arcachon, the Spanish colonists, and they are not a few, assembled in force at the depot and saluted the train as it slowed from the station with most enthusiastic yet respectful cheers. Our illustrations represent the meeting of the lovers, the trip across the Great Basin, and the departure of the Archduchesses.

CURIOSITIES OF THE DAY.

THE Methodist Conference of Southern Illinois refused to admit a woman as a member, although she was pastor of a church.

A RARE golden wedding has just been celebrated at Watertown, Conn., the couple being Hiram Atwood and his fourth wife.

HER Royal Highness the Princess of Wales plays nine-pins, her own liveried pages attending the alleys and setting up the pins.

STATISTICS show that all the church property in the United States is worth $254,500,000, while every year $700,000,000 is spent for drinks.

A SAN FRANCISCO man was caught altering the figures on his mother's tombstone, his object being to make the date suit his purpose in a lawsuit.

MEGNIEN, an eminent French agriculturist, proposes to feed cattle, sheep, and pigs on provender containing savory herbs, to give favor to the flesh.

IN consequence of the non-delivery of a telegraphic message, the first information that a Solon (Ill.) family received of the death of a daughter was the delivery of her coffined remains by an express company.

THE Moquis Indians of Arizona, numbering 1,700, live in seven villages on the tops of three cliffs or headlands that rise more than 600 feet above the plains. Why they choose these unhandy places is a mystery.

LILLIE KNIGHT, the Hartford little girl who fell forty-four feet from a window, in July, and was supposed to be fatally hurt, her legs and right arm being badly broken, has recovered, and she will have the complete use of all her limbs.

A RECENT Paris suicide left the following letter: "I shot myself because I am suffering from an incurable disease. In spite of that I am as strong as a horse and can not die. Let me be very carefully dissected. I shall afford the doctors a very curious study."

THE steamer *City of Edinburgh*, which conveyed the late Emperor of the French in 1840 when he made the famous landing at Boulogne, was hired from Donald Currie, of Glasgow, and was a sister ship of the *Edinburgh Castle*, which conveyed the Prince Imperial to Zululand.

IN Central Africa lives a king who, according to Commander Cameron, demands divine praise for himself, and proclaims the degrees of the deity or deities which reach him from the mouth of an idol which he consults, and which nobody but himself and a single priestess is ever allowed to see.

AN American millionaire now sojourning in Rome has asked permission of the authorities to have an exact duplicate of St. Peter's statue made. A molder is already engaged to take its cast, and a bronze founder is afterwards to execute it. It will cost several hundred thousand dollars before the statue finally reaches America.

JOE PEVEY took a rifle to his wedding, at Mark's Gap, Texas. The sexton tried to persuade him to leave it at the door on entering the church, but he persisted in carrying it across his shoulder as he walked with the bride up the aisle to the altar rail. His explanation was that a rival suitor had threatened to kill him on this occasion, and he meant to be prepared for defense.

THE law about municipal councils in France to-day is as follows: Every commune elects its council, to hold office for six years. The councils elect the mayor for six years, except in towns of more than 4,000 inhabitants. The City of Paris has no mayor. It is divided into twenty wards, each having a mayor and two adjuncts appointed by the Government. Its municipal council takes the place of mayor.

A SCOTCH girl was recently sent to prison for twenty days for cheating three Glasgow lawyers—an unprecedented feat. She was a domestic servant, twenty-three years of age, and representing to each in turn that she would inherit a considerable fortune, giving each instructions how to dispose of her prospective "property," she induced each of the astute gentlemen to advance her small sums for present necessities.

WELLESLEY COLLEGE, at Wellesley, Mass., has secured a $106,000 slice from the Stone estate, which will be devoted to the erection of "Stone Hall" on the college grounds, for the accommodation of school-teachers who wish for a time to pursue special advanced studies at the college. The gift is made with the explicit condition that if the new hall complete costs a penny over $100,000 the amount shall revert to the estate.

A NEW British war steamer, called the *Mercury*, built of steel, has just been completed and successfully tried at Portsmouth, England. The vessel is 350 feet long, 46 feet beam, 16 feet 3 inches hold. Displacement, 3,750 tons. On her late trial trip the engines developed 7,995 horse-power, and the speed attained was within a trifle of twenty-two miles an hour. These are remarkable results for a vessel of the dimensions given.

IN walking through the grounds of the Jardin des Plantes the visitor may remark an old tree banded with iron, the trunk of which resembles a block of plaster or cement. An inscription at the root of the branches announces that the tree is the *Acacia Virginensis spinosa* of North America. It was brought to France in 1601, by Jean Robin, and was planted in the place it now occupies by Vespasian Robin, gardener to Louis XIII., in 1636.

A NEW survey of the Catskills, by Professor Guyot, reveals mountains that were not known to exist. A large part of the region, especially the southwestern, is an untracked forest, and in several cases the only chance for making triangulation was by climbing to the tops of high trees. He found higher points than were before recorded. His table of altitudes contains three peaks over 4,000 feet, thirteen over 3,800 feet, and thirty-six over 3,500 feet. The highest point is one of the previously unknown Slide Mountains, in the southern Catskills, 4,205 feet above tide.

SHORTLY after the death of George W. Adams, of Dresden, Ohio, one of the wealthiest and most prominent citizens of that section, a few days ago, it was discovered that some valuable papers were missing—papers representing property and money of the value of $15,000. They could be found nowhere, and after a long and diligent search, it occurred to some members of the family that Mr. Adams kept these papers in his new broadcloth coat, and that he had been buried in it. They at once agreed to reopen his grave, and, sure enough, there in his side pocket were the valued papers.

MRS CLARA B. HELMS, a teacher in a public school in Deadwood, Dakota Territory, died on September 6th, aged thirty-four years. A local paper tells the following story in connection with her death: "A number of the residents in the neighborhood of the schoolhouse were startled last night about midnight by hearing the schoolhouse bell break the stillness of the air by a loud and distinct toll, many at first thinking it was an alarm of fire. What caused the bell to strike will probably for ever remain a mystery, as the schoolhouse windows were securely fastened and the doors locked the evening previous. At the instant when the bell struck, some ladies were convening at the bedside of Mrs. Clara B. Helms, in the Overland Hotel, a former teacher in the school, who, in her delirium, said, 'Ring the schoolbell,' when all present were horrified to distinctly hear its sound. The fact of Mrs. Helms dying a few hours later throws a cloud of mystery around the affair, which will be the subject of discussion for some days to come."

AT HOME AND ABROAD.

—ON all the railways of Great Britain and Ireland during the six months ending June 30th, 1879, not a passenger was killed, although 227 were injured.

—DURING the past three years 132 American railroads, covering nearly 17,000 miles, and representing an invested capital of $128,483,000, have been sold under foreclosure.

—THERE are in the State of Louisiana more than 4,000 miles of streams, creeks and bayous, navigable by freight craft and adapted to bring agricultural products to the markets on the Mississippi River.

—THE telegraph is exclusively in the hands of Government in Italy. An innovation is telegraph cards for ten words, to be dropped in office-boxes or sent gratuitously through the post to the desired telegraph-office.

—THE question of dividing Dakota into two or three territories is being agitated with a degree of vim and persistency that promises success. Several plans of division are suggested. Dakota at present contains an area as large as three times that of the State of Iowa, and no region of country is filling up or developing more rapidly.

—ON closing the books for women's registration in Massachusetts, it was found that 17 had put down their names in Springfield, about 50 at Westfield, 25 at Northampton, 4 at Holyoke, 11 at Chicopee, 72 at Worcester, 115 at Lynn, 211 at Marlboro, and 1,040 at Boston. The first vote of women in the State will amount to about 2,000.

—FIRST-CLASS canal works have been projected in France, which if fully carried out will involve an outlay of $142,000,000. When these works are all executed the first-class canals of France will have an aggregate development of about 11,800 miles. The extent of the second-class canals of France is to be increased to 6,800 miles, at an estimated cost of $42,000,000.

—A RETURN of the national debt of Great Britain for each year from 1857-8 to 1878-9, inclusive, has been published as a Parliamentary paper. The total national debt, funded (including stock held on account of unclaimed dividends), unfunded, and (capital value of) terminable annuities, on April 1st of the former year was £839,519,329, and on the same date of the latter year £777,781,596.

—AS SHOWING how much machinery sometimes cheapens production, it is said that Mr. Perry, who made the first steel pen on a commercial scale, paid his employees five shillings for making each pen, and even when the trade had become regular he gave for some years as much as thirty-six shillings a gross to his workmen. Now, pens can be made and sold at a profit for three cents per gross.

—THE condition of the French savings banks illustrates at once the thrift of the people and public benefit of having these institutions under Government control. In 1873 the total deposits was 573,000,000 francs; in 1875, 660,000,000 francs; in 1876, 749,000,000 francs; in 1877, 863,000,000 francs. In 1878 the total had swollen to 1,010,000,000 francs. In four years the increase amounted to 473,000,000 francs.

—THE Liverpool *Post* says that the enormous richness of the old gold-fields on the Guinea coast has not been exaggerated in the reports received of late. Sir John Glover's statement, that he had traveled over districts where one might dig up gold like potatoes, is all but literally realized in recent discoveries, which give $600 per ton of quartz at a depth of fifty feet, and $15 on the surface. Their extent is practically unlimited.

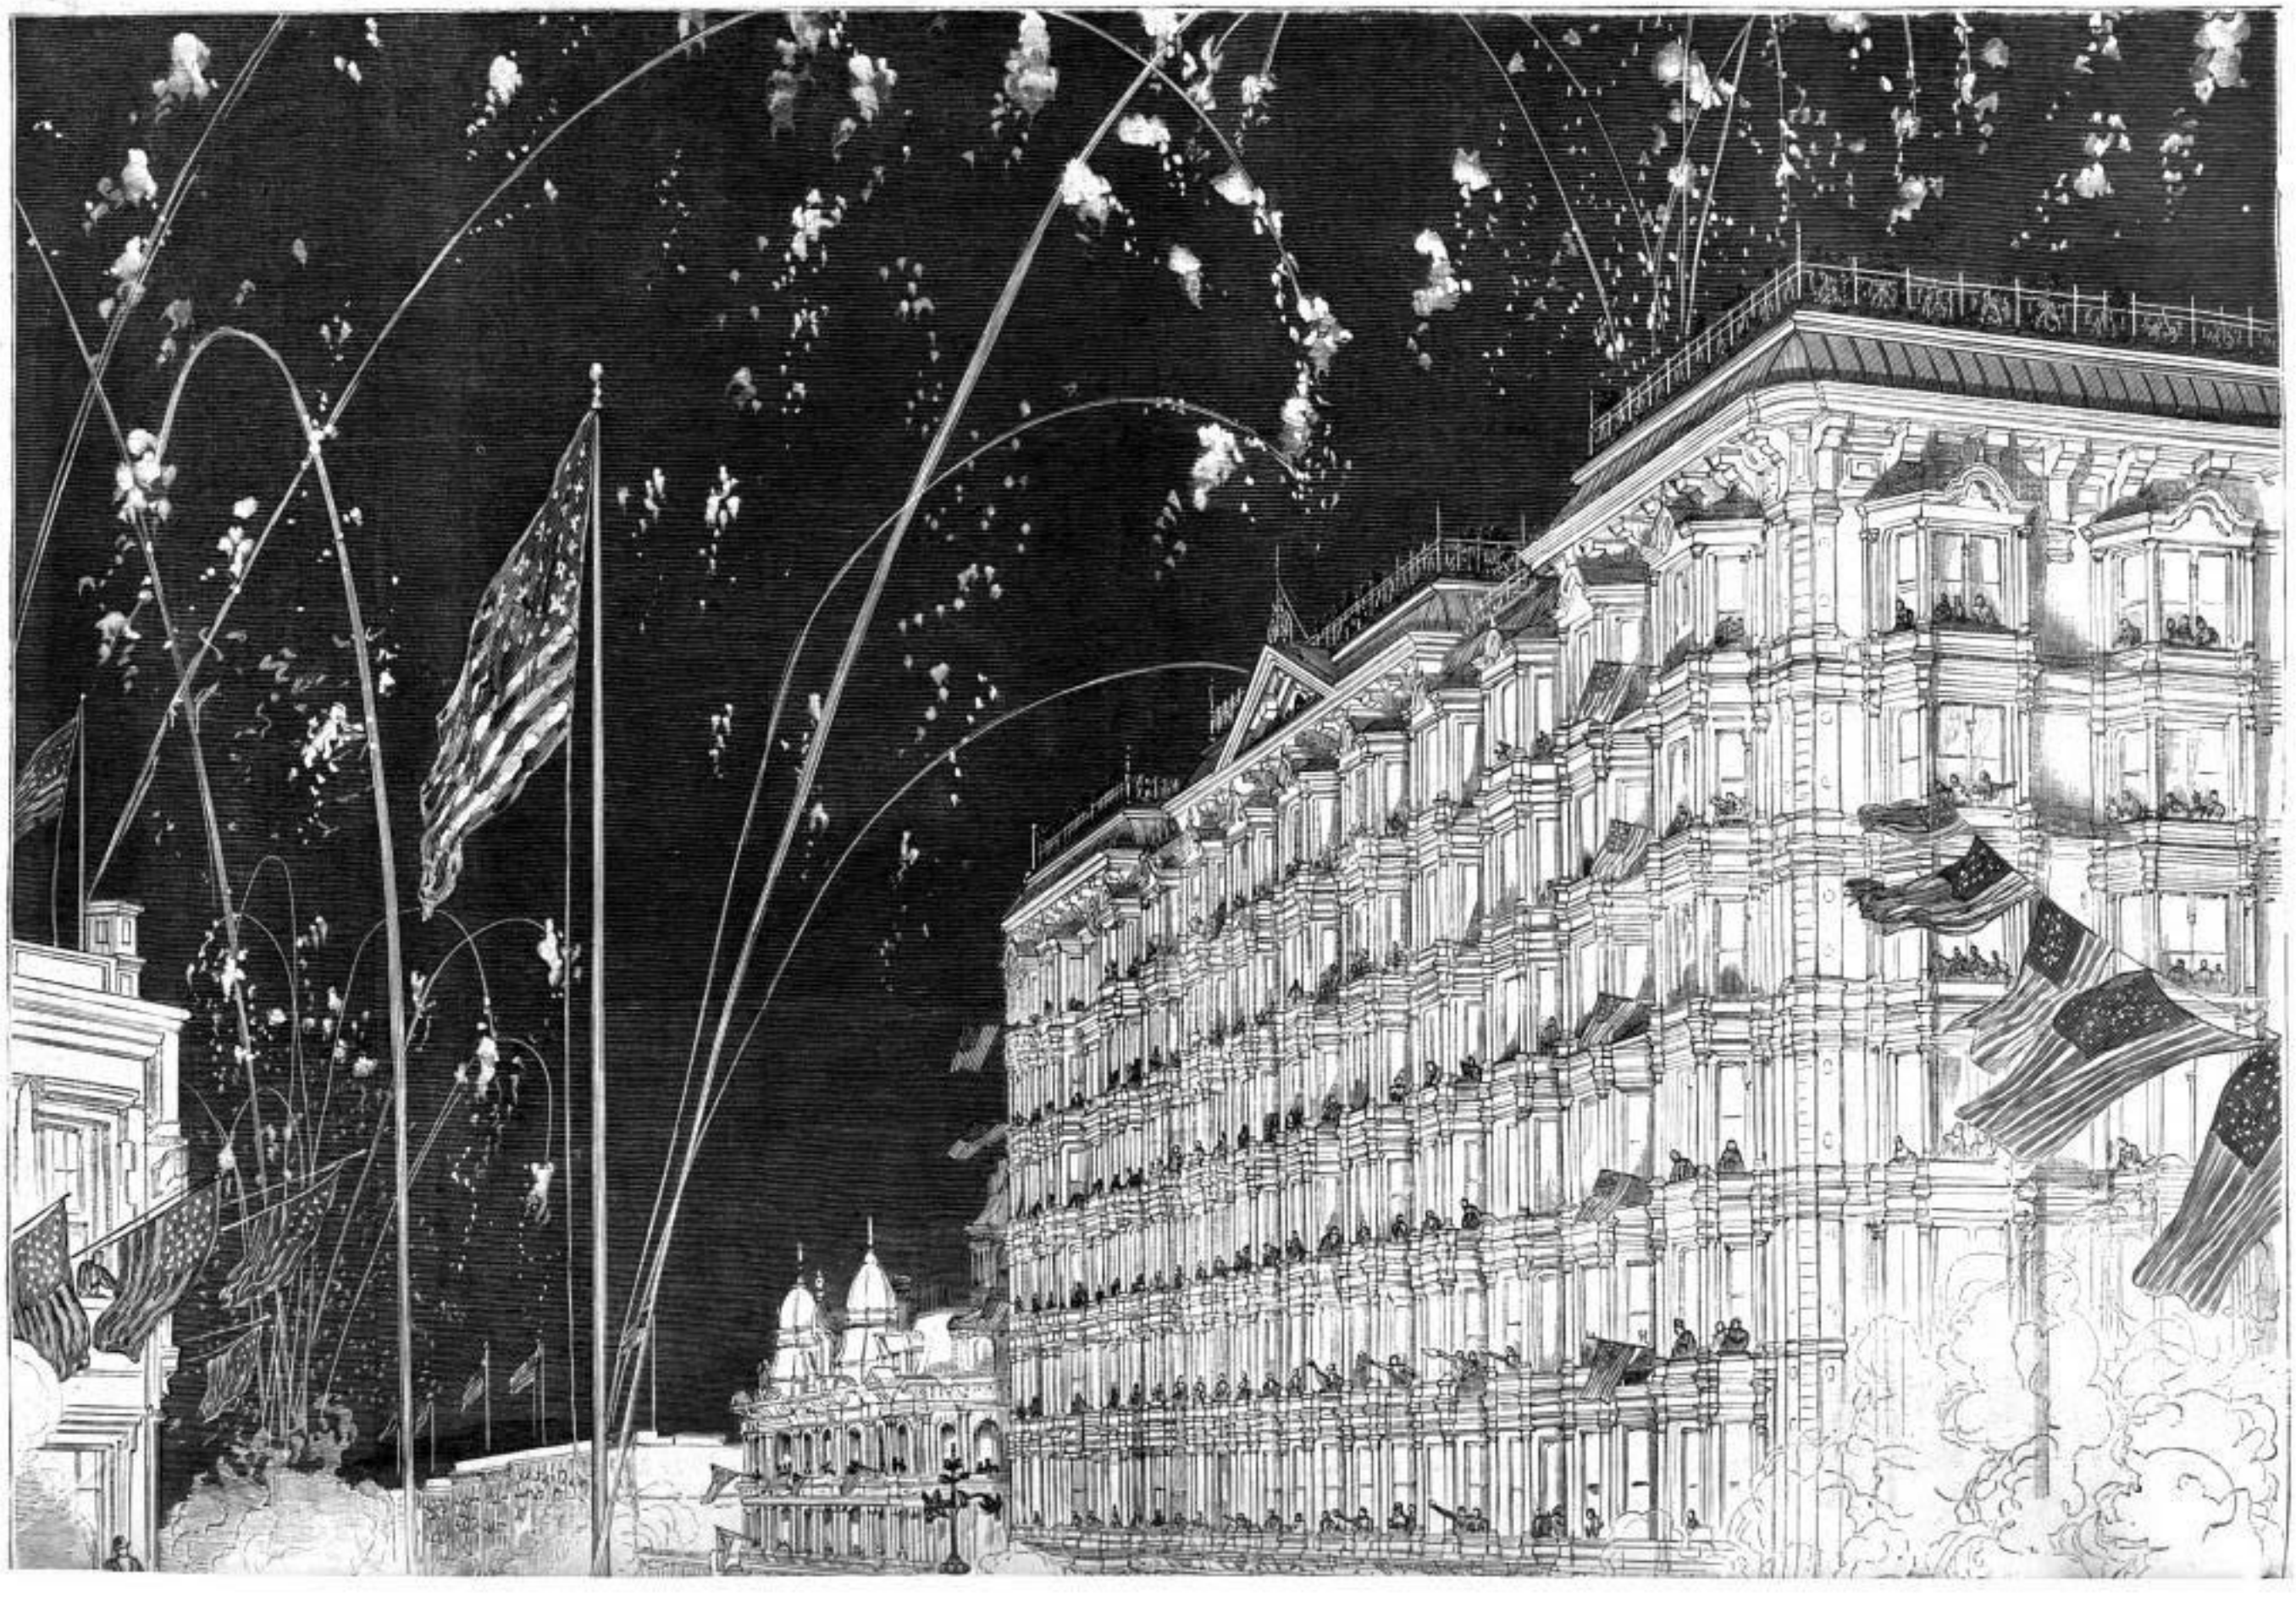
—MANY of the students of the Chinese mission at Hartford are entering the colleges and polytechnic schools of New England and the Middle States this Autumn. These Chinese students, while in the preparatory schools, have shown themselves to be remarkably intelligent, industrious and persistent. Five of them have gone into the Yale Academic Freshman Class; three of them into the Sheffield Scientific School; two have entered Columbia; one has gone to Amherst; one to the Boston School of Technology, and one to Troy Polytechnic School.

—CENSUS-DAY will be June 1st, 1880. On that date about twenty thousand enumerators will commence their labors—those in the cities being required to complete their work in two weeks, while others will be allowed the whole month of June. Persons alive on the 1st of June, but dying before the enumerator reaches them, will be counted in the census; births subsequent to the 1st of June will not be counted. Special agents will be employed to collect statistics relating to education, mining, manufacturing, agricultural and various other departments of trade and industry.

—TWO or three manufacturers owning large silk and lace mills intend to bring to this country about 200 Swiss weavers, skilled workmen in fine lace and delicate fabrics, who do the work in their own houses. It is the intention to select cheap but good land at some distance from the railroad, but near this city, where the weavers cannot be interfered with, and to divide it into lots large enough for a house and garden. The women do the house and outdoor work, as the men, who weave, are obliged to keep their hands in suitable condition for the delicate work. The agents have been offered a plot of land in Monmouth County, N. J.

—THE Royal family of Spain have spent the Summer in the Guadarrama Mountains, 3,800 feet above the level of the sea. It was bought from monks by Philip V., the Bourbon Prince who undertook to perpetuate the Hapsburg dynasty in Spain as heir of his grandmother, Maria Theresa. Philip V. built here a palace, and laid out gardens in imitation of Versailles, employing his time from 1719 to 1746 with such disregard of the cost that the gardens alone caused an outlay of $45,000,000. In return for this expense the King had, as he was heard to say, the satisfaction of a habitation higher in air than any other sovereign in Europe.

—ONTARIO is making rapid strides in population and wealth. Tens of thousands of settlers are pouring into the State every year. The production of wheat in the Upper Columbia is double this year what it was last, and it is expected to double every three or four years until it will exceed California. The city of Portland has increased in nine years from 9,000 to 20,000 inhabitants. Last year more than a thousand new houses were built; this year an equal number—many of them costly stores and residences. Its streets are thronged with drays, the wharves crowded with freight. Two railroads terminate there, and one more, at least, is projected.



—THE six days' bicycle-race which took place at Agricultural Hall, Islington, England, during the first week of September, resulted in a victory for the present champion long-distance rider, Mr. Waller, of Newcastle-upon-Tyne, who obtained the lead at midday of Monday and held it until the close of the contest, winning the belt, valued at £100, and £125 in money. He totally eclipsed all his previous brilliant performances, being credited with the remarkable record of 1,404 miles 6 laps. Terront, a plucky French rider, secured second place with a score of 1,380 miles 5 laps; Higham, third, 1,145 miles 3 laps; Cann, fourth, 1,100 miles 1 lap; several other participants making smaller scores. The attendance was large and enthusiastic, especially on the last day, when 10,000 persons were present.

THE GIFTS OF THE POOREST.

A SINGLE word is a little thing,
But a soul may be dying before our eyes
For lack of the comfort a word may bring,
With its welcome help and its sweet surprise.

A kindly look costs nothing at all,
But a heart may be starving for just one glance,
That shall show by the eyelid's tender fall
The help of a pitying countenance.

It is easy enough to lend the ear
To catch some tale of sore distress;
For men may be fainting beside us here,
For longing to share their weariness.

These gifts nor silver nor gold may buy,
Nor the wealth of the richest of men bestow;
But the comfort of word, or ear, or eye,
The poorest may offer wherever he go.

BLUE EYES AND GOLDEN HAIR.

BY ANNIE THOMAS.

CHAPTER VI.

"I DON'T think we'll talk about it any more to-night, Aunt Bertram."

"My dear child, not for the world will I say a word, if you're tired; but we haven't talked about it at all yet. I only want to tell you how rejoiced I am, and how *satisfied* I am, Daisy."

"Well, I am neither rejoiced nor satisfied," Daisy says, turning away impatiently from her aunt's caresses. They have come back from Lady Beauton's ball, and Miss Bertram has just heard the great news: her niece, the "lovely Daisy Eldon," is engaged to the catch of the season. Miss Bertram is so supremely delighted with herself for the family feeling she has displayed in having Daisy up to stay with her, that she resolves to bear and forbear unto the end, though Daisy's lukewarmness on the subject of her own success is "very trying to her aunt."

"I felt sure that it was settled the other day, Daisy; but you were in a teasing mood, and you wouldn't confide in me."

"No," Daisy says, flaming out in the distress which she herself can only partially understand. "I was in a mean mood, Aunt Bertram, and I dared not tell you how I had disappointed you; I refused Sir Bolingbroke that day because I didn't know what it was to care for any one; that's two days ago, and to-night I've accepted Sir Bolingbroke (what a mouthful) because I do know what it is to care for some one."

"You have learned to appreciate Sir Bolingbroke?" her aunt says, disregarding Daisy's remark about "the mouthful."

"I've done nothing of the kind. I've only learnt to appreciate myself too highly to cry for a moon that will not shine for me alone," Daisy says, striving to speak cheerfully, and failing signally in her attempt; and Miss Bertram, with a timely remembrance of that "singularly handsome young man" who hails from Burnsleigh, decides upon not pursuing the subject of Daisy's delusions any further this night.

The following day the report of Sir Bolingbroke Bray's approaching marriage with lovely Daisy Eldon is bruited about at all the clubs, and while it is remarked that "it's a jolly good thing for the girl," people still hope that he "won't be such a brute to her as he was to his first wife."

Simultaneously with this another marriage engagement is promulgated. The *Morning Post* and the *Court Circular* announce in their respective columns that Lord St. Briac, the eldest son of the Marquis of Beauton, will shortly lead to the hymeneal altar the beautiful and accomplished daughter and sole heiress of Robert Millard, Esq.

Daisy reads this announcement on the evening of the day after Lady Beauton's ball—reads it hopelessly, helplessly, feeling as if all her life were going to be laid waste by a misunderstanding. She has been tricked, deceived, inveigled into promising herself to Sir Bolingbroke Bray; and now that her promise has been made public, and there is no going back for her, she finds that the heiress is to be Lady St. Briac, and that Harry Poynter is still free. Fettered, furious with the man who has misled her and whom she is going to marry, the poor child feels more miserable and desolate in these first hours of what the world regards as her triumph than she has ever felt before in her life. There can be no doubt about Miss Millard's engagement to St. Briac, for they meet Lady Beauton at an "At Home" in the afternoon, and she verbally indorses the statement of the *Morning Post*. Still those words of the heiress's that had sealed Daisy's doom ring in Daisy's ears, puzzling and perplexing her cruelly. To what, to whom, could they have borne reference?

"You must come to-morrow morning. I will prepare mamma for the news, and she will plead the cause we have at heart with my father; he cannot stand out against us three."

By all the laws of common sense and reason Daisy has been justified in supposing that these words, spoken by Julia Millard to Harry Poynter, were the words of a girl discussing their love affairs with her lover. "What other cause could her mother plead with her father that could possibly concern Harry? I must find out, though knowing the truth won't help me now; still I must find out," she says to herself. "The first time I see him I'll tell him what I overheard; and if he suspects the truth about me, I can't help it. I must solve the mystery."

She shuts her eyes to the fact that there will be danger in the course she is bent upon pursuing. She, engaged as she is to Sir Bolingbroke, will put herself very much at the mercy of this other man by betraying to him the deep desperate interest she has in any tender possibility concerning him. "I must find out; it's too dreadful not to know something about the hidden rock on which I've been wrecked. I'll ask him right out what that girl meant, and tell him what I thought she meant; and if he puts two and two together, and guesses that what I thought drove me nearly mad, I can't help it."

"I can't help it." This is the phrase which is constantly on her lips now during these desperate exciting first days of her engagement. She cannot help herself, and she cannot help thinking more and more wildly and warmly of Harry, whom she has lost, she feels sure, merely through a misconception. The restless craving for fuller information on the subject nearly wears her out, and to the distress of her aunt and her future husband she flags visibly, and shows but a weary face to the world which is expecting to see her elated at her good fortune. She fancies that if she could see Harry and "set herself right in his eyes," that she would grow calmer and more at peace with the prospect that is before her. Her eyes strain themselves to see him in the Row, at the opera, and in every other place in which there is a possibility of his presence. "If I could only see him, if I could only tell him!" This is the burden of her cry; and it galls Sir Bolingbroke to the quick to perceive that the *fiancée* he has raised, as he considers, from the ranks, is oblivious of him before his own set. He longs to ask sometimes, when he sees her eyes roving anxiously round a room in search of some one who is not there, "What the devil are you mooning about?" but he restrains himself; he will wait till the nuptial knot is tied; for Sir Bolingbroke Bray is far too gentlemanly a man even to swear at a lady who is not his wife. But he makes up his mind that by-and-by he will twist the truth out of Daisy, and if it is not altogether flattering to himself he will then punish her for having told it.

Unquestionably Daisy's manner is not flattering to the man to whom she has surrendered herself. If he cared one jot about her heart it would be more than unflattering; it would, indeed, be exquisitely painful to him. As it is, he only cares about her beauty, and that intensifies itself under the influence of the numerous conflicting emotions which paint themselves in never-ending variety of expression on her face.

"She may hark back to some old feeling, and pine in silence for some village bumpkin of a lover as much as she pleases while she continues to look as she does now—the loveliest creature into whom the breath of life has ever been breathed," he tells himself complacently enough as he watches her attracting universal attention and admiration, and "keeping her head" the while in a way that does credit to her breeding, as she has had no training to prepare her for it.

At length, after a few days, the tension relaxes, and that air of being perpetually on the "look out" departs from Daisy's manner. She has had a letter from her sister Ethel, and this passage occurs in it:

"Mr. Poynter has come home at last. Both Mr. Lincoln and papa are very much vexed with him because he has insisted on inaugurating himself so quietly. How magnificent he is! I wonder you didn't lose your heart to him, for he tells us he met you accidentally in town; but, I suppose, Sir Bolingbroke is much more magnificent, and you'll be a 'lady' into the bargain. What a darling Aunt Bertram is! Thanks to her, we shall turn out in a most wonderful way at your wedding. Papa is saying that he wishes Aunt Bertram would pay Mr. Poynter—such an old friend as he is—the compliment of asking him to the marriage-feast. He would like the attention, and it might make it pleasanter for the lot of us whose lines are cast down here."

"Is your letter from home?" Miss Bertram asks, suavely.

She has been watching her niece's changing face while the latter has been taking in the full meaning of the matter about which her young sister has gossiped. He has gone home without seeing her, without wishing her "good-by" or "happiness," and he has gone home in a state of dejection. There is balm in Gilead still.

"Yes; from Ethel," Daisy says, in answer to her aunt's question. "Dear Ethel! I feel as if I had never made half enough of her before, and now I'm going to leave her."

"My dear, you can do a great deal more good for her by 'leaving' her, as you call it, than by staying with her," Miss Bertram says, prosaically and sensibly. "When you're married, you can introduce your young sisters well; and if they have half your beauty, they'll succeed under such auspices as yours."

And then Miss Bertram goes on to speak of the joy it will be to her to receive her dear sister and her dear sister's family on such a glorious occasion as this of Daisy's marriage.

"You'll think me very ungrateful," Daisy says, humbly; "but, after all, I've been thinking I should like to go to be married at Burnsleigh."

"Impossible!" Miss Bertram says, decisively. "You may have Ethel up here at once, if you like; but the idea of your being married at Burnsleigh is simply preposterous. Sir Bolingbroke must not see the barrenness of the land before it is his interest to cultivate it a little."

"Then, at any rate, let me go down for a week before," Daisy pleads. "I must see them all again while I'm their own Daisy—all their own Daisy—still. Just think, Aunt Bertram, how mamma must long to have me 'tell her all about it,' now that I can tell it; after I'm married I shall be different, and not able to speak as I should now."

Her heart is so set upon her scheme that her aunt is compelled to entertain it. Daisy reverts again and again to the topic.

"Let me go to them for a few days while I am all their own. When they come up to the wedding Sir Bolingbroke's claims will interfere with theirs, and they may fancy that I am estranged from them by my good fortune. Dear Aunt Bertram, let me go! I have been so much to my mother, let me go and assure her that I want to be more than ever to her; let me go and make her heart glad, poor, patient darling, by telling her of what I will be able to do for Ethel and the others."

She pleads, she persists, she carries the day eventually, so far as this, that Miss Bertram accords her permission for the brief visit to Burnsleigh to be made, provided "Sir Bolingbroke assents."

"I shall not care for his assent or dissent," Daisy says. "Till I'm his wife he has no power, and I shouldn't think he is mean enough to have the inclination to control me; and after I am his wife, even he will scarcely use his authority over me to divide me from my own father and mother. It will do me good to go home for a few days, Aunt Bertram. I shall get quieter; I shall realize better what I am going to do; I shall set my soul at rest, in fact."

So it is settled, without Sir Bolingbroke's knowledge, that Daisy is to go back to the family nest for a few days, and none suspects the poor little strategist of being actuated by other than the sweetest and purest family feeling in making this move.

On the whole, Sir Bolingbroke is not altogether ill-pleased at the plan. In three weeks Daisy will be his wife, and he will be in a position to control, direct and mold her precisely as he pleases. But just now, in the meantime, before this absolute authority is vested in his hands, Daisy is rather difficult to deal with. He does not object to her being *distraite* when he is with her alone; but it annoys him to see her so in society, when other people are keenly observant of her. He knows that it is more than hinted that the cause of her acceptance of himself was distress at the defection of another; and as he does not know who that other is, he has the feeling that he may be taken unawares at any moment should his rival reappear on the scene. For a brief time he entertains the fallacious notion of its being Lord St. Briac who has preceded him in Daisy's affections. But he is cast adrift on a sea of doubt again by Daisy's manner of mentioning St. Briac and Miss Millard.

"That ought to be a happy marriage," the girl says, sagely; "for she's very sensible, and he is a dear, good fellow, generous and gentle, and beautifully fond of his mother."

"Yes; St. Briac's all right enough," Sir Bolingbroke admits. "He was rather hard hit by you, wasn't he? And you were more than rather hard hit by him, they said."

"'They' said right for once," Daisy replies, calmly. "I liked him so much that I wonder I didn't like him more, only——"

"'Only' what, Daisy? Will you tell me that you would have liked him better if you hadn't known me?" Sir Bolingbroke whispers, making an indifferent effort to play the *exigeant* lover's part.

"No; I won't tell you anything of the sort," Daisy says, sturdily, impelled by she scarcely knows what motive to risk the position she has gained. Sir Bolingbroke's vanity is, she has discovered, a great and greedy beast, which she has firmly resolved never to feed. Nevertheless, she has pledged herself to live the remainder of her life with it. It seems to her, therefore, that the better policy for her to pursue is one that will make this same greedy beast understand from the first that it must not look for food and sustenance from her. "I won't tell you that, for it wouldn't be true," she says so softly that he cannot be annoyed with her.

"It would be pleasing and polite, and one wants pleasantness and politeness in society rather than truth, Daisy," he laughs.

"Truth is the best offering I can make you; don't try to teach me to deceive you," she says, frankly; and then she remembers what motive it is that is impelling her principally to pay this visit to Burnsleigh, and her face burns with a painful blush.

"It would take a cleverer woman than you to deceive me," he answers, carelessly. "I'd advise you never to try to throw dust in my eyes, Daisy; because you wouldn't succeed, and I should despise you for the failure more than I should for the attempt. What has made you take this freak into your head about going down to Burnsleigh?"

He asked the question with such abrupt suddenness that she feels as if she stands convicted and condemned before him directly. For the first time she fully recognizes the fact that, whatever he is or whatever he may have been, her allegiance is entirely due to him, for she has pledged her faith to him, and there has been no undue influence brought to bear upon her in order to induce her to do so. To her, at least, he has behaved straightforwardly, honorably and well; and the fact of her not loving him does in no wise exonerate her from the onus that is on her of behaving straightforwardly, honorably and well to him in return. The bondage is hateful to her; but she has gone into it of her own free will, and it behooves her to bear the burden her own rash haste has laid upon her as bravely and honorably as she can.

"I thought I would like to see them all once more before I married, while they could feel that I was quite their own still," she replies, in a choking voice.

"Well, I have nothing to say against it," he says, coolly; "only don't invite the whole parish up to stay with you next season. The friends of your youth are all very well in their proper places, but I have no appreciation for bucolic *badinage* and *bonhomie*; therefore, if I were you, I should advise the friends of my youth to keep clear of me when they come up to the Cattle Show next year."

She blushes now with indignation.

"You're surely not speaking of my family in that way, Sir Bolingbroke? If you are, I think I'll give myself the advice you suggest I should give to them, and 'keep clear of you,' not only next season, but altogether."

"Don't be huffy, dear little girl," he laughs. "My remarks didn't apply to your family at all. I was thinking of that untutored young savage who found himself in civilized society at Lady Beauton's, I believe, for the first time in his life, and who there distinguished himself by trying to compromise Miss Millard by his ferocious attentions."

"Oh, you are unjust, Bolingbroke!" Daisy cries, indignantly. "Harry Poynter is as true and courteous a gentleman as any one of you; and as for having striven to 'compromise' Miss Millard by his attentions, I can answer for it that she received them as if she liked them very much indeed."

"He either did know, or he ought to have known, that Miss Millard was just engaged to St. Briac, and that, therefore, it was not a happy moment for him to select to lay his scalp at her feet," Sir Bolingbroke laughs.

It is on the tip of Daisy's tongue to say that St. Briac forgot it, too, as a matter of fact. But even for the sake of palliating Harry's conduct she will not be untrue to her instincts and to the loyal silence she has resolved to observe about St. Briac. So she checks this observation, and says, instead:

"He shall not be brought in contact with you by means of me any more, I promise you that; and you, in return, promise that you won't hurt my feelings by speaking disparagingly of him to me; he's an old friend and a dear friend of mine, Bolingbroke, and—he—gave—me—my Tartar."

Poor Daisy is so affected by the thoughts of the renunciation she has volunteered to make, that a ball rises in her throat, and her utterance is choked by sobs. She is glad that Tartar is the "motive" of the concluding sentence.

"Has anything happened to the dog?" Sir Bolingbroke asks.

He is not altogether unkind; he is only careless and worldly, and a little too much absorbed in himself to have an eye for the effect the lights and shades of his conduct may have on any one else. But he is a true Englishman and sportsman; and though he can crush all the joy of life out of a woman's heart by his cruelty, he will not be callous to her suffering about a dog.

"No; Tartar is alive and well, and just the same as ever, which is more than can be said of Tartar's mistress. I have changed my mind about going to Burnsleigh. After all, I shouldn't be all their own Daisy; my head is too full of other things; and it would be harder for them to see me there as I am now than not to see me at all until there *ought* to be a change in me. They'll be up in a week or two; I'll not go down."

She speaks very decidedly and looks at him inquiringly, expecting him to express pleasure at her change of intention. He has none to express; for Sir Bolingbroke Bray finds the part of lover a heavy one to play with the woman whom he means to make his wife. Moreover, he has a matter of business to adjust, which began in romance and has ended in rather an unpleasantly realistic way, which demands a great deal of the time and attention which of right belongs to Daisy now. It seems to him, therefore, that Fortune is playing his cards very complacently for him when Daisy projects this visit to Burnsleigh. Accordingly, he magnanimously holds her to the fulfilment of her scheme when she, in an access of good, faithful feeling towards him, proposes to back out of it. So finally it is settled that Daisy goes down to Burnsleigh, to say farewell to all her old friends, by the express desire of Sir Bolingbroke Bray. Just for one week she is to be—or play at being—the free and happy Daisy Eldon of old times. At the expiration of that week she is to come back to the custody of her aunt, who will in turn, when a few busy days full of buying are over, deliver her up to the charge of the man who has notoriously so signally failed to take proper care of the woman who has preceded her.

* * * * * *

Once more behold Daisy down at Burnsleigh.

"Things have come round in such a wonderful way," Mrs. Granville observes, "that Daisy's old friends ought to do all they can to make the last days of her residence among them happy ones."

It is hot August weather now; but disregarding the blazing sun, Mrs. Granville hoists over to the rectory and asks all the grown-up members of the Eldon family to a banquet in honor of themselves, to grace which all the brightest social lights whom she numbers among her acquaintances shall be gathered together.

"Mr. Poynter, young Harry Poynter—I daresay you have forgotten him, Daisy; but I assure you he is worth recalling to your memory now—he has come home since you left us, and he seems to take quite a pleasure in coming to the Court and making himself one of us."

Mrs. Granville delivers this shot well into that poor target, Daisy; for the astute lady has heard rumors of Harry's *rencontre* with Daisy in London, and she wishes to let Daisy see that, high as she may soar socially, Mr. Poynter is of account in his own country-side and may fall to the lot of one of Mrs. Granville's own uncomely daughters.

"Do you see much of Harry?" Daisy asks, unwarily.

"Much of him! My dear child, consider for one moment; where could he go if he didn't come to us for social intercourse? Mary and Alice are such dear, good girls that they don't care what trouble they take to give pleasure to a fellow-creature. They won't let him be dull and lonely——"

Pretty Ethel Eldon, Daisy's sister, interrupts the great lady of the parish here with a laugh.

"No; I see that they won't let him be lonely, Mrs. Granville. I've seen them on the Glenholme road every day for the last week.

Digitized by Google

But Mr. Poynter seems ungratefully to prefer the society of a dog to that of young ladies; he comes here every morning for Tartar to go for a run with him."

"Well, you'll meet him at my house on the 8th," Mrs. Granville says, trying to smile unconditional approval of Harry's line of conduct and Ethel's mention of it. "I am sorry, my dear," she continues to Daisy, "that Sir Bolingbroke is not down with you; we should much like to have shown him that, though he is going to carry off the flower of Burnsleigh, we quite forgive him, and hope to become very much better acquainted with him next year. Mary and Alice were saying how delightful it will be to be chaperoned by you, their old friend."

Daisy's eyes distend as Mrs. Granville says this. Is she mad or dreaming when she fancies that the ill-bred and autocratic squiress of Burnsleigh is meanly endeavoring to propitiate her—Daisy Eldon? "And it's so foolish of her, as well as mean," Daisy tells herself, "to think that her civility of ten minutes is to blot out all recollections of her incivility of twenty years!"

But in spite of her vivid recollection of this incivility, Daisy gives in her cordial adhesion to the plan of going to the Granville gathering. If, by any other means, she could secure a brief interview with Harry Poynter, and show him that she is his old friend, and that she does take a warm interest in him still, she would shrink from shining forth at Mrs. Granville's bidding. But there is no prospect of her doing this. Since her return to the rectory Harry Poynter has neglected Tartar, and refrained from the slightest neighborly attention to the Eldons. Therefore, though it galls her to go to Mrs. Granville, she presses the claims of that lady's hospitality well home to her family; and as she is and always has been paramount with them, they proceed there on the day, and are received by the squiress of Burnsleigh in an impressive way that is designed to touch Daisy into extending boundless advantages to the two uncomely daughters next year in town. But Daisy is oblivious of both the attention and the intention. Her eyes are wandering over the various groups that are dotted about on the lawn, and at last she sees him, and is innocently aided in seeking him by her sister Ethel.

"Look, Daisy; there's Mr. Poynter! I am going to bring him to you and make him promise to give us an otter-hunt at the Glenholme pool to-morrow or the next day—at any rate, while you're here;" and before Daisy can arrest Ethel's progress the latter is walking across the lawn in the direction of Mr. Poynter, utterly regardless of the amiable and intelligent observation that is brought to bear upon her action.

Daisy stands outside the drawing-room window, on the terrace, surrounded by a cluster of people, who try to treat the once overlooked and kept-in-the-background "parson's daughter" as if she were a portion of their private property, of which they were remarkably proud. They coo at her, and gush congratulations at her mother, and quite forget that Daisy has a memory.

Meanwhile Ethel walks, with the free and happy boldness of a kitten, right up to the spot where Harry Poynter is; and Daisy, watching them, thinks what a handsome pair they make, and tries to feel gratified at the sight. "Little recks she" of the emotions that flood his soul as "Daisy's sister" addresses him.

"Mr. Poynter, why have you neglected Tartar for the last three days? Even the presence of his mistress hasn't consoled him for your defection. Did you know that my sister Daisy had come home?"

The girl asks the question in such perfectly unsuspicious good faith that he cannot diplomatize about the subject with her.

"Yes; I knew it, and that is the reason I did not come for Tartar as usual," he says, in a low voice, turning aside with Ethel from the group as he speaks. And Daisy sees the movement, and feels that the tone and—misunderstands the position!

"It will be Ethel, and she will be so happy, and I shall be so glad!" poor Daisy says, forcing the tears, that are so foolishly ready to fall, back from her sorrowful-looking eyes. And just then she is called upon to play lawn-tennis with some of the county potentates, for Mrs. Granville cannot glorify Daisy too much on this occasion; and so she loses sight of Harry Poynter and Ethel while she goes through the graceful gymnastics that the exigencies of the game compel her to perform.

"After all, I am glad things are as they are," tired Daisy tells herself later in the evening. "Papa and mamma are receiving the attention and recognition they ought to have had all along, because people know now that they will never feel the grip of poverty again; and Ethel will be happy down here close to them, and I—— But it doesn't matter for me."

The heartsick words are barely said before she forgets that she ever had occasion to say them, for a voice close to her side whispers:

"Daisy, your sister tells me she knows you would like to speak to me. Can she be right?"

For answer Daisy gives him her hand, and then (blessings on the liberty of lawn-parties!) the two stroll away together.

They reach the verge of the lawn, and opposite to them, only divided from them by a narrow gravel path, there is a prettily planted little wood which has been carefully trained into the semblance of a wilderness. They both look at it fondly, but neither likes to suggest to the other the delicious impropriety of crossing over to its leafy depths. Presently a guardian angel whispers to her that it is her last chance, and that she had better take it.

"I wish we could bring one of those nice seats over here," she says, breaking silence for the first time.

"As we can't do that, let us cross over to one of the nice seats," he replies; and Daisy acquiesces. His next remark may appear rather unintelligible and wide of any ascertained purpose. But to Daisy it is perfectly comprehensible.

"It was an awful blow to me," he says, gently, "an awful blow at first; but I feel now that it was my ignorance that led me on. Do you forgive me for not having gone with the rest of the world to wish you happiness?"

No answer comes in words from Daisy; but he sees her tremble and he hears her sigh.

"I have no right to tell you this now, any more than I had reason to hope that you were listening to me with tenderness when it was only tolerance you extended; but, Daisy, it will never do you any harm to hear now how I've loved you ever since I was a boy; how I've associated you with every hope I've ever had about Glenholme; how I've hated the hardness of the lines that kept me away from telling you this till the law granted that I had come to years of discretion; and now it's too late."

"Is it?"

"Is it not, my sweet? Can you give up the place you'll have as Lady Bray? Dare I ask you to give it up? What turned you from me, Daisy, in that short time? What made the sweetest eyes that were ever seen lie either to Sir Bolingbroke or me that night?"

Then—led on by she knows not what impulse—she reminds him of the words she heard Miss Millard speak to him that night; and she nearly dies with dismay at the thought of her own rashness when she learns that it was of a cast-off brother of her own, whom Harry had met and befriended in Australia, that the heiress spoke that night.

* * * * * * *

Sir Bolingbroke Bray bears the news of the breaking-off of the marriage between himself and Daisy like the lenient and charitable profligate he is.

"Poor little Daisy!" he says; "it would have been a cruelty to take her against her will; for she would never have made a bolt from me when I became intolerable to her—she would have been too good for that; and so she would have staid and been wretched; and the sight of a wretched woman is maddening when you've no cause to kick her out."

He is not in the least vindictive or even seriously vexed about Daisy; and he shows that he is not either by inviting Mr. and Mrs. Harry Poynter to his wedding when he marries Miss Millard; the Beauton family having found the heiress wanting as soon as it becomes a publicly avowed fact she has made peace between her father and a scapegrace brother of hers, who is forthwith coming home to grasp the larger portion of the goods with which the gods have endowed the Millards.

The blue eyes and golden hair, which created such a sensation, having buried their gleam and glitter in the shades of Glenholme so happily, there is little more to be told at present about their owner.

But of Ethel this much may be gathered from Miss Bertram's parting address to society, when leaving it for a while after that "very painful affair at Burnsleigh":

"My second niece, Ethel Eldon, will be with me next season; quite a child at present, but with such beauty in her hazel hair and brown-velvet eyes, that Daisy's quieter light will be completely put out. Happily, there are no more young squires in that part of the world to interfere with Ethel's prospects and cause me the agony of disappointment which I suffered from Daisy's foolish *mésalliance*."

THE END.

English Business Depression.

It is estimated that in the thickly-populated towns in the northeast of England, 20,000 persons have been thrown out of work during the last three years. There are thousands of empty houses in Darlington. Stockton and Newport are also seriously affected. The number of cotton operatives on strike at Ashton is now estimated at from 8,000 to 11,000. The streets are crowded by unemployed operatives, but little excitement is manifested. Serious complications are also arising in the cotton industry at Preston. In consequence of the resolution arrived at by the Scotch iron-masters not to accede to the demand of the workingmen for an increase of wages until the price of iron exceeds 50s. per ton, 54 furnaces have been blown out in various parts of Scotland, rendering 3,000 men idle.

The Czar's Body-guard.

A CORRESPONDENT, speaking of a late review of Russian troops by the Czar, writes: After inspecting all the troops, the Emperor took up his position on one side of the field, surrounded by his generals, military *attachés*, etc. Here he remained while the regiments all marched past him—the infantry, the artillery and the cavalry. At the head of this latter division came one hundred horsemen, each horse and rider differently caparisoned, and all evidently from some of the most distant eastern provinces of the empire. There was a great quantity of weapons about them of various antiquated shapes, richly decorated and utterly useless; the horses were covered with steel or gilt trappings; everything about them savored of barbarism. This was the Emperor's body-guard, composed of men from the Caucasus. Each province is required to furnish a certain number; each man provides his own horse, saddle, uniform, etc., hence the motley and picturesque array. They are extremely proud of themselves and their position, and they think that they are the chief bulwarks of the throne. As for the Emperor, they think he could not get on without them. Their air and bearing express this. It is said that a diplomat went down to the Crimea on some business and neglected to have the proper passport. Arriving at the palace, he had some difficulty in being admitted, but at last he found an officer whom he knew very well, and who got him in. But the unfortunate gentleman did not enjoy his visit much, for everywhere he went he was followed by one of these Caucasians. He made several calls, and invariably found the man waiting for him outside the door, and during his entire stay the soldier never lost sight of him.

SCIENTIFIC INTELLIGENCE.

H. M. Stanley, the explorer, arrived at Sierra Leone, Africa, July 24th, and started for the river Congo.

According to Dr. Armand, formiate of soda has the same physiological effects as the salicylate of soda on circulation, respiration and calorification, and possibly in cases of rheumatism.

During the month of February, 1880, there will be five Sundays, a conjunction which can only occur three times in a century. The next occurrences will be in the years 1920, 1948 and 1976.

A Telephone War is now raging second only to the famous telegraph campaign of past years. The Patent Office puts a chip on some unlucky inventor's shoulder, and he rushes madly about asking somebody to knock it off. Why not make common cause and bombard the Patent Office?

Professor Lamont, director of the Munich Observatory, died on the 6th of August, at the advanced age of 74 years. He was a native of Scotland, but has resided in Munich since 1835. He was the author of a Handbook of Magnetism and of important contributions on the subject of meteorology.

In a Valley near Cassel, a short distance from Wilhelmshöhe, where Napoleon III. was detained as a prisoner after Sédan, a ferruginous mineral spring has been discovered. The water of the new spring belongs to the class of alkaline earthy iron waters, and besides salt of iron, contains a great quantity of carbonate of lime. It strongly resembles the Schwalbach waters both in taste and composition.

The Length of Time for the development of rabies in a dog varies from a few days to a year, and hence the difficulty of studying this fearful malady in all its stages. Dr. Gallier finds when a rabbit is inoculated with lymph from a mad dog that all of the symptoms can be matured in four days, and never require more than forty days at the utmost. The poor rabbit must now come in for a new series of experiments.

Otto Schutt, who has been making explorations in Africa under the auspices of the Berlin Geographical Society, has recently arrived at Lisbon, where he delivered an interesting address before the Geological Society. He has thoroughly explored the Congo basin, and has discovered, between the Congo and Cassi, four other branches called the Quango, Maraia, Kinlu and Quange. He reports a race of dwarfs residing south of Lake Sankowa.

Paris has Lately been startled by the announcement of the publication of a work by M. de Beauregard, on a new method of applying steam. The principle of this application is, that the heat absorbed by the water-gas is never allowed to escape; "a complete cycle is created; heat is converted into force in the first half of the circle, and force is reconverted into heat in the second half." It is a perpetual motion and Keely motor combined, and will produce an industrial revolution—if it works.

In Europe there are fifty-seven technological schools where a complete education can be obtained in the application of science to the arts. Some of them are magnificently equipped and are worthy rivals of the older universities. In addition to the technical schools, public sentiment has so long clamored for scientific teaching in the Gymnasia, that these old strongholds of the "humanities" have capitulated, and are now divided into classical and "real" schools, with complete courses in each.

Dr. Hassall, of London, reports a great diminution in the practice of adulteration since the passage of the "Sale of Food and Drugs Act." Twenty years ago the adulteration of food and drink was 61 per cent.; it is now quoted as 17.2—an immense improvement. He says that drugs suffer more than food from adulteration, one-quarter of all the drugs tested being impure. Drugged drugs would seem especially deserving of suppression, as they tamper with the health of bodies already impaired by disease.

It is Proposed to use straw as building material in the Western States, where the destruction of forests has rendered wood very scarce. Several sheets of ordinary straw board, such as is produced in a paper-mill, are taken, according to the thickness of the desired block, and are passed through a chemical solution, which softens the fibre and saturates it. They are then rolled, dried and hardened, and emerge from the machine as a compact block, hard, impervious to water, and capable of taking any polish, such as of walnut-wood or mahogany. In fact, on sawing it, it is very difficult to distinguish it from real wood.

An Ingenious Contrivance has been put up in the railway station of the Northern, in Vienna, which is so connected with the canceling apparatus of the ticket-office as to communicate to the superintendent the number of passengers to be provided with seats. A dial indicates the class as well as the number of passengers. The depot-master is thus enabled to put on the requisite number of cars to accommodate the travelers. The whole operation is performed by means of electro-magnetism, and is found to work admirably well. After the departure of a train the dial-points are placed at zero, ready for a new count.

Professor Virchow, of Berlin, who has just returned from the ancient site of Troy, relates, in order to show how easily superstition can be founded, that he caused an excavation to be made in a certain locality to procure specimens of the different layers deposited during the past ages and of the rock in situ for the investigation of geologists. The natives were very superstitious about his work, and as soon as he departed had the place surrounded by a wall. It has since filled up with water, and wonderful curative properties are ascribed to the well, which is called the "Doctor's Fountain," and pilgrimages are made to it from far and near.

The Address of Professor Allman as President of the British Association this year at Sheffield, was on the principle of life as manifested in vegetables and animals alike. He described what is called protoplasm, the same material of all living organizations—a very complex combination of oxygen, carbon, hydrogen and nitrogen, which is not yet fully determined. He described its habit in its unorganized forms, when not even any special nucleus of organization can be detected, and how even then it throws out projecting fingers, sometimes in the direction opposite to that of gravity, and withdraws them again into itself. The close analogy between animal and vegetable protoplasm were also pointed out, but he refused to infer that thought was a property of protoplasm. The address is an admirable contribution to biology.

Paper from Grass.—Linen (flax) has hitherto been regarded as the best material for the manufacture of paper, as chemical analysis shows it to contain the smallest per centage of ash. An examination of common grasses proves them to approach more nearly in quality to the finest linen paper, possessing, if anything, a more transparent, soft and silky texture. The waste grass of salt marshes can in this way be converted into a fine quality of paper. The grass is crushed green under rollers, the sap is preserved as a fertilizer, and the washed pulp is boiled in a solution of caustic soda and lime, and bleached in various ways. The novelty of the suggestion is the taking of green grass instead of the dry hay.

PERSONAL GOSSIP.

Dr. Schliemann and Professor Virchow have both left the Troad and are going to England. Mrs. Schliemann has been staying at Boulogne for the benefit of her health.

The biography of James Buchanan, which was first intrusted to the late William B. Reed, is now to be written by Mr. George Ticknor Curtis, who will, it is reported, receive for his work $3,000 and one-half the copyright.

The Russian Czarewitch is said to be a great favorite with the Danes, partly because of his supposed anti-Prussian sympathies, but especially because he is known to be such an excellent husband to the happy Princess Dagmar.

Walt Whitman is in Denver, Col., having spent a couple of weeks in Missouri and Kansas. He has had good weather, and a good time generally, and will have traveled 5,000 miles, to and fro, before he gets home again. He returns in October.

Dr. Petersen, a German tourist, lately reached the highest point of the Jungfrau, 14,828 feet. He was rewarded by an hour of clear sky. He declares that he could see the whole chain of the Alps, from the furthest Tyrol to Dauphine, including Mount Blanc and the other southern giants.

Mr. Preston Powers, the son of Hiram Powers, will establish himself in Cincinnati, and will take charge of a school of sculpture, under the auspices of the Art Museum Association. Mr. Powers will remove his studio from Florence to Cincinnati, bringing with him some skilled Italian artisans to instruct the workers in marble.

One of London's greatest Catholic preachers, Monsignor Capel, the Chevely of "Lothair," will embark from England soon for a tour in this country and Canada. He hopes to return with money sufficient to extricate him from the pecuniary embarrassments into which he plunged himself to establish the Catholic University at Kensington.

Miss Annie Louise Cary's residence in Portland, Me., is of brick and brown stone, and is surrounded by a pretty lawn. It is furnished daintily, and adorned with many works of art. Miss Cary's married sister keeps house for her, and it is here that the singer, when not busy in her profession, reads, knits stockings, studies and rests.

Rev. W. H. H. Murray has been declared insolvent by Judge Landon, of Guilford, Conn., and the parson's affairs at the once noted stock-farm are in a very mixed-up condition. Attachments have been laid on everything possible, and there is a $12,000 mortgage on the farm. The creditors will probably receive very small dividends when the estate is settled.

Many distinguished French ladies are excellent artists. The Dowager Duchess Fitz-James is described as the Rosa Bonheur of the French nobility; the Marquise de Mun is equally accomplished, while the chalks and crayons of the Duchess de Chevreuse, and the water-colors of the Countess de la Rassetiere have been admired at each succeeding *Salon* for many years past.

The regal golden crown which Pope Leo XIII. sent last Spring to King Menelik of Shoa—a monarch who has always been friendly to the missionaries—has never arrived at its destination. Its bearer, Captain Martini, the explorer, was attacked by a hostile tribe on his journey to Shoa, and was deprived of both King Menelik's golden crown and the accompanying Pontifical brief.

Miss Rye, a noble Englishwoman, has just made her thirty-second voyage across the Atlantic with a cargo of "waifs," or street-waifs—girls collected from the highways of London. These girls are taken to Canada and placed in respectable families, and in almost every instance have obtained comfortable homes and lead virtuous lives. The work has been carried on for about ten years.

Lionel Tennyson, son of the poet, is to succeed to the Lincolnshire estate of his uncle, the Rev. Charles Turner, whose surname he will consequently assume. He is the Laureate's youngest son, and he married the daughter of another poet, Frederick Locker, in the Abbey, about two years ago. His father lately refused to take the property with the condition of changing his name to Turner.

An Alabama newspaper says that Mrs. James Bryant, of Lowndes County, donated last year her colossal fortune of natural black hair for the benefit of the Memphis yellow-fever sufferers. It realized several hundred dollars, and has now come back to the original owner by the kindness of a Boston merchant, who was the last purchaser. It will be raffled for in Montgomery, for the benefit of General Hood's children.

The Emperor of Russia has written to the Pope, taking advantage of an opening made by some communications made to him through the Prince of Bulgaria. In this letter the Emperor declares his readiness to make peace with the Catholic Church in Poland. The Sultan has also written to the Pope, stating his desire to leave full liberty to the Catholic Church in his dominions, and to preserve good relations with the Vatican.

Commander Chetwn, of the British Navy, expects to start with his expedition for the discovery of the North Pole next Spring. He has formed a committee in London, under the patronage of the Prince of Wales and other aristocratic notabilities, which is to be the head of forty-nine other committees throughout the country to promote the enterprise. It is to co-operate with the Swedish, Dutch, Austrian, Danish and American expeditions.

Mrs. Graves, who died at Morristown, N. J., bequeathed large sums of money to charitable objects, including the following: To the Consumptives' Home, Boston, $10,000; American Missionary Society, $5,000; Woman's Union Missionary Society of America, $5,000; Congregational Home Missionary Society, $5,000; Berean College of Kentucky, $1,000; Oberlin College, Ohio, $1,000; Literary Association of Conway, Mass., $1,000. The lady's fortune is estimated at $500,000.

James Freeland, Collector of Internal Revenue in Brooklyn, N. Y., and a prominent member of Plymouth Church, was found dead in his bed on September 23d, aged 50; J. Warren Woodward, Judge of the Supreme Court of Pennsylvania, died on the 23d, aged 59; James F. Fallon, Jr., owner of the International Hotel at Niagara Falls, and President of the village, died September 25th, aged 43; and Mrs. Mary Parrish, the eccentric widow and temperance crusader, of Fort Lee, was found dead, September 25th, aged 50.

Mr. John D. Long, the Republican candidate for Governor of Massachusetts, is nearly forty-one years old, and a native of Buckfield, Me., where his father still lives, a respected citizen. He graduated at Harvard in '57, and after teaching for several years established himself as a lawyer in Boston. In personal appearance he is "of medium height, but of compact and full rounded form, blonde in complexion and with a large head and square face, clean shaven, except his mustache, with a genial and refined expression, and the bearing of a gentleman who respects every self respecting man."

SUMMER LIFE AT NANTUCKET.

NO description of Nantucket, such as we have given during the Summer season, would be complete without a mention of the best-known person on the island. He is a man of vast importance, who does all sorts of public duties, and has greater responsibilities resting upon him than any other resident. The steeple of the old church on Orange Street is his favorite rendezvous when not engaged in his many vocations on the ground. If a fire breaks out he rushes to this lookout and sounds an alarm; whenever a mail-steamer with tourists from New Bedford, touching at Martha's Vineyard, appears in sight, he ascends to his post and announces the intelligence by lusty blasts on a huge horn. In the Winter, when communication is had with the island only once in two days, his signal of the arrival of the mail is eagerly listened for and produces for a time quite an excitement. The old houses at Nantucket are built in a quaint style, with platforms on the roofs, whence, in her days of whaling prosperity, the approach of the fleets could be watched by the families of the whalers. Old residents, deploring the decay and almost total abandonment of this industry, still cling to their long-observed habit, and the house-tops generally present a curious scene about the time the excursion steamboats are expected.

MASSACHUSETTS.—SUMMER LIFE IN NANTUCKET—GIVING WARNING OF THE APPROACH OF THE STEAMER.

PROF. NORDENSKJOLD.

THE famous navigator who succeeded in making the North-east passage comes of a family of note in Sweden, and was born November 18th, 1832, at Frugard, in Finland. He is a graduate of the University of Helsingfors, in that country, and from an early age has followed scientific pursuits, being on many occasions the companion of his father, who, by appointment of the Czar of Russia, was for over thirty years chief of the bureau of mining and mineralogy of Finland.

In 1858 Professor Nordenskjöld accompanied, as one of the staff of scientists, the Swedish expedition to Spitzbergen, for an exploration of the island, and on his return the Government appointed him chief of the mineralogical department of the National Museum at Stockholm, in which position he brought order out of chaos, and published valuable papers from time to time. In 1868 the professor, in command of a Government steamer on an expedition, reached the highest latitude ever attained by any ship, and was honored for his discoveries by most of the highest scientific institutions of Europe.

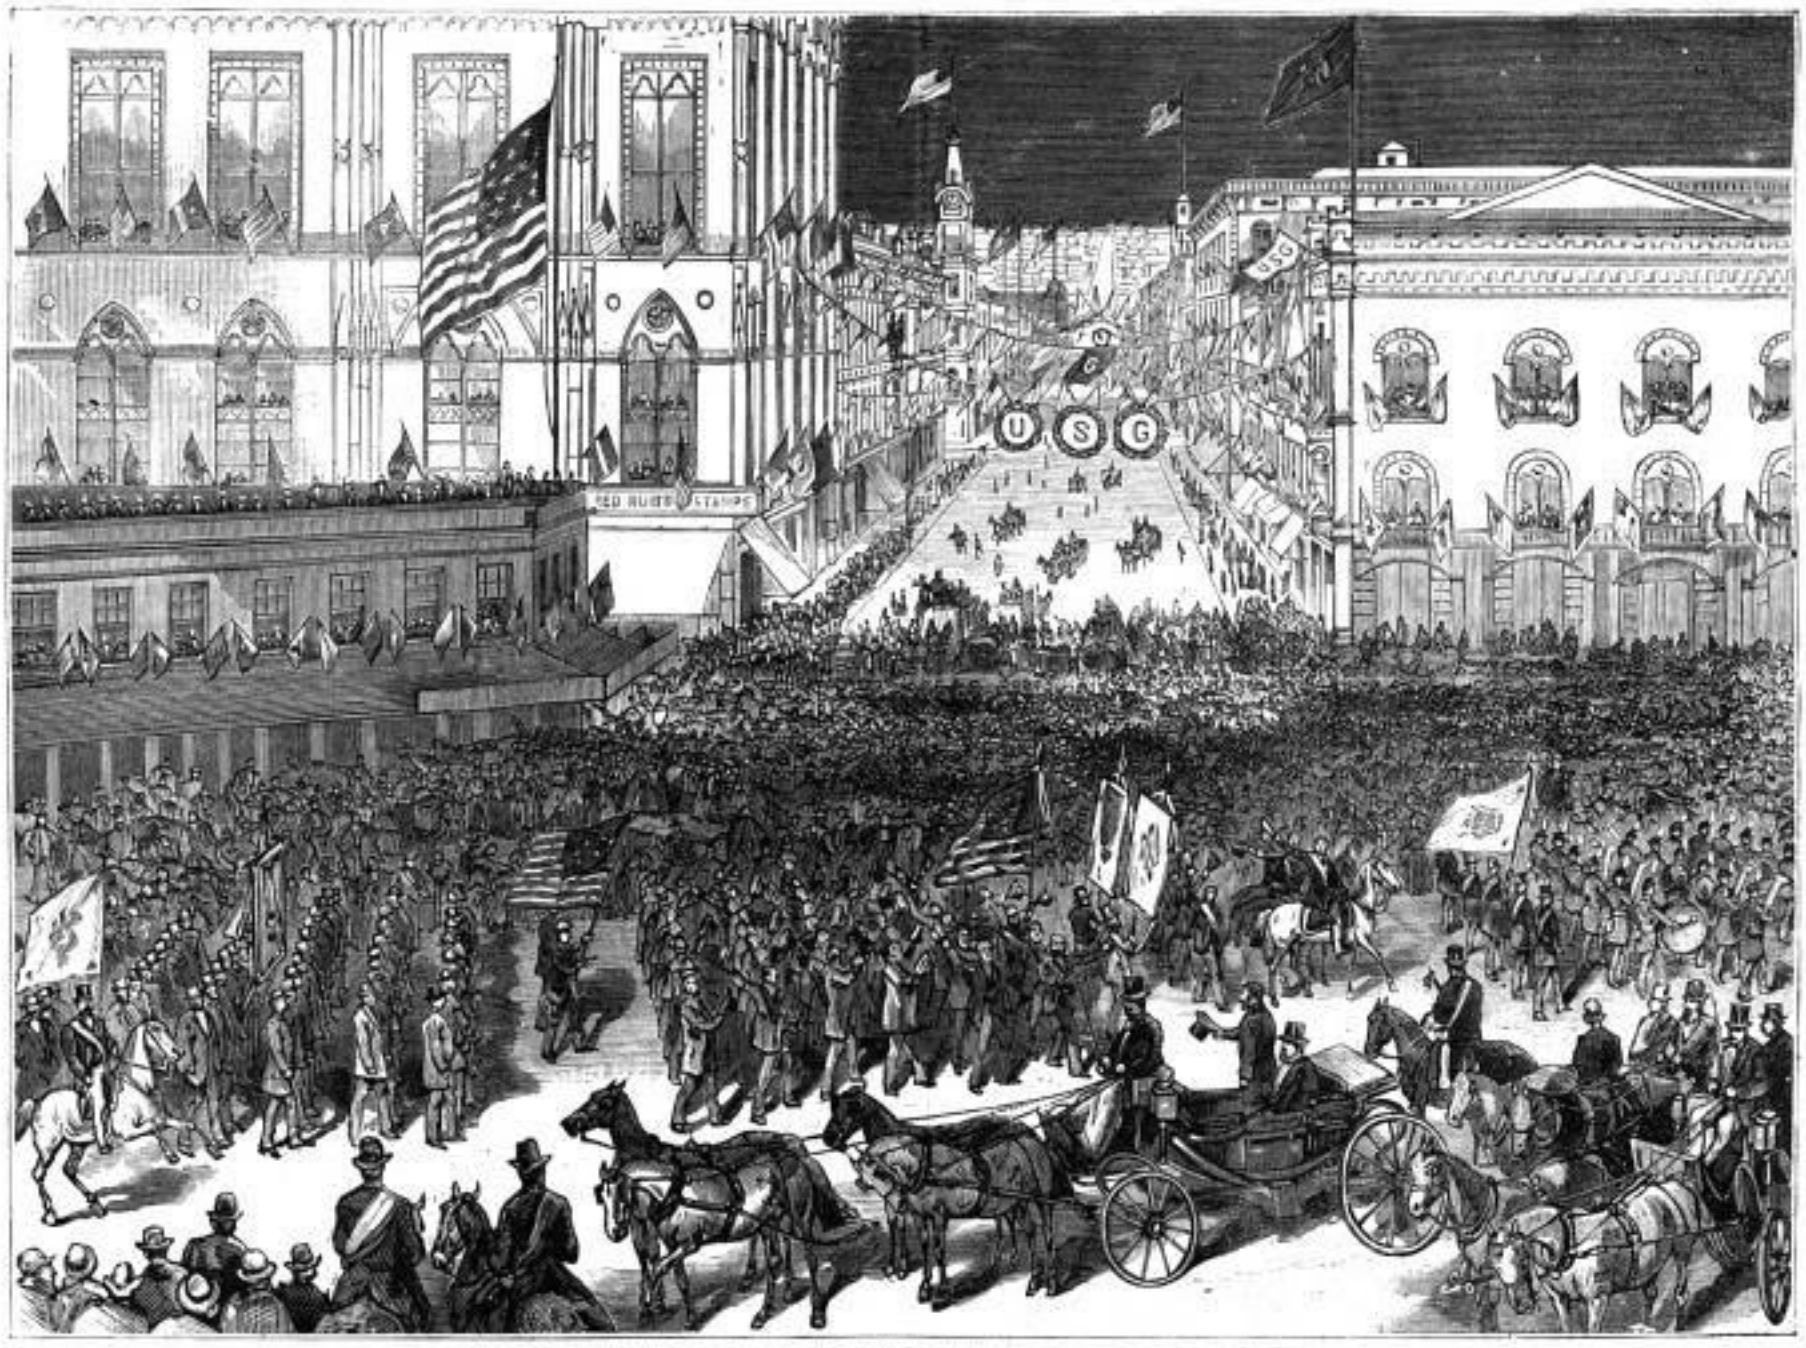
After a visit in 1876 to the Philadelphia Exposition, of which he was one of the international judges, Prof. Nordenskjöld returned home, and by the success of a commercial venture, established a new commercial route to North Siberia. Following that has been the daring voyage which has terminated so successfully.

The expedition was planned and organized in 1877 and the early part of 1878. It consisted of four steamers—the *Fraser* and *Express*, with cargoes for the Yenisei River, where they arrived in August of last year; of the *Lena*, bound for the River Lena; and of the *Vega*, which was destined for the voyage of discovery. Several Swedish scientists and lieutenants of the Danish, Italian and Russian navies were on the *Vega* by special request.

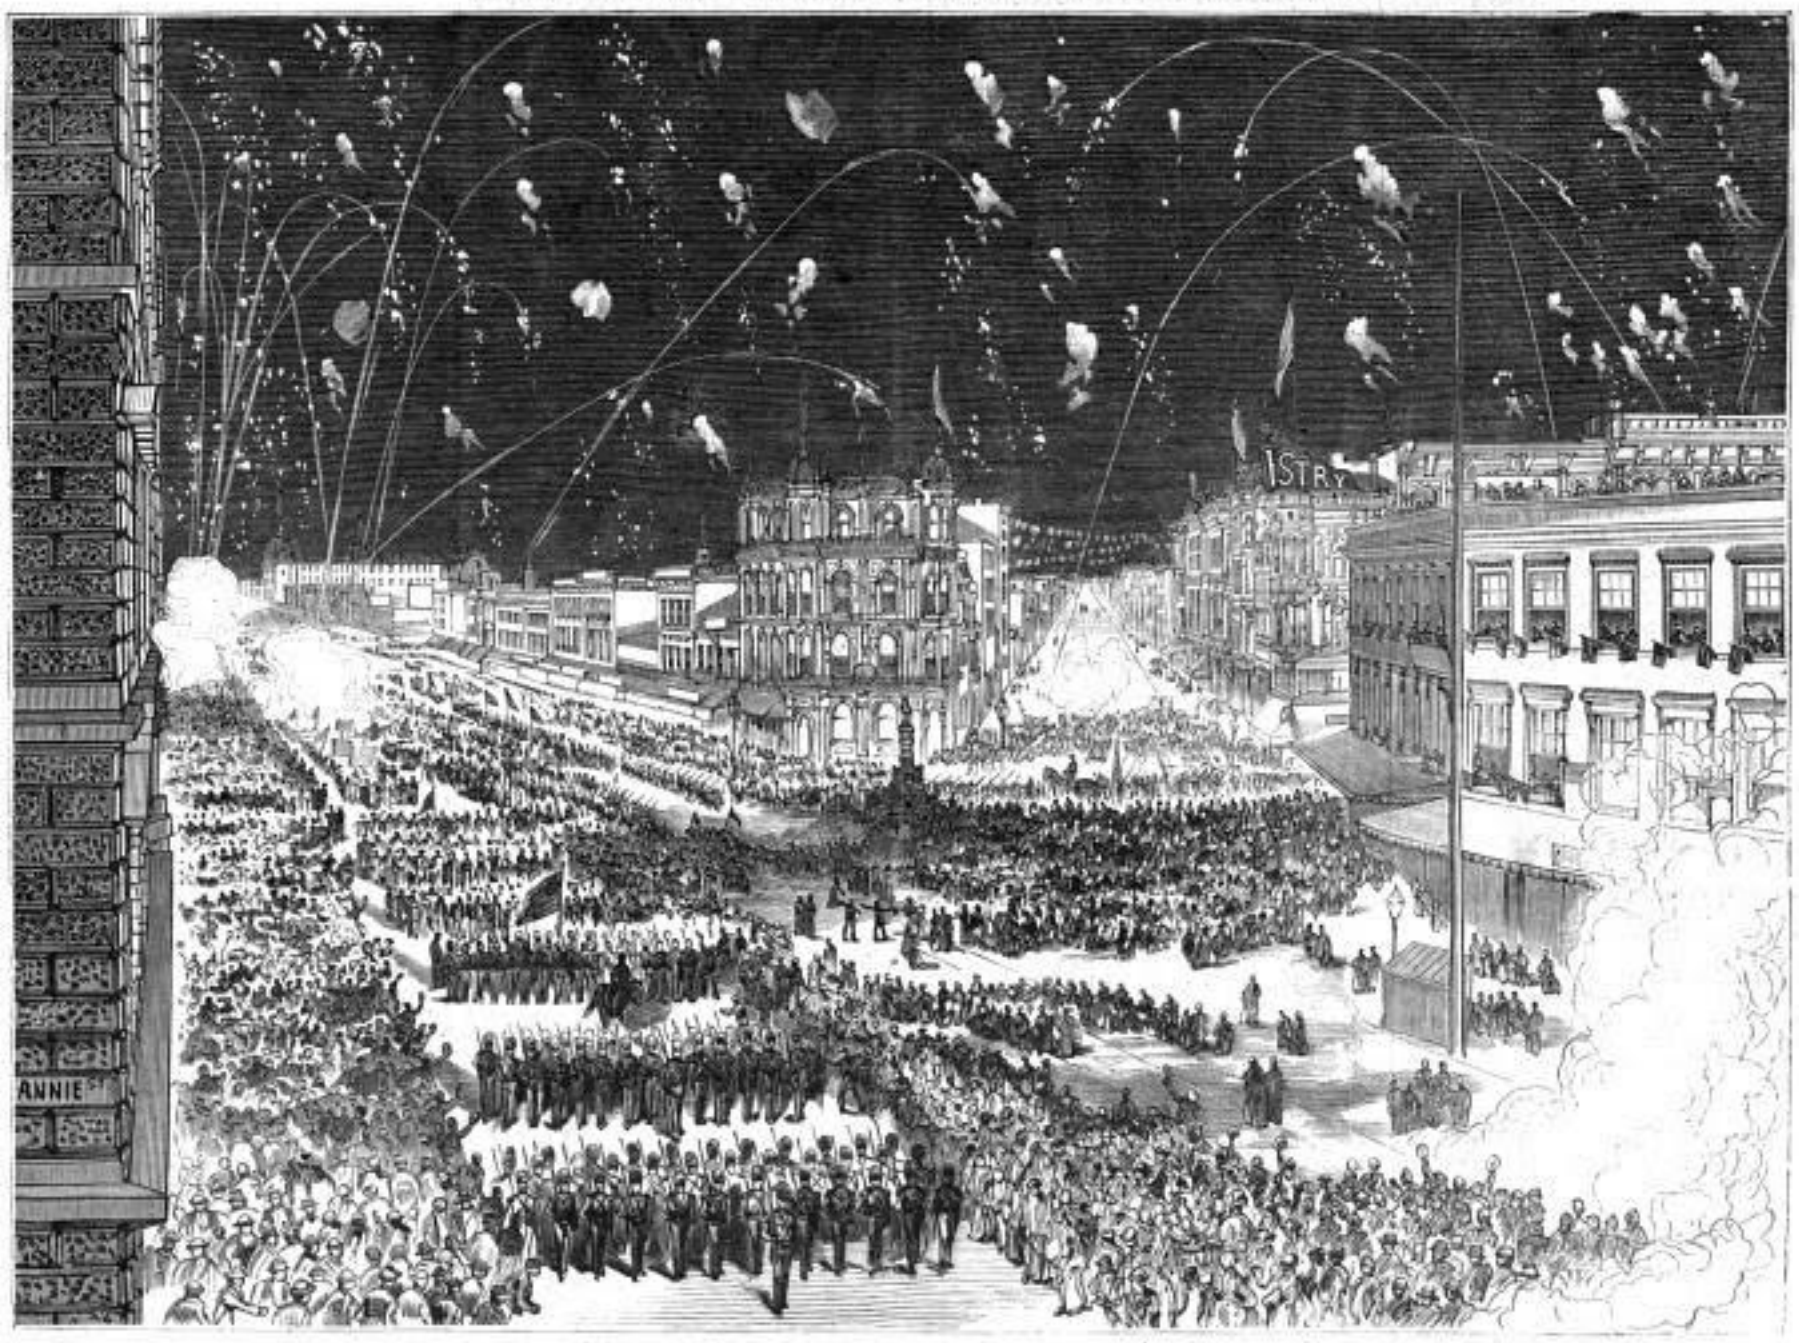
Of the $100,000 required for the enterprise, Dr. Oscar Dickson, of Gothenburg, furnished $60,000, and the King of Sweden and his Government and a Russian gentleman named Sibiriakoff, the owner of the steamer *Lena*, supplied the balance. The little fleet left Gothenburg July 4th, 1878, and passed the Winter of 1878-79 in a mass of pack-ice in latitude 67 degrees 7 minutes north, longitude 117 degrees 24 minutes west.

July 18th, 1879, after a detention of 264 days, the *Vega* escaped from her prison of ice, and July 20th passed East Cape into Behring Strait, and thence, without much trouble, to Japan, being the first vessel that has ever made the Northeast passage, and, by making it, accomplishing the purpose of its voyage.

MASSACHUSETTS.—OLD CHURCH AND HOUSES ON ORANGE STREET, NANTUCKET.



PROFESSOR ADOLF NORDENSKJÖLD, THE SWEDISH EXPLORER WHO ACCOMPLISHED THE NORTHEAST PASSAGE.



GORDON IN CENTRAL AFRICA.

THE country which Colonel Gordon has overrun and taken in the name of the Khédive of Egypt covers a territory nearly as large as that occupied by the valley of the Mississippi River. In this district, geographically known as Soudan, he has established a proconsulate form of government, under which, however, autocratic power rests in the hands of the Khédive's representative. The Governmental expenses are fixed at the rate of $2,750,000 a year, but in consequence of difficulties in collection it has thus far been found hard work to raise by taxation more than $1,000,000 per annum. Hence, the newly-established Government is following the example set by Egypt, and is fast drifting into debt, the deficit already amounting to $1,500,000. The chief item of expense is the army, kept up for the purpose of putting down the slave-trade and acquiring more territory. Indeed, it is not unlikely that Ismail Pasha's conscientious scruples concerning the slave-trade, while he was ruler of Egypt, arose from the belief that a respect for human liberty might be used as a cover for his ambitious designs upon the country lying around the head-waters of the Nile. His agent has put down one slave-trader after another, and, as these were no other than the local rulers, he has followed up their defeat by seizing their lands, dispossessing them of their authority, and has taken possession of the domain thus conquered in the name of the Khédive. There can be no doubt that, as far as the slave-traffic goes, this action has been salutary, for the business has been pretty thoroughly broken up; but this suppression is due to the activity and honesty of Colonel Gordon, and should he die or be removed from office the chances are all in favor of a speedy revival of the traffic. Respecting

THE PROCESSION OF MILITIA AND CITIZENS PASSING UP MONTGOMERY STREET TO WASHINGTON STREET.

POPULAR OVATION TO THE EX-PRESIDENT WHILE PASSING BALDWIN'S HOTEL.

CALIFORNIA.—THE ARRIVAL OF GENERAL GRANT AND SUITE AT SAN FRANCISCO, SEPTEMBER 20TH.—FROM SKETCHES BY OUR SPECIAL ARTIST.—SEE PAGE 86.

Digitized by Google

the country Colonel Gordon has conquered, its condition, in the main, is not so flourishing now as it was before he came. He has overthrown numerous local forms of government, which offered a certain measure of protection to the people, and has not possessed the power to substitute a vigorous administration in their stead. In consequence of this, the District of Darfur, the most western of the Egyptian possessions, has been transformed from a comparatively fertile country into an uncultivated waste. The people do not dare to raise more than what is absolutely necessary to support life, for fear that it would be taken from them by their more powerful neighbors. The only rule observed is the law of the strongest, and Colonel Gordon himself, in traveling through the country, was frequently attacked by brigands. All this indicates that the extension of Egyptian territory to the south has been forced beyond its proper limits; and even if the slave-trade has been temporarily checked, the condition of the people has been changed for the worse, and on this account more harm than good has been done.

Peculiar Leases.

In the treatment of its real estate Baltimore is peculiar. Its slow and uniform growth has led to a very general system of leasing land for "ninety-nine years renewable forever," at an annual ground rent of six per cent. on its market value at the date of the lease. For example, a common laborer or mechanic, who can command money enough to build a house, instead of buying a lot upon which to build, leases it. If the lot be worth $1,000, he pays annually for ever $60. If he builds a house that costs him $1,000, as money there is six per cent., this makes his house-rent practically $120 a year. This is, in effect, to loan him the value of the lot at six per cent. If the lot advances in value he has the benefit of it, since, if he wishes to sell, he disposes of his house at its market value, and the ground lease at its enhanced price. This encourages men of small means to live in their own houses. As a consequence, there are no tenement houses, actual rents are comparatively unknown, and a larger proportion of the people own their houses than perhaps in any other city in the world. This secures a staid, thrifty population, and, with a mild climate, cheap fuel, cheap food and cheap clothing, gives Baltimore a great advantage as a manufacturing city.

A Trappist Monastery in Pennsylvania.

THE Trappist Order of monks have bought a large tract of land in Western Pennsylvania for the purpose of establishing a monastery. This community consists of 200 monks from France, Ireland and Turkey. They are artisans, scientists, mechanics, agriculturists, artists, architects, lawyers and physicians, some of whom attained distinction in their native countries. They will themselves build their monastery. The Trappist is the most austere of all the monastic Orders. They rise from bed at two o'clock in the morning, dedicate twelve hours to reflection and prayer, and the rest of the day to severe labor, especially in the fields. No conversation is permitted with one another or strangers. They salute each other with the exclamation: "Remember death." They drink only water, and eat only vegetables. They sleep on a table with a pillow of straw, and never undress, even when sick. There are monasteries of the same Order at New Haven; in Kentucky; at New Melleray in Iowa; and at Tracadie in Nova Scotia. Most of the members of this ascetic organization are persons who, for one cause or another, have become disgusted with the world, and have determined to pass the rest of their days in seclusion and in contemplative repose. They renounce the battle of life, separate themselves entirely from temporal affairs, and concentrate all their thoughts on death and eternity. It is an institution savoring more of the spirit of the Middle Ages than of modern times.

A Doomed City.

THE town of Covington, Iowa, is literally a doomed city. Situated on the bend of the Missouri River, the banks are gradually being eaten away, and the ground on which the court-house stood a year ago is now covered by many feet of fast-flowing water. The cutting away is done by fits and starts. Recently the current set inshore and took off a strip of land thirty feet wide in a few hours. No invasions were made for another week, when another slice was cut off. Then about half a dozen buildings were moved back some thirty feet, and the next day the land on which they had stood was all gone. The citizens have tried to moor trees and logs to the bank in the hope of forming a barrier for the flood, but the current is so swift and the water so deep that these attempts have failed. To give an idea of what the town of Covington has suffered in the past five years, the case of the ferry house and principal hotel may be instanced. Two years ago there were six hundred feet of land between the buildings and the river bank; now you can toss a stone out of the hotel window into the river, and the buildings are now being put on rollers for removal.

Letter-boxes in India.

THEY appear to have a very curious way of posting letters in some of the letter-boxes in remote Indian stations. The receiving-boxes are about the size of a child's savings-bank, according to one account; according to another, about the size of a milkpan; and when the "chupprassies" come up laden with the bulky official missives they are accompanied by a "babu" to empty the box as soon as filled. The "babu" will not take the letters from the "chupprassies" unless the letters pass through the box, even though to make the passage they have to be rigorously thrust over with a stick. But the "babu" is not altogether oblivious to the necessities of such a case. When a letter makes its appearance which by no mortal ingenuity can be squeezed into the box, he opens the lower door and places his bag under it. The messenger then thrusts his letter into the box until one end appears at the lower door. It must not be pulled out, but by the aid of a stout stick it is crammed jammed and smashed into and out of the box, falling in due course into the bag. And no persuasion can induce the "babu" to act otherwise. The missive must be posted and issue from the box in due obedience to red tape. And yet people say that India is a backward country.

A VERY valuable volume of 500 pages, entitled "The American Popular Dictionary of the English Language," has been issued by Carter & Peck, 271 Broadway. The book is crowded with useful information, including every important word to be found in the English language, with its meaning, derivation, pronunciation, etc., together with valuable facts as to science, biography, history, land-titles, constitutions, notes of interest, etc., making a library of reference in one handy volume, for the modest sum of $1.

FUN.

"NOTHING succeeds like success"—unless it is a boy eating a stolen watermelon.

A MISCHIEVOUS rustic, owing his neighbor a grudge, mixed a quantity of Anti-Fat with his pig's barley-meal.

THE time is at hand when, if you want to see the Governor of a State on business, you will have to attend some county fair.

NO matter how bad and destructive a boy may be, he never becomes so degraded, or loses his self-respect sufficiently as to throw mud on a circus poster.

A LOUISIANA colored woman gave birth last week to a male child, from whose knees sort of excrescences resembling cow's horns are growing. Exchange: This is a new type of kneegrow.

"DO YOU see here where you are charged, sir, with being drunk and disorderly?" observed the Recorder, holding out the affidavit, just signed and sworn to by the policeman. The tramp took the affidavit, read it carefully, upside down, and replied: "Am I to blame?—I never wrote that."

ON the river: "What's the matter, Alfred? You look uneasy." "Well, my wife, who is fond of swimming, dived off the boat some time ago, and has not yet come to the surface; I am afraid that something must have happened to her." "How long has she been under?" "About two hours."

DEAN STANLEY was not equal to his opportunities when he performed the marriage ceremony of Professor Tyndall. The Dean should have asked the groom: "Do you take this anthropoid to be your co-ordinate, to love with your nerve centres, to cherish with your whole cellular tissue, until a final molecular disturbance shall resolve its organism into its primative atoms?"

A MEDICAL man was overhauling an electrical machine, and, after putting it in order, turned the crank to test it. His little daughter wanted to help; so he told her to turn, and he would hold the handles. The child performed her part well, and the current of electricity was so strong that the doctor's hands shook as though he had an attack of the ague. The next day the little girl asked her father to let her "play the hand-organ again." "Hand-organ?" said the doctor, in an inquiring tone of voice. "I didn't know that you had ever played a hand-organ." "Oh, yes," rejoined the young lady, "I have—yesterday, you know, when I played and you were the monkey!"

AN amusing story has lately been having a run through the Boston clubs, at the expense of a self important, somewhat portly man about town, who, on returning from Paris some time ago, was asked how he liked French cooking. "Jolly," was his reply. "It is wonderful how they transform everything. Boston could learn something in the way of cooking greens, for instance. Why, I should judge, from one little experience of mine, that a French cook could make you think a dish of dandelions was calf's-head jelly. They had a kind of grass—'patty de foy grass,' I believe they called it—with nothing to indicate its real nature. It 'came high,' as I was there in the Winter, you know, when it was out of season, or else I should have had my fill of it."

LEPROSY.

A MODERN miracle. Astonishing results from the use of CUTICURA.

MESSRS. WEEKS & POTTER: *Gentlemen*—We have a case of leprosy in our poorhouse which is being cured by your Cuticura remedies. The county had employed all of our doctors and had sent to New York for advice, but to no avail. The patient commenced using the Cuticura and immediately began getting better. He had been confined to his bed for two and one-half years. *Had not* And his clothes on during *this time*. Last week he dressed for the first time. When he walked there would at least one *quart* of scales come off of him. This happened every day. We think it is a wonderful cure. We do not say he is cured, but he is in a fair way to be cured, to say the least. Yours truly,

DURKEE BROTHERS,
Druggists and Booksellers.

ALLEGAN, Mich., February 11th, 1878.

HOME INDUSTRY.

DURING the two weeks ending Saturday, the 20th inst., the FAIRBANKS SCALE COMPANY received orders for 2,868 scales, including orders for no less than nineteen iron-frame R. R. track-scales. This is the largest number of orders booked at the factory since the panic of 1873. This increased business is the natural result of the improved condition of the iron trade, and the moving of the enormous grain crops of the West. To meet this business pressure, the factory has commenced running nights, the first time since the war.—*St. Johnsbury (Vt.) Caledonian, Sept. 26th.*

HALFORD TABLE SAUCE, a genuine relish, exactly suited to all tastes and all conditions of people.

THE inn from time immemorial has been the poetic type of comfort and enjoyment. This illustration gets double force when applied to such a hotel as the ST. NICHOLAS, in New York. It furnishes the model which other great hotels copy after, for its management, as shown in *cuisine*, in apartments and all the luxurious conveniences of the age, is perfect. The prices, too, are very reasonable.

FAIR skin, rosy cheeks, buoyant spirits and the sweetest breath in HOP BITTERS. See notice.

MONEY, TIME, LIFE are lost by accidents; secure indemnity by a policy in THE TRAVELERS.

TO RESTORE nerve and brain waste, nothing equals HOP BITTERS. Believe this.

FOR mosquito-bites, BURNETT'S KALLISTON is invaluable, as it contains a peculiar property which neutralizes the poison and allays the inflammation caused by the sting of insects.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

THE United States Capitol at Washington, the Metropolitan Elevated Railroad of New York, and many of the largest and finest structures in this country, are painted with H. W. Johns' Asbestos Liquid Paints, which are rapidly taking the place of all others for the better classes of dwellings, on account of their superior richness of color and durability, which render them the most beautiful as well as the most economical paints in the world. H. W. Johns Mfg. Co., 87 Maiden Lane, N. Y., are the sole manufacturers.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1 Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1872.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals; *16 kr. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*, (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

H.W. JOHNS' ASBESTOS LIQUID PAINTS

Are the purest, finest, richest and most durable Paints ever made for structural purposes.

☞ A saving of 25 to 33 per cent. of customary outlays can be effected by use of the Asbestos Liquid Paints. Samples of sixteen newest shades for dwellings sent free by mail.

ROOFING.

The Asbestos Roofing (with white or light gray Fire-proof coating) is now in use in all parts of the World, and is the only reliable substitute for tin. It is adapted for steep or flat roofs in all climates. It costs only half as much as tin, and can be easily applied by any one.

Boiler Coverings.

The Asbestos Steam Pipe and Boiler Coverings are the most durable, effective and economical non-conducting coverings in use. They can be easily applied by any one at a cost of from 25 to 50 per cent. less than are usually charged for inferior coverings.

☞ Note the address, send for samples and be sure and get the *genuine*, which are manufactured only by

H. W. JOHNS MFG. CO.,

87 Maiden Lane, New York.

Sole manufacturers of genuine Asbestos Materials.

☞ Descriptive Price Lists free by mail.

An Elegant Gift for the Ladies.

In order to introduce goods of our manufacture into every family, we have determined to present the lady readers of this paper one of our *Elegant Gold Thimbles*. Our retail price for this thimble is $1.00, and you will find, by inquiry, any jeweler will charge you more for the same goods. Cut this advertisement out and return it to us with 75 cents in currency, silver, or postage stamps, to pay the cost of engraving your name, and you will receive the thimble free by mail, securely packed in one of our *Elegant Velvet-lined Morocco Cases*. In ordering give the size you wear, and whether you want name in full, initials, or Christian name engraved on it. Address, NEW YORK JEWELRY CO., 194 Broadway, New York.

SILVER TEASPOONS

At Less than Manufacturer's Cost Prices.

The utter worthlessness of the stuff advertised by a number of firms in New York, Cincinnati and Philadelphia as Silverware, compels the world-renowned Tremont Spoon Co., of Boston, to offer during the next thirty days to every one in the United States a sample-set of their **VERY BEST SPOONS**, at a price much lower than any jeweler pays for them at wholesale. We make this offer simply to introduce our goods thoroughly in all parts of the country.

FOR 30 CENTS, or ten 3 cent postage stamps, which covers cost of the Spoons as well as postage and packing, we will send by mail, postpaid, *One Set of Six Teaspoons*, finely and heavily plated with *Pure Nickel and Coin Silver*, or a new metal called *Alfenide*, which is very similar to the finest English white steel. They will wear for years. **Two sets for Fifty Cents.**

Order at once, and address plainly,

A BRILLIANT NEW NOVEL!

ENTITLED

"The Wages of Sin,"

BY

Mrs. METTA VICTORIA VICTOR,

AUTHOR OF "THE DEAD WITNESS," ETC., ETC.,

Will be commenced in No.

754 754 754 754

OF

Frank Leslie's

CHIMNEY CORNER,

Issued Monday, Oct. 13th.

"THE WAGES OF SIN"

is a story full of movement and life; with scenes of great pathos and tenderness. It is sensational, but is altogether free from the stale tricks of sensationalism. It is sensational as real life is, with its tragedies, its temptations, its sins, its struggles, and its love "stronger than death."

SUNDAY MAGAZINE.

Conducted by Rev. Charles Force Deems, D.D., LL.D.

THE BEST AND CHEAPEST SUNDAY MAGAZINE PUBLISHED.

Delightful Reading for Everybody.

THE OCTOBER NUMBER NOW READY,

"This large and profusely illustrated Magazine, as conducted by Charles Force Deems, D. D., is one of the most attractive and justly popular journals of the day, containing attractive, useful and interesting reading for everybody. One hundred and thirty large pages, and every one full of interesting reading and illustrations."—*Illustrated (St. Louis) Magazine.*

"FRANK LESLIE'S SUNDAY MAGAZINE, the Rev. Dr. Deems, editor, is to hand, but not on our table, for its popularity is such that it does not lie anywhere until it has gone the rounds of our home-circle. The 'Home Sermons,' by the editor, is worth a year's subscription."—*Christian Advocate, Nashville, Tenn.*

"Like wine it improves with age. It strikes us the last is the best number thus far issued. We commend it to every father. It is indeed a capital family publication—just the thing needed in every household where God is reverenced, and pure, healthful literature is enjoyed. It is an educator, a friend, a companion that will not disappoint, weary or betray you. Get it. It is of extra size, each number contains 128 pages, and is very copiously illustrated."—*The Morning Star, Wilmington, N. C.*

"We have always thought this a good magazine, but we think the present number exceeds, in fine articles and papers, many of the preceding ones."—*Baltimore (Md.) Presbyterian.*

128 PAGES QUARTO—OVER 100 ILLUSTRATIONS.

THE CONTENTS EMBRACE

Serial Stories, Short Stories, Sermons, Poems, Music, Biographical Sketches, Exegetical Papers, Historical Articles, Timely Editorials, Anecdotes, the Wit, Wisdom and Pathos of Childhood, the Invalid's Portion, and Bright Short Papers.

No religious monthly ever published in America has had such a reception of kindly appreciation from the press, lay and clerical, Protestant and Catholic.

Single Copies, 25 cts.; Annual Subscription, $3; Six Months, $1.50; Four Months, $1, Postpaid.

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,255—VOL. XLIX.] NEW YORK, OCTOBER 18, 1879. [PRICE, WITH SUPPLEMENT, 10 CENTS. $4.00 YEARLY. IN WRAPS. $5.00.

GENERAL GRANT'S RECEPTION IN SAN FRANCISCO.

WE have already illustrated the more conspicuous features of the great popular welcome to General Grant on his arrival at San Francisco. It but meagrely expresses the warmth and heartiness of the reception, to say that no public man has ever been the recipient of such distinguished honors at the hands of the populace of the Pacific Slope metropolis. The ovation upon his arrival, the attentions bestowed upon him by all classes during his sojourn in the city, and the munificence of the provisions made for his comfort and enjoyment, all attested a heartiness of feeling and a generous hospitality which, it is safe to say, no other city will be able to match. The apartments secured for him at the Palace Hotel, for instance, were most sumptuous in all their appointments, and in their decorations displayed the very highest taste and thoughtfulness. They were, in point of fact, bowers of beauty and fragrance, all the resources of the floral kingdom having been apparently utilized in their embellishments. The eagerness of the people to see and honor the illustrious captain left him little opportunity for the calm enjoyment of these delightful retreats, but he gave repeated expression to his appreciation of the kindly forethought which had surrounded him with such marked evidences of good-will. His intercourse with the people is reported to have been characterized by entire freedom and geniality of manner, the only person to whom he refused to accord an interview being the agitator Kearney, who made repeated efforts to attain the distinction.

(*Continued on page* 108.)

PARTHIAN POLITICS.

AMONG the several political conventions which have recently put General Butler in nomination for the office of Governor of Massachusetts, there is one which associated Mr. Wendell Phillips with him as a candidate for the post of Lieutenant Governor. Nothing in the proceedings of that convention surprised us so much as the nomination of this gentleman. Mr. Phillips has been for so many years a separate and independent party by himself that it seemed an astonishing act of presumption, on the part of the people among whom he lives, to suppose that this political Ishmaelite could be content to work as a *lieutenant* to anybody, or that any declaration of principles which could be made by an average body of men would be satisfactory to a man who is "his own parallel" and the antithesis of everybody else.

Accordingly, it does not surprise us to learn, as we now do, that Mr. Phillips has declined the nomination of the Massachusetts Greenbackers, and that he has declined it, not for the want of sympathy with the present aim of the Greenback movement, but because he believes that he can more efficiently promote that movement by remaining "outside of party lines, where his whole life has been passed."

It is precisely because Mr. Phillips is at the furthest possible remove from the crystallizing points of our historical politics that he always acts as a solvent, and a very acid one at that, in promoting the disintegration and dissolution of the oldest political organizations in the country. A born "reformer," and, as such, pledged to maintain the thesis that minorities are more often right than majorities, he naturally finds it easy to believe that the largest and strongest parties are always most in the wrong and that the weakest parties are most apt to be in the right; and seeing that there is no party in the country so small as the "Wendell Phillips Party," it is entirely logical that the latter should be the only party with which he can consistently act, because it is the only party of which he can be sure that it is always honest, earnest, unanimous and right!

But while it would be very idle to look to Mr. Wendell Phillips as an exemplar of these principles of political confederation which the philosophical mind of Burke delighted to unfold, it is always very safe to look to Mr. Phillips as an apostle skilled to expound the gospel of political dissent in his day and generation. A Parthian archer, prowling on the flanks of the embattled Democrats or Republicans, and shooting at both as he flies from their ranks, he is quick to find with his arrows the loose joints in the harness of his enemy; and if in his desultory warfare he does small execution, he at least hints to that enemy by the prick of an arrow where a new rivet may be needed in his harness.

For instance, referring to the actual disintegration of the "old Democratic Party" in States like Maine, Massachusetts and Ohio, where the party has been virtually swallowed up by the Greenbackers, Mr. Phillips points a useful moralism for the consideration of the old Democratic leaders, when he suggests to them that the dissolution of the "old Democracy" in the North can scarcely fail to act as a diluent on the "Solid South." Mr. Phillips reasons with more than his usual cogency when he argues that just in proportion as the Northern Democracy cease to be an efficient force in politics, just in that proportion will the South "lose one great reason and temptation to mass itself into a solid political force," until, in the end, under the stress of these divisive tendencies, we may eventually expect to see the white vote of the South break into the usual party lines of cleavage, when, of course, the colored vote will be courted by each fraction as the "Irish vote" and the "German vote" are similarly courted by political leaders at the North.

If Mr. Phillips has a *memento mori* for the "Old Democrats," he equally has an urn ready in which to enshrine the ashes of the Republican Party. He charges that by indulging, for purely partisan purposes, in the empty rhetoric of "the bloody shirt," it galls and chafes the South into a formal "solidity," while at the same time indisposing candid men at the North to combine for the cure of real disorders at the South. This is an admonition which it would be well for the "stalwarts" in the Republican ranks to lay to their hearts, and we invite the more attention to the admonition from the fact that we have not been accustomed to look to Mr. Phillips for a warning against this species of *rodomontade*. Believing that there are real evils in Southern politics which call for sober handling, we entirely concur with him in his appeal for more sincerity in this line of popular argument, though we are far from being sure that we should concur with him in looking for this sincerity to General Butler and his followers! Of all casual and fortuitous aggregations of individuals, it seems to us that the "Butler Party" is the least substantial and coherent.

We do not propose to follow Mr. Phillips in his plea for more paper money and for "woman suffrage." His plea for the former is the article of a falling party, and his plea for the latter is the article of a party which, as yet, has not body enough to stand in the arena of living politics.

SLAVERY IN CUBA.

IT begins to look as if the question of slavery in Cuba is about to be settled at no distant day. Necessity, if not choice, will compel the abolition of the system. Already the slave-owners in large numbers, alarmed by the open espousal by the blacks of the cause of the insurgents, have petitioned the Spanish Government for prompt action on the subject. In their memorial the planters state that unless steps are speedily taken by the authorities, they will be compelled to assume whatever responsibility may attach to the act and set the slaves at liberty. Not otherwise, they say, can they prevent their property from being burned. In this condition of affairs, it will be impossible for the Spanish Government to remain inactive. In the meantime, the plantation owners are advised to act in conjunction with the Captain-General, and in a spirit of patriotism. It is also intimated that, as soon as the Cortes meets, a measure will be introduced providing for the emancipation of the slaves, to take place next year, but conditioned with a long period of compulsory labor with a view to the compensation of owners.

It should be borne in mind in this connection that slavery has been abolished in Porto Rico and Barbadoes, and that even in Cuba provision has been made for its gradual abolition. As far back as 1872, the so-called Moret Law provided that henceforward the children of slaves should be born free. It follows, as a consequence of this arrangement, that the number of slaves, in the interval, has greatly diminished. The Cuban slave, moreover, has become accustomed to the idea of liberty. He does not regret that his children are born to freedom, but he frets under the bondage which he is himself compelled to endure, and from which there is no hope of escape. His bondage is all the more intolerable from the fact that the Government, to which alone he can look for protection, has treated him with exceptional severity. The favors granted to his kindred and class in Barbadoes and Porto Rico have been denied to him in Cuba. His offspring, in whom, in many instances, he takes but little interest, are born to freedom; but he must bear the burden and submit to the lash while life continues. He is not ignorant of the fact that in Cuba alone, of all the New World, color is a badge of servitude. It is not wonderful, therefore, that the slaves in Cuba have at last bestirred themselves. It will not be wonderful if they obtain immediate and unconditional emancipation.

But it must be admitted that the complete and final abolition of slavery is beset with grave difficulties. Cuba has hitherto been useful to Spain. She has yielded large revenues, moneys which, if they have not been available for replenishing the home treasury, have at least been serviceable for the maintenance of the government of that island and for the furtherance of all transatlantic enterprises. Of late years, of course, the island has been less valuable than formerly, mainly because of the disturbance which has almost continuously prevailed, but also for other reasons. Spain, however, clings tenaciously to the "Pearl of the Antilles"; and the sentiment to-day is as strong as ever it was: "Perish Spain sooner than Cuba should be lost." The Cubans, like the other West Indian possessions of Spain, must buy their bread from the Peninsula, in spite of the American market, which offers a cheaper article and which is nearer home. They must also buy their cotton and woolen goods from the mother country and at Spanish prices, although better and cheaper articles might be had in the British, French, German or American markets. The abolition of slavery might produce the same results in Cuba which have been produced in Jamaica and San Domingo. It might ruin the island. It will only be natural, therefore, if the Spanish manufacturers, especially those of Catalonia and the Basque districts, should object to emancipation—at least to emancipation which shall be immediate and unconditional. Then, again, the plantation owners may demand compensation. Without compensation, indeed, it is difficult to see how they can sustain themselves or preserve their estates.

In any case, Spain is now called upon to deal with the question of slavery in Cuba, and to deal with it finally. It seems equally certain that half-way measures will not meet the emergency. Any attempt to saddle emancipation with compulsory labor must prove a failure. It can scarcely fail to lead to a general uprising of the blacks and to general anarchy. Spain, of course, would find herself compelled to make an attempt to restore order; but in doing so it would be necessary to draw heavily upon her exchequer. It would certainly be better to draw at once, and accomplish by peaceful means that which war cannot prevent.

COMMON SCHOOL PROGRESS.

THE report of the Commissioner of Education, recently published, furnishes very conclusive evidence of the progress of educational development in this country. In nearly every State the number of children attending the public schools is steadily increasing, the standard of teaching is improving, and the expenditure for school purposes is growing more and more liberal. This is especially true of the Northern States, in which, notwithstanding the financial pressure and distress of the past few years, the aggregate appropriations for school purposes have been rather increased than diminished. In some of the younger of the Western States the increase in school attendance has been very large; in Minnesota, for instance, there is an increase of over 10,000 pupils and 339 teachers; in Iowa, an increase of 22,000 pupils; in Wisconsin, an increase of 9,000 pupils; and in Michigan an increase of 10,000 pupils. The official statistics show that Iowa, a comparatively new State, with about the same school population as Virginia, pays more for education than all of the Southern States combined. Kansas, only nineteen years in the Union and one of the youngest of States, with a school population about the same as South Carolina, pays more than South Carolina, Arkansas, Florida, North Carolina, Georgia, Texas and Alabama combined. Kentucky shows a marked decrease in average attendance upon the schools, while in Mississippi there was a decrease of 30,000 in school population, of 14,024 in colored youth attending public schools, and of 14,207 in average enrollment. But on the other hand, 8,348 more white children attended the schools than during the year previous, and 696 more white teachers and 454 more colored teachers were employed. In South Carolina, according to the report of the Trustees of the Peabody Education Fund, the need of extended education is principally apparent, nearly 50 per cent. of the white population being unable to read the vote which they cast.

The official statement of the sums expended for school purposes shows the liberality of the Northern States in striking contrast with that of the Southern States; but some allowance should, perhaps, be made for the latter on account of their impoverished condition and the disorganized state of their society. The following figures show the amounts expended in support of common schools in the year 1877:

Northern States.		*Southern States.*	
California	$2,749,729	Alabama	$ 392,693
Connecticut	1,810,223	Arkansas	129,431
Illinois	7,288,596	Florida	101,722
Indiana	4,673,766	Georgia	400,153
Iowa	6,197,426	Kentucky	1,13[illegible],960
Massachusetts	5,662,519	Louisiana	389,429
Maine	1,170,668	Maryland	1,637,183
Michigan	3,187,913	Mississippi	481,215
Minnesota	1,181,327	Missouri	2,374,960
New Jersey	1,929,992	North Carolina	230,789
New York	10,978,234	South Carolina	226,021
Ohio	7,411,068	Tennessee	699,133
Pennsylvania	8,582,319	Texas	495,681
Wisconsin	2,249,638	Virginia	1,000,317

The following is the value of sites, buildings and other school property in several of the States:

California	$5,963,244	Pennsylvania	$25,400,762
Delaware	450,947	New Jersey	6,518,564
Illinois	17,781,929	Arkansas	1,328,376
Indiana	11,376,730	Tennessee	1,000,814
Iowa	9,264,189	Virginia	969,317
Kansas	4,357,654	West Virginia	1,040,467
Kentucky	2,380,400	Wisconsin	5,183,902
Ohio	21,145,127	North Carolina	278,000
Michigan	9,450,000	Rhode Island	2,644,541
Maine	3,022,722		

PARTY REVOLTS.

THERE are increasing indications that a spirit of unrest and revolt is taking possession of the Democratic Party in some of the Southern States. This is especially true of Texas, Louisiana and Georgia. In Texas, the discontent with the party management is so great that the election of at least two Independents as Representatives in the next Congress is regarded as all but certain. In Louisiana, where the Constitutional Convention vacated every office in the State except that of State Treasurer, the multitude of office-seekers are in such a condition of ferment and excitement as almost parallels certain periods of the carpet-bag domination. A correspondent writes that nothing is thought of but politics, "and there seems to be almost as much bitterness between the different factions of the Democratic Party as there has been in the past between that party and the carpet-baggers. The prospect is that the contest over the offices will result in a split in the party after the nominations are made." In Georgia, the Independents declare that the party can only maintain its ascendency by breaking down the existing "machine" rule, and, headed as they are by Senator Hill and other leading men, they will probably succeed in their efforts to eliminate the obnoxious elements. These evidences of a growing independence of feeling and purpose among the Democratic masses in States heretofore "solid" in their partisan fealty are among the most hopeful political indications of the hour, justifying as they do a confident expectation that, South as well as North, other and higher than mere sectional considerations will in the near future determine party relations and political results.

THE SECTIONAL ISSUE.

THE question of national unity which was supposed to have been settled by the civil war is still a "burning issue." To-day, as nineteen years ago, the country is debating whether we are a nation having a supreme government, or a mere confederacy or league of States, each member of which may exercise unrestricted sovereignty as to the acquisition of citizenship and the elective franchise as it pertains to the election of a Congress and the National Executive. The claim is set up that the States alone have citizens; that the electors are those of the States and not of the United States, and hence that Presidential electors and Members of Congress can only be elected by and under authority of the several States. In brief, the pretense is advanced that the integrants are greater than the integer. To-day this monstrous assumption is being hotly contested in the State of Ohio. It will, in a large degree, enter into the impending political canvass of New York and other States, and form the chief issue in the national campaign of 1880.

We are among those who deprecate all sectional issues. They are obstructions in the way of the nation's progress, and retard its growth in wealth and power. Our system of government, as we regard it, approaches as near to perfection as human wisdom can bring it. Under it the States maintain their distinctiveness as do the ocean billows, but they are no more independent of the nation than are the crested waves independent of the sea. They are welded together under a common Constitution—an instrument not ordained by the States, but by the people thereof acting in concert to establish a more perfect Union for national purposes. That Constitution speaks for itself in no uncertain or ambiguous terms. It declares itself to be the supreme law of the land, anything in any State Constitution to the contrary notwithstanding. More than this; it plainly sets forth that our country is not a mere confederation of States, but a perfect Union—a nation having one common organic law, one common government and one common flag to symbolize its power. The Union succeeded the old Confederation, and the Constitution declares that all debts contracted and engagements entered into by the United States shall be as valid under this Constitution as under the Confederation. It does not say as valid under this compact, or this league, or this confederation, as under the former Confederation, but as valid under this Constitution.

Whatever sophists or demagogues may say to the contrary, the Constitution establishes direct relations between the Government and individuals in whatsoever State they reside. The Government may punish individuals in any and every State for treason and all other crimes in the code, when committed against the United States. It possesses power to tax individuals, North or South, in any mode and to any extent. Furthermore, it possesses the power to demand and enforce military service from individuals all over the land. What closer relations can exist between individuals and any Government other than our own? On the other hand, the Government established by authority of the Constitution owes high and solemn duty to every citizen of the country, whether native or naturalized. It is bound to protect him in his most important rights and interests. It alone can make war or peace for his protection, and no other Government in this country possesses power to exercise like privileges. It maintains an army and navy for his defense and security, and it alone can exercise this power. Beneath its flag the citizen goes abroad, and carries all over the world a national character imparted by the Government of the Union,

Digitized by Google

and which no mere State Government can or does impart. In all that relates to war, to peace, to commerce, the citizen cannot and does not know any other Government than that prescribed by the national Constitution. What do these things teach? Simply that for certain purposes the people of the United States are one people, and have one common Government divided into executive, legislative and judicial departments—a Government transcending in its constitutional powers that of the States. The end and purpose of the Constitution was to make the people one people in making war, concluding peace, regulating commerce, and laying duty of imposts.

That the States have certain well-defined rights all must admit. Such rights, however, are in harmony with the powers granted to the National Government. Except under a false construction, or an unlegalized assumption by the States, there is no room for conflict. As the Constitution stands to-day it is not within the province of a State or States to hinder the legislative power of the Government from defining the privileges of citizenship, or enacting laws regulating suffrage in national elections. As to this latter, the language of the Constitution is explicit:

"The times, places, and manner, of holding elections for Senators and Representatives shall be prescribed in the State by the Legislature thereof; but Congress may at any period make or alter such regulations, except as to the place of choosing Senators."

The Constitution can only be overthrown by revolution, but so long as it lasts just so long will we be a nation, with one supreme Government, and one paramount and inextinguishable sovereignty.

EVENTS ABROAD.

THE symptoms of Irish discontent are both multiplying and growing more pronounced. On the 1st instant an agent of the Marquis of Sligo was fired upon in the public highway, and his son, returning the fire, killed one of the assailants, who was afterwards found to have been a militiaman. The Marquis of Headfort and his agent have been threatened with death unless they shall reduce the rent of their tenants, and there have been other equally significant evidences of the prevalent incendiary feeling. There can be no doubt that the Irish tenant-farmers are desperately in earnest in their determination to stick to their homesteads at whatever cost; and, as the *Pall Mall Gazette* puts it, "unless the Irish executive is prepared to support the landlords by measures amounting to little less than a military occupation of a large part of the country, the landlords will have to choose between virtually conceding the tenants' claim to fixity of tenure and giving the signal for an outbreak of something scarcely distinguishable from civil war." The situation is in every way grave and critical, and British statesmen will make a sad mistake if they shall fail to recognize the justice of the demand for the reform of abuses which have only too long existed as a menace to private rights and public tranquillity.

The situation in Afghanistan, if late accounts are trustworthy, is full of peril for the British. Dispatches of the 3d announce that the communications of General Roberts's column, advancing on Cabul through the Shutur-i-gandan Pass, fifty-five miles from that capital, had been cut off by the tribes on either side, rendering their position one of extreme jeopardy. The Ghilzais, who command the Pass, are inveterate haters of the British, and in the disastrous campaign of 1842 practically annihilated the British army in its retreat from Cabul, killing 3,000 in the Khoord Cabul Pass alone—the total British loss being 12,000. If General Roberts has really been surrounded, as alleged, it is difficult to see how he can escape from the trap without disaster. Two other British columns, advancing by other routes, have not, so far, encountered any opposition.

The Prussian elections, which seem to have involved the purely personal issue whether Prince Bismarck should be sustained, appear to have resulted in giving him a working majority in the Diet. Some of his conspicuous opponents have been defeated, and his position is so much strengthened that it will not probably be necessary for him to take an active personal part in the forthcoming session; indeed, it is already announced that he will delegate to the Vice-President of the Ministry the management of his interests. There is still a good deal of speculation as to the probable future relations of Germany and Russia; but beyond the fact that certain Prussian papers display an unfriendly tone in their discussions of Russian policy, there is nothing really new in the situation. The rumors of the illness of the Czar are renewed, and occasion some uneasiness in political circles abroad. In a recent interview with the Russian Ambassador to Germany and France, Prince Bismarck declared positively that no design to injure Russia was discussed during his visit to Vienna. A late dispatch declares that Emperor William is endeavoring to reconcile Bismarck and Gortschakoff.

The discussion of the Ferry Education Bill still goes on in France, and the indications are that the Ministry will not accede to any compromise on the disputed seventh section, which, it will be remembered, contemplates the destruction of the clerical influence in the schools. In a recent speech, M. Jules Ferry said that he meant to wage the anti-clerical contest with energy and perseverance, and he "felt quite sure of ultimate success." In Belgium the Bishops have been compelled to abandon their determination to refuse the offices of the Church to the parents of all children frequenting the public schools and to the teachers and pupils of normal schools, and the Pope is understood to have approved the capitulation.

The Spanish Government, alarmed at reports that a conspiracy is hatching among certain Radicals, has arrested a number of retired officers and civilians at Seville and other points. The danger is apparently exaggerated, but the seizure of arms and a clandestine printing establishment by the police seems to show that there is some grounds for apprehension. Some of the persons arrested have been, up to this time, generally believed to be entirely loyal to the monarchy, and to have no affiliations either with the movement in favor of Don Carlos or with Republican aspirations. The troubles in Cuba continue, and the Cabinet has resolved to send several thousand additional troops to that island.

The reported defeat of the Russians by the Turcomans at Geok-Tepe turns out to have been no defeat at all. The Turcomans, some 20,000 strong, after several futile assaults upon the Russians, were compelled to retire, and seem to have been unable to resist the subsequent advance of the invading columns. Opinions differ as to the probable future of the Russian expedition, but the latest intelligence apparently justifies the belief that it will go into Winter quarters at Tchikislar in consequence of the scarcity of provisions and the prevalence of sickness among the troops.

The situation of affairs in Eastern Roumelia does not improve. The civil administration is in chaos. "Self-constituted semi-secret committees have often more power than the regularly constituted authorities. Justice is subordinated to race hatreds and considerations of political strategy." The Porte has suggested the recall of Governor-General Aleko Pasha, who is endeavoring to allay the excitement, but the proposition is not regarded with favor by some of the Powers. As to the trouble between Turkey and Greece, the great Powers will make joint and identical representations with a view of bringing about an understanding.

The vigor of the Russian repressive policy is shown by the fact that 11,854 persons were incarcerated in the Central Prison at Moscow during the Summer, 10,474 of whom were condemned to exile in Siberia.—The German administration in Alsace is definitely installed, Field-Marshal Manteuffel having assumed the office of Governor, October 2d.—Heavy failures of business houses in Vienna and Hamburg, with connections in Paris, Manchester and Liverpool, are announced.—Five of the City of Glasgow Bank directors, who were convicted and imprisoned for uttering fraudulent balance-sheets, have been released, their terms having expired.—The discontent in Bosnia and Herzegovina is general, and the population unanimous in its dislike of Austrian rule. The Duke of Wurtemberg has demanded reinforcements to suppress the insurrection in Herzegovina.

THE story of the celebration of Decoration Day in this city by the Grand Army of the Republic is told in a neat little volume, for a copy of which we are indebted to General Charles K. Graham. The volume includes all the addresses made on the occasion, the poems read, and a sketch of all the ceremonies attending the decoration of graves of the dead, etc.; and to veterans of the Grand Army and all interested in them, it will prove a pleasant memorial of the most notable commemoration ever had in this city of the deeds of those who died for the Union.

THE message of President Diaz to the Mexican Congress embodies gratifying evidences of substantial progress in our sister republic. It shows that over sixty miles of railway have been built during the year; there has been a considerable augmentation of telegraphic communication, an increase of schools and in the numbers of pupils, and an improvement in the financial situation of the Government. Peace prevails over the entire republic. The President declares himself against a re-election, but it is believed by many that the interests of the country would be promoted by his continuance in power.

IT is gratifying to learn that the estimates of the several executive departments of the Government of the amounts needed to carry on the branches of the public service under their charge, for the next fiscal year, show in nearly every instance a reduction as compared with the amounts appropriated for the present year. With the business and finances of the country improving daily, and the expenditures for public purposes steadily diminishing, the outlook for the future must certainly be regarded as more full of promise and encouragement than some prophets of evil would have us believe.

MR. EVARTS has signalized his administration of the State Department by requiring its representatives abroad to do everything in their power for the promotion of American commerce and the extension of our trade. The French Foreign Office is now said to be considering the expediency of greatly advanced steps in the same direction. The plan under consideration contemplates the creation of French Chambers of Commerce abroad, and the appointment of commercial agents as assistants to the more important French consulates. Such a system, vigorously carried out, would undoubtedly prove highly advantageous to the commercial interests of this Republic.

CIVIL Service Reform, in this State, at least, is stark and stiff, and the sooner the corpse is buried out of sight the better it will be for the public nostrils. Two years ago it was held by the Administration to be wholly inadmissible for any Federal employé to participate in politics. Now Secretary Sherman, in a letter to a Federal official in this city, advises him to take part in the campaign, signifies his perfect willingness to have Government employés contribute to the campaign fund, and agrees to take the stump himself in behalf of the Republican nominees. Obviously, it is time that the funeral-march should be sounded for the poor abortion of civil service reform, so cruelly murdered in the house of its friends.

THE imports of gold and silver into the United States during the months of July, August and September exceeded the exports by $32,567,287. Not only are the precious metals coming to us, but our bonds are also coming back, and the interest formerly payable abroad is now largely kept at home. As to the improved condition of business, it is well illustrated by the fact that while in September, 1878, there were thirty failures in New York, with liabilities of $4,300,000, the liabilities of the persons failing in the month just closed were only $315,160, and by the kindred fact that many thousands of laborers are now employed at good wages who were one year ago out of employment and seeking it in vain. And what is true of New York is true of all the business centres of the country.

IT is stated, on apparently good authority, that our existing treaties with China are about to be modified in some important particulars, negotiations being now in progress between Minister Seward and the Chinese Government. The treaty modifications will tend to restrain the immigration of the lower orders of Chinamen and their admission to the full advantages of citizenship so long as Americans shall be excluded from any part of China, or permitted as now to frequent only a few of the principal provinces. It is understood that the revised treaties will have as their main object the promotion of commerce and trade, it being the intention of the Chinese Government to harmonize its commercial relations with the leading nations, and especially to place such restrictions upon the forced coolie trade as will effectually prevent it.

OFFICIAL statistics show that the whole amount of internal revenue collected during the last fiscal year was $113,561,610, and the cost of collection $3,527,956. The total receipts were $2,462,984 greater than for the previous year, while the cost of collection was $728,454 less. The average cost of collection throughout the whole country was a trifle over three per cent., excluding the Territories, where the cost is necessarily much greater than in the States. The eleven States which seceded paid last year $11,627,080 of internal revenue, and the cost of collection appears to have been double the average cost for the country at large. Kentucky, for instance, paid $7,640,805, or about one-half as much as New York, but the cost of collection per $100 in Kentucky was about fourteen times as great as in New York. The total revenue derived from the tax upon banks and bankers other than national banks during the fiscal year was $3,198,883.

A NUMBER of cases involving the question of State Rights will come before the United States Supreme Court at the sitting which commences October 13th. Among them is a case from West Virginia, which State has passed a law excluding colored men from juries. There is also the case of a revenue officer from Tennessee who is indicted for murder in the courts of that State, the case having been removed to the United States Court for trial, on the ground that the deed was committed in the necessary execution of his duty as a revenue officer. The question of the constitutionality of the law authorizing such a removal is to be discussed, as well as the manner in which the trial is to proceed after it is transferred to the United States Court. Another case is that of two judges of the State courts of Virginia who have been indicted in the United States Court for preventing colored men from sitting on the juries, and who have applied for a habeas corpus. There are also several cases involving the constitutionality of the election laws, and of the Civil Rights Act. It is to be hoped that explicit decisions on all these points may be promptly given.

NEWS OF THE WEEK.

Domestic.

SOUTHERN distillers are about to ask for a reduction of the tax on whisky.

REV. T. DEWITT TALMAGE reached home from his European tour September 30th.

ALL the mills at Fall River, Mass., with one exception, are now running in part or in full.

THE Treasury announces that the four per cent. loan has been closed up without the loss of a dollar.

THE revenue of the New York Post Office over expenses for the quarter ending September 30th was $53,320.

THE City of Evansville, Ind., has abandoned its municipal organization in order to escape paying a debt of $65,000.

JUDGE ABBOTT refuses to again accept the straight-out Democratic nomination for Governor of Massachusetts.

A SIX days' walk for the O'Leary belt commenced at Madison Square Garden, in this city, October 6th, with thirty-five competitors.

FOR the first time since 1861 about 20 per cent. on the salaries in the departments at Washington were paid October 1st in gold and silver.

THE investigation of the charge of bribery against Senator Ingalls, of Kansas, has not been sustained by the evidence before the Congressional Committee.

GENERAL GRANT and party last week visited the Yosemite Valley. President Hayes and party visited Indianapolis and other Western cities, being warmly received.

THE committee of creditors of the Jay Cooke estate have declared a third cash dividend of 2¼ per cent. They also declared an "asset scrip dividend" of 10 per cent.

A NEW combination of the coal companies has been effected, looking to a restriction of tonnage and consequent increase of prices—the compact to continue for three years.

MR. JOHN JASPER, JR., has been elected City Superintendent of Schools in this city, in place of Mr. Henry Kiddle, whose Spiritualistic vagaries have excited so much remark.

TWO hundred and fifty German emigrants arrived here, October 3d, bound for Texas, where they intend to settle as farmers and farm laborers. Most of them come from Rhenish Prussia.

THE Republicans of Nebraska have nominated General Amasa Cobb for Supreme Court Judge, and declared in favor of honest finance, economy in expenditures and the equality of citizenship.

AT a fair in Adrian, Michigan, October 2d, a stand occupied by 2,000 persons gave way, precipitating the occupants into the ruins. Sixteen persons were killed and seventy-five others injured, some of them very seriously.

THE receipts from internal revenue for September were $2,842,857, and for September, 1878, they were $9,254,227. The receipts from customs for September, 1879, were $16,056,524, and for September, 1878, $13,735,226.

AT the United States Sub-Treasury in Philadelphia, October 1st, all payments of interest on the four per cent. loan were made in gold coin. Gold was also given in payment of all currency obligations, on account of the accumulation of coin in the vaults.

A NATIONAL Militia Convention, held at St. Louis last week, approved the Bill now before Congress for there organization of the militia, and adopted a resolution asking for $2,000,000, the money to be divided among the several States, according to population.

A MONUMENTAL stone designed to mark the spot at Tappan, N. Y., where Major John Andre was hanged, October 3rd, 1779, was erected last week under the direction of Cyrus W. Field, who had for this purpose purchased the land on which the execution occurred.

THE reduction of the public debt during the month of September amounted to $2,563,781. Nearly $8,000,000 were paid out of the Treasury during the month on account of pensions arrears. Except for this, the decrease in the debt would have been about ten million dollars.

A GREAT number of religious revivals have occurred during the past two months in Dinwiddie and the surrounding counties in Virginia, and even extending into the neighboring counties of North Carolina. In a number of instances from 75 to 100 conversions have occurred at a single meeting. The revivals are still in progress.

THE contest between Mayor Cooper and the Police Commissioners of this city continued last week—both sides invoking the aid of the courts. The Extraordinary General Term of the Supreme Court finally issued an order to the Board to appoint Tammany inspectors of election. The Commissioners made some progress in this work, but it was slow and attended with sharp disputes.

IT has been found that the track at Madison Square Garden, in this city, upon which the Astley Belt match took place in 7 feet 5 inches short of an eighth of a mile. It follows from the discovery that Weston, Krohne and Ennis got some money out of the match which did not belong to them, neither of them having made 450 miles, and that Merritt, Hansel, Hart and Guyon got less than they earned.

Foreign.

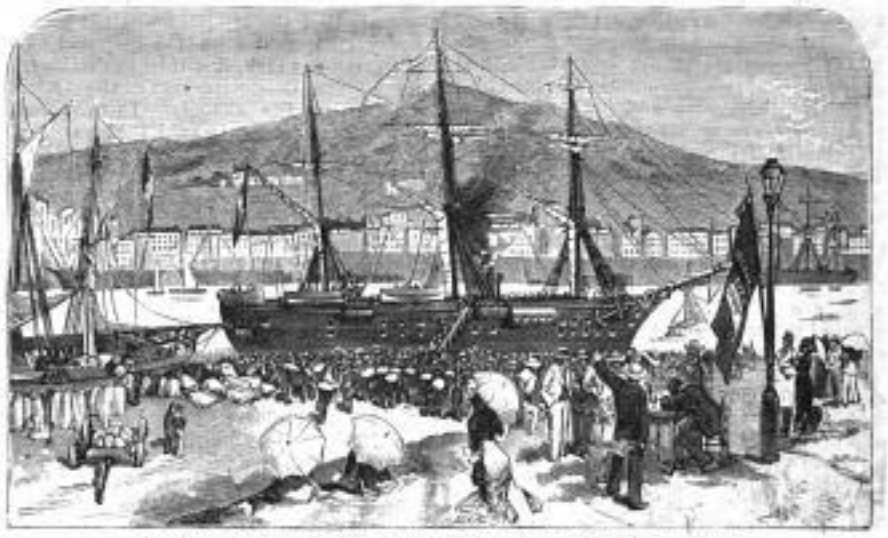
SPAIN and Santo Domingo have adjusted their differences.

PROMINENT Bonapartists have arrived in London to try and effect a reconciliation between the ex-Empress Eugenie and Prince Jerome Napoleon.

MR. CHARLES F. MACDONALD, Superintendent of the United States Money Order System, has arrived at Berlin to negotiate a new postal money-order treaty.

GUILLAUME ALPHONSE DEVERGIE, the eminent French physician and medical writer, and Prince Paul de Talleyrand, a grand-nephew of the celebrated diplomatist of that name, are dead.

A HANDSOME piece of furniture is to be made from the timbers of the old Arctic exploring ship *Rescue* for presentation to Mrs. Grinnell, the widow of the late Henry Grinnell, of New York, who fitted out, at his own expense, two expeditions for the search after Sir John Franklin.



THE Peruvian and Bolivian armies are advancing against Chili. It is reported that the Chilians, before evacuating Calama, sacked and burned that place. The Chilians have made raids into Bolivia, destroying commissary and ordnance supplies, and seizing horses and carts. It is reported that Peru has suspended payments from the Treasury, and prohibited the exportation of silver.

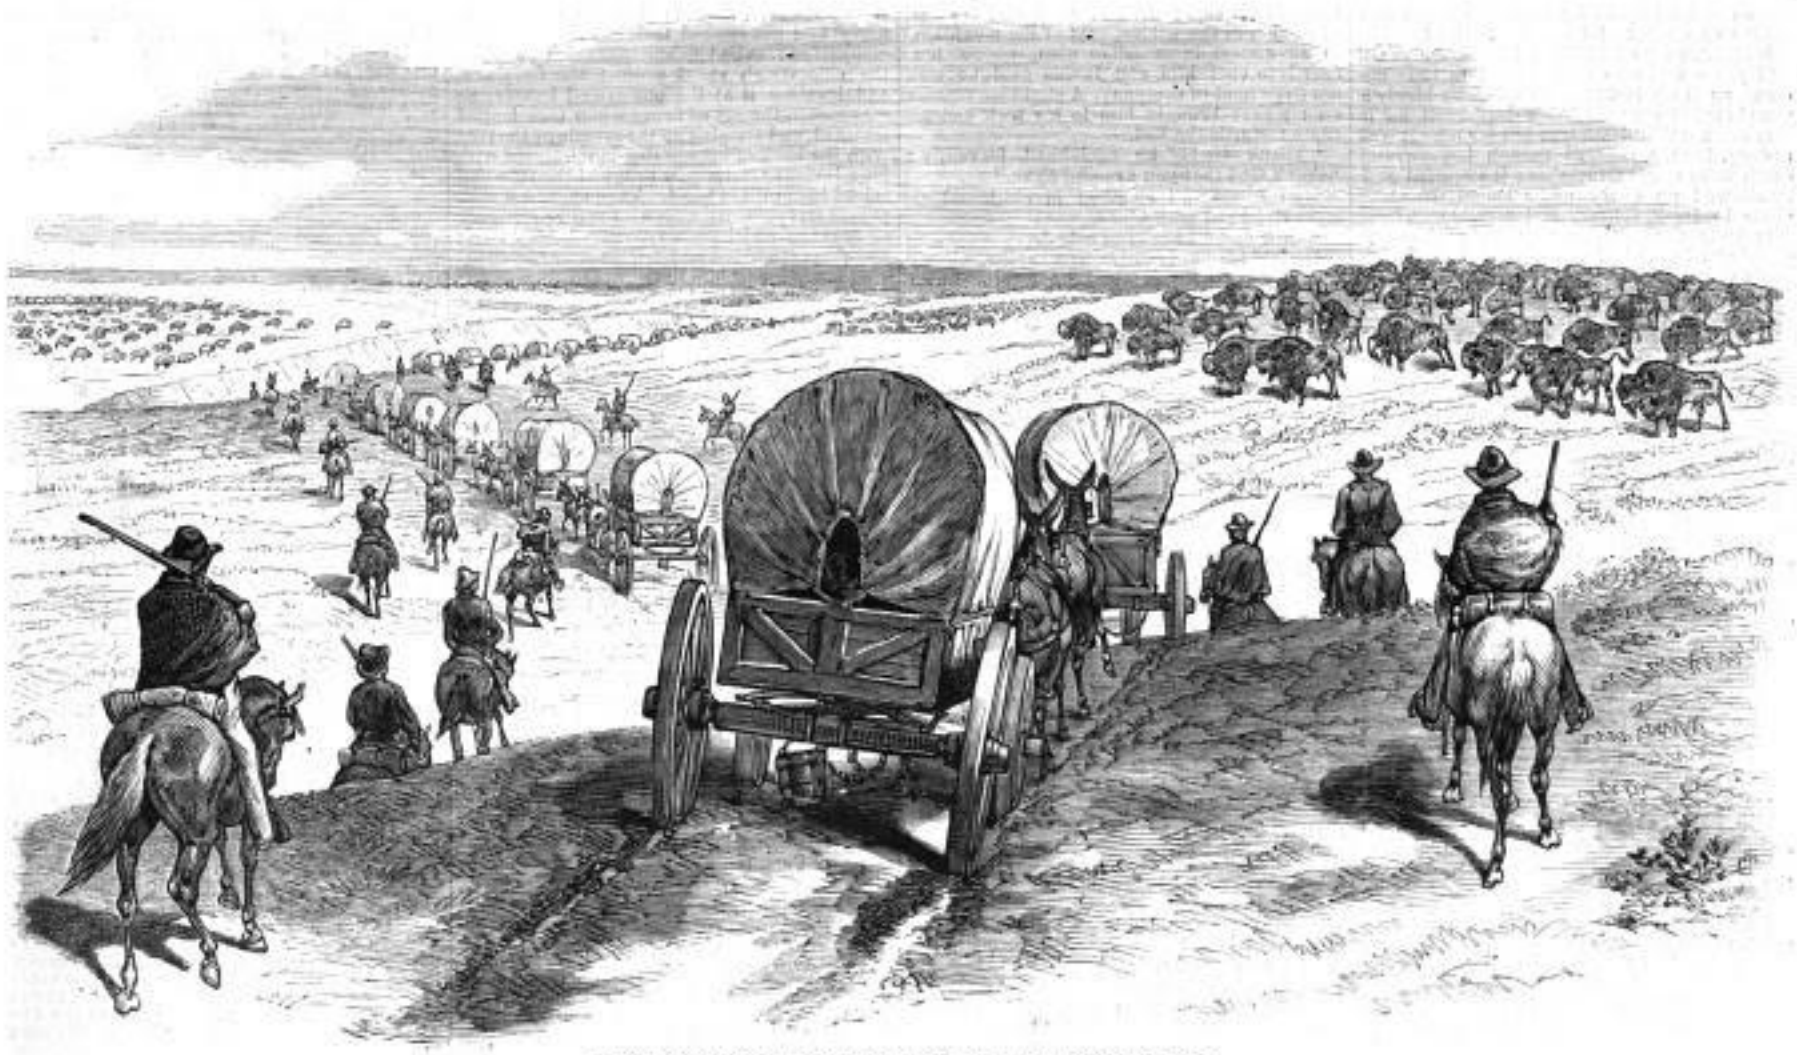
CLOSE OF GEN. MILES'S CAMPAIGN AGAINST THE SIOUX.

THE last Indian campaign, led by General Nelson A. Miles, against the Sioux, under Sitting Bull, of which we have published a number of illustrations, was brought to a close with comparatively little loss of life. General Miles started upon his tramp early in June last, and on September 4th he arrived at Fort Keogh, Montana Territory, bringing in a body of 1,000 half-breeds, who had been furnishing arms and ammunition to the Indians between the Yellowstone and the Dakota line. He succeeded in clearing the country he traversed of all the roving bands which had created trouble in the Spring, drove Sitting Bull and his chiefs across the Canadian line, and broke up the illicit traffic in munitions of war which had been carried on openly at various points on the line of his march.

Our artist, who has supplied us with a variety of sketches of camp and march life, concludes the series with the installment published this week. The present sketches are jointly of a military and hunting character. As the column and train moved along, it was necessary to throw out on the flanks a goodly force to prevent the multitude of buffaloes encountered breaking through the line and creating a panic among the horses. The troops lived mainly upon buffalo-meat, and to secure this from day to day, soldiers were told off to hunt the monarchs of the plains. Lest, in the excitement of the chase, the men might ride too far or remain on the grazing-grounds too long for their own safety, they were ordered to return at a stated hour in the afternoon by a call from the bugle. Whenever a stream of water was reached there was a gratifying halt, and man and beast enjoyed a fine season of washing and drinking.



THE BUGLE-CALL FOR THE RETURN OF BUFFALO-HUNTERS.

AN AMERICAN COLLEGE IN TURKEY.

AN official report received from Constantinople describes the commencement exercises of the American institution of learning, known as "Robert College," in that city, and gives the following facts with regard to its objects, condition and usefulness: The college was founded sixteen years ago by Mr. Robert, a gentlemen of New York, recently deceased. Since then, however, although it has received several gifts from Mr. Robert and other Americans, it has been self-sustaining and has rapidly increased in popularity and usefulness. Its students number at present about two hundred, with a prospect of increased attendance next year.

The president, Dr. Washburne, is a gentleman of broad culture, and the other members of the faculty, most of whom are Americans, occupy an enviable position among the foreign residents. No distinction of race or religion is recognized as a condition of admission to the college, Mohammedans sharing its benefits equally with Christians of all creeds.

The course of instruction is principally in English, but the native languages, modern Greek, Armenian, Turkish and Slavic, form an important part of the curriculum. Much attention is given to mathematics and sciences, an excellent philosophical laboratory forming one of the most interesting features of the institution. The classics, history and the modern European languages are also taught. Thus far the Turks seem to have been behind their neighbors and subjects, the Bulgarians, Slavs and others, in availing themselves of the advantages of the institution; but it seems probable that this will not long continue to be the case, as the high character of the college and its officers, and perhaps still more the positions taken by its graduates, can scarcely fail in time to overcome even Mohammedan prejudice, particularly as it is avowedly nonsectarian and makes no attempt to convert its students, aiming rather at the spread of general intelligence than the diffusion of special religious views. The excellent work already accomplished is shown by the fact that ten graduates of the college are among the members of the recently elected Bulgarian Assembly, a fact which points suggestively to the important part which this institution may play in the future of the nations which seem likely to arise in this part of Europe from the breaking up of the Turkish Empire.

The only similar institution in that part of Turkey is one on the Asiatic side of the Bosphorus for the education of native women, which is also American in its origin and management. Although somewhat less pretentious than Robert College, it occupies a similar position in public esteem, and in a quiet way is accomplishing a work of which it would be difficult to over-estimate the importance.

THE SOUL'S MATE.

THE bard has sung, God never formed a soul
Without its own peculiar mate, to meet
Its wandering half, when ripe, to crown the whole
Bright plan of bliss, most heavenly, most complete.

But thousand evil things there are that hate
To look on happiness; these hurt, impede,
And, leagued with time, space, circumstance and fate,
Keep kindred heart from heart, to pine and pant and bleed.

And as the dove to far Palmyra flying
From where her native founts of Antioch beam,
Weary, exhausted, longing, panting, sighing,
Lights sadly at the desert's bitter stream,

So many a soul o'er life's drear desert faring—
Love's pure, congenial stream unfound, unquaffed—
Suffers, recoils; then, thirsty, and despairing
Of what it would, descends, and sips the nearest draught.

THE ONE-ARMED HUNTER.

A STORY OF MINING LIFE IN CALIFORNIA.

[Concluded from last week.]

AFTER a desperate struggle we reached a ravine over which the trail crossed and down which the water thundered, a fierce and boiling flood. To attempt to return over the path which I had just descended was almost certain death. It was impossible to remain till morning where I was, for I felt the marrow chilling in my bones. There was but one thing to do, and that was to cross; so, tightening my belt, with a short prayer for safety, I dashed into the flood. In an instant I realized that I had terribly miscalculated the chances of escape; once in the grasp of that seething torrent, I was borne along as a feather is borne on the breath of a whirlwind, and just as powerless to resist. On and onward we went, at times striking some obstacle, to be spun around till my brain reeled and my head seemed ready to burst. In the brief moments that I was flying down that terrible track, it seemed as if my whole life passed in miniature before me; minute circumstances long past and forgotten were conjured up with a vividness never felt before or since, and I could see the faces of schoolmates who had been buried for years and years, and who now seemed to bear me company in my last terrible ride. Suddenly a sound struck my ears like a deathknell, for it was certain that death was not far off. It was a deep, hoarse roar, as though heaven and earth were coming together; it engulfed and swallowed up every other sound, standing alone by itself, solitary and terrible. There was little time for thought. The dreadful speed at which I had been hurried along suddenly seemed accelerated a hundredfold, then came a wild rush and a fearful leap, and all was over.

When I awoke the first thing that attracted my attention was a figure that sat between me and the fire in the low cabin where I lay. The room was small, the cabin being built of rough logs chinked up with earth. There was a little window at one end of the hut and a rude door at the other. The bed on which I lay was composed of the fine boughs of the mountain-pine, covered with the skin of a grizzly-bear. Around the walls were hung various trophies of the chase, and over the fireplace was a huge pair of elkhorns which had once been the crown of some forest king. There were a few cheap prints framed with the small cones of the mountain-pine, and in the centre of the floor was a rude table, evidently the work of some amateur carpenter, for the legs were rough saplings driven in the ground, while the remainder seemed to be made rather for use than ornament. Beside the fireplace stood a long Kentucky rifle which had evidently seen hard service, and hanging suspended from one of the tines of the elkhorn was a belt in which were a revolver and a huge hunting-knife, which, like the rifle, were evidently old companions of their owner.

The figure before me sat in the full glare of the fire and seemed buried in deep contemplation as he gazed into the glowing coals. He was clad in a dressed deerskin hunting-shirt, which was old and worn, and his legs were incased in deerskin leggings similar to his shirt; beside him on the floor lay a foxskin cap, and near by it were a pair of snowshoes which had been recently used. In appearance my host was above the middle height, and apparently about forty-five years of age—the whole frame denoted immense power, while the clear Roman cut of the face, the large curving nose and the firm-set mouth told of a character not to be trifled with and equal to any emergency of danger; on the side towards me the sleeve hung empty and limp, while his face rested on his left hand as he gazed thoughtfully in the fire. The more I looked at him, the more I became impressed that I had seen that face before, and for some minutes I racked my brain till at last it all came back on me. It was in 1850, when Mormon Bar was in its glory. A rich strike had been made in Morrison's claim, and Jack Shepley and two others came up with a pan of gold to Paddy Flynn's saloon, and all the boys gathered in from far and near to see it. Jack Shepley sat on a high stool behind Paddy's bar, with a cocked revolver in his hand to see that nobody tampered with the treasure, and beside the pan on a card was the ominous inscription "Hands Off." Among the crowd that filled the saloon was a young lawyer from Sacramento, named Ned Murray; he was a talented, handsome fellow, but dreadfully dissipated, and had abandoned his profession of the law, and, like many more in those early days, had become a sort of half-miner half-gambler, but withal he was generally liked. He was a bold player and a lucky one, and as fearless of personal danger as it was possible for a man to be. He had earned the lasting hate of two gamblers, Jack Ferris and Joe Mills, who, at their thieving game of faro, had robbed half the miners on the Bar. One night Ned Murray sat down, and, laying his cocked revolver on the table, told Jack to give him a square deal, as he threw down a pile of gold. Jack knew his man and dealt the squarest game that was ever dealt on the Bar, and, as a consequence, the bank was bursted and Ned Murray walked off with the ingots. Joe Mills swore revenge, and he and Jack Ferris were in the saloon that night.

In the course of the evening a row occurred over a game of cards; a pistol was discharged and the first shot shattered the only light in the room, and the fight became general. In the dark, screams and yells filled the air, for they fought with the fury of demons. When the lights were brought two men lay dead upon the floor, and Ned Murray lay across the doorsill with his right arm shattered and covered with blood from a terrible gash down the side of his face, which had laid open his cheek and severed his left ear. When he came to, the doctor pronounced amputation necessary, and maimed and bleeding as he was, I shall never forget the iron stoicism with which he passed through the trying ordeal. As soon as he recovered, his terrible disfigurement seemed constantly to prey upon his mind, and in a little while he disappeared from the Bar, and was heard of no more. Jack Ferris and Joe Mills disappeared on the night of the shooting, and many supposed they had left the country. I had seen Ned Murray but once, and that was when I assisted at the amputation.

Six years had passed; the whole contour of the man was changed, but the more I looked the more the conviction was forced on me that the one-armed man before me was Ned Murray of Mormon Bar, and I felt certain, too, though I had never seen him to know him, that my entertainer was also known as "One-armed Gus," the terror of the mountains. I had heard of him everywhere as a man of whom the boldest ruffians stood in awe; a fearless horseman, riding a wild mustang that nobody else could mount; a dead shot with either pistol or rifle, and ready with his knife on the slightest provocation to settle his disputes in the shortest manner. He lived alone in a cabin in the wildest part of the mountain, in an almost inaccessible glen, where few cared to visit him, and it was said he was not over fond of company. A slight movement on my part brought him to his feet, and he came towards the bed.

"Thank God!" he exclaimed, fervently; "thank God that you are still alive."

My face was all swathed in cloths which were dyed red with blood.

"How came I here?" I asked.

He laid his hands to his lips, saying, "Don't talk; by-and-by you shall know all. But I can tell you this: I found you on the morning after the storm lying upon the rocks outside my door, and unless you came down the cataract, I know of no other way you could have reached it."

Then all the events of that terrible night came back upon me, and I sank back exhausted. One-armed Gus watched over me tenderly, and when I recovered sufficiently to speak, I asked him if he remembered me, and then I recalled the night in which he had met with his terrible misfortune.

Looking mournfully at his empty sleeve, he said, in a choking voice:

"I remember it well, sir; I remember it well. God knows life has little hold on me, for it has been a life of constant suffering and grief. Cut off from the companionship of my fellow-men, who, when I go among them, look on me with horror, I have courted death in a thousand forms, only to see it fly from me. But I felt that I could not die till I met the murderous villain, Jack Ferris, who cut off this left ear. Something tells me that I shall meet him somewhere. On that hope I have lived for years, and in that hope I still live on; and when the hour of retribution comes—as come it surely will—then, and not till then, I shall die content."

As he spoke he held a cup of cool water to my lips, then, strapping on his snowshoes, he seized his rifle; adjusting his belt, he flung his cap on his head and vanished through the door. And this, then, is the terrible One-armed Gus, I said to myself, as I remembered the wild stories of his courage and prowess, many of which bordered on the supernatural.

While I was thinking on my host and the experience of my dreadful ride, I felt that my whole body was as if it had just been taken from the rack. My head was terribly swollen, and my right arm was powerless. Suddenly the light that came straggling through the little window above me was darkened, and, looking up, I saw a white face laid flat against the pane. The face was pinched and sharp, and ashy pale, and two diamond-glittering eyes peered into the cabin. There was the crackling sound of footsteps on the frozen snow, and then the door was cautiously opened and the visitor stepped timidly in. He did not observe me as I lay in the dark corner of the cabin, and evidently supposed himself alone. Approaching the table, he gathered up the fragments and ate them voraciously, as if starved, while he trembled like one chilled to the bone. He wore a blood-stained cloth around his head and a bandage on his right arm also stained with blood. When he had consumed what was on the table he went to the cupboard and helped himself to whatever he could find; then, returning to the fire, he threw on a couple of sticks and stirred the smoldering embers into a blaze. As the bright flame shot up he observed me on the bed in the corner, and, drawing his knife, he approached me. I looked up, and to my horror saw that it was the gambler Langham. The sharp knife glittered before my eyes; his hot breath seemed to scorch my face as he threw back the cloth with an exclamation of horror, for I was disfigured beyond human recognition.

As he stood leaning over me suddenly he started; there was a sound of footsteps on the outside, and the next instant One-armed Gus stood in the door. Seeing Langham, whom he could not recognize at once, standing by the bed with the knife, Gus threw up his rifle, and covering Langham, told him to hold up his hands and let his knife drop. Langham did as he was commanded, and stood with his hands above his head.

"Who are you and what do you want?" said One-armed Gus to Langham, who stood trembling before him.

"A poor traveler, hungry and footsore, hunted down by enemies, asks your shelter and a mouthful to eat," said Langham.

"If that's all," said One-armed Gus, dropping the muzzle of his rifle on the floor, "sit down and you shall have it, and pardon the rough welcome of a man not used to entertain visitors."

Langham sat down on a stool by the table, while Gus went to the closet and produced a bottle and a couple of tin cups. Gus placed the bottle before his guest and presented him one of the cups, into which he poured some of the contents of the bottle; he then reached the bottle to Gus who stood on the opposite side of the table, and as they raised the cups to their lips their eyes met, and for the first time in six years Ned Murray and Jack Ferris—for he and Langham were one—stood face to face. Gus dashed his cup upon the floor, and, starting back a step from the table, whipped out his huge hunting-knife from his belt. Langham's knife was already in his hand, and he felt that his hour had come. In a close fight he knew that he had no chance with the desperate man before him; so throwing his all upon one desperate cast, he threw his knife with deadly aim, for it whizzed by Gus's head and stuck quivering in the side of the cabin. Gus paused for a moment, glaring on him with the ferocity of a tiger. "You murderous thief!" he said, "have we met at last—you who six years ago tried to murder me in the dark—I wish you had, for if your knife had gone deep enough it would have spared me all these bitter years of misery and suffering." As he spoke, Langham, without seeming to move, had got around towards the fireplace, and just as Gus had finished speaking he seized the rifle which stood against the fireplace, and, leveling it at the one-armed hunter, he was just in the act of firing when Gus leaped forward, and striking up the muzzle of the rifle with the back of his hunting-knife, closed with his adversary, who now dropped the rifle and seized his uplifted hand. Then ensued a desperate struggle, wherein all the dire elements of revenge and hate were mingled. At last Langham stumbled and fell backwards, dragging his foe with him to the floor. As Gus fell forwards, his pistol slipped from its holster and fell right into Langham's hand. Cocking it quick as lightning, he fired; but in that same instant, the desperate hunter's keen knife descended and was buried in the gambler's heart. Then all was still. The deadly foes lay side by side all through the silent night, and I kept a vigil with the dead.

When the morning light broke in upon the scene, I dragged myself down the mountain to the nearest cabin, and the next day a party of miners went up to One-Armed Gus's cabin and buried the aforetime owner under the big pine-tree right above the spring. Langham they buried on the other side of the creek; and as you ride down the trail you can see the little head-board that marks the last resting-place of One-armed Gus, the Hunter of the Sierras.

GRAPE CULTURE IN NEW YORK.

THE native country of the vine is shrouded in obscurity, and profane history is silent on the subject of the first vineyard and the first—what Artemus Ward would facetiously term—"flowin bole." The vine is wild in Greece, Italy and the south of France. In the region between Caucasus and Ararat and Taurus it flourishes abundantly, as also in Mingrelia and Georgia. It is indigenous to America, albeit the apocryphal stories anent its introduction by Sir Walter Raleigh into this country. The sculptures of antiquity are emblazoned with the vine. The shield of Achilles represented a vine-gathering, while vine-culture in Egypt has been commented upon both by Herodotus and Theophrastus. Pliny speaks of a finger-shaped berry, and Mr. Pliny, a high authority on viticulture, states that he recently received slips of a vine, imported from Hungary, the fruit of which was described as an inch and a half long by half an inch in diameter—a form which might be easily described by an imaginative writer as resembling a finger. Virgil's Second Book of Georgics is a practical treatise on vine-culture.

Vitis, the generic name of the vine, is derived from the Latin word *vincere*, to bind. *Vieru*, to bend, is likewise pressed into service, while in a work published in 1638, the name vinum is attributed to *a vi*, from its strength. The distinctive differences between European and American vines set botanists by the ears. One thousand four hundred different varieties of the vine have been collected and examined by M. Champagny in the gardens of the Luxembourg, Paris, and 550 different distinct kinds designated. There are four American species, with 300 varieties. The vine is a long liver. Pliny mentions a 600-year old, and at 300 years the vine bears in Italy, 100 years being counted young. It stretches wondrously. Spetchley describes a vine trained against a row of houses in Northallerton, Yorkshire, which covered a space of 137 square yards, its stem being three feet eleven inches in circumference at a short distance from the ground. The Hampton Court Vine is celebrated for its immense size, and also from the fact that George the Third once directed a royal gardener to cut one hundred dozen bunches of grapes to be presented to the players of Dury Lane Theatre, a favorite resort of the mutton-eating monarch. The gardener not only procured the required number, but sent word to the King that he could cut off as many more and still have plenty of bunches to spare. This fruitful vine was planted in 1769. Its stem is fourteen inches in girth and one of its branches extends 200 feet. California is not a whit behindhand in Brobdignagian vines. At Montecito, four miles from Santa Barbara, there is a single vine the main stem of which is ten feet in circumference. It is trained upon a trellis sixty feet in diameter. Seven thousand bunches have been collected from it in a single season, yielding 18,000 pounds. In the south of France instances are known of bunches of grapes attaining a weight of eight and ten pounds, while in Syria bunches weigh up to seventeen pounds. Even at the present day, not to speak of the enormous clusters brought by the Jewish spies from the Promised Land, the grapes at Damascus frequently weigh twenty-five pounds to the bunch. One thousand to fifteen hundred dollars have been realized from an acre of Isabella grapes grown in Western New York. In 1564 wine was made from the native grape in Florida. The earliest attempt to establish a vineyard in the British North American Colonies was by the "London Company" in Virginia, prior to 1620. Wine was also made in Virginia in 1647. On the authority of Beverly, who wrote prior to 1722, there were vineyards in that colony which produced 750 gallons a year. In 1683 William Penn attempted to establish a vineyard near Philadelphia, but without success. In 1769 the French settlers in Illinois made 110 hogsheads of strong wine from native grapes. A Swiss colony attempted vine-raising in Kentucky in 1790, but as they cultivated the foreign vine only, their enterprise failed. The great turning point of vine-culture in this country was reached when Mayor Adlum, of Georgetown, D. C., introduced the Catawba grape which, for delicacy and piquancy of flavor, has proved a formidable competitor to many of the most esteemed European vines.

Before we enter into the details of vine-culture, to be illustrated in succeeding numbers of this paper, it might be well to give a few figures in connection with the development of our native wines. According to the most reliable statistics, the average product of late years has been 20,000,000 gallons, 8,000,000 being of California growth and the remainder of the States east of the Rocky Mountains, though some years it has been considerably greater, and this year California alone promises a yield of 12,000,000 gallons, while a proportionate increase is probable in the other States, more particularly the Southern States, where great interests are developing in this industry. These figures look small beside the 1,287,000,000 gallons produced by France (crop of 1878); but, then, it must be borne in mind that only about 3½ per cent. of that quantity comes to the United States, and this brings about 45,000,000 gallons in competition with our own products. Starting with the balance only slightly against us, and being free from tax, it would seem that our native dealers could, without much effort, take the lead and become virtual masters of the situation. That this state of things is rapidly being realized is shown by the *American Wine and Grape Grower* in the fact that by the receipts at the port of New York during the past six months, over 900,000 gallons were of California production against 700,000 gallons from Europe, showing 100,000 gallons balance in our favor. Our illustration represents grape-gathering in a vineyard near Marlboro, on the Hudson River.

The Depth of Niagara.

THE cañon of Niagara is far more mysterious than the falls themselves. Within the era of civilization in America no one was able to successfully pierce through the fierce and terrible undercurrent to the bottom until, recently, the Government itself thought it necessary in behalf of science to undertake the task. All the great schemes imagined to be strictly scientific were put in operation by bunglers to obtain the depth of water beneath the falls. Bars of railroad iron, pails of stones, and all unreasonable bulky and awkward instruments, were attached to long lines, and cast off the railway bridge and elsewhere, but positively refused to sink. The very bulk of the instruments was sufficient, no matter what their weight, to give the powerful undercurrent a way to buoy them up upon the surface or near it. The United States Corps of Engineers, however, with a small lead of only twelve pounds weight, attached to a slender rope or sounding-line, easily obtained the depths from the falls to the lower bridge. A correspondent who assisted in the hydrographical operations, describes the operation as follows: "One day we launched in a small boat not far below the falls, and entered on a most exciting and perilous exploration of the cañon. The old guide, long in charge of the miniature ferry situated here, accompanied the party. With great difficulty we approached within a short distance of the American falls, which darted great jets of water on us, and far out into the stream. The roar was so terrible that no voice or human sound, however near we were to one another, could be heard. The leadsman cast the line, which passed rapidly down and told off eighty-three feet. This was quite near the shore. Passing out of the friendly eddy which had assisted us up so near the falls, we shot rapidly down the stream. The next cast of the lead told off 100 feet, deepening to 192 feet at the inclined railway. The average depth to the Swift Drift, where the river suddenly becomes narrow, with a velocity too great to be measured, was 153 feet. Just under the lower bridge the whirlpool rapids set in, and so violently are the waters moved that they rise like ocean waves to the height of 20 feet. At this point the correspondent, at the time of the survey, computed the depth at 210 feet, which is accepted as approximately correct. The terrors of the gorge

Digitized by Google

below this point are known to but few. Indeed, the foot of man scarcely ever treads this infernal region, where almost perpendicular walls rise on each side of the verge of the river from 270 to 360 feet in height."

Another Indian Outbreak and Massacre.

ON Monday, September 29th, as Major Thornburgh, with three companies of United States cavalry, was passing through a cañon near Milk River, in the wild northwestern corner of Colorado, his command was suddenly attacked by a band of Ute Indians, numbering several hundred. Major Thornburgh was instantly killed, and as his men were forced to retreat, thirteen of them were killed and twenty or more wounded. The Indians burned a wagon-train and killed about three-fourths of the horses of the troops. As hastily as possible the remainder of the troops intrenched and sent the alarm to the nearest post. On October 2d General Merritt left the Union Pacific Railroad station at Rawlins, Wyoming, with 500 men, on a forced march to the rescue of the troops under Captain Payne, who were believed to be surrounded by the Utes. A party of 400 men followed from Rawlins on the 3d. Three theories are given of the cause of the outbreak. One from Washington attributes it to the malice of a mail-contractor, who, having lost his contract, is endeavoring to prevent his successful rival from getting the benefit of it. Another and more probable one, because based upon letters of warning and a demand for the protection of troops, is that Indian Agent Meeker exasperated the Indians by continuing to plow up ground on property they considered their own, and in spite of orders from them to desist. The third is that a gang of white miners made an irruption into the Ute reservation last June, and when the Indians complained to the agent of the trespass they could obtain no redress. Mr. Meeker had had frequent difficulties with members of the tribe, and such fears were entertained of an outbreak that he applied for troops to protect the settlers several weeks previous. It was in answer to this request that General Pope ordered Major Thornburgh on the mission that proved fatal to that commander. The Utes are said to be the terror not only of the whites, but of other tribes, to number over 3,000, with 1,000 fighting men, and to be well-armed and commanded. Up to Saturday morning no message had been received from Captain Payne and the beleaguered troops. Grave fears are entertained at Rawlins about the safety of the besieged command. Later dispatches announce that Agent Meeker and all his employés were killed. Ouray, the head chief of the Utes, has sent word to the war party at Milk River to desist.

An Aeronaut Probably Lost.

FEARS are entertained that Professor Wise, the venerable aeronaut, and George Burr, of St. Louis, who made an ascension from that city on Sunday, September 28th, have been lost. The professor's object was to make special scientific observations, and he designed remaining in the balloon as long as it would float. Nothing has been heard of the parties since the ascension. A report from Bunker Hill, Ill., on October 3d, said that the balloon had been seen passing over that place, and a farmer's boy declares he saw it at a point ten miles further to the north. At the time of writing it was believed that the aerial voyagers had been lost either in the northwestern pineries or in Lake Michigan. It will be remembered that Professor Donaldson and Mr. Grimwood were lost in 1875, under, as near as can be ascertained, the same circumstances.

Hearing with the Teeth.

THE deaf can hear by means of their teeth! The audiphone, an instrument invented by a Western Yankee for alleviating the misery of deafness, is simply a sheet of vulcanized rubber, about 1.12 of an inch in thickness, set firmly in a handle of the same material. In the upper rim of this sheet are pierced some holes, through which passes a silken cord. This goes down on the inner side of the sheet, to the handle, through a slot in which it passes. By pulling this cord the sheet is bent over at any angle which the user may desire. Each person has to ascertain for himself what kind of a curve of the rubber sheet will enable him to hear best. Generally it is very slight—only about ten or twelve degrees—though apparently the deafer the person the greater the curve must be. When used the person holding it simply touches the upper edge of the fan or audiphone, against the teeth of the upper jaw. The voice of the speaker strikes on this loose sheet of rubber, and communicates to it vibrations which are in turn imparted to the teeth, and then pass to the auditory nerve. With this operation the outer ear has nothing whatever to do: the delicate machinery through which sound passing from without makes an impression upon the auditory nerve is not used at all. The outer ear may be stopped up entirely, so far as it is possible to do it, and yet one hears distinctly the moment the audiphone is applied to the teeth. It is necessary to use the teeth of the upper jaw, for the reason that they are more nearly in contact with the auditory nerve; nor does it make much difference whether the teeth be one's own or artificial, so long as those artificial teeth are tightly fitted; for when that is the case the vibration is imparted about as well as when they are natural teeth. The inventor is deaf himself. He happened one day to hold a watch between his teeth, and noticed that he could distinctly hear its ticking, though when he held it to his ear no sound was audible. This set him to thinking that possibly he might be able to invent some device by which the sounds of the human voice could be transmitted to the auditory nerve through the medium of a tube, just as the ticking of the watch had been.

Criminal Statistics in France.

THE official report addressed to the President of the Republic in reference to the administration of justice in criminal causes in France and Algeria in 1877 has recently been published, and shows that the number of persons accused and tried before the criminal courts was 4,413, of whom 3,680 were men and 733 women. The figures showing the civil condition of the prisoners are calculated to throw a curious light on the relations between the celibate and married state on the one hand, and crime on the other. The result is, indeed, strikingly in favor of the wedded as compared with the single condition. Thus, it is found that, while the proportion of unmarried persons tried for the gravest class of crimes is 33 in every 100,000, there were among the married, the widows, and the widowers only 11 in every 100,000. The country, too, would seem, so far as these statistics go, to enjoy a purer atmosphere in a moral as well as in a physical sense as compared with the cities of France; for while the towns furnish 17 prisoners from every 100,000 of their population, the country afforded less than one-half—namely, only 8 per 100,000. It may, however, be remarked that, as the villager or peasant who has gravely transgressed the law generally shuns the locality where everybody knows him and his misdoings, and, accordingly, seeks the cities, while there is little or no compensating movement of city criminals to the rural districts, the towns probably have placed to their account in the figures here quoted part of the sins which properly belong to the country. As regards education, the statistics do not enable us to state anything more definite as to its relations to crime than that it appears to have no effect in preserving men and women from the commission of the gravest descriptions of crime. Of the 4,413 prisoners in 1877, as many as 2,864 were returned as able to read and write, while 177 had received a higher education; only 1,372 of the prisoners were unable either to read or write. There were 31 persons sentenced to death, but only 12 were executed. Of persons charged with capital crimes, 33 per cent. of the women were acquitted; but only 19 per cent. of the men so charged escaped condemnation. The Paris Police in 1877 took into custody 35,083 persons, 30,794 of whom were males and 4,289 females, of whom upward of one-fourth were under 21 years of age and upward of two-fifths had been previously convicted. The number of suicides in France in 1877 was 5,962, of whom 21 per cent. were females. Among unmarried persons, there were 28 suicides to every 100,000, while in the same number of married persons there were only 18; but among the widows and widowers the proportion was 31 to every 100,000. Suicide is far more frequent in the towns than in the country, the proportion being 23 and 13 in every 100,000 persons respectively. Among men, it is remarked that suicide is more common as age increases. As regards the causes to which self-destruction is attributed, of the total number of cases, 5,922, the report assigns 1,794 to lunacy or diseases of the brain; 855 to domestic troubles, 837 to physical suffering, 701.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Eagle-shooting by the German Emperor.

It is customary for every Prussian Prince to enter on his tenth birthday as Lieutenant into the First Regiment of the Garde, and serve therein until he becomes commander of a regiment himself. That is the reason why all the Hohenzollerns, the sovereign included, participate in all the festivities given by the Garde. For 140 years the regiment has had an annual target or eagle-shooting near Potsdam, in the forest of oaks and elms of Katharinenbahl. This year the shooting commenced on the 22d of August, and the next day Emperor William and his family arrived from Berlin to take part. It was the first time the old Emperor had had a rifle in his hands since the attempt of Nobeling to kill him. The Emperor shot very well, but the Crown Prince was the best marksman of the day, and declared to be "Schützen Koenig" for the next year.

Release of Amnestied Communists.

The selection of Port Vendres as the landing-place of the amnestied Communists released from New Caledonia was a happy stroke of policy, for its population is too sparse and scattered to contribute an element of disorder and riot. It is a commercial and seaport town in the south of France, department of East Pyrenees, on the Mediterranean, with a harbor, formed by a projecting tongue of land, seventeen miles southeast of Perpignan. It was here that the several detachments of released Communists were debarked from the men-of-war, and whence they took cars direct to the Orleans station in Paris. Some relief-committees and a small body of personal friends met the men at Port Vendres, but the only demonstration of note occurred upon the arrivals of the trains in Paris, where thousands of relatives, friends and sympathizers were found in waiting.

Catching Ephemerae.

The Ephemera, or day-fly (an insect that lives one day only), is at the end of August caught by millions on the borders of the Elbe River, near Schandau, in the Kingdom of Saxony. It is of a yellowish-white color, about one-fourth of an inch in length, and rises towards evening in immense quantities from the waters of the Elbe, whereon the females lay their eggs. The poor people in the neighborhood gather the dead insects and sell them to bird-fanciers and to aquariums as food for birds and small fish. They are killed by building large straw fires, in the smoke of which they perish and fall down upon white bed-sheets spread upon the grass near the fires.

New Style of French Ferryboat.

The constant passing of vessels up and down the Seine utterly precludes the possibility of fixed or even swivel bridges, and the difficulty has been most successfully grappled with at Duchair, Caudebec and Quillebeuf by means of flying bridges, or steam rafts. Our illustration represents one of these rafts or ferryboats, that of Duchair and the smallest of the three. It is but eighteen meters long, and is furnished with an engine of thirty horse-power. The entire cost of the construction has been 28,000 francs, and it has been turned out of the workshops of M. Powell, of Rouen, who has also constructed the two others for Caudebec and Quillebeuf respectively. The facility of crossing the river is now most ample. Before the introduction of these flying bridges, an average of but two hundred and thirty or two hundred and fifty vehicles passed over during the day; now that number is quadrupled, while the number of pedestrians has increased in the same ratio.

The New Afghan Rebellion.

The late murderous attack upon the British Residency at Cabul by mutinous native regiments, and the measures at once taken to suppress the rebellion, call renewed attention to both Cabul and Candahar. The views now presented are quite different from those published early in the Afghan war, because the occupation has afforded the artists an opportunity to sketch the historic places at greater leisure and with fuller detail. The city of Cabul, which is the capital of Afghanistan under the Ameers of the ruling dynasty, is situated on the banks of the Cabul River, in an elevated plain 6,300 feet above the sea-level, inclosed by high rocky hills on the south and west sides. It has about 60,000 inhabitants and a considerable trade. The principal articles of commerce are fruit and merchandise from India. An active trade is also carried on with Bokhara and with Candahar. The Bala Hissar is a fortified inclosure, comprising nearly a fourth of the whole area of the city of Cabul, and surrounded by a wall which follows every rise and fall of the rocky slopes on which the palace-citadel stands. The most numerous and the most aggressive class is that of the Afghan nationality, who are termed Cabuleers. Cabul is, after Bokhara, probably the city in Asia where the fanatical zeal of the Mussulman runs highest. The greatest punishment that could be inflicted on the Cabuleers would be to remove the capital of the State back to the old Dorani city of Candahar, which is situated about 260 miles southwest of Cabul. Candahar was occupied by the British in the war of 1842, and on the 9th of January last General Sir Donald Stewart took possession and established a large camp outside the walls.

NUGGETS FROM THE MINES.

A VERY rich tin mine has been discovered near Dalton, Georgia.

IT is claimed that there are eighty-five producing mines in Leadville.

COAL in large seams has been discovered eighteen miles southwest of Wa-Keeney, Kansas.

A LARGE bed of bituminous coal has been discovered near Mountain View, Stone County, Alabama.

THE ore from the silver mines recently discovered near Farmington, Mo., assays $97 per ton, silver and lead.

THE silver-mines in Montgomery County, Miss., are said to be rich. Silver has also been found in Scott County.

EXPLORERS have found gold one hundred miles east of Prince Arthur's Landing, Lake Superior, on the Canada side. A rush in that direction is not improbable.

VERY rich lead mines have been discovered in the vicinity of Spocerville, in Clark and Hot Springs Counties, Arkansas. Mineral is found near the surface in great quantities.

SINCE January 1st, 1879, 325 mining claims have been located in Nevada County, Cal., and duly recorded. It is one of the best proofs of activity in the mining industry that could be obtained.

GOLD has been discovered at Burk's Gut, Newfoundland. Specimens of the quartz contain considerable gold. A copper mine has been discovered at Harbor Main, Conception Bay, Newfoundland.

THE receipts of iron ore in St. Louis in the first eight months of this year were 119,676 tons, as compared with 71,701 tons in the corresponding period last year, an increase of about 48,000 tons.

THE total production for the world of gold and silver for the 373 years from 1493 to 1875 is estimated by an eminent German authority at $7,474,185,310.50 of silver, and $5,644,151,241.43 of gold.

THREE thousand miners are now employed by the coke companies in the Connellsville region, Pennsylvania. An item from Connellsville reads: "All persons who wish employment can get it."

A LETTER from Maine describes the development of a new source of riches in that State—a copper-mine. A rich vein seems to have been discovered, and the work of mining has already passed beyond the experimental stage.

ALASKA boasts of placer diggings at Cassiar, about 300 miles inland by way of the Stickeen River, with which communication is had by two steamers. Some 1,800 miners, one-half Chinamen, have gone thither this season.

EXTENSIVE deposits of almost pure gypsum have been discovered in Squak Valley, twenty-five miles from Seattle, Washington Territory. It is reported as the first deposit of the kind found west of the Rocky Mountains.

CONSIDERABLE excitement has been created near Empire, Kansas, on the branch of the Fort Scott road, by the finding of a vein of lead ore by laborers employed in building the road. Nearly 1,500 pounds of rich ore were secured.

MONTANA during the past sixteen years has produced $163,000,000 in gold and silver; $147,000,000 of this was in gold. Montana, therefore, ranks next to California as a producer of gold. There are already 20,000 quartz mines in the Territory.

ENGLISH iron ore will be a new feature of our imports this year. American ores having risen $1.50 per ton, owing to the great demand from our blast-furnaces, orders for nearly 50,000 tons have been sent to mining companies on the west coast of Great Britain.

THE rock of the famous soap-mine near Elko, Nevada, is of a soft reddish cast, greasy to the touch, and in water soaks into a pulp, very much like Castile soap in appearance. It contains silicate of alumina, oxide of iron, boracic acid, magnesia and native silver.

THE McGregor Mine, at Georgetown, Grant County, New Mexico, since its discovery in 1873, has turned out a steadily-increasing quantity of high-grade ore, and the nine different pay-streaks now being operated indicate that the real wealth of the mine has not been even approximately ascertained.

BALTIMORE capitalists have struck a bonanza of copper ore in Ashe County, N. C., just where that State joins Virginia and Tennessee. A vein 20 feet wide has been opened for 1,000 feet, and 700 men are keeping 10 blast-furnaces at work, which turn out 10,000 pounds of copper daily. The ore yields 400 pounds to the ton.

PRIVATE advices have been received at Little Rock, Ark., of the discovery of very rich lead mines in the vicinity of Spocerville, in Clark and Hot Springs Counties. It is found near the surface in great quantities. One man melted sufficient ore to yield five hundred pounds of metal, over a common fire, and sold it at Arkadelphia.

THE Thursday evening receptions of the Bullion Club, New York, are quite popular, and their elegant rooms are crowded with capitalists and mining men every week. The evenings usually open with an address from some practical or scientific gentleman, followed by an informal interchange of opinions and current mining news.

PROFESSOR FERNY, of the French Academy of Sciences, in a recent paper, claims that a vein of coal does not represent a mass of vegetation which has been changed directly into coal by distillation under pressure. It is, indeed, a product of the decomposition of substances derived from vegetation, but the plants from which coal is ultimately formed must have lost all trace of organic structure before the modification took place of which coal is the result.

THE mineral wealth of Canada and its development are just now attracting the attention of the ablest minds in the Dominion. Reliable workings in the neighborhood of Thunder Bay have been purchased by Nevada and Colorado miners. Four seams of ore, carrying both gold and silver, have been struck in the Northern Light district. McKellar's Island is found to contain silver spar very rich. Explorations recently made on Black Bay were attended with success.

COLORADO produced, previous to 1870, $27,231,081, gold; $350,000, silver; $40,000, copper; making a total of $27,623,081. From 1870 to 1878, inclusive, the yield has been: Gold, $21,004,360; silver, $25,481,760; copper, $592,993; lead, $1,131,000; total, $48,110,125. This makes a total value of precious metals in gold of $48,235,450 76, and in silver, $25,811,760.48 — of $74,047,211.23. It is stated that this year will add to both metals at least $12,000,000 to this sum total.

THE Mexican Government has received authentic accounts of the immense richness of mines recently discovered in the Sierra Mojada. Crowds are flocking there, and the Government has adopted measures to preserve order and have the mining laws enforced. A Texan company has been organized as Nueva Laredo with $50,000 cash to work the mines. A competent Mexican assayer, to whom specimens from the Mojada have been shown, pronounces them one-quarter gold. Americans at Mojada in one hour excavated a lump valued at $5,000. The mines are 500 miles southwest of San Antonio.

AT HOME AND ABROAD.

—WIDOWS in Nevada are exempt from taxation to the extent of $1,200.

—THE heavy tax imposed by the last Legislature has pretty much put an end to horse-racing in Texas.

—STUDENTS who take the benefit of the Texas State Normal School are required to teach five years.

—THE London Society of Arts intends awarding a gold medal for the discovery of the best means of protecting ships from fire and from sinking.

—THE French artillery has been doubled since 1870; and now numbers, gun for gun and man for man, exactly the same as that of the German Empire.

—MASSACHUSETTS sends 74 per cent. of her school population to school; New York sends 35 per cent.; New Jersey, 34; Connecticut and Rhode Island, 55; Oregon, 60, and Louisiana, 20.

—FRANCE, Germany, Italy, Austria and Switzerland have agreed that their embassies and consulates shall send home indigent persons of their respective nationalities at half the ordinary railway fares.

—IN disinfecting Memphis the National Board of Health has used 170,145 pounds of copperas, 9,000 barrels of lime, 40 barrels of sulphur, 1,215 pounds sulphate of zinc, 15 barrels of carbolic acid, and 1,200 gallons of zinc iron.

—A CHINAMAN in Carson City failing to pay his laundryman, another Chinaman was, on September 8th, dragged into the Chinese Masonic Lodge there, and had a portion of his ear cut off as a punishment, after which he left the city.

—NEXT to the United States, Russia has the most extensive system of telegraph lines, viz., 58,000 miles; Italy comes next, with 46,500 miles; next France, with 34,600; Great Britain has about 26,000 miles, and Germany 24,000 miles.

—A REPORT has just been issued by the Minister of Public Works in France showing the number of railway accidents between 1868 and 1877. The total number of accidents has been 799, causing injury to 2,158, and deaths to 218.

—THE population of Stockholm, the Swedish capital, now numbers 161,594 persons, 88,830 being females and 72,764 males. Personal taxes are paid to the Government by 109,616 of the inhabitants, namely, by 63,513 females and 46,103 males.

—THERE are over 46,000,000 acres of land in the State of Kansas now open for pre-emption under the Federal laws, or to purchase from railways and others holding grants of lands. The lands open to purchase are sold at from two to six dollars per acre.

—THERE are at present about 54,000 cotton operatives employed throughout Italy in spinning and 30,000 in weaving. Italy possesses 800,000 spindles and 13,000 power looms, and there are three large printworks at Milan, Torre Pellice and Salerno.

—A SIAMESE embassy is in London to open up a new line of connection between India and China which will shorten the voyage by 800 miles, and, it is hoped, increase the commerce. The digging of a canal to connect the two rivers which traverse the Malayan peninsula is their special object.

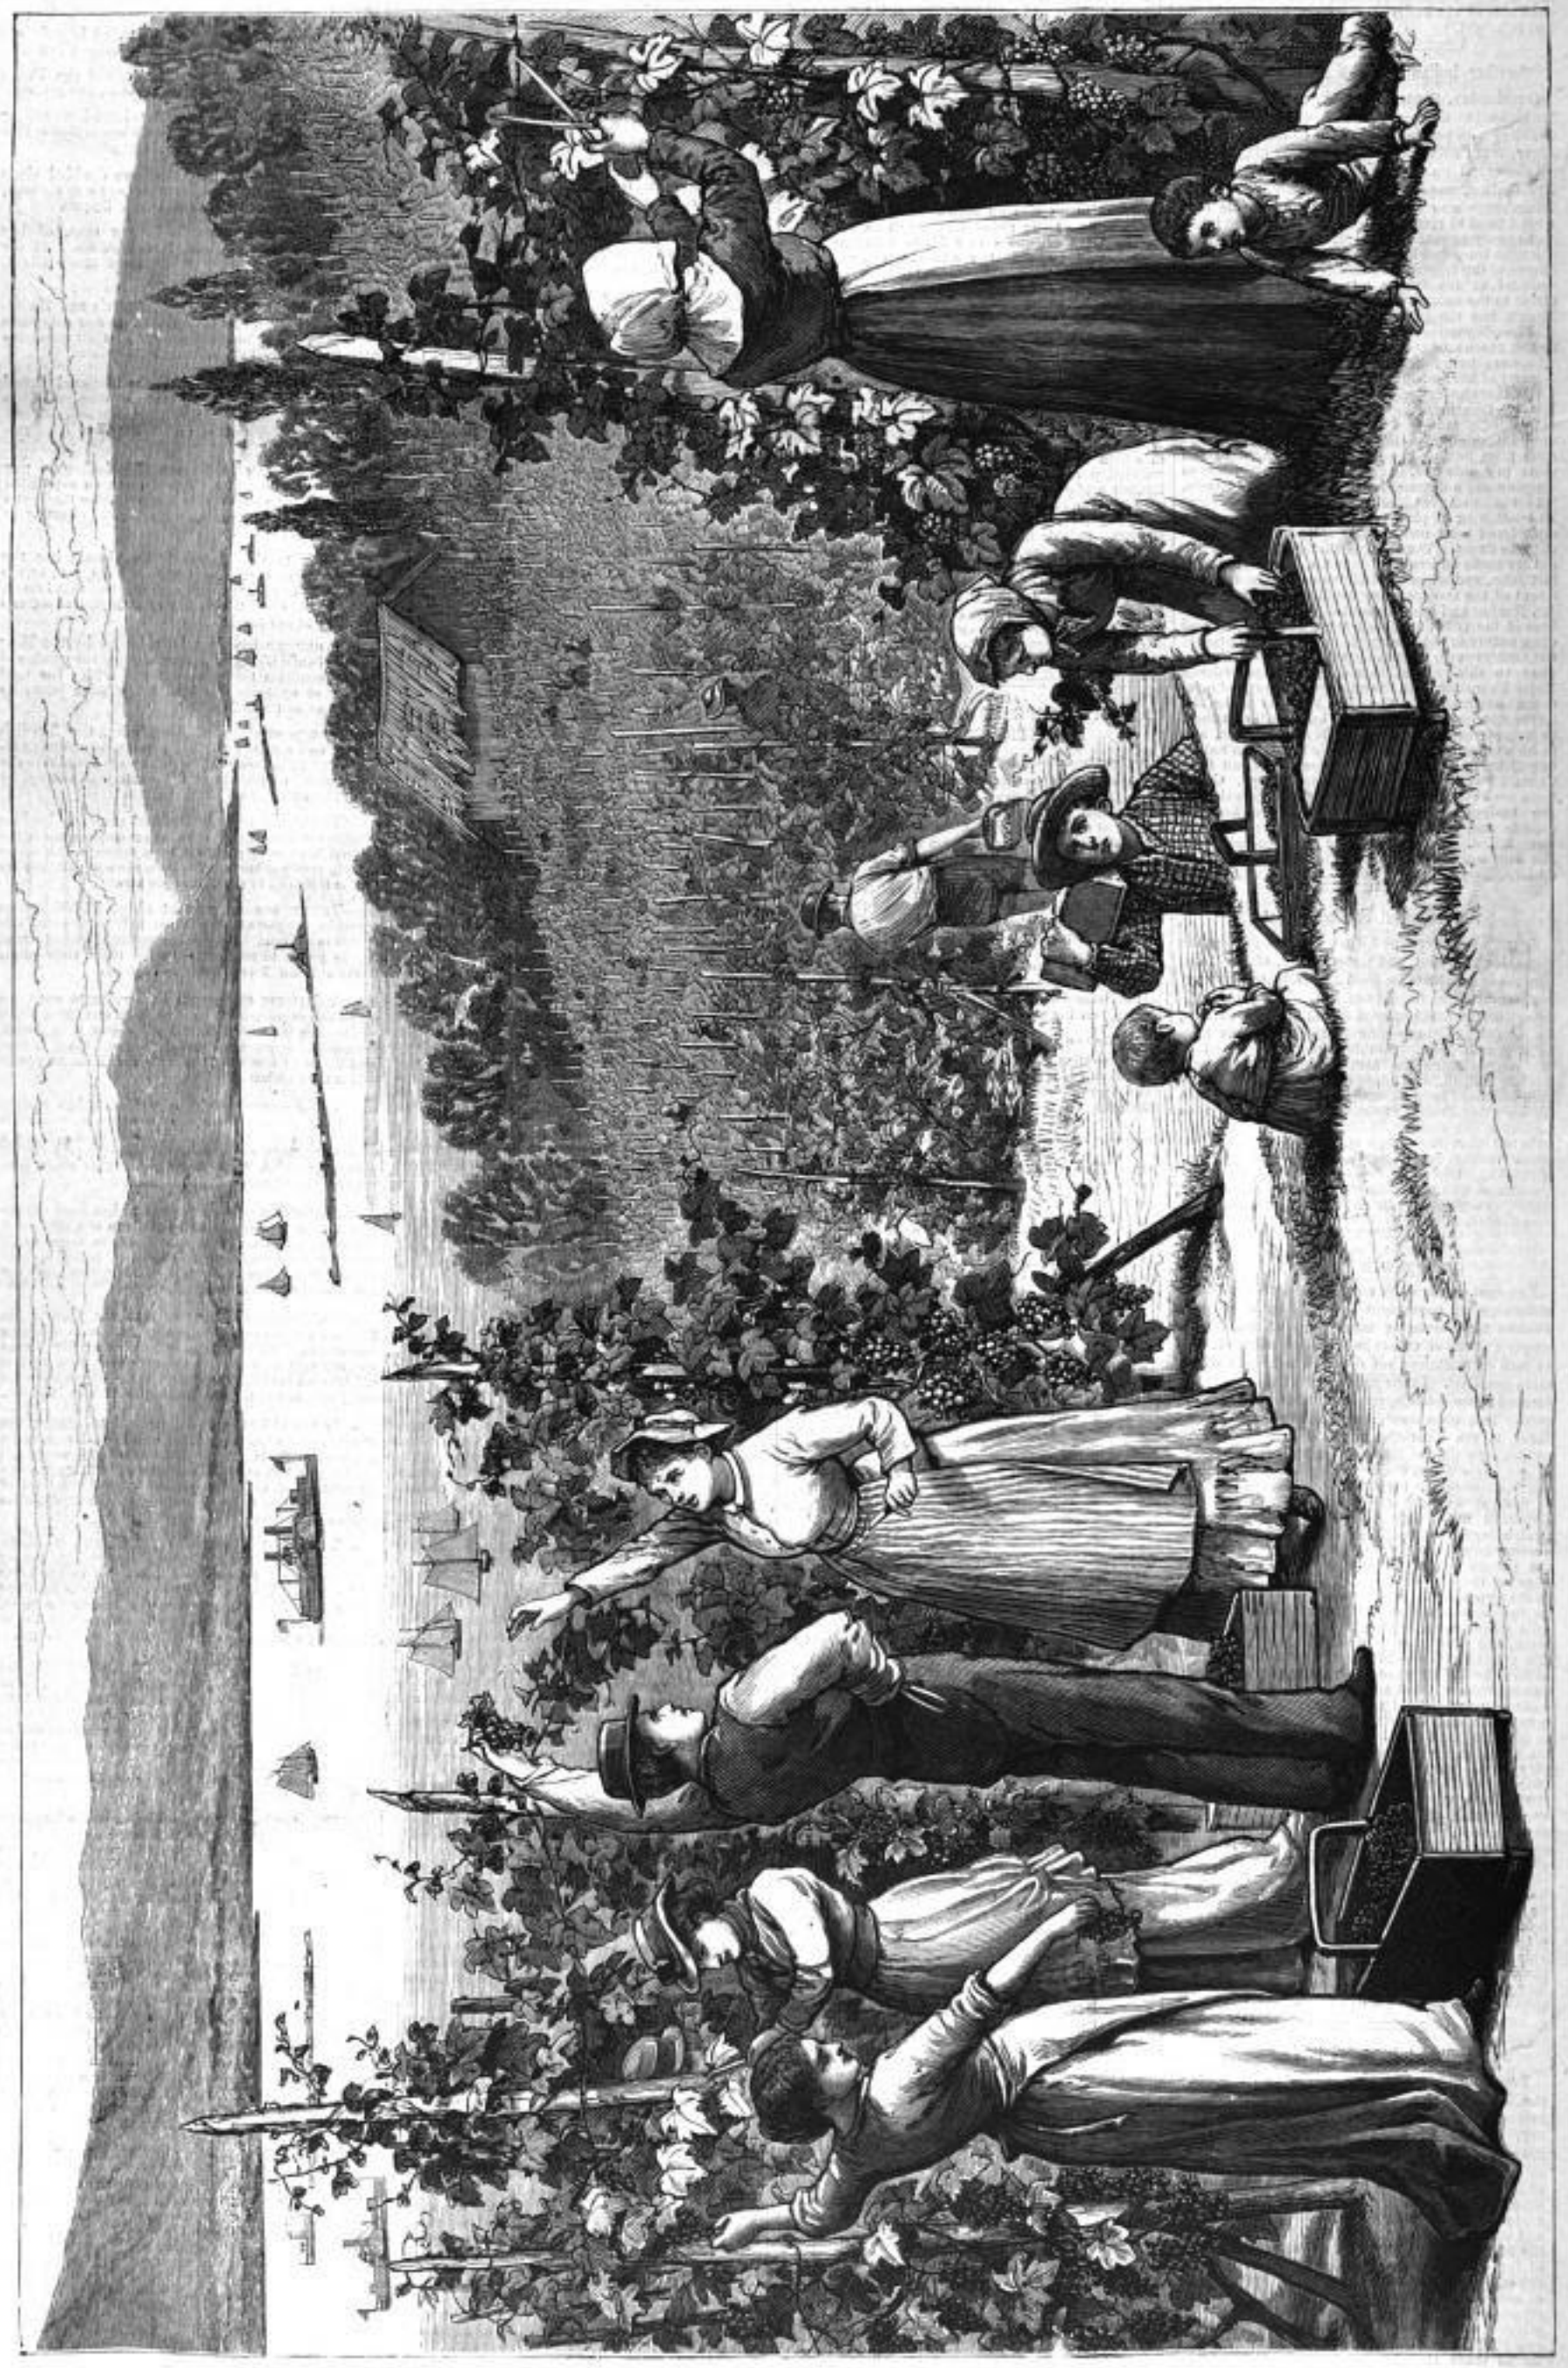
—THE Farmers' Emigration Society is a reality in London. It sent a batch of eighty men, with their families, to Texas the other day, and it is organizing a second and larger expedition. This first colony carried with it more than $150,000 in cash. This would give not far from $2,000 to each emigrant.

—A NEW temperance movement has been organized in Great Britain. It takes the form of a joint-stock company, with a capital of $5,000,000, in shares of $5 each. It proposes to open temperance houses all over the kingdom. The Archbishop of Canterbury heads the list in the prospectus of the enterprise.

—ST. PATRICK'S Roman Catholic Church at Norwich was dedicated, September 28th, with imposing ceremonies. All the Catholics of the vicinity turned out, and visiting delegations were present from several neighboring towns. The church is the largest and most costly structure in Eastern Connecticut. It cost $250,000.

—IT has at last been determined to convert the *Great Eastern* into a meat-carrying trader between London and Texas. The requisite alterations, which will include new boilers, will involve an expenditure of about £100,000; but as the vessel can carry 2,000 head of cattle or 24,000 sheep, the speculation will doubtless prove remunerative.

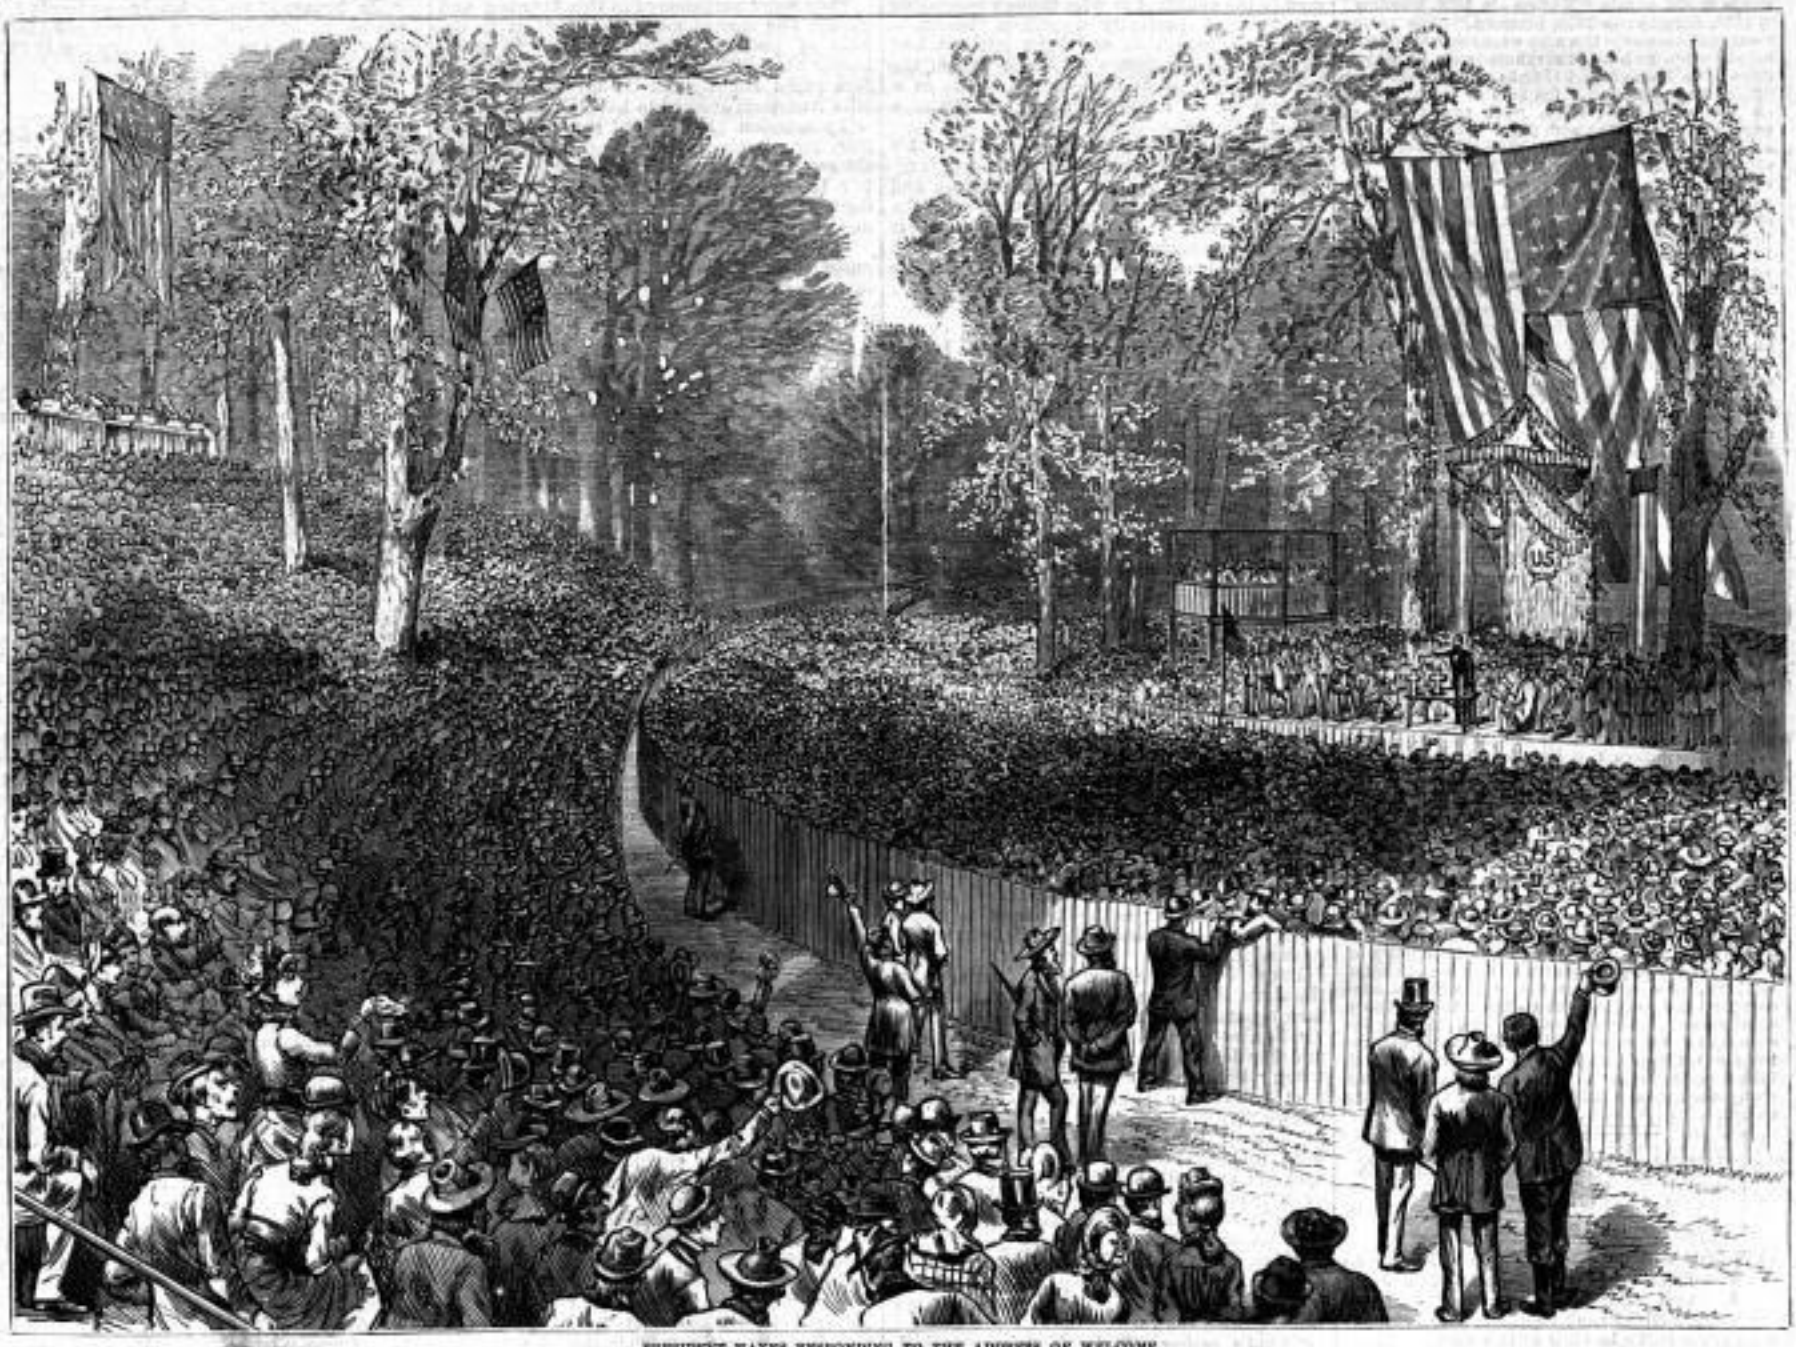
—THE First African Baptist Church of Richmond, Va., is the largest church in this country, having no less than 3,300 members. In the past twelve years no less than 3,500 names were taken from the roll. The pastor, Rev. James H. Holmes, was formerly a slave, and since the war he has had the opportunity of forgiving the man who sold his wife and children from him.



—THE Imperial Statistical Office in Berlin has published a review of the population of the States of Germany according to the enumerations which have been taken since 1816. In that year the number of inhabitants of the States now included in the German Empire was 24,831,396. At the census which was taken about three years ago the population enumerated was 42,727,360, being a total increase during the half-century of 17,895,964.

—THE Gothard Tunnel is being pushed rapidly to completion. Four thousand men are now engaged in the work, and fresh hands are taken on every day. The advance is at the rate of nearly eight metres a day, and the length still to be bored is 1,000 metres, so that the tunnel will probably be finished by the end of this year or the beginning of next. The making of the Monte Ceneri branch will be commenced on the 1st of October, and its completion is expected to coincide with that of the main line.

—THE flotilla of which the Russians made a present to the Bulgarians, and which is riding at anchor in the port of Rustchuk, has quite recently had the Bulgarian flag hoisted on its masts. The ceremony was performed with all solemnity on the five ships. The metropolitan of Rustchuk, at the head of the clergy of the place, blessed the flags, the thunder of cannon announcing to the crowds thronging the riverside the commencement of the ceremony. The Bulgarian prelate also delivered an address to the first Bulgarian crew.



—THERE is only one country in the world in which there are no illiterate people; it is the Sandwich Islands. The population of the Islands is 58,000. They have eleven high educational institutions, 103 middle public schools, and forty-three private schools. The public instruction is under the supervision of a committee appointed by the king, and composed of five members, who serve without remuneration; the committee appoint a general inspector and a number of sub-inspectors. The Government takes care that every person shall be able at least to read and write, and pursues energetically all parents who neglect to send their children to school.

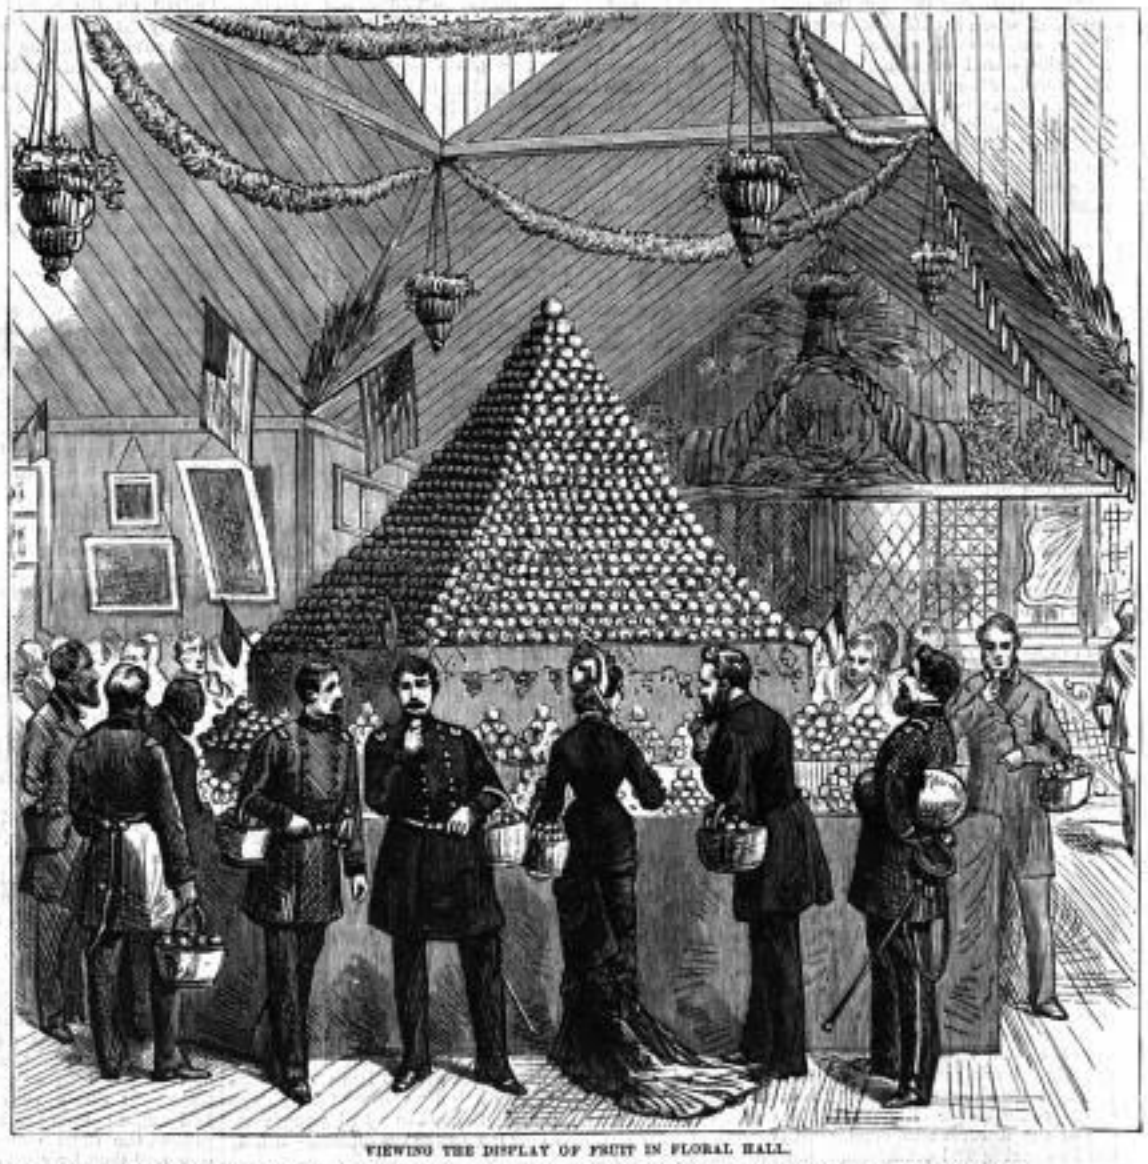
PRESIDENT HAYES RESPONDING TO THE ADDRESS OF WELCOME.

PRESIDENT HAYES'S WESTERN TOUR.

THE VISIT TO THE FAIR AT NEOSHO FALLS, KANSAS.

THE Western tour of President Hayes and party was attended by many pleasant and gratifying incidents, his reception being everywhere most cordial and enthusiastic. But in no State was his progress marked by heartier popular ovations than in Kansas, the imperial young commonwealth of the West. No event in recent years seems to have stirred the people to greater enthusiasm than the visit of the President to the region which, now dotted with towns and cities and teeming with fertile and prosperous farms, was only a few years ago a barren waste.



One of the objective points of the Presidential excursion was Neosho Falls, an invitation to visit an exhibition of the agricultural products of Southern Kansas at that place having been accepted before the departure from Washington. The President, accompanied by Mrs. Hayes, General Sherman, and one or two others, reached Neosho on the morning of the 25th of September, being met at the railway station by a vast concourse of people, and escorted to the fair-grounds by the Capital Guards of Topeka, headed by the band of the United States infantry and a company of boys, less than twelve years old, in the uniform of Zouaves, followed by a procession of carriages and civilians a mile long. The grounds were handsomely decorated and ornamented by various productions of the State, artistically and tastefully arranged. At the entrance was a magnificent arch of welcome, formed entirely of agricultural products and bearing the Goddess of Liberty. The reverse side bore the

BUCK-HORN CHAIR PRESENTED TO THE PRESIDENT.

SYMBOLIC ARCH AT THE ENTRANCE TO THE FAIR-GROUNDS.

words in the panels, "Kansas—in 1856, bleeding; in 1860, drouthy; in 1879, booming." The battlements and cornice of this arch were made from large ears of corn, with black sorghum-heads by way of finish; the Kansas coat-of-arms was painted on a circle, the eagle having feathers of wheat heads; on the top, at the sides, were two groups of pumpkins surmounted with flags. The body of the arch was entirely covered with green sorghum-stalks stripped of all leaves, with a border of red sorghum-heads on each corner. The letters of the word "Welcome" were formed of finely cut wheat straw, on a background of blue, which in turn was bordered by ears of yellow corn and yellow millet-heads. Under the arch were festoons of bearded wheat, with hanging-baskets filled with fruit. The lower part of the structure was covered with corn in the stalk, fresh from the fields.

On reaching the grounds the reception committee immediately marshaled the way to the grand stand, in front of the amphitheatre, in which 10,000 people stood and sat. Upon the platform sat the Presidential party, Governor and Mrs. St. John, members of the latter's military staff, George A. Crawford, Sidney P. Clarke, General Horton, of Texas, a number of other prominent Kansans and representatives of the press. Hon. John R. Goodin made the welcoming address in behalf of the association, and was followed by Governor St. John. The President responded at some length, speaking humorously of the incidents of his trip, and then more gravely of the political duty of all good citizens, especially in maintaining the doctrine of the sovereignty of the nation. The President was enthusiastically cheered, and was followed by General Sherman, who delighted the audience by a witty contrast between the Kansas of 1851 and the Kansas of 1879.

At the close of the platform exercises, Hon. George A. Crawford, on behalf of the people, presented the President with a splendid buckhorn chair which was beautifully upholstered and manufactured from the bones of Kansas cattle. Lunch followed, to which two hundred guests were admitted. After dinner, speeches followed from the President, General Norton and others, from the grand platform. The occasion was one of great interest to all participants. The fair itself was in every way creditable, the display of cattle, fruit, and farm products being especially attractive. Grain was represented by 132 lots. There were 96 entries of vegetables, 137 of garden vegetables, 46 of butter, cheese, etc., 86 of apples, etc., etc. Our illustrations show the interior of the Floral Hall and fruit exhibit, with the Presidential party inspecting and sampling the fruit; also the exhibit of tall corn, some seventeen feet high, which at once surprised and gratified the visitors; the buckhorn chair presented to the President, etc. Among the corn-stalks was one on which the lowest ear was ten feet six inches from the ground. By way of illustrating the height of the corn, a dummy figure was placed upon a ladder, in the act of detaching an ear.

"QUEEN LILY AND ROSE IN ONE."

CHAPTER I.

"YOU will have to go down to Kelly's to meet the coach, Frank," Miss Julia said, sighing dismally.

"Very well," Frank rejoined, shortly, looking rather sulky in view of this duty.

"Mind you don't pay Pat Byrne more than sixpence for bringing up her things: He wanted tenpence the last time I came from Dublin, I remember," Miss Anastasia remarked in a vindictive tone.

"No matter whether there is a horse-load or not, I suppose," Frank said, scoffingly.

"A horse-load! For a girl's box with her few clothes!" said Miss Julia, growing a dull purple with anger at the suggestion.

Without rejoinder Frank quitted the room, and was tramping through the kitchen, on his way out, when his steps were arrested by an eager, suppressed voice—"Frank, Frank!" and the sound of some one descending the stairs at headlong speed.

"It's such a cold day, Frank—the poor little thing is perished maybe in that coach! Take my shawl with you to put around her coming up the hill." And Mary O'Hara's plain red face brightened into comeliness with her good-natured smile as she went back to her bread-making, which she had just quitted.

"All right, Molly." And Frank's face softened a little, and the eyes of the brother and the younger sister met with a kindly look of mutual recognition of each other's thoughts.

Mary and Frank O'Hara—each the other's only earthly friend—were the children of old Robert O'Hara's second marriage, as "the weird sisters" Julia and Anastasia were those of his first and very early marriage, poor Miss Julia being, in fact, sorrowfully aware that she was only twenty years younger than her father, old Robert O'Hara, whose eyes were bluer and brighter and his color fresher than his thin haggard-looking daughter's had been for twenty years, as he likewise possessed higher spirits, more energy and briskness.

Miss Anastasia was a more youthful copy of her sister—a genteel pinched-looking person, with drab hair and complexion to match, and an anatomically suggestive figure perpetually clad in horribly limp dresses of black calico of a slatey, shiny, crumpled, and altogether funereal appearance.

"Tea ready, Julia? Where's Frank? Molly, where's your brother?"

Six loud strokes had just resounded from the old eight-day clock in the passage, but the cold daylight of the bleak Spring evening was shining strongly into the large scantily-furnished parlor, on the white cloth of the tea-table, on Julia O'Hara's meagre, despondent face bent over some sewing, on her sister Mary hard at work cutting and buttering endless slices off a huge loaf of fresh-baked bread, her face glowing from the combined effects of the fierce kitchen fire and her present exertions, until it presented a most inflamed appearance, which was unhappily almost a normal condition with poor hard-working, housekeeping Mary; and, last but not least, the cold clear light shone right on the face of the bluff, burly personage sitting in a hard, polished wooden armchair at the head of the table—redoubtable Robert O'Hara himself, one of the fiercest-tempered, most tyrannical, hard-swearing and occasionally hard-drinking men in the county, but who, though possessing the gifts of perfectly unbroken health, a splendid constitution, and keen intellect, had likewise the reputation of being one of the best-looking men and shrewdest hands at a bargain to be found "for twenty parishes round."

"Frank's gone to meet the coach, sir," his youngest daughter replied, timorously, glancing at her sire's knotted gray eyebrows and the angry sparkle in his clear blue eyes she knew so well. "You know the little girl is coming this evening."

"Hum!" her father replied, gruffly, and the stern eyebrows lowered, and his whole face darkened for a few moments.

Mr. O'Hara had finished his second cup of tea and his third slice of cold beef and bread-and-butter, when Frank's quick, heavy footsteps were heard in the hall.

"Here they are," Mary said, in a slightly excited undertone, the good-natured smile coming into her eyes which she was afraid to let appear on her lips.

Julia looked three degrees more doleful, sighed, and slowly rose to her feet. Anastasia compressed her thin lips, coughed, and darted a swift frown in the direction of her father, which she took care, however, that he should not see, but did not raise her eyes again, until a strange, half-suppressed ejaculation from him made her start.

"You're Madeline's daughter!"

Her father had risen to his feet, and before him was standing a young girl dressed in black, with a mass of jetty ostrich feather curling softly over the crape folds of her hat and resting on huge soft plaits of pale golden, feathery-looking hair. Beneath the crape folds was a small, delicate, *mignonne* face, a pair of haughty, downcast, white eyelids, a sensitive red mouth, and an imperious little chin.

But Miss Anastasia cared for none of these things. Her gaze concentrated itself on the rich black feather; in the depths of her inner consciousness she instantly and correctly appraised it.

But nobody spoke a word of welcome, whilst the stern father stared frowningly at the fair face beneath his gaze.

"You've your mother's figure and her hair, and her look, too," he muttered, in a lower tone; "but you're not much like her. I expect you're like your father—eh, Maud St. Crewe?"

"Yes, sir, I am very like my father, I have been told." The reply was coldly, clearly spoken; and with haughty self-possession she drew herself away from old O'Hara's touch and addressed poor Molly O'Hara, who brightened up instantly.

"Would you please show me to my room?"

She spoke courteously, but as one speaks to a servant, and, with a slight inclination of her head, quitted the room.

"That's rather stiff," Anastasia remarked, sneeringly, in a loud whisper addressed to no one in particular. "I expect the young lady forgets where she is—she took Mary for a waiting maid."

Frank's fresh, handsome face, so like his father's, darkened as a thunder-cloud, as he flung himself into a chair.

"She'd better go on like that," he muttered, angrily. "I'll soon let her know what is what!"

"What'll you let her know?" his father demanded, scornfully. "You'll not interfere with that girl, if you please! Maud St. Crewe has a right to take what airs she likes, d'ye know that? She has some of the best blood in the United Kingdom in her veins!"

"Oh, I know! And my sister has not, sir!" The reply was uttered very quietly, but with intense bitterness.

"No, your sister has not, sir," the sire rejoined, coolly; "and she has sense enough to own it, if you haven't."

Any further reply to this assertion, so calculated to produce a favorable impression of the stranger on the whole family, was prevented by the entrance of the stranger herself.

"Now, missy," O'Hara commenced, patronizingly, "sit here by me. Maud—isn't your name Maud? Give her a cup of tea at once, Molly. Julia, cut some beef."

"Thank you," the young lady said, calmly seating herself. "Do not cut any beef for me, please"—to Miss Julia.

"Nonsense! You must have some beef," Mr. O'Hara protested, with noisy hospitality. "Well, what'll you have? Eggs and bacon? Ham?"

"No, thank you—oh, no!" the young person said, with an involuntary shudder of disgust. "I should like an omelette, please, or a *pâté*. I really should like a *pâté*," she said, her little mouth curving into a confidential smile.

"What's that? Some of your French dishes?" said O'Hara, roughly. "No, missy, you won't get any of them. We don't have such kickshaws"—with supreme contempt. "Say the word at once—ham or eggs?"

"I will take an egg, then," the young person answered, resignedly. "I shall show your cook how to make omelettes if you will allow me."

"Indeed? There's the cook, then!" said O'Hara, chuckling and pointing to Mary.

"Your cook?"—with an astonished stress on the word.

"Yes, Miss St. Crewe," Frank interposed, his face flaming defiantly, "that's the cook, and I'm the stable-boy."

"Pardon me, and—and those?" the young lady said, rising to her feet and, with a flutter of a tiny white hand, indicating the two elder sisters.

"The Misses O'Hara—any time for the last forty years, my dear," said O'Hara, coarsely. "That lady, the cook, is my youngest daughter, Molly, and the gentleman in a bad temper is, my son, and heir if he behaves himself—if not, you'll be."

They were accustomed to this taunting and gibing, and accustomed to regard it in the light of playful ebullitions of their sire's humor; but at these last words Frank's flushed face paled slightly and his lip curled, whilst Miss Anastasia seemed to have almost lost her self-possession. She glared scornfully at the intruder, muttered some excuse, and rose from the table, to relieve her feelings by grinding her teeth hard when once safe outside the door, and, Miss Nipper-like, by contradicting and calling names in the entry.

She seemed to have come like a firebrand amongst them, this lily-like girl, with the soft, lustrous hair and pure, statuesque young face,

"Pale with the golden beam of an eyelash dead on her cheek."

She was made to be loved, with her childish innocence, her maiden pride and loveliness, but already she had won not love, but hate.

With dull, apathetic distavor, Julia regarded her; with intense jealous fear and vengeful dislike Anastasia thought of her as a supplanter and rival in every possible way; and more plain-featured Molly, who would fain have loved her, felt humbled and painfully conscious of all her physical and mental shortcomings before the clear, penetrating gaze of those bright, proud eyes and the pale beauty of that calm patrician face.

Frank hated her. There was no doubt about that. Short a time as his hatred had endured, it had become intense. He hated her before he ever saw her or spoke to her; he hated her now so fiercely that he thought to himself—recalling a fragment of his scanty historical knowledge—that, if they had both lived in the days of Robespierre's blood-stained rule, he should almost have liked to see her on the guillotine scaffold, this white-faced, insolent young aristocrat.

For she was very young—poor little Maud St. Crewe; for all her blossoming womanly graces, she had only just passed her sixteenth Spring, and was an orphan, and friendless, and homeless, save for this home into which she had just entered—"Rathmore Castle, the seat of Robert O'Hara, Esq.," as the county guide-books had it. And this home she might not have possessed either, but that she was owner of a very small fortune, which, being left entirely in her own control, old O'Hara shrewdly guessed might possibly be entirely at his control, too—not that he designed to rob the orphan and the fatherless, but that the possession of hard cash was one of the things which Mr. O'Hara could not calmly contemplate in another when the possessorship could be by any means transferred to himself; he never meant to do a deliberate wrong to Maud St. Crewe, for she was the child of the only woman he had ever really and passionately loved.

Some ten years before the handsome, fiery old Irish squire had met, loved, wooed and won Madeline St. Crewe, a beautiful, high-born young widow, who, in utter forlornness, had accepted him, had lived two years with him in bitter, repining unhappiness, and then her short, ill-starred life closed. Her little daughter by her first marriage had been adopted, or partly adopted, by an old peeress, a relative of the child's father, who had taken her as a beautiful toy—an amusement to brighten the loneliness of a selfish old age. Maud's step-father had thus never even seen her until the death of her protectress had thrown her adrift on the world again; and whilst his crafty, hard nature softened at the memories she revived of the fair, unhappy woman he had won proudly to be his, to have and to hold till death—the death that came so soon to break the fetters that held her against her will—his children regarded the advent of this daughter of their father's third wife—the cold, stately young stepmother whom they had all disliked—with vexation and dismay.

In the kitchen, by the dull red glow of the turf-fire, Frank and his sister were sitting together. Of course there was work to be done, or Mary would not have dared to waste fire and candlelight up to such a late hour of the night: she was busily employed in making hot coffee for the men who were sitting up in one of the out-houses with a sick cow, for whose benefit Frank was likewise compounding a huge medicinal potion.

"I wouldn't say that, Frank—no, I don't think she intended to behave uncivilly," she said, in a low tone and half-unwillingly; "but she is as stately and distant as if she were Lady Fitzwilliam herself, I declare! I wonder who she thinks she is?" Mary continued, angrily, after a pause. "I only asked her—I meant it in kindness, I'm sure—I asked her if she'd like me to sleep with her, being a stranger, and she says——"

"She says!" repeated Frank, mockingly.

"I mean, 'she said,'" Mary went on, humbly amending her words—"she said, 'No, thank you—certainly not,' and looked at me in such a way! And then she handed me her dressing-gown, and says—said, 'Will you be kind enough to have this aired for me?'—a splendid deep rose-colored one, Frank, with velvet buttons all down the front—I never saw the like!"

"She's a wonderful creature altogether!" Frank said, ironically. "We have never had such a blessing come to the house before as this, though we've had a good many."

"You may say that," said Mary, shaking her head; "but she's really a handsome girl, Frank, isn't she?"

"For those who admire a bit of a ghostly-white face and a lot of yellowish hair like a Banshee of a moonshiny night, I suppose she is," Frank replied, searching about him for a sufficiently contemptuous simile.

Later still at night, in the far off room at the end of the long corridor, where the misty moonlight dimly revealed a narrow white bed and a golden head tossing wearily on the pillow, the dead silence was broken every now and then by a sobbing smothered cry:

"Oh, heaven, I am so lonely—so lonely! I have no one on earth! Oh, heaven, send some one to love me, I am so very, very lonely!"

CHAPTER II.

"WHO was that came to see you to-day, Maud?"

"Sir George Canonbury, sir," Maud answered, sedately, swinging the open sash of the window to and fro softly.

"Indeed! And what did Sir George say to you? He is a relative of your late friend, Lady Canonbury, isn't he?" Mr. O'Hara asked, pompously.

"Would you shut that window, if you please?" Miss Anastasia interposed, frowning. "We are not all as fond of living in the open air as you are."

"Yes, sir," Maud returned, closing the window; "he is Lady Canonbury's grand-nephew; I have often met him at her house."

"Oh, then he is quite an old friend of yours! I hope you made Sir George very welcome," Mr. O'Hara continued, politely.

"I said I was glad to see him, sir, and he said he should like to call again," Maud answered, coldly.

As she spoke Frank O'Hara raised his head from the book he was stooping over and looked at her. Maud, meeting the look, turned away. Forgetting Anastasia's sour rebuke of a minute before, she opened the window again and leaned out amongst the leaves and blossoms with which the young Summer-time had begun to clothe the bare old walls, but not before Frank saw that her pale cheek had flushed like the red roses the petals of which, shaken by the opening casement, fluttered down softly on her fair head and outstretched hands.

It was now the sweet primrose-time, and the silent green lanes were all alight with drifts of lemon-hued velvety blossoms nestling amidst their rosy translucent stalks and broad soft leaves; beneath old ivied walls, growing in pale-gold clusters here and there on the moist moss-crept sod, or in the lush growth of the deep hedgerows, where the angel-faces of the little flowers smiled through the tangle of the dusty bramble-leaves or the trailing blood red stems of wild geranium.

Just such a lane, long, silent, flower-starred, shadowy, led from the Castle towards Avonbank, winding gently down-hill.

"Dear, but it's a wondher Miss Maud wouldn't be afeared of her life wandherin' down that lonesome road be herself for iver!" Sally remarked, wiping the last of a pile of plates.

"Is she gone out again at this hour? Well, if that girl has done a blessed thing this day but dress herself and pick flowers and walk about!" Miss Anastasia said, laughing.

Those who had the happiness of knowing Miss Anastasia O'Hara very intimately were always uneasy when she laughed at them or about them.

"Sally, go and bring in that quilt—it was dry enough an hour ago; and you don't know but some one might take a fancy to it if you go leaving it out till night in that way. I remember when the new pair of sheets were stolen," her mistress added, as a Parthian shot to remind Sally—honest, ignorant, simple-minded maid-of-all-work—of the day when occurred the direst calamity of her existence. Miss O'Hara's new sheets were appropriated by a traveling tinker—as suspected—and Sally was mulcted in the sum of six shillings—half price.

Sally having disappeared in instant obedience, there was silence in the kitchen for the space of a minute, and through the open kitchen-door streamed full the amber sunset glow; the soft lowing of the cows came from the farmyard, and the birds began to twitter gayly in the evening breeze.

"Julia, do you think this is all fair and square and right and proper," Anastasia asked in a suppressed tone, with intense decision ironing down the plaits of one of her black, slatey calico gowns, accenting each word with a stroke of the iron, "Miss Maud spending all her time doing nothing but picking flowers and reading books and walking about?"

"What do you ask me for?" Julia says, peevishly. "Do you think I can help it? Didn't she spend most of yesterday putting black ribbon bows all over her muslin dress? I think father must be going mad to let her!"

"Well, but, Julia, do you think there is nothing wrong in such behavior?" Anastasia asked, putting the iron down and facing her sister. "As a discreet Christian woman I ask you. Do you think this won't end in some mischief, I say?"

"I'm—I'm sure I don't know," Julia replied, staring at her sister in a half-frightened manner. "I never did know any good come of girls being brought up in sinful idleness and vanity, of course, but—but, Stasia, you don't mean anything?"

"I mean nothing but what I say, and what I see, and what I know," said Anastasia, venomously. "I've warned father, and got nothing but abuse for my trouble. She reminds him of his dead beauty Madeline, I suppose; and she is a lady, he says, and knows nothing of work, and shall do as she pleases, for all we may say! What do you think of that, my dear?" Miss Anastasia laughed again, and went on in a lower tone, "Father will have his eyes opened one of these days—you see if he doesn't. I'm generally right, Julia, when I say things. Father'll be sorry, one of these days, he had ever anything to do with the dead beauty or her daughter either!"

Neither of the sisters saw that their step-brother was leaning against the porch of the kitchen-door. Neither of them saw his white face as he overheard those last words.

"What do you think makes her so fond of rambling down towards Avonbank?" Anastasia went on, in a hard, sneering tone, putting by the slatey dress and beginning to iron a black

Digitized by Google

stuff apron. "And what do you think makes her always try to go off by herself, and not with Molly or any of us?"

"I don't know," said Julia, dazedly; "she always does keep to herself in that stiff, unsocial way she has. I never saw such a proud, disagreeable young minx! I hope that's not wrong for me to say; but she does try my patience beyond everything."

"She wants grand friends," Anastasia went on, speaking through her closed teeth—"high titled people such as she has been used to all her life. Didn't you hear her at tea? She wants fine titled aristocratic acquaintances, and—she has got them."

She uttered the last words with slow meaning.

"Is it that lord?" Julia ejaculated. "My gracious me, that baronet—I mean that Sir George, who was here to-day? Ah, that's it, is it?"

And both the women, watching each other's faces in their mutual excitement, did not see that the listener's white face had grown rigid, and his head had drooped and sunk on his breast.

"That's it," Anastasia said, virulently, smiling—"that's the reason we don't care for the society of common persons—that's the reason we go out dressed in white cambric and black ribbons down the lonely road towards Avonbank. It's very near Derrybane, too, you know, Julia—just through the wood; and it's with the Parnells of Derrybane that our titled acquaintance is staying on a visit since—— Here's Mary! She's such a fool, there is no letting her know anything. Yes—I think there's nothing like this black linen for wear, and I always said so."

He listened attentively to every word—to his sister's vapid household chat, all through a protracted dialogue respecting Miss Delany's new window-curtains and the quantity of white cotton required to make blind-tassels, on the hardship of father's refusing to let the parlor chairs be recovered when the green damask had faded yellow-white—to the even-song of the birds, the lowing of the cattle, the house dog's barking—until, at length, something softly touching his hand, he looked down with a sudden start, and saw that it was Maud's pet—a remarkably plump little gray cat, adorned with a sumptuous bow of blue ribbon, which she invariably succeeded in twisting under one ear—who was rearing herself playfully against him and tapping him with her velvety paws.

He swore at the little animal and flung her off; and then he went across the farmyard, and the rusty iron gates clashed behind him as he took the shadowy, silent road to Avonbank.

* * * * * *

She was sitting there in her white dress, nestled into a mossy seat amidst the roots of an old sycamore-tree. A large white-paged book lay open on her lap, and the sunset glow rosily tinted the little hand that moved up and down so softly, and burnished her pale, bright hair into a glory.

She was such a fair sight, such a fair memory for the heart of a man to linger over, that he, the hidden watcher, lingered on and on, stupidly wondering what she was doing with that big open book, and the case of shining tubes by her side, and the white palette, color-blotched, on her left hand, understanding at length, with a pang of jealous admiring wonder that she was painting a picture—a beautiful picture of the purple mist-vailed hills closing in the distance, of the long, green meadow dotted with yellow-gray haycocks down by the dark, smooth-flowing Avonbeg, of the dam and its silver-white frothing waters, and the old mill with the red-tiled roof.

There was no one with her; she had come only to paint her picture. Anastasia, with her bitter tongue, had wronged her. That was what brought her down this way so often. She was painting flowers too, perhaps; that was what made her ask him so often to bring her such curious things—not fine bunches of roses or tulips, but tufts of marsh lilies, bedded in dripping green mosses, tangled ivy wreaths, last year's withered leaves, wood hyacinths, and pale-green fern-fronds—of course it was—he understood it all now! And he used to bring them to her; he brought a great cluster of yellow and purple irises and emerald-hued duck-weed leaves only yesterday. Heaven help him! What was it he would not do for her if he could—a big, stupid, ignorant fool that she thought no more of than the dog that licked her hand? The dog! The dog could follow her, could walk by her side, could lie down at her feet and gaze at her for hours, could lay his head in her lap and be caressed by her gentle hand.

"Oh, Maud, Maud!"

The cry was a voiceless one; but a magnetic thrill from the yearning pulses of that wild-beating heart touched her spirit. She rose to her feet, looking about her uneasily.

"It is lonely here," she whispered, timidly; "and the sun has gone down this long time. I had better go."

"Oh, Maud, Maud—my darling, my beauty! If I only dared!" came that voiceless cry again. "If you were anything less than what you are—like a queen, my heart's darling! Yes, faith, that poem is right enough. You're a queen, Maud, my beauty—'queen lily and rose in one'—and I'd die for you—I'd die for you!"

The passionate tears welled into his eyes and dimmed his sight, and he shook from head to foot with the excitement of the thought that he would dare to tell her—not all, but a little, a little—to let her know that she had a friend—a true friend—near her, a friend that would serve her faithfully—serve her with his life! He would tell her so! Let her be surprised, displeased, anything, so that she only listened to him and did not laugh at him. She might listen—she might not be angry—she might even be pleased. There were people who had often told him that he was the image of his father, and a good-looking fellow—the image of his mother, too—and Frank O'Hara's handsome face grew crimson to his sun-browned temples and crisp, bright hair. For his mother and Mary's had been only a pretty servant-girl of their father's house when he had married her, and her uncouth, ignorant, peasant kindred claimed relationship with Frank and Miss Molly O'Hara of the Castle from many a mud walled cabin around Rathmore townlands.

What was he, to think of such as her? He was not much better in her eyes than a servant-man—the hard-working, ignorant farm-laborer he actually was, in obedience to his father's despotic behests. He looked at his hard sun-burned hands, his big feet, and coarse country-made clothes, and hated himself with a fierce despairing hate.

Yet if Maud were not angry—if, by-and-by, she should come to think seriously—if she did not dislike or despise him, and would only say "Yes," to let him work for her, live for her, die for her! She did not dislike him; she always spoke so gently and politely to him—always, even in the days when she first came; and he, like an ignorant ill tempered brute—it afforded Frank a peculiar bitter pleasure just now to apply every contemptuous and opprobrious adjective to himself that he could think of—had hated or tried to hate her for her pride, her coldness and reserve.

(To be continued.)

Commemorating the Destruction of Pompeii.

The destruction of Pompeii eighteen centuries ago was commemorated, September 26th, in the presence of an immense concourse of spectators, mainly from Italy, and of scientific men from every country in the world. The weather was beautiful, and the guests found great pleasure in exploring the ruins and examining the relics which have been removed from the ancient city. From a pavilion erected on the ancient Basilica, Professor Ruggieri (the director of the excavation) delivered an address explaining the newest mode of prosecuting discoveries, and giving an account of some of the more important discoveries that have been made since the excavations were commenced. He attempted to describe to the guests assembled the city as it must have appeared eighteen hundred years ago, and referred to the account of the destruction of the city and Herculaneum as recounted by the younger Pliny in his famous letter to Tacitus, giving an account of the death of his uncle, the elder Pliny. Count Guarnieli and Mgr. Miradelli then declaimed Latin verses commemorative of the event. After a visit to the ruins, excavations were begun under Signor Ruggieri's superintendence, the spectators eagerly watching the process. Stratum after stratum was removed. In the first layer vases were discovered; in the second, a mass of cinders, which gradually revealed several bronze vases of various sizes, two of them having perfectly exquisite silver handles, and also many bracelets, brooches, rings, coins, kitchen utensils and earthen vases. Under them were found wooden beams and sacks of partially calcined corn. The objects that were discovered will enrich the museums of Naples and Pompeii. A spacious refreshment tent was erected on an eminence commanding a lovely panorama. Capital music was furnished by the orchestras from various Italian cities. Vesuvius looked more threatening than usual, and all day long vomited a continuous stream of lava and smoke.

Scraps of Chinese Wisdom.

A wise man can fill a thousand mouths; a fool cannot protect himself. One good word can warm three Winter months; one bad one stirs up anger. If you converse by the way, remember there may be men in the grass. Let those who would not drink, look at a drunken man. The lion opens his mouth; the elephant (the emblem of wisdom) shuts his; shut yours. They are only horses and cows in clothes who neglect the study of the past and present. Every character must be chewed to get its juice. Foam on the waves is the fame of earth. The bright moon is not round for long; the brilliant cloud is easily scattered. The ancients saw not the modern moon; yet the modern moon shone on the ancients. The great wall of a myriad miles remains; but Chin Shih 'Huangh (its builder) is gone. Heaven, earth and the spirits love the humble, not the proud; to the humble they give happiness; to the proud, calamity. Man cannot become perfect in a hundred years; he can become corrupt in less than a day. Men who never violate their consciences are not startled by a knock at the door at midnight. Each half of a riven bamboo smokes. (This is said against quarreling). Better be upright, and want, than wicked and have superabundance. To save one life is better than to build a seven-storied pagoda. Do not consider any virtue trivial, and so neglect it; or any vice trivial, and so practice it.

A Singular Danish Institution.

There exists in Denmark a singular institution, established mainly for the benefit of the daughters of the nobility. When a man of wealth is blessed by the birth of a daughter he causes her to be enrolled at this institution, paying a very small sum, with a fixed annual payment of a moderate amount. When the young girl reaches the age of twenty-one years she not only finds herself in possession of a very comfortable little income, but she has a right to occupy and enjoy a fine apartment, well furnished, in an elegant house, with parks and gardens, and her companions will be ladies, young or old, who are members of the association. It is not obligatory upon a member to live longer at the château, or more frequently, than suits her convenience. If the father dies and the young girl is unprotected she has an asylum at once, even if the subsequent annual subscriptions are not liquidated, and when she attains her majority her annual income begins. If she should die or marry, her interest in the association passes to the general fund. If she should be married when she is twenty, all that is paid in by her father accrues to the association, and it is this source of income that enables the institution to demand only a small annual subscription, which renders it easy for a father to meet the demand, with the assurance that if his daughter cannot be married without a marriage portion, she will at least be in the enjoyment of a comfortable home for life. This institution has been prosperous at Copenhagen for sixty years.

SCIENTIFIC INTELLIGENCE.

The Government of Western Australia has offered a reward for the discovery of new guano islands. Valuable deposits are believed to exist on the north coast between Lacepedes and Camden Harbor.

Professor Diculafait, of Marseilles, has been studying the diffusion of copper in primitive rocks. He encounters this metal in a multitude of rocks in which its existence was formerly not suspected, and also finds it in salt water.

Immediately after the Meeting of the German Association at Baden-Baden on September 14th-24th, the German Geological Society will hold its general meeting at the same place, viz., on September 25th-28th. This arrangement enables the geologists to attend both meetings.

Several Russian Expeditions are to be sent out during this Autumn to Central Asia, and especially to the Darwaz. Captain Hermann and the well-known young botanist, M. Smirnoff, will explore that quite unknown country, and the latter will no doubt bring back a rich botanical collection.

The "Scientific Weekly," conducted in Paris for many years by the Abbé Moigno, under the title of *Les Mondes*, has been bought by a company. The object of the abbé was to combat the philosophical tendencies of modern science, and he will still follow up his work for the edification of the faithful.

There is a Manufactory of prehistoric articles near the Lake of Bienne in Switzerland. Implements of stone and bronze purporting to have been found in lake dwellings are offered to credulous travelers at high prices. One hundred francs was asked for a bronze sword which was not worth as many centimes.

Dr. Arthur Hartland says, in a recent discourse on the distribution of disease, that during the last twenty years no less than one hundred thousand women died from cancer in England. Patients who show tendency to cancer, or persons in whose families cancer appears to be hereditary, should choose for their permanent residence high, dry sites.

M. Debray proposes white metal and iridescent lamium for embroidery in the following way: He uses wires of German silver in the manufacture of metallic laces. He likewise colors metallic foils for the same use by depositing upon them iridescent films of oxide of lead. He dissolves litharge in caustic alkali and decomposes this liquid by a current of constant intensity, the positive pole of the battery being in communication with the metallic surface to be coated.

The French Association for the Advancement of Science will hold its session this year at Montpellier. The ancient university at this place has many historical relics which will be exhibited to strangers for the first time, among them apparatus used by Lavoisier and Bélard. A public lecture on the "Electric Light" will be one of the features of the occasion, and French ingenuity will be exhausted in illustrating this with the most complete apparatus thus far invented.

Some Granivorous Animals will eat many plants that others do not appear to relish. Linnæus, the distinguished botanist, by offering fresh plants of the ordinary kinds eaten by animals, found that horses ate 279 species and refused 211; horned cattle 258 and refused 218; sheep ate 387 and refused only 141. If pastures where dairy cows have grazed are overgrown with briers, indigo plants, ferns, sumac and other nuisances, one way to get rid of them will be to turn on sheep and they will eat them.

Mr. Stephen West Jones, a carpenter, formerly residing in Stockbridge, Massachusetts, and who was given to the study of geology, has proved that in Berkshire County glaciers have formerly existed, by the discovery of numerous polished and grooved surfaces of quartzite and dolomite rocks, now imbedded in the foundation deposits of more recent geological periods. It appears probable from this discovery that many of the gravel-beds of this region are the terminal moraines of the glaciers formerly descending from the north and finally melted in the Champlain period.

Commodore Cameron, at the last meeting of the British Association, stated that the natives near Lake Tanganyika, in Africa, had a call on the drum for everybody's name, and could ask questions and convey intelligence over hundreds of miles and receive answers almost immediately. "In war, messages were constantly sent enormous distances, to bring up reinforcements, or to stop them coming." It also appears, from his account, that lake-dwellings on piles, like the old lake-dwellings of Switzerland, are known in Uruu, but that, for the most part, the villages are built on dry land.

Seven New Oxygen Acids of Sulphur.—M. Manuméd announces the discovery of seven new acids of sulphur obtained by the action of iodine and hyposulphite of baryta, according as we take an excess of one or the other of these reagents. These are two which precede the tetrathionic (S4 O6), namely: S2 O3 and S5 O8. Both of these he has isolated. The second of them can be obtained by mixing three equivalents of hyposulphite of baryta and two equivalents of iodine. The crystals are to be washed in alcohol and have the formula Ba O, S5 O8. The manner of the preparation of the other new acids is not given.

Ozokerite, or Earth-Wax.—The output of earth-wax (native paraffine) in Galicia for the year 1878 was 220,000 hundredweight, about two-thirds of which was worked for ceresine and one-third for paraffine. It is said that ozokerite has been found in the Caucasus and in Southern Utah. The Utah deposit is reported to be 62 miles long and 12 miles wide, and of unknown depth. If this be true, the mining of the product will prove to be of great value to the Territory. The purification of ozokerite and the manufacture of ceresine is accomplished by employing one-fourth its weight of not too concentrated sulphuric acid, subsequent neutralization with soda, bleaching by animal charcoal and hot pressing. Ozokerite is also fused with two per cent. cocoanut-oil or palm-oil and treated with eight per cent. fuming oil of vitriol. To obtain the paraffine the raw material is distilled with superheated steam. Ceresine has properties quite different from paraffine, as its melting point is much higher and it is better adapted to the manufacture of candles.

The Value of Bees to Agriculture.—The society for promoting the culture of bees in Saxony publishes the following highly important statistical information referring to the indirect utility of these industrious animals. It appears that the society named possesses 17,000 hives, from each of which 10 000 bees fly out daily, which represents a total of 170,000,000 of bees. If we suppose that each individual bee undertakes but four journeys per day, and that this takes place only on one hundred days of the 365, then we obtain a yearly total of 68,000 millions of bee journeys. It is not too much to suppose that fifty flowers are visited on each journey, and we are certainly justified in supposing that five out of these fifty are fertilized; then we get a grand total of 340,000,000 of fertilized flowers per year. Let the value of fertilizing five thousand blossoms be one-fourth of a cent, then the work done by the bees of the society represents a value of $170,000. It results from these calculations that each hive benefits agriculture to the amount of $10 annually, a value which hitherto has been totally overlooked.

PERSONAL GOSSIP.

Dr. Sears, the distributing agent of the Peabody fund, has tendered to the colored people of Georgia fourteen free scholarships in the Atlanta University.

General Sherman's third daughter, Miss Ellie, is engaged to be married to a young naval officer named Thackeray, who is a relative of the great novelist.

On September 25th, at Fredericksburg, Va., a large boulder of native white quartz rock was placed to mark the spot where Stonewall Jackson received his death-wound.

Winnemucca, chief of the Pintes, who is now over 75 years old, is visiting all of his people. Feeling his end to be near, he is exhorting them to remain on friendly terms with the whites.

Mr. George I. Seney, President of the Metropolitan Bank of New York City, has given $50,000 in six per cent. bonds to the Wesleyan University at Middleton, Conn., of which he is a trustee.

Roanoke College has a new building—the Bittle Memorial Library—which is to be formally opened October 17th, upon which occasion Dr. Dreher, the newly-elected president will be inaugurated.

One of the pleasantest incidents of General Grant's visit to San Francisco was his reception by 30,000 schoolchildren at Woodward Gardens. In point of enthusiasm this reception eclipsed all others.

M. Alexandre Dumas *fils* is about to write a sensational romance based upon the Jesuits. At first the illustrious novelist had intended to produce a play upon the same subject, but he has since changed his mind.

Rosa Bonheur has just presented to the Spanish Government the life-sized painting of a lion, which is to be placed in the world-renowned gallery of Madrid, notwithstanding the law forbidding the exhibition there of the work of living artists.

The Hon. James G. Jenkins, whom the Democrats of Wisconsin have made their candidate for Governor since Mr. Mitchell's refusal to run, is a native of New York State. He was born in Saratoga Springs in June, 1824, and is a grandson of the late Chancellor R. H. Walworth.

Mr. Chin Law Pun, the Chinese Minister to the United States, who is now in Paris, will return to Washington some time in November preparatory to a visit to Peru, where he will complete the establishment of the diplomatic posts ordered by the Emperor with the nations of Europe and America.

Lord Beaconsfield is nearly half-way between seventy and eighty; but, if there is any truth in the doctrine of hereditary longevity, he has yet a good long lease of life before him. His father, at all events, lived to celebrate his eighty-second birthday, and his grandfather reached the still more mature age of eighty-nine.

Cardinal Manning, now seventy-one years old, is a vigorous and active man with a rarely fine and noble head and face. His strength was shown by one day's experience two weeks ago. He said Mass in Liverpool in the morning, went to London and christened the little Earl of Arundel and Surrey in the afternoon, and returned to Liverpool and addressed a large meeting in the evening.

None of the death-warrants of the Nihilists are signed by the Emperor. By rights the sentences should be attested by his signature; but Alexander is sensitive in the matter of capital punishments, and throws the unpleasant duty upon his subordinates. Geurko and Todleben make nothing of signing the warrants; but Dolgorouckl, of Moscow, and Loris Melikoff, of Kharkoff, have repeatedly refused to order the execution of the revolutionists in their districts.

It is reported in Rome that the Sultan of Zanzibar is about to visit Europe for the purpose of negotiating treaties of commerce with several European Governments and to invite the latter to appoint consuls in Zanzibar. As commercial relations have already been established with Zanzibar by France, England and the United States, the Sultan's principal object is said to be the negotiation of treaties with Italy, and more especially with Austria, as the Austrian florins have the largest currency in the Sultan's dominions.

Intelligence has reached St. Petersburg from Turkestan of the expulsion of Dr. Regel from Kashgaria. The agent, who is the Government botanist at Tashkend, set out with a small exploring party to investigate the flora in the vicinity of the Chinese headquarters at Chikho. The passport which the doctor took with him described the expedition as being purely scientific, but General Tso-Tsoun-Tan saw through the disguise of the Russians, and stopping the party half-way to Chikho, had them conducted back to the Kuldja frontier. Dr Regel protested to the commander in chief against this treatment, asserting the aim of the expedition to be exclusively botanical, but Tso-Tsoun-Tan retorted that the Chinese had already investigated everything that grew within their dominions, and that Russia could have as much botanical information as she wished for on applying to the Chinese Government botanists at Pekin.

President Grévy has made up his mind that he will not be outdone in magnificence by M. Gambetta; and in view of the festivities which he is going to inaugurate in November next at the Elysée, he had the palace given up, previous to his departure for Mont-sous-Vaudrey, to a perfect host of painters, builders and contractors. Not only is the whole ground floor to be entirely regilt and redecorated, but a wooden gallery is to be erected in the garden to allow of a circular tour round the reception-rooms, thus making them by far the widest and most splendid in Paris. The garden, a perfect gem of its kind, both in luxury and design, is to be a conspicuous feature in the *fêtes* at the Elysée, and it is to be illuminated even when the temperature will not allow of the fair guests stepping out into the alleys. Altogether, there is every reason to believe that the re-opening of the palace under the present Consulate will be an immense surprise to a generation which is rather ignorant of its splendors.

The marriage of King Alfonso of Spain with the Archduchess Maria Christina of Austria is to take place on his twenty-second birthday, the 23d of November. The King is said to have declared that he desires several banquets, receptions and state balls to be given in honor of his wedding, and the apartments of the future Queen are being prepared very actively in the palace of the Plaza of Be Oriente. The *fêtes* in November will include the usual bull-fights and illuminations. Gala nights at the opera and principal theatres will follow the celebration of the marriage in the Church of San Isidro, the oldest but one in the capital. The King has announced to his Ministers that the Archduchess and her mother, accompanied by several Austrian princes, intended to go to Spain from Trieste in an Austrian squadron, which would be met by the Spanish fleet of five ironclads and two frigates. The future Queen is to land in Barcelona, where she will be received with much state. The Archduchess will be met and conducted to Madrid by Ministers of the Crown and a royal commission of senators and grandees.

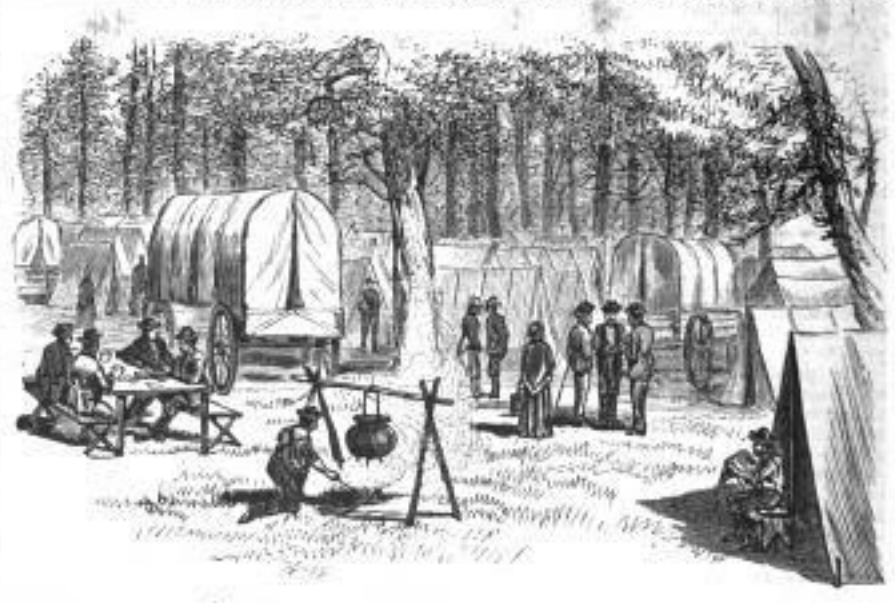
KANSAS.—THE AGRICULTURAL FAIR AT NEOSHO FALLS.—PRESIDENT AND MRS. HAYES VIEWING THE SEVENTEEN-FEET-HIGH CORN-STALKS.—FROM A SKETCH BY H. WORRALL.—SEE PAGE 105.

CALIFORNIA.—ARRIVAL OF GENERAL GRANT AND FAMILY AT SAN FRANCISCO.—GRAND ARCH ERECTED ON NEW MONTGOMERY STREET.—FROM A PHOTOGRAPH BY HOUSEWORTH.

GENERAL GRANT'S RECEPTION IN SAN FRANCISCO.

(Continued *from front page.*)



The city maintained its holiday appearance for a full week after General Grant's arrival, the floral arches and other decorations remaining undisturbed. The triumphal arch on New Montgomery Street, from the Palace to the Grand Hotels, was especially notable, eliciting general admiration for its gracefulness and beauty. We give a view of it as taken by a photographer on the spot, and we could easily fill our pages with illustrations of decorations of every sort, and all exhibiting exceptional skill in their arrangement. The *Alta* says truly that the San Franciscans "have a peculiar fondness for, and a remarkable skill in, public displays. This skill has been developed by the help of a peculiar climate, never too cold and seldom too warm for comfort in the open air, free from rain for seven months, and in the other five rarely raining without fair notice by the prevalence of a strong south wind for six or eight hours. These favorable climatic conditions have had a strong influence on a lively, intelligent, energetic, excitable, public-spirited people, representing nearly every civilized country, interested in everything that concerns humanity, organized in numerous associations, accustomed to work together harmoniously for common purposes, and well supplied with cash even in the hardest times."

The portrait of General Grant, on our front page, presents a face marked by the same expression of strong, rugged and impassive character which has become so familiar to our people. There is, however, an obvious softening of the harder lines of the face, as if, in wider contact with men and freed from official cares, the nature within has lost something of its combative tendencies and become more tender and subdued—more easily touched by those humanities which make the whole world kin.

HINDOO WOMEN.

THE Hindoo women, when young, are delicate and beautiful, so far as we can reconcile beauty with the olive complexion. They are finely proportioned; their limbs small, their features soft and regular, and their eyes black and languishing; but the bloom of beauty soon decays, and age makes rapid progress before they have seen thirty years. This may be accounted for from the heat of the climate and the customs of the country, as they are often mothers at twelve years of age.

No woman can be more attentive to cleanliness than the Hindoos; they take every method to render their persons delicate, soft and attractive;

their dress is peculiarly becoming, consisting of a long piece of silk, or cotton, tied round the waist, and hanging in a graceful manner to the feet; it is afterwards brought over the body in negligent folds; under this they cover the bosom with a short waistcoat of satin, but wear no linen. Their long black hair is adorned with jewels and wreaths of flowers; their ears are bored in many places, and loaded with pearls; a variety of gold chains, strings of pearls and precious stones fall from the neck over the bosom; and the arms are covered with bracelets from the wrist to the elbow. They have also gold and silver chains round the ankles and an abundance of rings on their fingers and toes; among those on the fingers is frequently a small mirror. The richer the dress the less becoming it appears, and a Hindoo woman of distinction always seems to be overloaded with finery, while the village nymphs, with fewer ornaments, but in the same elegant drapery, are more captivating—although there are very few women, even of the lowest families, who have not some jewels at their marriage.

FUN.

BAREFOOTED boys begin to draw their toes in.

MADAME OYSTER is now having her Fall opening.

WHEN a corner loafer dies in Tennessee, the newspaper says—"Another old landmark gone."

THE shrewd old granger who wants a lot of land broken up now gets up a plowing match for a prize of $5.

THE man who invented the gas-metre has achieved the nearest approach to perpetual motion that we will ever see.

A MAN who fell over a bridge the other day was alluded to as quite an aristocratic person, because he could trace his descent from six piers.

A LADY told her little son, who was teasing for something to eat, to wait until breakfast. With a tear in his eye, he burst out: "I jest honestly sometimes think you're a stepmother!"

FIRST BOY—"Where yer ben, Billy?" *Second Boy*—"Bin fishin'." *First Boy*—"Ketch anythin'?" with an anxious expression on his face. *Further-second Boy*—"No. But I expect ter when I git in the house."

IN these piping days of peace there is room for only one more pad. The heart, lungs, liver, kidneys and throat having been padded, somebody should bring out the mouth-pad with the motto: "Stick up and shut up."

THE PARSON—"I'm very sorry to hear, Mrs. Brown, that you were present, last night, at a 'Plymouth Brethren's' tea-meeting. I have often told you that these doctrines are highly erroneous." *Mrs. Brown*—"Erron'ous, sir, their doctrine may be; but their cake, with Sultany raisins, is excellent!"

"ANOTHER burglary on my square last night," said old Dr. Willis, while dining with his partner the other evening. "For my own part, I'm tired of paying taxes for the privilege of being robbed. I don't really see how the police can help arresting some thieves now and then, if only by accident, unless, indeed, the police are the burglars themselves. How is it that you are never robbed, Joe?" "Simplest thing in the world. All you need is a little knowledge of human nature. Now, I'll bet there are three or four policemen in this house at the present moment. Let's go and see." And Joe led the way down into the basement, and the company peeped through the kitchen-door. Sure enough, there sat four officers. One was fixing the fire, one was picking chickens, while the other two were shelling peas and singing a chorus from "Pinafore." "Well, I'm blessed!" said old Willis; "how do you manage it?" "Easy as rolling off a log. I keep a pretty servant-girl!"

GET MORE OXYGEN.

THE Philadelphia *Business Advocate*, speaking of the new and remarkably successful treatment for chronic diseases, known as COMPOUND OXYGEN, says: "We call particular attention to this new treatment, and especially for those who are suffering from chest or catarrhal diseases, or from any of the various forms of neuralgia. The larger amount of oxygen which it furnishes to the lungs gives a higher degree of warmth and vitality to the system, and so fortifies it against the assaults of Winter. A few years ago a gentleman of this city, with lungs so weak and vitality so low that he was obliged to seek a southern latitude every Winter or confine himself to the house from December to March, was induced by a friend, who had received great benefit from the oxygen treatment, to give it a trial. The result was not only improved health, but the ability to remain in the city all through the colder season of the year. We believe that he has not been South since he commenced to use the oxygen." If you wish to know all about this new treatment, write to DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa., for their "Treatise on Compound Oxygen." It will be sent free.

THE NEW YORK CENTRAL AND HUDSON RIVER RAILROAD will issue excursion tickets at reduced rates from all points on their line to the Hanlan-Courtney race on Lake Chautauqua, October 16th. Passengers from New York can reach the lake in less time by the Central than by any other route.

CUTICURA REMEDIES.

CUTICURA RESOLVENT, a powerful blood-purifier, is the only purifying agent which finds its way into the circulating fluid and thence through the oil and sweat glands to the surface of the skin, thus destroying the poisonous elements with which these vessels have been daily charged.

CUTICURA, the great skin cure, applied externally, arrests all unnatural or morbid growths which cover the surface of the diseased glands and tubes with scaly, itching and irritating humors, speedily it removes them, leaving the pores open, healthy, and free from diseased particles of matter.

Thus, internally and externally, do these great remedies act in conjunction, performing cures that have astonished the most noted physicians of the day.

MONEY MAKING.

MONEY.—For simplicity in money making in Wall Street, write CHAS. FOXWELL & CO., Bankers and Brokers, 115 BROADWAY, NEW YORK. By their new system it gives the $10 to $100 operator the same advantages as heretofore the $1,000 or $10,000 purchaser enjoyed.

LEAVE not that to chance which you can make sure of by an accident policy in THE TRAVELERS.

HALFORD TABLE SAUCE—best relish' in use. For family use preferable to all others.

BUTTER-MAKING IN JULY AND AUGUST.

BUTTER-MAKING can be carried on in hot weather as successfully as in June by using the Gilt-Edge Butter Maker. It reduces time of churning one-half. Increases production 6 to 10 per cent. Storekeepers pay 3 to 5 cents a pound extra for butter made with it. Sold by druggists, grocers and general storekeepers. Send stamp for "Hints to Butter-Makers." Address, Butter Improvement Co., Buffalo, N. Y.

QUAQUAGA DAIRY, SUSQUEHANNA VALLEY, N. Y., May 25th, 1879.

BUTTER IMPROVEMENT CO., Buffalo, N. Y.:

Gentlemen—Please accept a sample of butter made from "hay-fed" cows and with the use of your Gilt-Edge Butter Maker: without its use the butter made was almost as white as lard, while with its use (as you will observe from the sample sent you), the butter is of a very beautiful, even golden color, leaving nothing to be desired in that direction. Several of my neighbor dairy farmers have tried your powder, and are loud in its praise. It passes in market as "creamery butter," and is worth from 3 to 5 cents per pound more than dairy butter.

H. C. BRYANT.

AS a light, mild beverage, agreeable to the most delicate digestive organs, the COCOA preparations of WALTER BAKER & Co. are recommended to invalids and convalescents as well as to those in full health.

FOREMOST among great hotels is New York's prime favorite, the ST. NICHOLAS, veteran in years and experience. In every department it is managed with consummate taste and care, and the guest is treated with an attention very noticeable, compared with the laxity of many of its rivals. The consequences of its unequaled accommodations and low rates are found in its crowded daily arrivals.

KIDNEY and Urinary complaints of all kinds permanently cured with HOP BITTERS.

CAUTION.—The *National Dispensatory* says of Tonka Beans: "They are usually covered with a crystalline efflorescence of coumarin. Given to dogs in the dose of from seven to ten grains, this substance produced a great and even fatal depression; and in man in the dose of from thirty to sixty grains it occasioned nausea, giddiness, depression, vomiting and drowsiness." Many of the spurious compounds purporting to be pure Extract of Vanilla are prepared principally from Tonka Beans.

Housekeepers who study their interests will demand of their grocer strictly pure vanilla only, and refuse to accept of an adulterated compound, which may render the dealer a better profit.

BURNETT'S EXTRACT OF VANILLA is prepared from selected vanilla beans, and is warranted entirely free from Tonka or other deleterious substances.

THE devastation of the foreign vineyards by the phylloxera turns public attention anew to the advantages of American wines. In purity and excellence they are fast finding their way into successful competition with all standard foreign brands. The house of A. WERNER & Co., of this city, proprietors of "AMERICA" Extra Dry Champagne, have done much to develop both the home and foreign demand for American wine, and their large and rapidly increasing trade fully justifies their confidence in their goods. The plague on the foreign vines thus results in advantage to American vineyards.

THE NEW YORK AND PHILADELPHIA "NEW LINE."

THE Bound Brook route between New York and Philadelphia opened on Monday their new depot at Ninth and Green Streets, Philadelphia, and now runs nine trains daily between that point and New York. A fast express train, making the trip to New York in two hours, leaves Ninth and Green Streets at 7:30 A. M., returning from New York at 4 P. M., and other frequent trains occupy but a trifle more time in the journey. Pullman cars accompany the fast trains, and no route is more free from smoke and dust nor better provided with the comforts of travel than the "Bound Brook," to which is almost wholly due the credit for the revolution of the last few years in means of travel between New York and Philadelphia. A tedious journey, occupying the best part of two days, is reduced to a pleasure trip, allowing an entire day in each city for business.

SOUR stomach, sick headache and dizziness, HOP BITTERS cures with a few doses.

THE surprising results in saving of fuel by the use of ASBESTOS STEAM PIPE AND BOILER COVERINGS are worthy the attention of every one using steam. H. W. JOHNS MFG. CO., 87 Maiden Lane, New York, Sole Manufacturers of Genuine Asbestos Materials.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

NO MORE **RHEUMATISM**

SELF-RAISING

Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

Dr J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahneman Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

If your grocer has not got it sent a three cent stamp to the manufacturers for a sample.

SECURING THE BRUSH.

THE last fox-hunt of the season at Newport was a genuine "burster." Never were "the men in pink" in better form, the daughters of Nimrod more *piquante*, the cattle "off stable," the "beauties" in better voice! Many were the croppers fetched, many the bullfinches balked, many a gate opened that never before passed man or horse. All honor to the pluck of the fairer sex; "boldly they rode and well," bearing off huntsmen's hearts as gaily as they carried their dainty little hats and whips. Mr. Barrel, of New York, fetched a cropper, and had to compound with Fortune for a few bruises. Mr. Wadsworth would have pushed Mr. Fairman Rogers for the brush if a roll-over in the spin had not taken his wickets. The riding of Mr. Griswold, Captain Candy and Mr. Zobrowski was worthy of the Quorn or Pytchley, while the "go" of other to squeeze into Southwick's Grove, and never did Newport extend a better day's excitement to its high and mighty guests than on the occasion of the last fox-hunt of the season of 1879.

EXTENSION OF THE ELEVATED RAILROAD TOWARDS HIGH BRIDGE.

A FEW weeks ago, in noting the rapidity with which the construction of the Metropolitan Elevated Railroad is being pushed towards High Bridge, we gave a view of Ninth Avenue from the Eighty-first Street Station looking south. Our present view is from the same standpoint looking north. On September 17th the company began running trains to One Hundred and Twenty-fifth Street, although the station building was not then completed. The scenery is particularly beautiful. Central Park and intervening cultivation are seen on the right, prolific gardens, wooded and verdure-clad ridges, to the left, with frequent and fine views of the Hudson and of the high cliffs of Jersey. But it is not until the One Hundred and Fourth Street station is put behind that the novelty, beauty and interest of the route begin to culminate. Sweeping away from it towards richly cultivated lowland and verdured rise, One Hundred and Ninth Street is speedily reached. Here, gliding along at an elevation of some seventy feet—which is preserved to nigh One Hundred and Twentieth Street—the road emerges from the embowerment of the beautiful Lion Park towards One Hundred and Tenth Street, and, in a series of most graceful curves, reaches over that deeply-sunken meadow to Eighth Avenue, where it again assumes an undeviating right of way. At One Hundred and Tenth Street a view of great extent and of striking beauty suddenly presents itself, which increases in interest and attraction when the avenue is reached. Stretching far away to the front are the plains of North New York, and beyond the annexed district of Westchester, with varied topography of hill and dale, embryo woods, and well-tilled farms. Clear over to the east, keeping continuously along, is Long Island, backed by its lofty hills. To the right is a peep at Upper Hell Gate, and along on are views of the East River, Ward's and Randall's Islands, with their institutions. Off from Randall's you have a view of beautiful Flushing Bay, and the entrance to the Sound, of Flushing and of College Point. Looking closely, and Berrien Island is seen dotting in the bay. Over there, on and about Third Avenue, is the thickly populated part of Harlem, and yonder, with highly cultivated lands intervening, are the restricted tending from opposite Ninth Avenue, at One Hundred and Tenth Street—and here Ninth Avenue ends—along and around to the Grand Boulevard, at One Hundred and Twenty-sixth Street. This is a part of the Harlem Heights, historic because of the battle fought there 103 years ago.

That large, columned building on the heights at One Hundred and Tenth Street is the Leak & Watts Orphan Asylum. North from it that spacious and well-preserved frame, buff-colored, old, but comely-fashioned, is the "De Puyster Mansion." Over the heights, at about One Hundred and Fourteenth Street, is a glimpse of the Bloomingdale Asylum. Near One Hundred and Nineteenth Street, and over to the northwest, through the gore made by brief breakage of the heights, is a wondrously beautiful and picturesque view of the Hudson, the close of the highlands of Jersey and the beginning of the

RHODE ISLAND.—FOX-HUNTING AT SOUTHWICK'S GROVE, NEAR NEWPORT—SECURING THE BRUSH.—FROM A SKETCH BY H. A. OGDEN.

Miss Havemeyer, and the "stay" of Miss Oosthout won the heartiest commendation from the worthy and genial M. F. H. From the "gone away" to the death the "rascal" made excellent running, taking the plow where many a steed "stuck," despite the full-flavored language of the cavalier, and skirting over hill and down dale, the "beauties" in close attendance yelping in merry chorus, got pounded at last and done to death. Mr. Fairman Rogers rode straight and cunning, nearly riding down the dogs and honestly earning the coveted brush by sheer good workmanship. The master steered his own course like a good 'un, and the "field"—a very small one at the death—displayed workmanlike qualities that would "place" them with the Ward Unions or the Galway Blazers. The attendance at the meet was something worthy of chronicling, since everybody managed somehow or

The plan of this structure is unlike the others on this road, except the one at One Hundred and Fifteenth Street, being situated between the tracks with a long covered platform, and entered from each side of the avenue. The running time from Rector Street to One Hundred and Twenty-fifth Street is thirty-eight minutes, and six minutes is allowed to engineers to run over the highest part of the road, and around the curves between One Hundred and Fourth Street and One Hundred and Twenty-fifth Street. Strict orders have been issued not to increase the speed between these stations. The iron-work of the road is finished to One Hundred and Fifty-fifth Street, and 175 men are laying the track and building stations. The contractor laying the track says he expects to have it ready for use by the 1st of December.

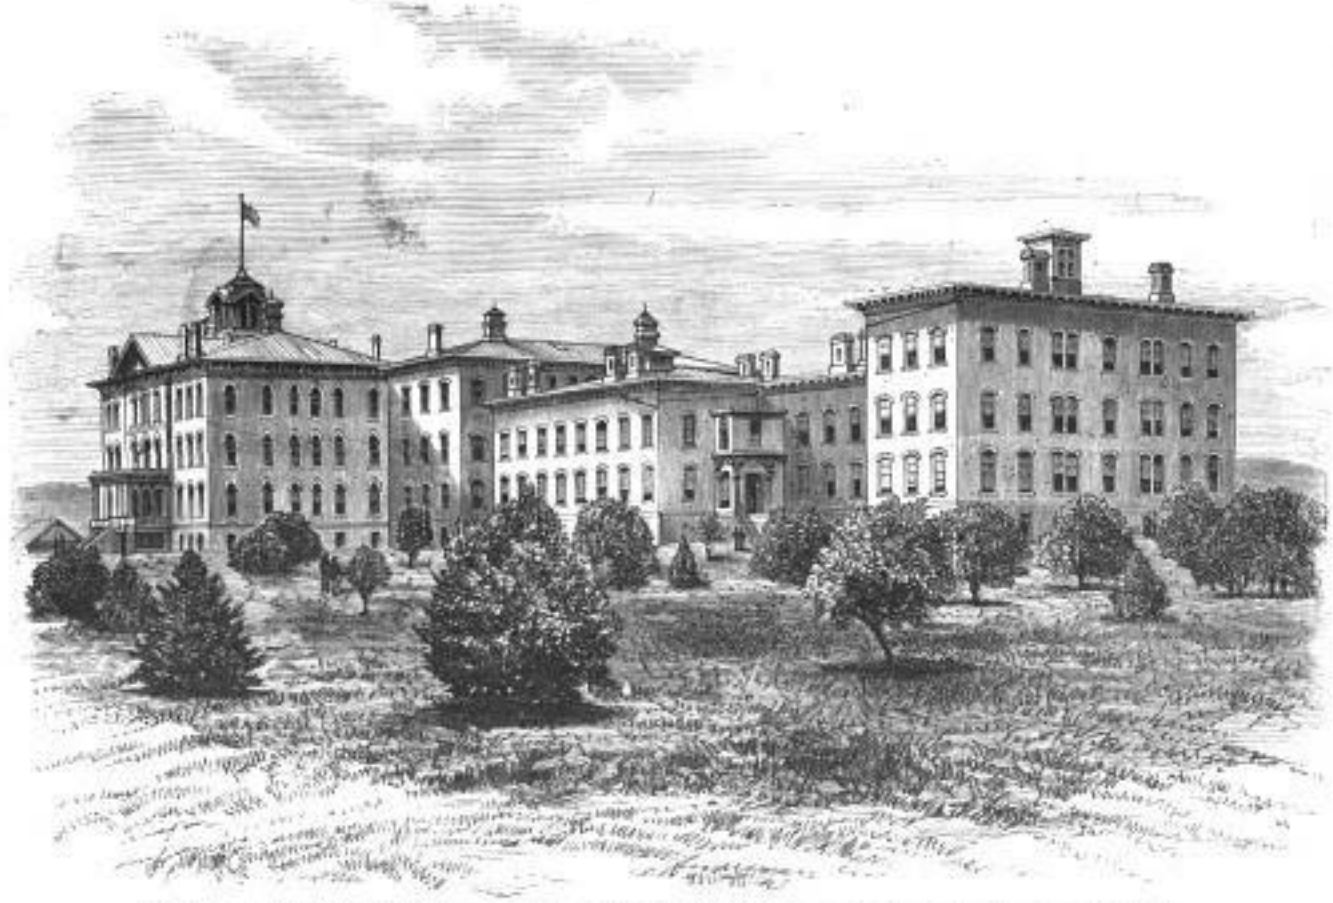
At almost every point along this last extension

NEW YORK CITY.—EXTENSION OF THE ELEVATED RAILROAD TOWARDS HIGH BRIDGE—VIEW ON SIXTH AVENUE, LOOKING NORTH FROM THE EIGHTY-FIRST STREET STATION.—SEE PAGE 113.

Palisades, with pretty Fort Lee cozily snuggling at the foot. That populated little section in and about the gore is Manhattanville, still thereabouts familiarly called "the village."

CANNING FRUITS AND VEGETABLES.

The Thurber Establishment at Moorestown, New Jersey.



AMONG more modern American industries, that of canning fruits and vegetables has rapidly grown in importance until it now ranks ahead of many of much older origin. In order to to give an idea of its development and importance, we illustrate this week the great canning establishment of H. K. & F. B. Thurber & Co., which is located at Moorestown, New Jersey, within easy reach of the headquarters of this well-known New York firm of wholesale grocers, importers and manufacturers, whose business already extends to all parts of the civilized globe. Each illustration exhibits, it will be observed, some interesting feature in the preparation of canned fruits and vegetables. In No. 1 the farmers of Moorestown and the adjacent country are seen bringing in fruits and vegetables to be canned; No. 2 represents the employés preparing fruits and vegetables for processing; No. 3 gives a view of the processing room; No. 4 shows the room where the cans are made; No. 5 represents the soldering-room; No. 6 the labeling-room, and No. 7 the first scene of loading-up the cars and dispatching the trains to different parts of the United States.

The buildings cover two acres of ground, and from 300 to 500 employés are engaged in them during the busy season, in which time there are packed every year over two million cans of the choicest fruits and vegetables. Here are also packed in cans especially made for export, goods of such superlative quality as to create a demand in England, France, and other foreign countries, for Thurbers' brands, which are known on the continent to be a guarantee of the excellent quality and elegant style of any goods upon which they may be placed.

It is the aim of this enterprising firm to pack the very best goods it is possible to procure; and for that reason they located their factory at Moorestown, where the soil is adapted to raising fruits and vegetables in perfection, and where from 300 to 400 acres of tomatoes alone are under cultivation, producing 175,000 bushels of this delicious and popular vegetable. It is there that the celebrated Baldwin tomato is grown—a variety possessing unusually fine flavor and solid, mealy texture, which the Thurbers pack and dispose of as the choicest canned tomato upon the market.

Having observed that the poultry usually canned was of inferior quality and not at all uniform, all ages and sizes being bought up from the farmers and packed indiscriminately, the Thurbers determined to give their customers at home and abroad such canned poultry as was never before packed in this country, and for that reason have recently erected, on their premises in Moorestown, buildings expressly for the purpose of systematically fattening chickens and turkeys, so that none but the finest poultry, killed at the proper time, will be packed, thus guaranteeing a uniform article in perfection. This coming season they will pack 300 tons, or 600,000 pounds, of such poultry as cannot fail to make a demand, since poultry of such quality, put up in such style, is more economical and reliable than much of the so-called fresh poultry furnished in the markets.

In this department the firm has had the benefit of the wide experience of one of its members representing the House at Bordeaux, France—a gentleman thoroughly acquainted with the most approved French methods of preparing every kind of delicacy—on whose recommendation the celebrated Martin process of artificial fattening will be introduced at Moorestown. This process consists of having in a suitable building a number of circular cages for poultry in separate tiers, one above another, which rotate on a central upright shaft. The tiers are divided into separate cells, each just large enough to admit a fowl, open at the back for the sake of cleanliness, and with a small aperture in front through which the bird can thrust its head. Within a few inches of this revolving machine, between perpendicular beams lined with iron sliding ways, is an iron tank capable of containing about forty gallons. In this is the food, composed of skimmed milk with corn-meal, the mixture having a semi-liquid consistency; no water is given. On the top of the tank stands the keeper, who, by a crank at his right, can elevate or lower himself and machine as may be required to reach one tier of cells after another. Taking, let us say, the first cell on the lowest tier, the keeper grasps the head of the fowl with his left hand, with his thumb he opens the beak, and with his right hand thrusts an india-rubber tube connecting with the tank into the throat of the bird. Then with his left hand he closes the beak as tightly as possible, while his foot, pressing on a pedal, works a pump that forces into the fowl the necessary amount of food. Some of the fowls require more food than others, a point which it is the keeper's business to determine. A gauge like a dial, in front of the feeder, shows the exact quantity absorbed. As soon as the right amount has been administered, the keeper lets go the fowl and proceeds to another, until all in that particular tier are served, when, by means of the crank, the man raises himself to the tier next above, and so on until the feeding of the birds is completed. Strange as this method of fattening may seem, the birds take kindly to it, and by thrusting their necks out of the cage, show their eagerness for the approach of feeding time. Fowls are fed three times a day—at daylight, noon and sundown—and the cages, as well as each compartment, are regularly cleaned twice a day. The fowls, chickens in particular, fatten to an almost incredible size in a very short time, and when split open show a very healthy condition. In France, by the use of artificial as well as natural incubation, chickens are hatched the year round, and with the use of this machine for fattening, plump and tender chickens are found in the market at all seasons. There is no reason why this should not be the case in this country, and the enterprise of Messrs. Thurber & Co. will demonstrate its possibility

here. The business history of this house shows that they are never satisfied with well-doing, but are constantly striving to improve upon what has been already done, and the result is that the standard of quality has been raised in every class of goods of which they have thus far taken hold. By *combining* the *manufacturing* and the *distribution* of food products, they have secured the greatest excellence at the minimum of cost, and this economy of expense and perfection of detail controls every other department of their immense business, which is said to be greater than that of any other four houses in their line in this country, while, as before stated, their connections of one kind and another reach to every part of the globe.

CHARITABLE INSTITUTIONS OF KANSAS.

KANSAS may well be proud of her vast charitable institutions. The asylums for the insane deaf and dumb, and blind, are each controlled by a board of six trustees appointed by the Governor and confirmed by the Senate. The Lunatic Asylum at Osawatomie, of which we give an illustration, was opened in 1863, and large as it is, has already proved inadequate to the needs of the State. During the first ten years of its existence 378 persons have been admitted, of whom 161 have been discharged recovered, 38 improved, 20 stationary, and 19 died. At the close of 1875 there were 121 patients undergoing treatment, and the expenses for that year were $28,221. At Olathe there is a Deaf and Dumb Asylum, organized by the Legislature in 1866, to give instruction without charge for board or tuition to all the deaf and dumb of the State between the ages of ten and twenty-one years. The course of instruction covers six years, and the students are obliged, in addition, to devote time to industrial pursuits with a view of being able to obtain a livelihood after leaving the institution. For the blind there is an admirable structure, founded in 1867, at Wyandotte. Although when these institutions were constructed the work was backed by liberal Legislative appropriations, the growth of the population has since been so rapid that many deserving individuals are now unable to obtain the shelter and advantages of the asylums. Additions have been made to existing buildings, entire new ones have been erected within the past five years and there is still insufficient accommodation.

Tennyson vs. Turner.

WHAT is a name worth? A good deal apparently in the case of Alfred Tennyson, who is so fully alive to the magic charm of his patronymic that he has declined to become the heir of certain estates in Lincolnshire rather than exchange it for that of Turner. The Laureate's brother inherited Grasby Hall and some neighboring farms many years back, and for the sake of the £1,000 or £2,000 a year which they yielded he entirely dropped the Tennyson, and became the Rev. Charles Turner, a name which stands on the title-page of his book of sonnets. He died a few months ago, leaving no issue, and his wife followed him to the grave within a few weeks. The next heir is the Laureate, but he will not accept the condition which rigorously enforces the entire suppression of the Tennyson. Doubtless there will be found a brother, or a nephew, if not a son, willing to forego the prestige attached to the family name for the sake of a comfortable inheritance, but the succession is still unsettled.

The Chinese and Naval Architecture.

THAT the Chinese should bring about a revolution in naval architecture and armament is another surprise which the Orient has provided for the European world. It seems that the continued prospect of war between Japan and China led the Japanese Government to purchase in England a number of very heavily armored vessels for offensive operations along the coast of China. Thereupon, the Chinese Government, adopting a plan devised by Rendel, an Englishman, began at once the construction in English shipyards of a fleet of small light-draft unarmored gunboats, each to carry an enormous 35-ton 16-inch muzzle-loading gun. These curious vessels are merely and really self-propelling, floating gun carriages. The guns are not mounted, but lie flat upon the deck, and are worked, loaded and aimed by five men with the assistance of hydraulic power. The boats are double enders; the fire is directed from the bow, but when the engines are reversed the gun becomes a stern chaser. The English journals, in discussing the question raised by this new departure in the art of naval warfare, admit that their boasted massive ironclads —their *Thunderers* and *Dreadnoughts*—would be at the mercy of a small fleet of these gunboats which, from an unapproachable position in shallow water, might concentrate their terrible fire upon and disable such unwieldy monsters, before they could do damage by their turret guns.

Dining with the Dead.

A MYSTERIOUS dinner party was given some short time ago by an elderly gentleman in the Hotel Demouth, at St. Petersburg. One morning the gentleman in question called on Mr. Pintacher, the manager of the Demuth restaurant, and ordered a luxurious repast for six, of which he himself made out the menu, selecting from the wine card the costliest vintages. He asked for an estimate of the dinner's cost, paid the amount of his bill in advance, and requested that everything should be prepared for the entertainment of his guests at seven o'clock precisely the same evening. At that hour he entered the room reserved for his banquet, and took his place at the head of the table. To the chief waiter's respectful inquiry, "whether he expected his friends to arrive soon, as the dinner was quite ready," he replied, "They are all here! Let the soup be served forthwith!" By his express command the puzzled attendants then proceeded to help the absent guests to course after course, setting down full plates before the empty chairs, and pouring out precious wines into groups of glasses stationed before each untenanted place. The gentleman ate and drank copiously, now and anon clinking his glass against the masterless goblets ranged upon the table to his right and left. With his first round of champagne he arose, and made a speech to his imaginary friends, from the tenor of which oration the waiters gathered that they had been engaged in attending to personages long since defunct. When the gentleman had concluded his remarks, he again went through the clinking formality, drained the contents of his glass, and turning to Mr. Pintacher, chilled that amazed functionary's blood by the following ghastly statement: "To-day I celebrate my joyful meeting with my beloved relatives—my dead wife, daughter and three sons, two of whom fell in the last campaign. Do not be afraid; I am not mad. It has done me a power of good to spend this happy hour or so with my family. You may look for me again on this day twelvemonth."

A Peculiar Race in Siberia.

A LETTER from one of Professor Nordenskjöld's assistants, recently published in various Scandinavian papers, gives an interesting account of the Tshudi, a peculiar race inhabiting the northeastern part of Siberia. They look very much like the Greenlanders, are small but alert, have a brownish-yellow skin, with coal-black eyes and hair, and a singular, joyless, almost frozen expression of face. They live in tents, dress in skins and feed on seal-flesh. Their women are tattooed in the face. In their intercourse with the crew of the *Vega* they were a little shy, but curious, like penguins, and willing to help. Their moral ideas were rather naïf, but firmly adhered to, as far as they went. Of their language a dictionary (Tshudi-Swedish) has been made, comprising about three hundred words, and it will, no doubt, prove of interest to the linguists, as the tongues of the polar races have hitherto been as great a puzzle to the philologists as those of the negroes of tropical Africa.

Russian Ground Dwellings.

THE incendiary fires which have of late been so frequent in Russia as to bring down the shares of the First Fire Insurance Company from 1,005 to 900, are powerless in at least one region of the Empire—that lying between Uralsk and the Syr-Daria. Here, for many miles together, there are literally no houses at all, the inhabitants living in underground burrows, which they call "zemlianki." In the loneliest part of the open prairie a swarthy face, with small narrow eyes and sharp white teeth, suddenly pops up out of the ground before your horse's head, and invites you to come down and drink some tea. You follow a narrow, slanting passage, and presently find yourself in a low, square chamber, carpeted with matting, and tenanted by your host's family, while within a stone's throw is the larger burrow in which he stables his horse. Tea and wheaten cakes are produced, and you enjoy an underground breakfast, the coolness of the vault being agreeable enough after the scorching heat outside. Some of the "zemlianki" are inhabited in Winter as well as in Summer, and after a heavy snow-fall it is no uncommon thing for the occupant to have to dig his way out.

Official Salaries in Germany.

OFFICIAL salaries are very low in Germany compared with those in England. The entire salary of the Imperial Chancellor, Prince Bismarck, from all sources, both as Prussian Minister and Chancellor of the Empire, is only 54,000 marks ($13,500). The highest salary of a Prussian cabinet minister is 36,000 marks. Pensions are on the same moderate scale. They are settled on analogous principles to those which govern the English civil-service pension system, the pension amounting to as many eightieths of the salary which was being received at the time of retirement as there have been years spent in the service of the State. Ten years are added to the service in all cases where misconduct has not called for censure. But where the salary exceeds 12,000 marks ($3,000) only the half of such excess is taken into account. Dr. Falk, the retiring Minister of Public Works and Education, entered the service of the State in 1847. He has, consequently, thirty-three years of public service plus ten. His salary as minister was 36,000 marks, which becomes reduced to 24,000 for the purpose of estimating his pension, which will be 42-80 of this amount, or a little over the half, viz., 13,200 marks ($3,300).

Protestant Missions in Mexico.

THE recent consecration of Dr. Riley as bishop of the Church of Jesus, in Mexico, gives interest to the history of Protestant missions in that country. In 1863 a church—and probably one of the first of Protestant churches—was organized in Monterey by the agent of the American Bible Society. Between 1863 and 1870 six churches were organized in various parts of northern Mexico under the Board of the American and Foreign Christian Union, by regularly ordained missionaries. In 1870 the Baptists sent an ordained minister to Monterey, who organized three Baptist churches in and around that city. A year later the Friends sent to the State of Tamaulipas a missionary, who founded a church in Matamoras, and labored in other places in northern Mexico very successfully. In 1872 the Presbyterian Missionary Board sent four ordained ministers into the country. They have organized several churches and schools. In 1873 the Methodist Church sent out Rev. Dr. William Butler, whose labors have been very successful, not only in founding churches, but in publishing and circulating religious literature. The American Board have a mission on the western coast, and the Southern Presbyterians are operating on the border of the Rio Grande. Of the actual number of Protestant churches in Mexico at the present time, there may be forty, and perhaps more, whereas, it has been stated that Bishop Riley's was the only one.

What Every House Needs.

ONE of the worst faults of our very faulty modern architecture, as applied to houses, is found in the fact that our architects do not take into their plan the possibilities of sickness in the family. Now no house is properly constructed that has not in it a room or rooms expressly designed for the accommodation of the sick and infirm. This room should, in the first place, have a warm sunny exposure. The window light should be ample, and command the widest possible view. The first essential in a sick room is a good, liberal fireplace. Through it, by means of the warmth which it generates, the whole room is kept wholesome and pure. Not only so, but a slow, burning fire, with its lights and shades, its rising sparks and glowing brands, its curling and many colored smoke, and its changeful embers, furnishes ceaseless diversion to the sick one who lies watching it. Nothing is more soothing and quieting than the influence which subtly steals into the senses of him who gazes dreamily into the gentle flame. It is a companionship itself. The walls, too, should have their proper adornments. Pictures that suggest quiet and peace, and the free fresh life of nature outside, should be on them. A bracket, with its vases of flowers; a green clambering vine, clinging ambitiously to the ceiling; a library case filled with familiar books; curtains that soften the light while admitting it—all these are helpful to one who lies in weakness, and can take no more of life than what a little room reveals. The object of the construction and location of a sick-room should be to give perfect accommodation and protection to the invalid, while at the same time it suggests the beauty and freedom of being unconfined—the life and animation of the great out-door world beyond.

This Year's Cattle Drive.

THE cattle drive of the present season from Texas and the southwestern ranges is placed at 250,000 head. From Montana and Oregon a late estimate places the drive of 1879 at 100,000 head. The drive of Texas and Indian Territory cattle and ponies reaches Ogallalla in June, towards the latter part of the month, and continues to arrive during July. Kansas was formerly the northern limit of the drive, and this gave to Kansas City a considerable advantage as a market; but the proportion of stock remaining in Kansas is yearly decreasing, while that of Nebraska and Wyoming is annually increasing. At Ogallalla, on the Union Pacific, is now found the great cattle rendezvous which formerly ended at Abilene on the Kansas Pacific. Advices from Ogallalla are not up to date, but a week since the arrivals had reached 75,000 head, and it is fair to estimate them at 100,000 head at this moment alone. Besides the Texas drive, the mountain drive of 100,000 head will reach the Union Pacific, and this route will soon become the greatest stock thoroughfare in the world. The demand for feeders in Nebraska and Iowa is already very great, and the Omaha live-stock market is soon to become an important object of interest between the rival Chicago and St. Louis lines, when the new Wabash and St. Louis lines reach Omaha.

An Extraordinary People.

AT the meeting of the British Association at Sheffield on August 23d, the well-known African explorer, Commander Cameron, gave an interesting account of the manners and customs of the people of Urua, in Central Africa. Urua was one of the largest native States in Africa. It was bounded on the east by Tanganyika, on the north by independent tribes in Manguema, on the west by Ulunda, and on the south by mountains south of the lake of Benguenlo. The great chief was Kasongo, and the race was perhaps the most civilized in Central Africa. The chief claimed divine honors. On his death all his wives save one were slaughtered at the grave, and the one whose life was not taken was handed over to the chief's successor. The spirit of the deceased prince was supposed to pass into the body of the successor. The centre of the religion of the people was an idol, which was held in great reverence.

The idol was placed in the midst of a dense jungle, and it had for wife one of the sisters of the reigning sovereign. Under the principal chief were smaller chiefs, who collected and paid over to the sovereign tribute. He had seen this tribute come in, and some of it must have come from distant parts of the country. There was a numerous class of wizards in the country who did a large trade in idols and charms. Many of the wizards were ventriloquists, and in this way the idols were made to give answers to the questions put to them. Caste was very clearly defined in the race. No one dare sit down in the presence of the chief without permission, which was very seldom granted. In one case where, in the traveler's presence, a native had neglected etiquette, severe punishment was about to be inflicted, but the traveler saved the offender.

Authority was maintained by mutilation. Hands, feet, ears, noses, were mutilated, and the natives did not seem to mind it much. One woman had cut off her own ears. This woman was one of Kasongo's wives; he had about 1,000 of them. She asked permission to mutilate herself, and she did it at once. The body-guard of the chief was composed to a great extent of mutilated people, whose affection for the chief seemed in no way decreased; indeed, it would appear that mutilation strengthened their regard for their chief. The name of the idol was Kungwe à Banza, and profound reverence was shown to it. Fire was obtained by friction from a fire block, and in one case a chief used the shin-bone of one of the other chiefs who had been conquered. The dress of the people was very simple, consisting of an apron. Members of the royal family wore three large skins, and junior members of the family wore aprons of green monkey skins.

The hair-dressing of this people was curious, varying more with districts than with rank. In some cases it was worked up into four ring plaits crossed at the top of the head like a crown, and surrounded at the bottom with a band of cowries or other shells. Skewers were inserted in the hair, one end of which could be used in tattooing. The people were not a hairy race, but they managed to grow their beards long, and plaited them like a Chinaman's pigtail, usually putting at the end of each a lump of mud to weight it. Some of the beards reached to the waists. The women, not having beards to amuse themselves with, were tattooed extensively. Tattooing usually commenced at the age of seven, and might be completed about the age of twelve or fourteen, which was the time for marriage. Beautiful patterns were used, and the tattooing was done in raised cuts. Sometimes a husband, when he was displeased with his wife, cut off all these raised pieces, and the women could not appear in public again; she was not received into society until she was retattooed. He saw one of their weddings, which was very curious. The festivities lasted several days. A ring was formed of the natives, two men with big drums being in the middle. The drums were played and the people round danced. The bride was brought out, dressed in feathers and other finery, on the shoulders of two or three women; she was taken into the middle of the ring, and was jumped up and down on the shoulders of the women. The bride threw shells and beads about, for which there was a scramble, as the possession of them was supposed to confer luck. Ultimately the husband came into the ring, and putting the bride under his arm carried her off. The means of communication was by drum signals. They had a call on the drum for everybody's name, and they could ask questions and convey intelligence over hundreds of miles, and receive answers almost immediately. In war messengers were constantly sent enormous distances to bring up reinforcements or to stop their coming. The mass of the people lived in huts on dry land, but there were one or two exceptions to this.

OUR INDUSTRIAL PROGRESS.

THE cotton mills in the South are running night and day.

ALL of Treston's rubber mills, with earnings of $1,000,000 a year, are now running.

AS SOON as cold weather shall have come, every iron-mill in Pittsburg will be put upon double turn.

GEORGIA'S new venture—the Atlanta Rolling Mill—now employs 500 men, who work upon double turn.

IT IS estimated that Utah Territory has produced $44,000,000 in bullion since the opening of its mines.

SELDOM has Montgomery (Ala.) been the scene of as much activity in every department of business as now.

NORTH ATTLEBOROUGH, Mass., has thirty jewelry shops, employing 1,500 hands, and running to their utmost capacity.

OVER $100,000 worth of slate mantels have been ordered by a London (Eng.) house from a Newburgh (N. Y.) firm.

SOUTHERN Oregon will produce a great deal of excellent pork this year, many rusted fields having been given up to hogs.

NASHVILLE (Tenn.) wholesale merchants assert that more business has been and is being done there than for ten years past.

TEN million paper bags were made by a factory in Ballston Spa, N. Y., in one month recently, and yet the demand exceeds the supply.

TWENTY-TWO million feet of lumber is annually consumed in making boxes for Chicago pork-packers and 2,000,000 feet in picture-frames.

CANNING crabs, a new industry at Oxford, Md., gives employment to 170 persons, who put up from 12,000 to 15,000 crabs daily, or over 500,000 a month.

THERE are ten petroleum refineries within the limits of Pittsburg, which have a combined capacity of from 60,000 to 75,000 barrels refined oil per week.

FOR eight years the large rolling mill of Spuyten Duyvil has been closed. It now has an order for $400,000 worth of steel rails, and work will be resumed at once.

THE largest cargo of grain ever exported from this country has just been shipped from Savannah to Liverpool. It was valued at $40,000 and comprised 3,650 barrels.

DR. A. M. BLACK, who has already done so much for Eastern Kentucky, has induced a company of Pennsylvania oil men to buy 800 and to lease 10,000 acres of land in Johnson County, where they are now boring for oil.

WESTERN New York and Ontario are beginning to ship apples to Europe by way of Montreal. The few shipments already made turned out well, and a large business is anticipated. Advices from Liverpool are encouraging.

THE Pittsburg *Post* believes there has never been anything to compare to the passenger and freight traffic at this moment on our trunk lines. Passenger trains are delayed for hours and interrupted by freight that crowds the track at all points.

THE linen mills in Greenwich, Washington County, N. Y., have been purchased by a firm of manufacturers from Guilford, Ireland, who will give employment to 700 hands. If successful, the firm will transfer their entire business to this country.

A FEW days ago Mr. James B. Pace, of Richmond, shipped 250 hogsheads of bright leaf tobacco to Europe, the value of which was about $40,000. This is perhaps the largest shipment of bright tobacco that has ever been made from Virginia.

THERE are in Cincinnati 5,172 manufacturing establishments with an invested capital of $57,509,215; the number of hands employed, 67,145; and the value of the product, $138,136,166. In forty years the manufactures have increased almost tenfold.

IT IS estimated that the production of silk manufactures in Paterson this year will reach fully $10,000,000. The weekly consumption of raw silk is estimated at 10,000 to 15,000 pounds, and between 9,000 and 10,000 persons are engaged in the industry.

IT IS estimated that the various cotton manufactories in and around Augusta, Ga., use $1,500,000 worth of raw cotton per annum. The annual sales from their product amount to about $2,000,000. The product of the Augusta flour and grist mills yields $1,500,000 per annum.

THE Swiss colony in Tennessee is reported very prosperous. It consists of 112 families, 700 persons, and they bought 10,000 acres of land at $1 per acre. They have started a cheese factory, devote most of their attention to dairy farming and get high prices for their produce.

IT IS proposed to propagate sponges on the Florida coast by cutting the live sponge into small pieces, attaching them to pieces of rock, and sinking them to proper depths in suitable locations. Professor Schmidt reports that in three years each piece will attain a remarkable size.

TO SHOW how our export trade in cattle has increased the fact is cited in an important British document that "in the one article of arrivals, oxen and bulls, the importations into the United Kingdom from the United States has increased in values from about $60,000 in 1873 to nearly $6,000,000 in 1878."

GEORGIA is by far the largest cotton manufacturer, having 160,000 spindles in operation, North Carolina standing second and South Carolina third. Texas is the smallest in the whole list. A number of new mills are now in course of construction in different parts of the South and the production will thus be considerably increased.

THE farmers of a Louisiana parish, finding that they cannot profitably raise and prepare sugar in a small way, have combined to build a large mill, and will take their cane to it for pressing, on the same principle that farmers in some parts of New York take milk to a common cheese and butter factory, receiving pay for their milk and an additional profit for its products, according to prices realized in market.

IT IS estimated that 3,000,000 American pigs will be manufactured this year into many more millions of American hams for sale in England; but these hams are seldom sold by retailers for what they are. They are carefully selected and "dried" in England or Ireland, returning from the latter country in the form of the well known Belfast hams, advanced in price from 40s to 90s. per cwt. The American "long rib" is transmuted into "Irish rolled" bacon. "Cumberland cut," another American product, is converted into "farm leg."

A SHORT time ago an extensive deposit of lithographic stone was discovered in Clinton County, Ky., and a company was incorporated with a capital stock of $500,000 to open and operate a quarry. The stone has been thoroughly tested by lithographers, and is pronounced fully equal to the best Bavarian. Heretofore there was but one quarry of lithographic stone in the world, and that is nearly exhausted, and in future the supply will come from Kentucky. The stone is very valuable, and the bed is believed to be inexhaustible. Blocks as large as the side of a house can be got out.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE LESSON OF POLITICAL DISCONTENT.

THE sacred historian informs us that in the days of the Hebrew monarchy the children of Issachar "were men who had understanding of the times to know what Israel ought to do," and it is added, as significant of the political influence which resulted from their political sagacity, that though the heads of the tribe were only two hundred in number, they had all their brethren "at their commandment." The scheme of politics devised at any given epoch or in any given land is always and everywhere an attempt on the part of real or assumed popular leaders to project a line of conduct which shall be best calculated to promote the welfare of the State. And this line of conduct will be projected with more or less skill according to the degree of intelligence which shall be brought to a solution of the political problems that are inherent in the situation, and will command the public approval according to the degree in which it answers the felt wants of the people.

Wherever the people fall away from existing political organizations it is a sign that the leaders and exponents of these organizations have failed to include all the facts in their analyses and synthesis of the political situation. We have frequently referred to the existence of the Greenback organization as "a sign of the times" through which our country is passing in the present confused state of public opinion on many outstanding questions of currency and of political economy. We remember some years ago to have read a critical essay in the *Revue des Deux Mondes*, in which the presence of brigandage in Southern Italy and in Sicily was treated as the expression and outgrowth of a political discontent still harbored in the minds of that portion of the Italian people who were dissatisfied with the overthrow of King Bomba and with the succession of Victor Emmanuel in his place. Whatever may have been the real state of the facts in this particular case, it is certain, as a general proposition, that the existence of many parties in any community is at once a mark of unrest in the people and a mark of unwisdom in most of their leaders. It was so in Florence when, after the triumphs of the Guelphs over the Ghibellines, the former were seen to divide into the *Bianchi* and the *Neri*, until in the end all sense of political concert and community was merged in a struggle of petty factions, as purposeless and futile as the "wars of kites and crows," to use the comparison of Milton when writing about the aimless feuds of the old Saxon Heptarchy.

We recur to this subject to-day because it seems to us the most significant feature in the age and body of the times now passing before the eyes of our political prophets, and most of these prophets seem to have a very slight perception of the fact which it concerns them so deeply to understand if they are to have "understanding of their times," and if they are to have their brethren "at their commandment." And we recur to the subject with only the greater satisfaction to-day, because we are able to re-enforce our opinion in the matter by citing the corroborative judgment of an intelligent contemporary which, notwithstanding a slight dash of cynicism in its political comments, honestly strives, we believe, to take a broader and deeper view of the facts than is always comfortable to the thick-and-thin partisan of any particular school. We refer to the New York *Nation*, which, in a recent number, justly characterizes the Greenback party as "the party of discontent." That it represents some deeper feeling than the insensate aspiration for "more paper money," is argued by the *Nation* from the fact that the "Greenback movement," so called, is not visibly "dying out under the influence of specie payments and of returning prosperity." It adds:

"The name Greenbacker is a mere accident. The discontent may next year take another name, but it will continue. Many Republicans seem to take comfort in the fact that it now and then, as in Massachusetts and Maine, swallows up the Democratic Party, but we do not see how this mends matters. The 130,000 who voted for Butler last year have to be met and overcome under the name of Butlerites as well as under the name of Democrats."

We think the *Nation* makes a correct analysis of the political situation when it holds that the Greenback Party represents "not simply a particular financial heresy, but a loss of interest in the questions by which the two great parties have been divided since 1856; an unwillingness to accept the new issues got up in Congress between the Brigadiers and the Stalwarts; and, finally, a widespread desire to discuss some mode of improving the condition of the working classes, including the struggling farmers, through legislation."

In this view it is a matter of prime importance that the leaders of the two historical parties of the country should abjure all factitious issues and betake themselves at once to a solution of the real issues which are stirring in the bosoms of the people. When men are found running after such blind guides as Kearney, it is plain that even an ignorant agitator may secure a following by the mere fact of talking, with whatever of folly and inconsequence, on questions in which the common people feel a deep interest. To suppose that the people will refuse to listen to words of truth and soberness on these same topics is to despair of free elections and of popular government. But the people will not accept even sound doctrine on questions of property and labor and money if these questions are degraded from their real pre-eminence among the living issues of this living age. These questions are felt by the unerring instinct of the popular masses to be the impending questions of the hour, and the party which subordinates them to the disputatious politics of the "brigadiers" and the "stalwarts" can count on nothing better than the half-hearted adhesion of the public. It is necessary that statesmen should have intelligence enough to form right opinions on questions of public policy, and that then they should have the courage of their opinions. Party leaders are betrayed by their ignorance of the times; but much more are they betrayed by the cowardice which refrains from speaking the right word in the right season, from a craven fear of its immediate popular effect.

THE BRITISH IN AFGHANISTAN.

THE situation in Afghanistan is still critical. The army of General Roberts, escaping from the trap in Shutargardan Pass, on October 6th, encountered a large force of Afghans ten miles from Cabul, and, after heavy fighting, carried their position, capturing a number of guns and dispersing the enemy. The British loss is reported at eighty killed and wounded. Possibly Cabul is by this time in the hands of the British, General Roberts at last accounts being engaged with the enemy in front of the city. But the campaign will not end with the occupation of Cabul. The Cabinet has already decided that Afghanistan must be held militarily for some time to come, and this decision will involve the seizure and occupancy, probably at considerable cost, of a number of points which have heretofore been considered as unimportant. Then, also, there appears to be a possibility of danger from the Russian expedition in Central Asia which is said to be aiming at Herat, the capital of Western Afghanistan and the key of India. Persia, which affords Russia the shortest and easiest route to India, is reported to have undertaken to provide the expedition with supplies; but this report lacks confirmation. It is also said that the English Home Government has ordered an Anglo-Indian corps to march immediately upon Herat, with Candahar as its base of operations. Simultaneously it is reported that the Czar has demanded assurances that this force shall not occupy Herat or the Badakshan Plateau. However this may be, it is certain that Russia's policy in the direction of India is fixed as the stars, and a collision with Great Britain, sooner or later, will be inevitable. The *Spectator* argues that it would be madness to attempt "to hold down by force and administer through Europeans a poverty-stricken hill-country, as large as France, and to defend its boundaries against all its neighbors," and thinks that the true course would be to abandon Cabul to its fate, and annex the kingdom of Candahar. It says:

"With Candahar up to the Helmund in their hands, and the city itself turned into a Metz, the Government of India cannot, indeed, rule Afghanistan, a task which it is their interest to avoid, but can deliver smashing blows at any part of Afghanistan which an enemy may attempt to cross, or threaten to cross. With an army sheltered in such a fortress, fed by the broad, fertile valley, and reinforced by a railway connecting it with Kurrachee, no enemy could by possibility approach the frontier from the Northwest. But annexation would be an insanity, a willful waste of resources of every description, such as would almost justify ordinary Englishmen in an organized refusal to pay taxes."

A writer in the *Examiner* agrees substantially with the view here stated as to the course which should hereafter be pursued. He says:

"One thing is certain—come what may, the reins of government cannot for the future be held at Cabul. The capital must be removed further from the fostering care of the Emperor of All the Russias and nearer the watchful eyes of our frontier officers. After stern reprisal and well-deserved punishment has been meted out with no lenient hand, it must be placed, once for all, out of the power of Afghan or Russian again to violate the most sacred law of nations, and to insult our country and our flag."

It is plain that Beaconsfield has a problem on hand in this Afghanistan business which cannot be solved in a day; and he will be fortunate, indeed, if he shall finally so determine it as to secure "peace with honor."

COMPULSORY EDUCATION IN NEW YORK.

THE law enforcing attendance at school for a specified term during the year has now been in force in this State a sufficient length of time to enable us to form some opinion of its practical operations, its merits and defects, and the amendments necessary to render the measure thoroughly effective. It was scarcely to be expected that, in a community like ours, a very complete law could be passed in the beginning. The enactment seemed arbitrary, an infringement on personal liberty, and our legislators handled the subject with considerable caution. But the importance of popular education to all, and especially to the class that compulsory laws are designed to reach, is so great that all aversion to the system, it may be presumed, has by this time given way to active sympathy. We must have compulsory educational laws, and they must be made so thorough in their operations that complete illiteracy will be unknown.

With regard to the compulsory education law as it stands at present, it is undoubtedly exerting a very excellent influence. Its results, in the opinion of those whose official positions give them the best opportunities for forming a correct judgment, are most beneficent. Contrasted with the four years preceding its passage, the number of arrests of juvenile offenders, in this city, during the four years in which the law has been in operation, has fallen off about one-fourth. This calculation is made, too, without taking into account the increase of population or the causes which, of late years, have led to a rapid growth of crime. The result looks towards substituting the school for the penitentiary. The moral effect, also, among parents in the class from which the more inveterate specimens of truancy come has been very beneficial. Finding their children under the eye of the truant agents, and no longer permitted to look upon themselves as outcasts, they have been taught to think more kindly of the community of which they are members, and there have been known instances where the result has been found to work a positive reformation among those who previously were only drunken and disorderly. This fact offers a suggestion to the moralist which may aid him in his work of regenerating society.

But despite these and kindred benefits, the law is felt to be insufficient, and scarcely more than in its inception as a measure of public utility. In the first place the period of fourteen weeks, the limited term in which attendance on instruction is made obligatory, is too short. There is no good reason why the great majority of children should not be kept at school during the entire school year. Comparatively few are found to be working in factories, or engaged in any manual labor. The majority of children out of school are "rock rats" and the like; and the truant agents should be, at least, given discretionary power to enforce attendance so long as there is a vacant seat in the school-room. Were this the law, we might expect to see a still more signal decrease in the number of youthful criminals; but, as the case stands, many children attend school during the specified term only to secure unrestricted liberty during the remainder of the year. For reasons very patent to all, there should be no idle children on the street.

Another defect in the operations of the Act springs from the imperfections of the local machinery and methods for its enforcement. Here, in New York, the only penalty for truancy is commitment to the Orphan Asylum or to the Catholic Protectory; and a discharge from those institutions may be ordered, at any time, by the President of the Board of Education. This power, it is charged, is sometimes, on the solicitation of parents, abused to a degree that is demoralizing to the children, and offensive to the managers of both the Asylum and the Protectory. So mischievously, indeed, does this method of enforcing the Truancy Act work that commitments have become rare, so rare that, according to the statements of an officer of the Asylum, they were more common under the old law of 1833, a law by which police officers and constables were authorized to put vagrant children to school wherever found, than they are now. In Brooklyn, where they have a system of attendant schools and a Truant Home, the system works better than in New York; but even there it seems to be susceptible of improvement. The attendant schools appear to be altogether successful, showing a percentage of attendance on the part of truant pupils equal to that of the highest of the grammar schools in the city. But the name of Truant Home, given to the boarding-school for the worst class of truants, is unfortunate. It savors too much of the character of an asylum, or of some house of correction for criminals; and the name should be made to conform more nearly to the designations in use in the public school system. At present it is needlessly offensive to parents.

There are other imperfections in the law and in the administration of the system which might be pointed out; but on a subject of so much importance it should only be necessary to call attention to the more striking errors to secure such a revision of the Act as experience has proved to be necessary. The law should be made more explicit in detail; the period in which a child may be kept at school should be limited only by the duration of the school term, and all chances for conflict of authority in administration should be removed. We must remember that the law has already shown that by extending the advantages of education we diminish the amount of crime, and, with this fact in view, no available means of perfecting the system should be neglected.

PROGRESS IN WEATHER SCIENCE.

THE progress in meteorological science and the application of meteorological knowledge to the service of mankind, is one of the conspicuous facts of the present century. And it may fairly be claimed that in this, as in many other scientific fields, the thinkers and workers of the United States lead the column. It was General Myer, of our Signal Service, for instance, who originated the system of international weather observations, which has proved of such immense service to the commercial countries, and which now, as we are told, is to be so extended in its scope that "Old Prob" hopes to be able to present every morning to every citizen of the Union a report of the condition of the weather all over the world. This will be done by "world weather charts," which, now issued monthly, it is proposed to issue every day, the same to be deducted from reports of observations taken simultaneously twice each day all over the globe, and telegraphed. The value of such reports to commerce can scarcely be over-estimated. In furtherance of the system, over 100 daily observations are made at sea in all parts of the world, by naval and other vessels of this and other countries, under the immediate direction of General Myer. The total number of observations now made daily on land and sea, is 557, extending around the world and including all the civilized powers north of the Equator, and several south of it. The facts as to the movement of storms from continent to continent, the movement of areas of high and low barometer, the conditions of the temperature and winds, the distribution and amount of rainfall, and other facts in climatology, thus gathered each day, are permanently recorded, and thus form a basis upon which deductions may be safely built and meteorological laws satisfactorily determined. We need not be surprised if, a little while hence, General Myer shall tell us every morning, as we linger over our coffee and toast, just what sort of weather will mark the day in Iceland, Africa, or "far Cathay," and whether umbrellas or sunshades will be needed on the boulevards of Paris and the streets of Melbourne.

EVENTS ABROAD.

FULLER returns as to the elections for the Prussian Diet show the result to have been more decisive in its confirmation of the authority of Bismarck than was at first supposed. The Liberals, who in the last House had a majority of nearly 50 over their combined opponents, have now lost over 110 seats to the Conservatives and Ultramontanes, and will have altogether only 170 votes, against 260 supporters of the Government. The Catholic Party having nearly 100 votes, they will be able to command the position in the event of a parliamentary conflict, and this fact will probably hasten the reconciliation of Bismarck with that element. It may be doubted, everything considered, whether the interests of genuine reform and real progress will be promoted by the defeat of the Liberals and the check which has been given to wholesome political tendencies in the German polity.

The agitation of the Irish land question grows in vehemence and intensity. The *Spectator*, speaking of the perturbation, says that "unless some popular, pressing wants as to more equitable conditions of tenure are satisfied, the consequences of the refusal or neglect are likely to be socially demoralizing, if not politically serious." In Tipperary 300 tenants have opened the campaign against the landlords by formally refusing to pay their rent, although in some cases a reduction of thirty per cent. was

Digitized by Google

offered them. The situation in some districts has become so serious that detachments of military are said to have been ordered to proceed to the scene. An appeal to the Irish in America has just been issued by some of the advanced Home Rulers, who set forth with a good deal of cogency the evils of the land system. The address solicits contributions of money to enable the "600,000 landless farmers" to effect a compact organization and fight the landlords, inch by inch. "The freedom of the Irish soil," it says, "is a task far above the influences of party movement. It has won the indorsement of public opinion. It will win the indorsement of Irish America; and Irish America will at last obtain for Ireland the possession of an unfettered soil." It is stated that Mr. Parnell may come to the United States in furtherance of the movement here outlined.

In his address at the opening of the Austrian Reichsrath, the Emperor urged economies in the administration, but as to the military bills, significantly said, "The monarchy must be enabled to assert its influence fully whenever events required it to protect its interests." The Emperor, in accepting Count Andrassy's resignation, said that he "by no means regards his retirement as the termination of his statesman-like labors. He is convinced that Andrassy will always be ready to obey the call should his well-tried services again be required."

Both China and Japan appear to be busily preparing for war, but no really hostile steps have yet been taken. Certain changes recently made in the Japanese Ministry are regarded as favorable to a more advanced national policy—the new Minister of Foreign Affairs, Inouge Jakoru, being one of the ablest and most liberal publicists of the Empire. In China, Li Hung Chang, the Premier, has established a hospital at Tientsin, under foreign guidance, which is largely patronized by the higher class of natives, and has so far violated national traditions as to employ a foreign physician in his own family—an example which can scarcely fail to produce salutary results.

There is some uneasiness in France in view of the somewhat defiant attitude of some of the returned Communists. On one or two public occasions recently, the crimes of the Commune were openly extolled, and movements are on foot looking to the election of representative Communists to seats now vacant in the Chamber of Deputies. It is regarded as somewhat significant that, while the Cabinet has resolved to oppose reopening the amnesty question, the organ of M. Gambetta favors the extension of pardon to all the exiled Communists.

The British Resident and staff have left Burmah, and the London *Examiner* says it has information that Lord Lytton has determined on a war with that country if possible. "The thin edge of the wedge has already been introduced in the usual way, by preferring an impossible demand with the certainty of a refusal. As Burmah is a country with resources other than scientific frontiers, its annexation might be profitable"; but the *Examiner* declares that "neither justice nor the true interests of the Empire would at present justify war."

The latest incident of the war in South America is the capture by the Chilians of the famous Peruvian ram *Huascar*. This ram has been the main reliance of the Peruvians, having sunk the *Esmeralda*, raised the blockade of Iquique, captured the transport *Rimac*, bombarded Antofagasta, and performed several lesser exploits. With the aid of this formidable vessel the Chilians will now be able to carry on a vigorous offensive warfare, and possibly terminate the war speedily in their favor.

The business prospect in Great Britain is becoming more hopeful. Mills which have been closed are resuming operations, and industrial conditions generally are adjusting themselves upon a more satisfactory basis. Two hundred and sixty farmers with their families sailed from Liverpool for Texas, October 9th.—Spain will send 4,000 troops to Cuba during the present month. The Committee of the Cortes on the abolition of slavery is divided into three parties: one favors immediate abolition without compensation to the owners; another party favors gradual abolition without compensation, and a third party favors gradual abolition with compensation.

THE TROUBLE WITH THE UTES.

THE relief of Captain Payne's beleaguered garrison on the Milk River battlefield, on the morning of October 2d, by Captain Dodge and forty men of the Ninth Cavalry, colored, formed a most dramatic picture. The colored troops fairly cut their way through a large Indian force, and so fierce was the fire that, while rushing on foot to Payne's hastily formed intrenchments and leading their horses by the bridle, they lost all but two of the animals. General Merritt, with his relief party, marched seventy-five miles in twenty-four hours, and reached the scene of the massacre on the 5th, greatly surprised to find that the colored company had already arrived. Special praise is awarded to Captain Dodge and his colored troops for their promptness and determined succor. In the Indian Office the opinion is held that the outbreak was occasioned by the incessant raids into the Ute reservation of white miners who had discovered specimens of rich gold in the very centre of the tract, the Indians being provoked to warfare to preserve their rights under the treaty. Considerable stress is also laid upon the statements that the Utes became exasperated by the persistent attempts of Indian Agent Meeker to force the "improvements" of the white man upon them, endeavoring to sow the germs of civilization in their midst by means of systematic agriculture, when they as persistently objected to being civilized.

THE friends of the late Charles G. Rosenberg, a journalist and artist of this city, have undertaken to secure a collection of pictures to be sold for the benefit of his widow. The use of the rooms of the New York Press Club has been kindly offered for the reception and exhibition of the pictures, and it is hoped that the enterprise may result in a substantial provision for the relief of the bereaved and destitute wife.

THE London *Saturday Review*, commenting on the California election, says that "the new Governor, who was formally a Baptist minister, probably profited by the outrageous attempt of one of his opponents to murder him on the eve of his election." The ignorance which many eminent English journals display in discussing American affairs—of which this is a conspicuous example—would be amusing if it were not disgraceful.

THE people of Connecticut evidently have no fear of the evils of excessive legislation. They have just rejected by an overwhelming vote a proposed amendment to the Constitution, providing for biennial sessions of the Legislature. An amendment giving Judges of the Supreme Court life-terms experienced the same fate. There is something to be said on both sides of these questions; but in the country at large the popular feeling is becoming more and more favorable to the reform proposed in the first of these rejected amendments.

THE political campaign in the State of New York is already characterized by a good deal of vigor on both sides. So far the Republicans appear to make the largest show in the way of meetings, but the Democrats are evidently giving more close attention to systematic detail work, and it is that which produces the most satisfactory results in any general canvass. It is too early to predict intelligently the probable outcome of the struggle, but it is safe to say that principles will have very little to do, on either side, with the determination of the issue.

THE regular Democrats of Massachusetts, who object to being swallowed by General Butler, have nominated John Quincy Adams for Governor, and propose to brand as traitors all members of the party who fail to give him their support. Butler is making a vigorous canvass, but it is not believed that, with all his backing, he will be able to overcome the majority which defeated him last year. But his opponents should not be content with a mere majority: they should make the defeat of the arch agitator so overwhelming as to render him utterly powerless for the future.

IN a speech at a Republican mass meeting in Brooklyn the other evening, Rev. Henry Ward Beecher said:

"If men will not attend the primaries and see that their parties do not disappoint them, they can blame no one because they themselves neglect to take the step. If from indolence, preoccupation, prejudice, or any other reason, they do not care enough about affairs to bring them to pass by the natural way of creating a sentiment in the convention or party, they should at least have modesty enough not to attempt to overrule those who have taken the pains and have done this work."

This may seem like indorsing "the machine" in politics, but it is just and true, nevertheless. We shall never have government at its best until the best, purest and worthiest citizens shall give their attention generally to the duty of controlling the primary sources of political influence and authority.

IT is the policy of FRANK LESLIE'S ILLUSTRATED NEWSPAPER to illustrate all events of public interest, and to make its columns a mirror of the actualities as well as the thought and spirit of the times. In the carrying out of this policy, we know no party, sect or section. It is our aim to be perfectly independent and impartial in everything, supporting whatever may be good and commendable in either of the great political parties, and condemning what is plainly wrong and vicious in both. As to public men and their acts, we strive to regard them in their relation to principles and ideas, and to treat them justly and intelligently, without any reference whatever to mere partisan considerations. Habitual readers of our columns will not need this statement to enable them to understand our position, and it is made not for them, but for the benefit of those who may not have been familiar with our general course.

THE increasing activity in business is clearly illustrated by the statements of the earnings of twenty-two Western Railroads during the month of September. As compared with the earnings for the same month last year, the receipts for the month just closed show an increase of 20 per cent., the exact figures being $9,876,960 as against $8,220,301. The Chicago papers state that the business revival throughout the West is universal. In Chicago the money value of sales, this season, will exceed that of last year's sales by from 30 to 40 per cent. In Kansas City stores are let in advance before they are built, and large bonuses are offered to the holders of such leases. Denver, the centre of the vast interests seeking investment in Colorado, is represented to be fairly "dancing with prosperity." Other cities make similar reports, and it is quite evident that the tide of prosperity is everywhere gaining strength and volume.

IN an address at Indianapolis, some days since, General Sherman commented sharply on the action of Congress in reducing the army. It was simply impossible, he said, to protect the frontier with the force at his disposal. "There are not more than 20,000 soldiers scattered over Colorado, Idaho, Arizona, Oregon and other points that need protection from predatory raids from the Indians," and these are scarcely sufficient for picket duty on the exposed frontier lines. The General expressed it as his solemn conviction that "if the border is to be protected so that the public domain may be improved and built up, then the army must be maintained at such a standard as can cope with the hostiles." There can be no doubt that, in the event of serious Indian troubles, the country would find good reasons in the impotence and misfortunes of the military for condemning the Congressional policy as to the army; but it is to be hoped that, with fair dealing and justice to all the tribes having cause for discontent, we may avert any formidable uprisings.

THE Supreme Court of Pennsylvania has decided that the county of Alleghany is liable for all the damage done by the Pittsburg mob in the railroad riots of 1877, and that suits can be brought and the amount of losses recovered by those who suffered. There can be no doubt as to the justice of this decision. The county and city authorities displayed a pusillanimity and impotence in the presence of the mob which was utterly inexcusable, while the populace manifested a sympathy with the prevalent incendiarism and lawlessness which justly provoked the condemnation of law-abiding citizens everywhere. If the community shall be now compelled to pay for the outrages it permitted, nothing more than strict justice will be done. It is estimated that the aggregate of losses, for which, under the decision just given, the county will be liable, amount to nearly $5,000,000. It is possible that an effort will be made to compromise the matter, or obtain legislation for the relief of the municipality; but it is scarcely likely that the effort to saddle the bill upon the State, which failed at the last session of the Legislature, will be revived with any show of success. The court, in the course of its opinion, uses this language:

"We see no evidence of any serious attempt upon the part of the local authorities to suppress it. At the time of its commencement a feeble attempt was made by the Sheriff, resulting in the enrollment of some half dozen deputies. But there was no proclamation calling upon the body of the county to come to his assistance in preserving the peace. No one doubts at this day that if a proper effort had been made at the proper time the mob could have been held in check. The law will not tolerate the spectacle of a great city looking on with indifference while property to the value of millions is being destroyed by a mob."

THE injuries inflicted upon the business interests of the country by the rivalries and contentions of competing lines of railway, and their discriminations against certain classes of shippers, have very naturally drawn public attention to the subject of the regulation of inter-State commerce, and the necessity of the assertion by the State or nation of some sort of control over the corporations which have displayed such a reckless disregard of individual and public interests. Bills on the subject, introduced into Congress, have hitherto failed because of the conflict of views as to the jurisdiction of Congress, but the opinion is gaining ground that the evils can only be cured by a national law, and a vigorous effort will no doubt be made to secure the needed relief from that quarter. It is a gratifying fact that nearly all the great "railway kings" who have expressed themselves on the subject, manifest a disposition to have it intelligently decided in the interest of the public. President Scott, of the Pennsylvania Railroad Company, thinks that the question of the Congressional regulation of inter-State commerce might properly be submitted to a commission acting on the part of the Government and the Board of Arbitration appointed by the trunk lines to adjust differences arising between themselves. "This joint Board," he says, "could confer with the officers of railways and other transportation companies, with the different commercial organizations, and with the representatives of the farming and other interests involved in the question, with a view of taking such action as would be fair and equitable to all parties." Mr. Vanderbilt, of the New York Central, and Mr. Garrett, of the Baltimore and Ohio, have expressed substantially similar views. Colonel Scott adds that, in his opinion, the results arrived at by the committees of conference, should be clinched by the enactment of the necessary local legislation in the several States which have created the railway corporations. Possibly this course, in the event that the power of Congress in the premises should be held to be doubtful, might be the proper one to pursue; but there could scarcely be that uniformity in the adjustment of the interests affected, under this plan, which could be secured by national legislation.

NEWS OF THE WEEK.

Domestic.

THE attempt to re-establish the coal combination has proved a failure.

EIGHTEEN months will be required to complete the Brooklyn Bridge.

THE cotton crop reports for the month of September show that from 25 to 40 per cent. of the crop has been picked.

THE warm weather has caused a revival of the yellow fever epidemic in Memphis, but the deaths are not numerous.

THE sales of public lands belonging to the United States, during the last fiscal year, amounted to 8,650,000 acres.

FIFTEEN missionaries for India sailed from New York, October 11th, under the patronage of the American Baptist Union.

THE receiver of the Continental Life Insurance Company announces that he can pay policy-holders a dividend of fifteen per cent.

ROBERT W. STEELE, bookkeeper of Isaac Smith's Son & Co., of this city, has absconded, having defrauded the firm of $60,000.

STATE TREASURER RENFROE of Georgia has been found not guilty of the charges made against him by the popular branch of the Legislature.

PRESIDENT HAYES reached his home in Ohio last week, and remained until October 14th, in order to cast his vote for the Republican State ticket.

THE Louisiana Democrats have nominated Lieutenant-Governor L. A. Wiltz, of New Orleans, for Governor, and S. D. McEnery for Lieutenant-Governor.

THE total attendance at the Cincinnati Exposition up to the hour of closing, on October 8th, was 358,005. It is thought the receipts will reach $160,000.

THE council of the Centennial League of the United States has resolved to co-operate with the various committees to insure the holding of a World's Fair in 1883.

A CHICAGO and Alton Railroad train was stopped by highwaymen near Kansas City, Mo., October 8th, and robbed of $6,000 in the hands of the express messenger.

RECENT dispatches from the Ute country encourage the belief that the women and children who were at the White River Agency with Mr. Meeker were not molested.

THE sub-committee to investigate the charges against Senator Ingalls have concluded their labors in Topeka, Kansas, and adjourned to meet in Washington on December 4th.

GOVERNOR WALLACE estimates the present population of New Mexico at 125,000. A large immigration is following the construction of the Atchison, Topeka and Santa Fé Railroad.

THE Colorado election, October 7th, resulted in the election of the Republican candidate for Supreme Judge. The Republicans claim a majority of nearly 5,000, a gain of 2,000. A very light vote was polled.

THE walking-match for the O'Leary belt was won on Saturday night, October 11th, by Murphy, of Haverstraw, who made 565½ miles, with Howard second, 500, Faber third, 488, and Briody fourth, 475.

THE Rev. Dr. William J. Tucker, of the Madison Square Presbyterian Church, of this city, has accepted the chair of Sacred Rhetoric in Andover Theological Seminary as successor to the Rev. Dr. Austin Phelps.

TWENTY-TWO immigrants and second-class passengers were killed and thirty wounded by an accident on the Michigan Central Railroad, near Jackson, Mich., October 10th. The accident was caused by a misplaced switch.

GENERAL GRANT will leave California for the East about the 27th of October. He was given the compliment of a public reception by the merchants of San Francisco, October 9th, and sailed on the same day for Oregon.

THE corner-stone of a monument to the memory of Sergeant Jasper was laid at Savannah, Ga., October 9th, on the centennial anniversary of the siege of Savannah. Over 15,000 people were present, and there was a fine military display.

THE Faneuil Hall (Massachusetts) Democrats have nominated John Quincy Adams for Governor, W. H. Pinckett for Lieutenant-Governor, M. T. Donohoe for Secretary of State, D. N. Skillings for Treasurer, W. R. Field for Auditor, and Richard Olney for Attorney-General.

Foreign.

INFANTRY are to be stationed throughout every available portion of County Mayo, Ireland.

THE French Cabinet has unanimously resolved to uphold the Ferry Educational Bill in the Senate.

IT is said that 5,862 animals have died of rinderpest in Southern Russia since the beginning of the year.

ADVICES from Hayti state that General Montpezency has been elected President of the Republic by a majority of 85 votes.

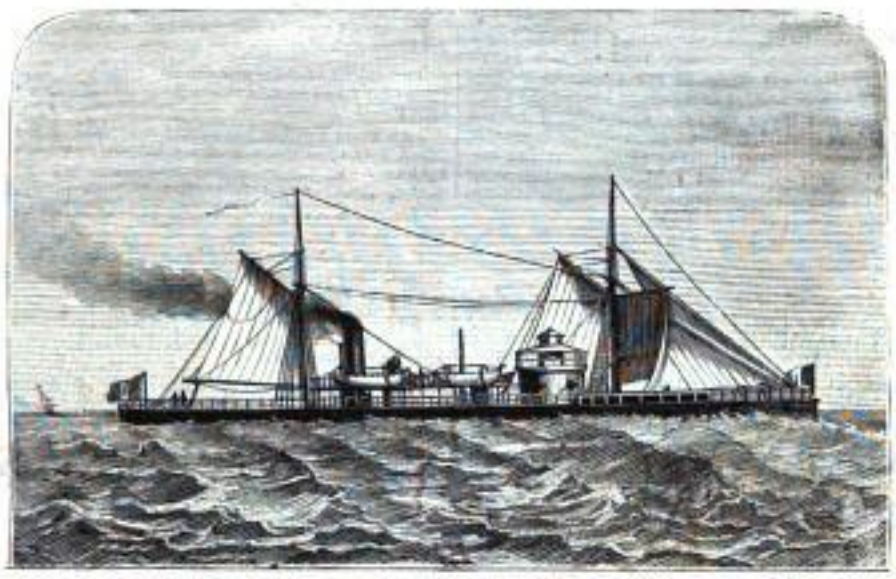
NEW regulations have been issued at St. Petersburg authorizing the police to use weapons to disperse threatening crowds.

MUCH damage has been done in Manitoba by prairie fires. Many farmers have lost their houses, wheat and hay-stacks.

A PARIS dispatch reports that 1,000 emigrants embarked at Genoa for the United States October 5th, and 1,200 on October 7th.

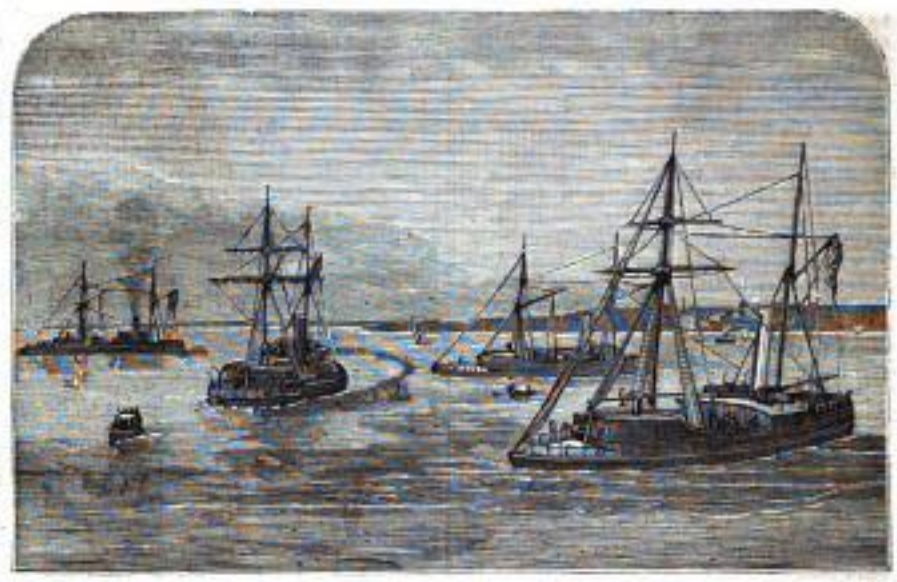
THE manager and directors of the Consolidated Bank of Montreal have been indicted for entering false statements of the condition of the bank.

MINISTER NOYES and Consul Fairchild with their wives will shortly go to Egypt, North Africa and Spain. They will be absent from France for three months.



PRINCE BISMARCK was to go to Varzin, his estate in Pommerania, October 9th. The Emperor has granted him a five months' furlough on condition that he shall superintend any business of more than ordinary importance arising during that period.

A SPANISH Cabinet council has settled the basis of treaties of peace and commerce with Peru and Bolivia, and has also resolved to enforce in Cuba severe penalties against persons guilty of sequestrations, pillage and incendiarism on political pretexts.



ADVICES from Cape Town to September 23d are that the presence of the troops and Sir Garnet Wolseley's emphatic declaration that England intends to claim the Transvaal, have produced a quieting effect on the Boers. Affairs in Zululand were quiet.

GRAPE CULTURE.

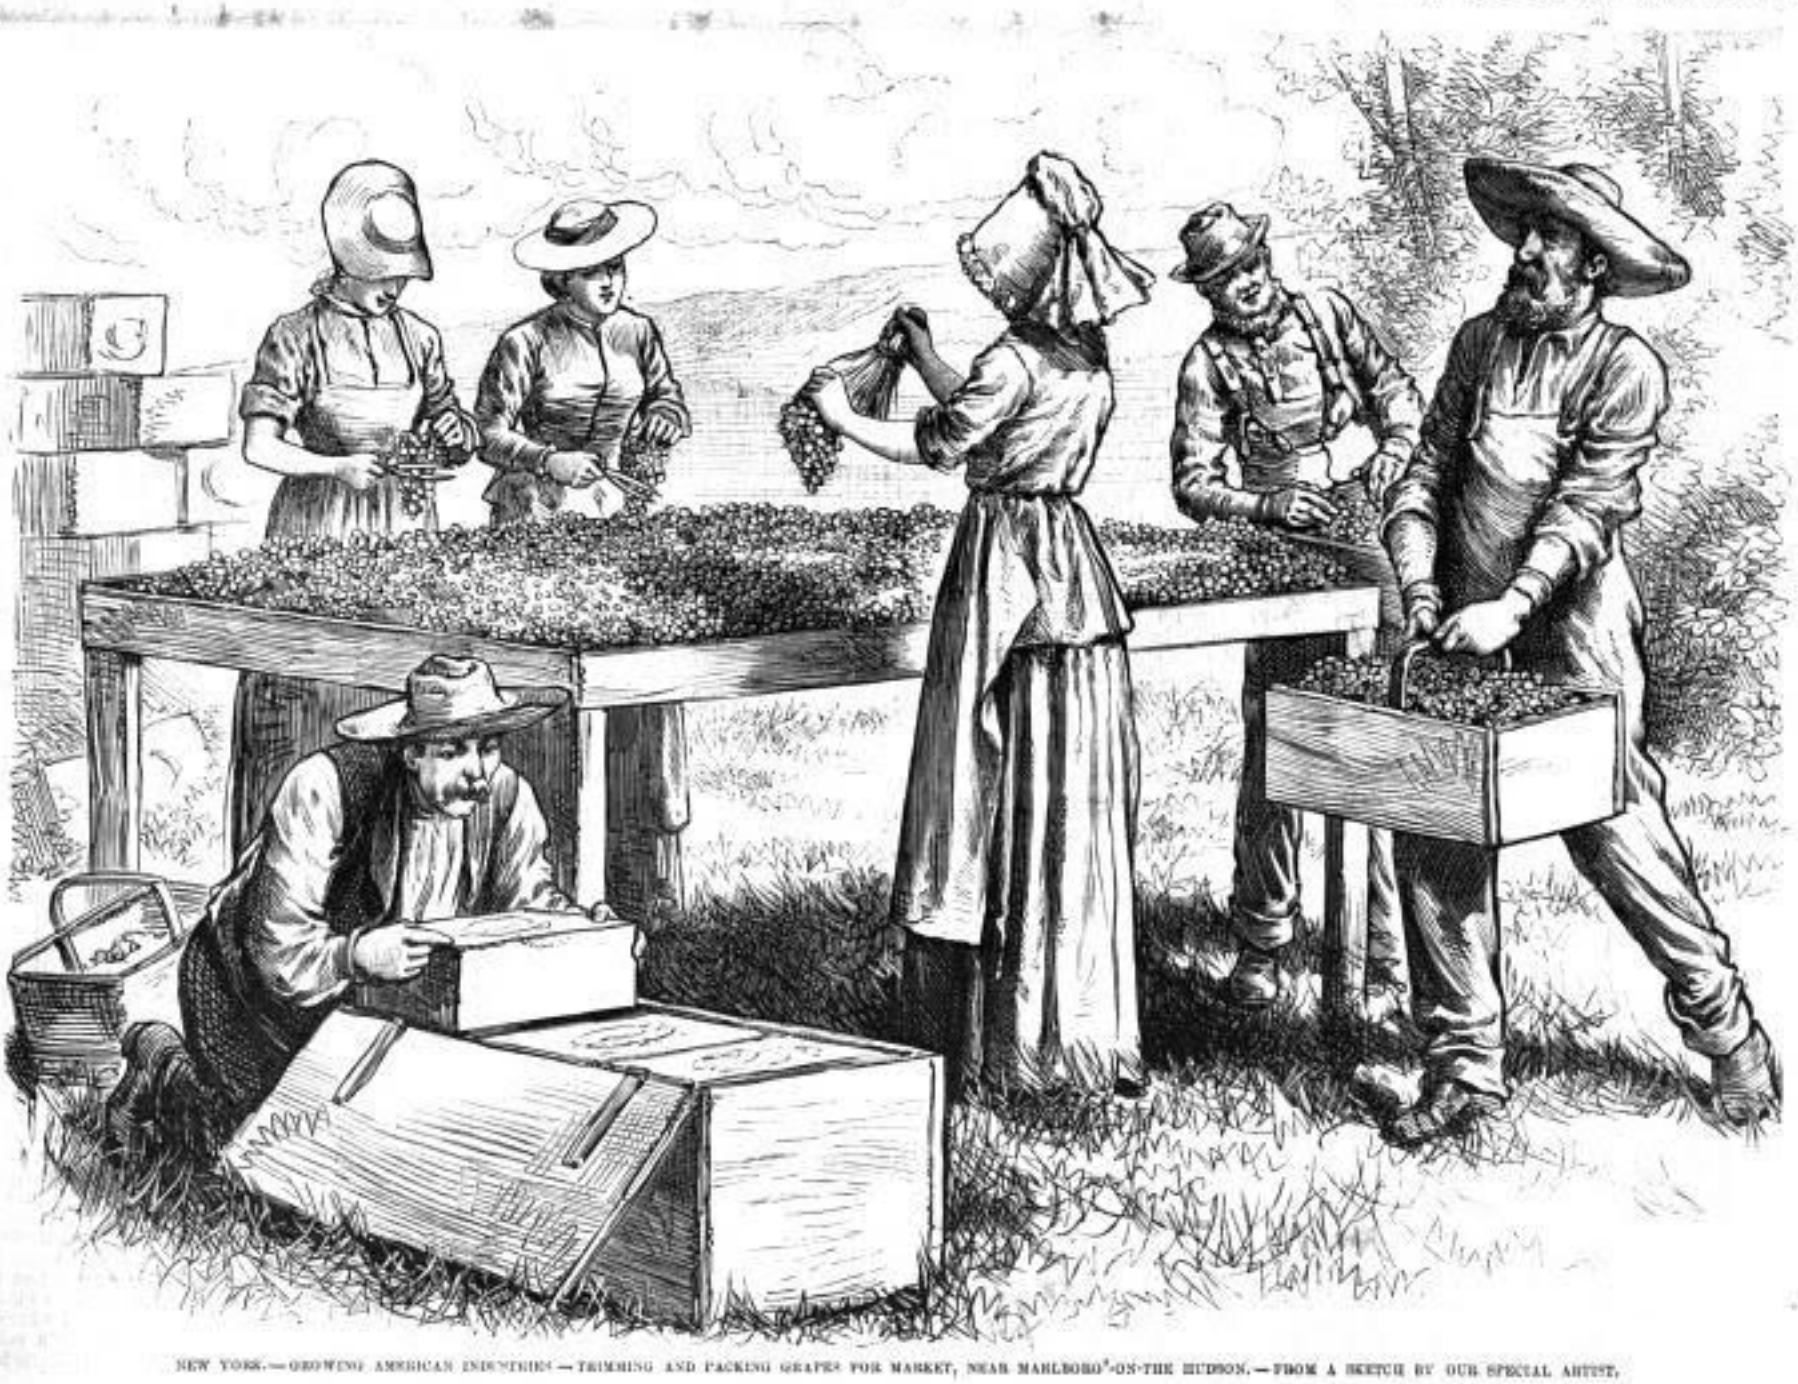
THE three primary considerations with viticulturists are soil, situation and aspect. The vine will grow almost in any situation, and exhibit luxurious vegetation under conditions apparently the most unfavorable; but if healthy vines and fine fruit be desired, it is necessary to choose a soil where the roots can ramble freely, find plenty of nutriment, and be safe from stagnant water and its accompanying cold sour subsoil. "The vine cannot bear wet feet," is a very old and very wise saying. In the Arriège, in France, a rich wine like Tokay is obtained from mountain sides covered with large stones, as if the cultivators had left all to nature. In Italy and Sicily the best wines are grown among the rubbish of volcanoes. On the other hand, the rich Chasselas de Fontainebleau table grapes are produced by vines planted in cold and heavy soil, well manured, while the celebrated Hampton Court vine revels in the luxury of an old sewer. All good vines are grown on the hillsides; hence Virgil tells us that "*Bacchus amat colles*," "Bacchus loves the hills," and modern experience bears out the ancient saw, though it does not follow, however, that the plains will not produce good wine-making grapes, as the fine wines of the Gironde in France and Chateaux Margaux, Lafitte and Latour are grown on the plains.

The writer, with an artist, recently traversed the grape-growing district of the River Hudson, radiating fifteen miles from the picturesque little village of Marlboro', and in order to afford an idea of the quantity of grapes raised within this circle, I may mention that forty-five tons weight, on an average, are shipped for market from Marlboro' dock every night during the season—the first of September to the middle of October—and from Milton, eight miles further up the river, an average of forty tons.

Anything more lovely than the views from these vineyards it is impossible to conceive. The lordly river shimmering and flashing like a mirror, and dotted here and there with snowy sails resembling so many lilies; the gently sloping banks clad with the greenest, keenest verdure, and striped with the russets and golds of the clambering vines till they reach the tender blue sky; cottages, so white! peeping coyly from groves soft as moss or lichen; and in the distance the giant crags of the Highlands slumbering in the last rays of Summer, or the filmy forms of the Catskills, sublime in their ghostly outline! At Cedar Ridge our lines fell in pleasant places, and having encountered Mr. H. W. Murtfeldt, one of the oldest and most experienced of viticulturists, we spent "a long hour by Shrewsbury clock" in his picturesque vineyard, while he initiated us into the mysteries of vine-growing.

"I work on the Niffen system," observed Mr. Murtfeldt, "which gives me the grapes on top, and lets the sun get at them underneath. I used to prefer the foliage all down to the ground, but the Niffen system for Concords is the best." When I go to plant a vine I subsoil well and turn the ground upside down for eighteen or twenty inches so as to get it thoroughly drained. I open a trench all the way through, so as to get the roots of my vines all over the place. After the first year's growth I cut down to two eyes. On the second year I allow the two eyes two shoots, then I form my arms out of the two shoots, cutting them down to three eyes. This gives me bearing wood for next year of three bearing shoots on each side of the bearing stem. In the third year, if the vine is thrifty and well manured—I manure with bone—I let eighteen bunches grow. I consider that no vine in open cultivation ought to have more than twenty pounds; this, with 600 vines to an acre, grows 12,000 pounds of grapes. In 1870 I cut off this patch fifteen tons weight of grapes, but if I had cut seven tons it would have been more money to me, as I was induced to leave too many bearing buds on and thus crippled my vines. I prune in Winter after a heavy frost. At the end of February I tie with twine or wire, disbudding everything except what the vine will be able to bear. I calculate three pounds of grapes to each bearing shoot, and three bunches pay better than five. Unless the wood is overburdened, I do not touch the grapes until I cut them for market. If you are very particular with your vine you 'lath' or 'pinch out.'" Mr. Murtfeldt here showed us the process of lathing or pinching off, which is simply the removal of a shoot by means of a sharp pinch of the forefinger and thumb.

NEW YORK CITY.—REV. ROBERT COLLYER, NEW PASTOR OF THE CHURCH OF THE MESSIAH.—SEE PAGE 123.



"I like to get the dew off the grapes, as they must be perfectly dry to pack safely. I employ no pickers outside my own family, and this is the rule in this section of the country. It's fine work for women—healthful and congenial. When the grapes are cut (*vide* illustration), I put 'em into half-bushel baskets and bring 'em to the packing-house. They are then placed on a table and all the poor fruit cut out; then I leave 'em for three or four days to sweat, because when sweated they pack so much better. I have packed forty boxes a day, and so close is the fit that no box would vary from the other a quarter of a pound. I ship all to New York. Ten cents per box is the freight on board; six cents to place it with commission-men, and the commission is ten cents. It costs me eight cents a pound to raise grapes."

This is practically the history of the vine from its being planted to its bearing golden fruit.

For table grapes the soil cannot be too deep or too rich, while twenty inches is the least depth to be relied on, and, if very favorable results are desired, it should be made three feet. Vegetable mold from decayed leaves is considered to be the best invigorator, but as it cannot be always obtained by reason that the leaves require two years before they become sufficiently putrid, rotten wood reduced to a fine mold, the scrapings of the ground in old woods where the trees grow thick together, mold out of hollow trees and sawdust reduced to a fine mold, are substituted. The proper season for planting depends upon local circumstances. The distance apart at which vines should be planted will, of course, depend not only upon the variety but upon the object for which they are set out. In Europe they are placed at all distances, from thirty inches to thirty feet. In the Ohio vineyards, where they are usually fastened to stakes, the plants are placed four and five feet apart; but in the Northern States, where vines are trained upon trellises, they are set in rows six feet apart, the vines standing seven or eight feet apart in the rows. The number of vines required to plant an acre will be seen from the following table:

Plants to the Acre.			*Plants to the Acre.*		
3 x 3	requires	4,840	8 x 7	requires	788
4 x 3	"	3,630	8 x 8	"	680
4 x 4	"	2,722	9 x 7	"	691
5 x 4	"	2,178	9 x 8	"	605
5 x 5	"	1,742	9 x 9	"	537
6 x 5	"	1,452	10 x 7	"	622
6 x 6	"	1,210	10 x 8	"	544
7 x 6	"	1,023	10 x 9	"	484
7 x 7	"	888	10 x 10	"	435

"Stopping," or pinching, consists in picking off the end of a shoot; its immediate effect is to arrest the further growth of the cane, or at least its further lineal development for the time being. That the leaves are great agents in the elaboration of sap was fully proved by the experiments of Hales, who forced orange flower water into the vessels of a vine, with a view to impart its flavor to the fruit. The experiment was unsuccessful as to its ostensible object, but not as to its concomitant results, for he traced the flavor through the stem and branches to the leaves, but no further; there it was decomposed and doubtless returned to the wood and fruit in the form of sap. When extra fine bunches are desired, one-half the berries should be removed from every bunch, leaving the largest. This operation should be performed when the grapes are about the size of peas. The pruning of vines is reduced to four systems, viz., the long-rod removal system, the long-spur system, the short or secondary spur system, and the close-cut or primary spur system. Viticulturists are now

declaring in favor of walls, as when vines are judiciously trained in front of brick walls, and a few inches distant from them, the grapes uniformly ripen sooner than those on exposed trellises. The wood also is more perfectly matured, and this, during a succession of years, exerts a considerable and favorable influence on the vine. The Concords, the Clintons, the Ives, the Nortons and others, get along safely through most Winters without protection, but the luscious Delaware, the Rebecca, the Maxitawney and the Catawba require protection.

Mildew and rot are the chief diseases affecting the grape, and are both believed to be caused by atmospheric influences. Excessive rains and damp sultry weather are deemed the chief causes of these allied diseases. No specific remedy has been found, as no means of preventing the recurrence of the unfavorable causes are within human reach.

Of insects there are several that are quite destructive to the grape plant, among which the most formidable is the phylloxera, a tiny insect which, in its several stages, is lately making deadly havoc among the vineyards of both Europe and America—affecting the roots as well as the foliage. In its work upon the foliage it does comparatively little injury, but its work upon the roots is very destructive—eating away the fibrous portions, and causing them to decay and die.

Against the ravages of this insect there is as yet no known satisfactory remedy. Large rewards have been offered in Europe to stimulate discovery, and in America the entomologists and others are diligently pursuing their investigations.

The leaf-hopper is a troublesome insect on some varieties. It is an active little beetle, and works on the underside of the leaves, causing them to assume a deadly appearance in spots, and finally killing the leaf entirely. Soapsuds has been recommended as a remedy, also tobacco infusion thrown upon them with a syringe.

The leaf-folder is a green worm that folds itself up in the leaf, where it goes into the chrysalis state. The parent-moth appears in the Spring and deposits her eggs, which hatch and fold themselves up during the Summer. The increase of both this and the leaf-hopper may be checked by raking-up and burning the leaves in the Fall.

There is also a grape curculio, inferior in size to the plum curculio, but with habits somewhat similar. It punctures the fruit and deposits an egg, which hatches a worm to live on the juices. This larva leaves the berry during Summer, and passes into the ground. It is believed, however, to issue again in the Fall as a beetle, and thus pass the Winter. Many other more or less destructive insect enemies of the grape might be mentioned, did our space permit.

Years ago, when Horace Greeley offered a large premium for the grape best suited to the wants of the million, and a wise and intelligent committee awarded the prize to the Concord, there was an expression of very great dissatisfaction on the part of many interested and earnest men, and the decision was denounced in severe terms. Yet, as time progressed and the different sorts became more widely known and tested, the wisdom of the decision has become more manifest and very generally acquiesced in; and it is safe to say that to-day the Concord stands at the head of the best as the grape for the million. Yet there are many grapes superior in quality, and there are localities where it will not thrive, so that it would be unwise to urge its planting to the exclusion of other varieties.

I shall not easily forget that little dock at Marlboro' (*vide* illustration), with its pile of boxes laden with grapes, the moon silvering the river and throwing all else into fantastic shadows. For a mile the road from the village to the dock was blocked with wagons, all bent on forwarding their luscious load to the great centre, New York. On this road we visited a factory out of which there are turned 7,000 grape baskets a day. These baskets are new in design, and are to be given away with the grapes. Each case contains six baskets, the entire being capable of holding fifty pounds weight of fruit. Hitherto the party buying the fruit at wholesale was compelled to leave a deposit for baskets, ranging from one to two dollars. By the new system the bookkeeping of the commission merchant is saved, the steamers are eased on their return trip, and the grower can enlarge his operations, as he is no longer compelled to pay a heavy deposit, in some cases equal to the value of his fruit.

THE SMUGGLER'S DAUGHTER.

IN the early part of last December my firm sent me down on Jersey shore to look after a brig engaged in the coast trade, which had been run aground in a gale off Barnegat Bay. Arriving there, I found that she had sustained no damage, but had got loose from the sand and was on her way to port.

Away from the rush and bustle of New York, and out upon a lonely sea-coast in Winter was a novelty to me, and I determined to enjoy a short vacation before returning to the city. I had a fancy to see Father Neptune in his cold-weather moods and go a gunning. I had had enough of town, so I left Barnegat and went four or five miles above Waertown, and put up at an old red tavern, that captivated me with its quaintness. It was desolate enough, surely, for any one who had a relish for such things. It was a queer, rambling structure, at least a century old, with stone chimneys built up on the outside, and weather-beaten porches ending abruptly in odd places, where additions to the original building had been made. An ancient elm beat its bare branches over one corner, and two or three weeping-willows hung over an ugly little creek in the rear, making dark nooks that offered suggestions of a hundred possible horrors. Inside was good enough cheer—plenty to eat and drink in a plain way; and when one had had enough of that, one could lounge about the big bar-room and study human nature, or look out of the dingy windows at the sea.

Within an hour after drifting in there, I made a bargain with a long-legged, keen-eyed fellow, who said he had a spare gun and a couple of fine dogs to go out for game bright and early the next day. After dinner, surfeited with the rum and tobacco of the tavern, I set out for a stroll on the beach. It was a glorious day. The sky was the tenderest azure; and the blue waters of the bay, ruffled by the light breeze, sparkled and danced in the rays of the sun, while beyond the low bar the ocean rolled in gentle majesty away. Existence itself on a day like this was satisfaction; the crisp, pure air was inspiration. I walked on and on up the smooth, hard sand, never thinking of fatigue, until at least seven or eight miles must have stretched between me and my starting-point.

"My good Karl," said I, suddenly to myself, "that is certainly Crag Point—that smuggler's den long-legged Jerry was telling you about this morning—and I think you would better go back."

I sat down upon a rock to look at the place.

The scene was weirdly picturesque in this bright weather, but it made one shudder to imagine it under a pall of gray sky, with a driving rain and the waves rushing up against the rocks. The mouth of a small creek made a snug harbor, and the wild, jutting rocks afforded many safe nooks for smugglers to run into, while there was not a habitation in sight. Yes, it was just the place for these fellows; and I was soon deep in picturing out the daring and dangerous probabilities of their outlaw lives. All at once I became conscious of a friendly presence; a hearty hand-grasp was on my shoulder, and a brusque voice in my ear:

"Karl Meiningen! In the name of all that's wonderful, how did you get *here*?"

"Detective Brunning!" I cried, "I am as much surprised to see you."

"Never be surprised to see me anywhere, my boy," sticking his thumbs in his vest pockets; "but the question is, what are you doing here? I thought you never ventured out of New York at this time of year."

"I came down to look after the *Crescent*. She was aground off Barnegat Bay; but she was all right when I got there, and I concluded to return at my leisure. I am stopping four miles above Waertown, and strolled up here to enjoy myself. Now, Brunning, for your side."

"I? Oh, I'm on business, of course. There are crooked goods on the market again, and I am running them down. Crag Point is a first-class cove for smugglers to put into, and I think this is the place to look for my game. I was here on the same errand some years ago, and I can assure you that I had a deuce of a time."

We paced up and down the sand, talking upon topics of mutual interest, until we saw that the short Winter day was drawing to a close, and that the on-coming night would bring foul weather. A bank of sullen black clouds had gathered in the west, and the setting sun was fringing them with a border of dingy yellow; a damp wind was blowing landward, and there was every prospect of getting a wetting before reaching shelter.

"Come," said Brunning; "go up to Whiting with me."

"No; come, go down to that ghostly old tavern with me, and go a-gunning to-morrow. Business can wait."

"By George, I believe I will!"

As we started, a girl rushed past us, running with headlong speed to the rocks at the water's edge, and, stopping there, clasped her hands on her breast and threw back her head as in supplication. A thrilling picture of utter desolation she made as she stood there upon the wild rocks, with the waves dashing roughly at her feet, the marble beauty of her face outlined by the waning sunlight against the bleak Winter sky and her long brown hair blown by the unheeding wind. Detective Brunning clasped my arm convulsively. I turned to look at him. He was intensely pale, and staring fixedly at the woman on the rocks before us.

"My God! Karl, that is Dick Warren's Alice!" turning to me. "I would rather see a whole graveyard of spooks! It was terrible. Poor Alice—poor Alice! We can't help her," he said, in reply to an inquiry; "she is hopelessly insane. So, hurry on, or we'll get carried off our feet, besides getting a ducking," looking up at the ragged, gray clouds driving across the sky. "I'll tell you about her after supper, over a bowl of punch."

About two hours of quick walking brought us to the tavern, a little wet, but blown almost out of breath by the gale, which had helped rather than retarded us. A good supper and blazing fire soon refreshed us, and nine o'clock found us seated in the room assigned to me—in that corner with the great bare branches of the old elm beating against it. Inside we were cozy enough. A great fire burned in the ancient fireplace; before it was a mahogany table, with a sufficiency of steaming, fragrant punch in a rare old china punch-bowl—that punch-bowl must have existed at least a century, and was covered with blue griffins and dragons and St. Georges in a style that would set a collector of ceramics crazy; two capacious armchairs, Brunning in one, myself in the other. Outside it was just the night to tell a terrible story; just the night to listen to it. The howling of the wind, the wild dashing of the rain, and the heavy boom of the angry sea breaking against the bar, made a fit accompaniment for any tale of human life that might be weird, or dark, or terrible, or sad.

"Just such a night as this," said the detective, reflectively, pausing the glass half-way to the lips, "just such a night as this! Meiningen, think of a boat at sea! But I promised to tell you the story—about poor Alice, I mean. You want to hear it?"

"Certainly; your stories are always worth listening to."

"They ought to be. I've been in enough queer places. You know I told you that I was down here before, several years ago. Some of the merchants found that a lot of smuggled goods were on the market, and they came to us to trace them up. For quite a while we were completely baffled; but at last we thought we had a clew, and that Dick Warren up there at Crag Point was the leader of the gang. Some half-dozen of us went down and tried to work up the case, but Warren was as slippery as an eel, and we could get no hold on him whatever.

"We began to think that we were playing a losing game, when a trump card turned up in the shape of a young fellow from Cincinnati—a new hand at the business, but as sharp as a steel trap. After making all sorts of inquiries about the case, he asked abruptly:

"'Has the old fox a daughter?'

"'Yes, sir,' says I; 'he has; just sweet sixteen, and as pretty as a picture.'

"'And innocent?'

"'To be sure. Warren would rather lose his head than have that little angel suspect him of being a sinner.'

"Then Corwin leaned back in his chair and twisted his heavy, black mustache very thoughtfully for a few minutes, then with a quick flash in his keen black eye, he sprang to his feet, exclaiming:

"'Gentlemen, if Dick Warren is a smuggler, you shall have him safe enough inside of three months.'

"'What are you going to do?'

"'Make love to Warren's ewe lamb, and go into the trade. Do you doubt me?' showing his white teeth.

"'No,' said I; 'you are deucedly handsome, and could pass yourself off for a pirate seven days in the week.'

"Well, it was settled that Corwin should work up the case to suit himself, and that when he needed help to send for me. But the Lord knows that, if I could have anticipated the terrible end to the affair, I should never have had anything to do with it to catch a thousand smugglers.

"We didn't hear anything more from Corwin for three months. Going to headquarters one morning in November, I found a message requesting me to come down to Whiting immediately to meet him.

"I found him in high spirits, and confident of getting the whole lot.

"'My success,' said he, 'is more than I dared hope for. I have joined their gang; am personally acquainted with every one of them; know all their craft, and the places where they keep their stuff, and have everything spotted, so that there will be no trouble when we are ready to make the haul. And all this, because I am to be Dick Warren's son-in-law. Ha, ha, that's good! But then,' he added, with a shadow darkening on his face, 'it's a cruel shame to make that innocent little beauty a cat's-paw to draw our chestnuts out of the fire. Yet what's the use to moralize! Business is business, and besides justice demands it,' and he sprang up and began to pace the floor. This was evidently a sore spot, but he was grit clean through, and I knew he wouldn't back out.

"Arrangements were made for me to go over to Crag Point with him. I was to be Corwin's father *pro tem.*; was to be profoundly ignorant of smuggling operations; only come over through a paternal interest in my son's bride-elect, to get acquainted with the family, and all that, you know.

"Well, I made up splendid, and did the gentle patriarch to perfection. Dick Warren never suspected that a detective's cussedness lay under that white wig and those snowy whiskers until it was too late.

"Warren lived in quite comfortable style, about a mile beyond Crag Point, in a neat brick house which an old-maid sister had charge of, and where she now takes care of poor Alice. Well, Alice's lover and her prospective father-in-law were most warmly welcomed and hospitably entertained. Karl, I can never forget what a picture of loveliness that little girl was. Her face was like a flower—so fair and pure and dainty; and her light-brown hair floated down like a cloud full of golden glints over her blue silk frock. She sang like a bird, and was just as happy as one. Poor little Alice! It makes my heart ache to think of her.

"After retiring to our room, Corwin disclosed his plans to me fully. They were deep and unscrupulous, the cunning knave! Alice's pretty wedding *trousseau* had already come from New York, and there was no reason why the marriage should not occur immediately. Corwin had succeeded in persuading them to have it take place in Philadelphia, his native city. We were to go in a carriage to the home of a dear friend, who was to accompany us thither; thence to Philadelphia. This was the programme, as *they* understood it; but as we understood it, this friend's house was an old deserted mansion that Corwin had got possession of, some fifteen or twenty miles down the coast. Here he had a room fitted up in the best style to take care of a prisoner. The windows were heavily grated, and the door well secured. He also had bracelets and anklets in waiting. It was his plan, when we got Warren and his daughter safely inside the house, to imprison him in this room and lock the girl up in another. Then, on the afternoon of the same day, Corwin was to ride back to Crag Point and entice the rest of the gang into a snare, under the pretext that Warren had sent him back with a message to them on important business. Four officers of the law were to be on hand and take them in charge. Then Corwin and myself were to escort Warren to New York and give him over to justice. It was beautifully planned, and we had no doubt but what it would be as well executed.

"The day was not fine, but apparently no gayer party than ours ever existed. But I, at least, was inwardly wretched; for I could think of nothing but the sudden woe that was to fall on that pretty, bright girl, and dash the light from the sweet brown eyes for ever.

"Well, we arrived at Corwin's house and alighted. They suspected nothing, for he had the shutters on one side of the house thrown open and white curtains at the windows; the hall was furnished and the stairs carpeted.

"'Walk right in, my friends. I have the passport to the house, and will surprise the folks,' said Corwin, lightly, and opened the door with a latch-key.

"'Follow me; the parlor is up stairs.'

"Safely inside, the door was quickly locked and the key secured. In a twinkling, Corwin, pale and determined, with a smile of Satan on his handsome face, put a pistol to Warren's head, and told him that he was his prisoner.

"'We have you now, my friend, and will put you where you'll never play smuggler again. Put on the bracelets, Brunning.'

"We detectives are used to scenes, and we had a first class one here. Warren raved and swore like a maniac, while poor little Alice lay in a heap on the floor, mercifully unconscious for a few moments of her sorrow. Then Warren thought of her.

"'Oh, my poor little bird, why must they murder you to punish me! Oh, you heartless, cowardly dogs!' he cried, turning upon us with ineffable scorn and rage. "You vipers! to sting to death an innocent girl, than whom the angels of heaven are not purer. Smuggler though I be, I could never be so vile a murderer!'

"It seemed to be too true; and we turned to the window in silence.

"Presently the poor girl opened her eyes and gazed around in a dazed sort of a way for a second, then she shuddered convulsively as the fearful truth rushed over her, and she closed her eyes again as if to shut it out.

"'Alice, my darling!' cried the wretched man.

"All the filial love in her heart aroused at the sound of his voice, and she slowly rose and tottered over to him. Putting her arms around his neck, she laid her soft cheek against his and murmured:

"'Dear, dear father, I love you. Misfortune can never take me from you.'

"Then she sobbed—such dry, hard, bitter sobs, that they broke a fellow's heart to listen to them.

"After a while she raised her head, and her face was like a wraith. She walked slowly over to Corwin, who stood on the other side of the room, pale as death, but with his lips set firm together. She took his ring off her little white finger and dropped it at his feet. He quailed as from a blow at the awful anguish and reproach in those despair-filled eyes.

"'Mr. Corwin,' said she, choking down a sob, 'I was a happy girl who never harmed you, yet you have heaped upon me an agony so great that heart or reason cannot live through. If God is just He will punish you for your crime against the innocent, and may His judgment come quickly,' raising her hands and solemn eyes to heaven. 'It is vain to ask for mercy for my father from such a soul as yours.'

"Corwin opened his white lips as if to speak, but no sound came from them.

"'No,' she said, in protest; 'let me not listen to your traitor voice. Leave my father and myself alone for a little while,' with a wail of entreaty.

"We went outside and left them alone.

"'Corwin,' said I, 'that girl will be the death of me. It's too awful.'

"'It cuts me to the quick,' he replied; 'but it's our business, you know.'

"'But can't we get out of this for the girl's sake?'

"A look of scorn was his only answer.

"'It is now three o'clock,' he said, after a few turns in the hall, 'and I must be back at Crag Point by six. The men will never suspect me, and by midnight all will be over, and I shall be safely back here, and Warren can easily be finished off. Of course we'll see that—that Alice does not suffer.'

"He took a fresh horse and rode rapidly away. I wandered up and down like an uneasy ghost all afternoon. At six o'clock I carried the two prisoners their supper, and Alice begged so piteously to be left with her father that I did not have the heart to take her away.

"The night set in pretty bad and kept getting worse. The rain was falling fast, and a stiff breeze was dashing the sea against the shore. I went out on the porch to wait for Corwin. The moon was at its full, and despite the storm I could see pretty well. Suddenly two figures rushed swiftly past me into the wild night. I was utterly surprised. *Could* it be the two up stairs? Of course, my *first* impulse was to run after them; but a second impulse told me to go and see if it was they—it must have been the voice of fate, for I went. Yes; somehow Alice had picked the lock—how I am not satisfied to this day—and she and her father were free. I wished from my heart that they might get where we could never find them. I got down stairs just as Corwin dashed up, dripping wet, and threw himself from his exhausted horse.

"'Well!' he cried, 'mine are safe enough. How are yours?'

"'Gone!' I replied.

"'Gone, gone!' he yelled. 'Coward—fool!'

"'Take care,' I cried, catching him by the throat, 'wait till you know.'

"I briefly explained.

"'Quick, quick! We'll be too late!'

"'Go yourself,' said I, 'I don't hound children to death.'

"'Coward!' he hissed between his teeth. 'I'll blast you in every paper in the land for this.'

"We glared at each other.

"'Come,' I cried, wild at the taunt. 'Follow where I lead. They went to the sea.'

"In a few minutes we reached the shore just in time to see the frantic girl and her desperate father pushing out on that fearful sea in a little boat.

"'There were two boats yesterday,' Corwin shrieked. 'We'll take the other one. She can row like fury; but I can beat her in this storm. Quick! I'll have him or die!'

"Like two madmen we sprang into that frail bark. Karl, Karl! no one ever did such a thing before. It was like flying into the arms of death. What was human strength before that mighty sea. We were tossed like a bubble by those writhing, rushing, foaming waters! I know not how long we stood it; but it seemed ages. Then there was a wild shriek of the wind, a terrific roar of billows, and I knew no more until the sun was climbing up a cold November sky. Stiff and battered by the storm, it was long before I could realize who, or what, or where I was. After a while I

Digitized by Google

dragged myself up and looked around. Both boats had been washed ashore together. Warren and Corwin both lay stark and dead—Warren with his handcuffed hands dropped across his breast; Corwin with a great gash in his white temple. Both had expiated their crime—for I can never hold Corwin guiltless. I turned to look for Alice, and saw her standing a little way off—just as we saw her to-night. When she saw me she laughed that wild, blood-curdling laugh of the maniacs, and it has never yet ceased ringing in my ears."

The storm beat and the sea roared, and Brunning and I studied the fire in silence.

"Poor little Alice!" said the detective, softly, after a while. "If those cruel waves had only borne her out into the wide ocean of eternity."

REV. ROBERT COLLYER.

THE Rev. Robert Collyer, well known to the present generation as the "Blacksmith Preacher," after serving as pastor of Unity Church, Chicago, for twenty years, has now entered upon his duties as minister of the congregation of the Church of the Messiah, in New York City. On Sunday, September 21st, he preached his farewell sermon in Chicago, and on the 28th his inaugural in New York. He was born at Keighley, Yorkshire, England, December 8th, 1823, and emigrated to the United States in 1850, as a Methodist exhorter. Like many among the Wesleyans, he combined a worldly trade with his spiritual profession, and labored hard at the anvil on week-days. His first location was at Shoemakertown, in Pennsylvania, where he was permitted to act as "local preacher." This position he held for ten years, and his salary was certainly not such as to lead to any worldly competition for the place. It amounted, according to himself, to "one almanac, various little household necessaries, and ten dollars in money."

During the last years of his blacksmith life he became acquainted with Lucretia Mott, and the well-known philanthropist, Dr. Furness, whose views he found to be more in harmony with his own; and having accepted a generous invitation of the latter to preach in his pulpit, Mr. Collyer was, in January, 1859, brought up for heresy by the conference, and refused a renewal of his license as a preacher on the following grounds: That he could not believe in eternal punishment, nor in total human depravity, nor in the damnation of a good man because he does not believe in the Trinity. In February of the same year, the Chicago ministry at large being in need of an earnest and unsectarian worker, he was recommended to the place in a noble letter from Dr. Furness, the Unitarian pulpit of that city being then vacant. Mr. Collyer was invited to supply it the first Sunday after his arrival. The church in which he preached being then disturbed by political differences, some thirty or forty of the members withdrew and invited Mr. Collyer to become their preacher. The Second Unitarian Society was thus formed and the Unity Church was soon after built by it.

Mr. Collyer is an eminently practical and liberal man. When the press and pulpit and public were excited over the funeral of the veteran actor, George Holland, and the circumstance that rendered "The Little Church around the Corner" famous the world over, Mr. Collyer spoke these stirring words as embodying his opinion on theatres and play-actors: "Two things and no third, as far as I can see, Christian men and women, and all that believe in the virtue of fair morals, have got to do—to countenance and patronize what is sound and good in the drama in a very large and human fashion, from the hottest alto of laughter to the deepest bass of tears; from the rudest, wholesome and honest plays to the most refined; and then they must stand shoulder to shoulder, steady and sturdy, against the evil things that are growing upon us, and threaten to swamp this great, good power with their evil fascinations—the lust of the flesh, the pride of the eye, and the pride of life. I proclaim myself, fearlessly and frankly, a Puritan of the Puritans on the line at which the theatre drifts hellward. If those that insist on playing these low and degrading parts die and are to be buried, and you send for me, I cannot refuse to come or to open my church for the poor dust to rest a moment on its way to the grave; but I cannot say such words of hope and cheer as I fain would always say as I stand beside the dead. I can only commit the soul to the infinite mercy with some such feelings as I would commit the sorely diseased to the surgeon. But let the actor give himself to what is good, wholesome, honest and of good report in his calling. I will not ask whether he went here or there to church, or believed in my sect or another. I will be sure that, being an honest, true, kindly man, who wrought out in his life what was good and true, and tried to lead men to virtue by the drama, as the preacher does by the sermon, he stands among the good where he has gone, is included in the universal hope there and then, and he has not to wait until

> On the glimmering limit far withdrawn
> God makes himself an awful rose of dawn.'"

How Long a Man Can Live.

HOW LONG a man can live is a question that has been widely discussed. Americans are generally reckoned to be short-lived, compared with European nations, and they may have been in the past; but they are steadily gaining in respect of age, as their material conditions improve and the laws of health are better understood and observed. Several instances have been recorded recently of persons in the State of New York who have died at 107, 108, and even 110. It is maintained, however, by men who have paid special attention to longevity, that there is no well-accredited instance of any man or woman living beyond 106—that that is the maximum possibility of human endurance. It is more reasonable to suppose that there is a mistake in calculation than that the mentioned limit has been exceeded. In Europe it is a subject of dispute as to what nation lives longest. The distinction has been claimed in turn by the English, French, Germans, Spanish, Italians and Russians. Late statistics prove that the number of people in Europe who are upward of 90 years old is 102,831, of whom more than 60,000 are women. Of those beyond 100 there are 241 women and 161 men in Italy, 229 women and 183 men in Austria and 526 women and 534 men in Hungary. The percentage of old people is found to be much higher among the Germans than the Slavs. Investigation appears to show that human life has been lengthening in the last twenty years throughout the civilized world.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

New Peruvian Ironclads.

At the outbreak of hostilities in South America the Peruvian fleet consisted of the turreted ram *Huascar*, two monitors, the corvettes *Union* and *Pilcomayo*, four small armed transports, and several sailing-vessels. The *Huascar* was one of the most formidable rams in service, and has been of great injury to the Chilians in the present war. It was the *Huascar* that sunk the Chilian corvette *Independencia*, commanded by the gallant Captain Prats, in the harbor of Iquique, a few months ago. To this fleet the Peruvian Government has recently added the ironclad *Atahualpa*, constructed on the monitor principle, of which we give an illustration.

New Chinese Gunboats.

These diminutive but powerful war-vessels form the third installment of a fleet of armored gunboats which Sir William Armstrong is building for the Chinese Government, and are intended for coast defense. Four of these boats delivered at Tientsin are named *Alpha*, *Beta*, *Gamma*, and *Delta*, and those shown in our engraving are called *Epsilon*, *Zeta*, *Eta*, and *Theta*. Whether the Chinese Government mean to go on adding to their fleet until they reach "Omega" remains to be seen. Though there are some slight differences in measurement, capacity and power of machinery, and weight of armament, a general description of one of these vessels will serve for all. The *Epsilon*, then, is 127 feet long, with 29 feet beam, a draught of 9 feet 6 inches, and a displacement of 440 tons. She is propelled by two pairs of compound engines, which give her a speed of ten knots forward or nine backward, for, being double-ended, she can be driven either way. The hull is divided into water-tight compartments, and the gun, a 38-ton muzzle-loader, is worked by hydraulic machinery, so that only five men are required to attend to it when in action.

The Afghan Rebellion.

The engraving of the British Residency at Cabul will enable our readers to form some idea of the building occupied by the late Major Cavagnari and his little band of devoted followers, whose lives have been sacrificed in the performance of their duty. The Residency, although situated within the Bala Hissar, or citadel of Cabul, was anything but a fortified structure, being built mainly of wood and sun-dried bricks, yet the determined valor of Cavagnari and his men were such that the attacking party, though immensely superior in numbers, were successfully held in check until the cowardly device of firing the building was resorted to. Even then the gallant fellows, driven forth by the flames, rushed sword in hand upon their besiegers in the street, and sold their lives as dearly as possible. The late Dr. Kelly, in a letter soon after his arrival at Cabul, describes his quarters as truly Oriental in style, there being one or two good rooms, and the remainder small and poky. The news of a military insurrection at Herat, and of the murder of the civil and military officers of Government there representing the Ameer Yakoob Khan, must be regarded as very serious, with a view to Afghan political complications. Herat, which is situated near the western or Persian frontier of Afghanistan, and not far from Merv and the country of Tekke Turcomans, where a Russian expedition is now on foot, has long been considered an important stepping-place to conquests in Central Asia. It commands the roads from the Caspian Sea to Candahar and to Cabul, though distant three or four hundred miles from either of those cities. The Shah of Persia has in former times repeatedly contended with the Ameer of Cabul for the possession of this frontier fortress. The citadel or ark of the town, which in old days was called Keila-i-Aktyar-Eldyn, was by itself a formidable construction, and, although it has long been neglected, it still possesses an important place in the list of the defenses of this city. It is situated in the north, where the ground is most elevated, and forms a prominent object in the landscape for miles around.

View of the City of Lima, the Capital of Peru.

The ancient City of the Kings, founded by the heroic Francisco Pizarro, on the Epiphany of 1535, is situated in the delightful valley of the Rimac, at the foot of lofty granite hills, at a distance of eight kilometres from Callao, which is a busy and active seaport. Lima is one of the most handsome cities in South America, both in the perfect arrangement of its tree-lined streets and the charming if *bizarre* architecture of its houses. The houses are for the most part those which were built at the Spanish conquest, and are as perfect to-day as when the daring Pizarro disputed with Rolla for the sovereignty of Peru. Its population, according to the most recent statistics, numbers 110,000 inhabitants, while the floating population is calculated at 25,000. The climate is temperate, and the most vivid and wondrous flowers bloom all the year round in the magnificent gardens attached to the superb mansions.

The Prince Imperial's Death in Zululand.

A simple memorial has been constructed by Corporal Solly and a few soldiers under his orders to mark the spot where the French Prince Imperial was killed, or where his body was found next morning. It is about six miles from Fort Newdigate, in the valley of the Ityotyosi. The stones composing this monument, which in form resembles one of the ordinary flat gravestones in an English churchyard, were shaped by the men in garrison at Fort Newdigate, and were carried to the spot in an ox-wagon. The headstone and those forming the cross and the letter "N" are white, the others of a dark color.

Oyster Culture in Arcachon, France.

Arcachon is a village in France, in the Department of the Gironde, thirty-five miles southwest of Bordeaux, with a population of 3,000. It is situated in a land-locked bay or lake—Bassin d'Arcachon—which is sixty miles in circumference, connected with the Gulf of Gascony by a narrow strait. It is surrounded by pine woods which extend as far as Bayonne, and abound in game. But it is famous chiefly for its oysters, the Arcachon oyster being considered on the Paris Boulevards equal in flavor to the celebrated Ostend—an oyster called the "Ear of Venus" fetching an almost fabulous price at such celebrated restaurants as the Maison Dorè, the Café Anglais and Philippe. At Arcachon, oyster-culture is carried on so as to give employment to both men and women, and the delicious bivalve is raised after a fashion peculiar to the locality, namely, in basins, or parks, as they are called, over which a certain height only of water is allowed to run at certain intervals.

International Exhibition at Melbourne.

The opening of the first Australian International Exhibition at Sydney, New South Wales, on September 27th, and the success it has already achieved, have vastly stimulated the citizens of Victoria, and a building for holding a similar display in that colony is now being erected at the south end of the Carlton Gardens, fronting on the Victoria Parade, in Melbourne. It is expected that the Melbourne Exhibition will be opened next Spring.

FOREIGN LABOR NOTES.

THE strike in the Staffordshire potteries has been averted, the men consenting to arbitration.

THE estimated average yield of wheat for the entire Province of Manitoba exceeds thirty bushels per acre.

FOUR of the principal labor unions in England have spent $1,300,000 in the last year in extending relief to their members.

COMMERCE in Mexico is increasing, and industries are expanding by reason of the peaceful and hopeful condition of the country.

THE employees in the iron works at Jarrow, England, have resumed work under protest against the award by Mr. Dale, the arbitrator.

THE Duke of Beaufort says publicly that it is impossible to compete with American wheat production. He advises British farmers to devote their attention to the raising of cattle.

THE city of Manchester, England, makes gas for the use of its people, and for the year past it has derived a profit therefrom of $250,000, which is turned over to an improvement fund.

THE Iron Ship Builders and the Boiler Makers' Association of Stockton-on-Tees has resolved upon a strike unless the masters modify their action in relation to a reduction of wages.

THE national industrial exhibition contemplated for Moscow in 1880 has been postponed one year, on account of the general feeling of insecurity and the unusual dullness of Russian trade.

ALL the workmen in the ship-building trade at Grimsby, England, are on strike against a resolution of the masters to extend the working hours from fifty-four to fifty-eight and a half hours weekly.

GREAT opposition is being manifested in the Austrian dominions to the introduction of American meat of all kinds. The Government has not prohibited the importation, but the local producers proclaim that the American article is rotten with worms.

AN extra edition of the *Canada Gazette* published, contains an order in Council further prohibiting the importation or introduction into the Dominion of cattle from the United States. The length of time this prohibition will be in force is not specified.

REVOLTING details of the sufferings of the famine-stricken people still come from Cashmere. There is reason to hope that the worst is now over; but undoubtedly the relief measures have been miserably mismanaged by the Maharajah and his advisers, and the loss of life has been terrible.

M. LEON SAY, French Minister of Finance, has requested his colleagues in the Cabinet to hasten their estimates for the budget of 1881. He intends to continue reducing taxation, and consequently asks his colleagues not to propose any fresh expenditure except for objects of urgent necessity.

MR. JOHN WALKER, Member of Parliament for the County of Berks, addressing an agricultural meeting, October 6th, expressed his concurrence in the views which is now becoming widespread, that British farmers could not compete with America in growing wheat, but must grow what pays them best.

AN Irish agent describes the present year, from an agricultural point of view, as "the worst since the famine." Few of the small farmers in his county can hold their lands at any rent. "Cattle and sheep are unsaleable, and, as for the crops, they are all lost, in consequence of the never-ceasing rains which we have had for months."

THE *Hamburger Börsen Halle* has the following with reference to the treaty between Russia and China relating to the cession of Kuldja: "Traffic with all inland markets of China is to be granted to Russian industries, the Chinese Government to pay to Russia five million roubles and cede a portion of the Steppes at the sources of the Irtish behind the Saisan Lake."

IN its last issue the London *Economist* says: "There has been a further sharp advance in price in the iron trade. South pig is 4s. 6d., and Cleveland 6s. per ton higher on the week, both principally on American orders. The stocks in and around Middlesbrough are, however, still measured by hundreds of thousands of tons. The upward movement is too feverish, and a relapse may be anticipated.

EVERY horse that trots along the tramways in Wolverhampton, England, is shod with American horseshoes. This, too, in face of the fact that Wolverhampton is the principal town in the world for the manufacture of horseshoes. The trouble is they are made by hand and must be heated before use, while American horseshoes are turned out cheaply by machinery and put on cold, without whittling the horse's hoof.

THE committee consisting of Messrs. Parnell, O'Connor, Power, and Finnigan, Home Rule Members of Parliament, and others, formed for the purpose of conducting the anti-rent agitation in Ireland, have agreed upon an appeal to the Irish race in the colonies and in the United States to promote ownership of the soil by the occupants instead of the landlords, who, the appeal declares, should, however, be fully compensated.

FIFTEEN thousand people were present at a land meeting at Cork, Ireland, October 5th. William Shaw, Member of Parliament for the county, and one of the Home Rule leaders, extolled Gladstone's Land Act. He declared that those who worked the soil should own it, and that landlords should be fairly bought out. Mr. Parnell, Home Rule Member for Meath, declared that the tenants required no Acts of Parliament. They should not rely on passive physical resistance to unjust demands. So long as Englishmen governed Ireland, they would resort to robbery and oppression. Colonel Colthurst, Sir Joseph McKenna and Patrick J. Smyth, other Home Rule Members of Parliament, also made speeches.

THE *Scotsman* observes: "Calculations are already being made as to the amount of loss which the English farmers will experience owing to the bad season. An estimate published lately puts down the amount below an average on the corn crop alone at £25,000,000, and £28,000,000 if beans, peas and rye are added. Potatoes show a loss of £15,000,000, hops of £1,250,000, and hay of £15,000,000. Here is a total loss of a little less than £80,000,000. It is further said that England will have to import at least 16,000,000 quarters of wheat, against 14,000,000 quarters last year. If these figures can in any way be relied on—and there is too much reason to fear they can—there is no reason for further inquiry as to how it comes about that the manufacturers are fairly alarmed at the prospects of the home trade.

THE weekly wages paid for labor in Germany, as averaged from the several United States Consular reports, are: For bricklayers $3.45; masons, $4; carpenters, $4.16; painters, $4.03; plasterers, $4.35; plumbers, $3.20; blacksmiths, $3.90; bakers, $3.90; shoemakers, $4.32; butchers, $4.20; cabinet-makers, $4.95; coopers, $4.35; engravers, $4; printers, $3.90; tailors, $4.30; laborers, porters, etc., $2.60. The average weekly wages paid to agricultural laborers in Germany are: For men, without board and lodging, $3.50; men, with board and lodging, $1.80; women, without board or lodging, $1.85; women, with board, etc., 60 cents. All laborers are required to work from 6 A. M. to 6 P. M., with two hours of intermission; 5 to 6 cents per hour is paid for extra time. Food is dearer than in New York.

AT HOME AND ABROAD.

—THE manufacture of guava jelly is the latest Florida industry.

—AMERICAN orders for 50,000 tons of English iron ore have been sent over.

—VICKSBURG is receiving more cotton than at any corresponding period since the war.

—THE schools of Hull, Ont., are to be closed on account of the prevalence of smallpox.

—THE manufacture of lamp chimneys has reached a higher figure in Pittsburg than ever before.

—THE 700th anniversary of the Bavarian dynasty is to be celebrated at Munich, September 16th, 1880.

—IT is reported that 60,000 hundredweight of rails have been lately bought in Germany for the United States.

—THE Governor and Council of Canada declare that Belgian vessels should be admitted to the coasting trade of Canada.

—GREAT BRITAIN, it is estimated, now holds $130,000,000 of United States bonds, and Germany, France and the rest of Europe about $70,000,000.

—THE Treasurer of the United States reports that the total amount of standard silver dollars coined is $42,737,740. The amount on hand is $31,703,650.

—NOTWITHSTANDING quarantine restrictions New Orleans had received to October 1st 35,487 bales of cotton, as against 21,450 at the corresponding period last year.

—IT is stated that during 1880 the coinage of 20,400,000 roubles worth of gold and 7,312,000 roubles worth of silver will be authorized by the Russian Government.

—NEW HAVEN manufacturers cannot get hands enough to do their work. One company was compelled to reject an order for 140 platform-cars, to be fitted with oil-tanks, for which $40,000 was offered.

—THE entrance to the two German rivers emptying into the North Sea, the Elbe and Weser, will be impregnable as soon as the fortifications now nearly complete are finished. They will be armed with Krupp breech-loaders of enormous size.

—IT is claimed that during the past twelve years Mississippi has paid into the Federal Treasury over $10,000,000, and yet has been able during all that time to get not more than $600,000 for clearing out her rivers and improving her harbors.

—THE increase in the market value of the bonds of thirty-two railroads within the past year aggregates, it is estimated, about $196,000,000, in each of these cases the increase being over a million dollars, and in one case rising to over $25,000,000.

—IT has recently been discovered by some Philadelphians that there is considerable show of oil in the vicinity of Malta, Morgan County, Ohio, and they are taking up leases rapidly for the purpose of boring. They claim that the oil they are likely to obtain is of the heaviest lubricating kind.

—A 94¾ CARAT diamond, found recently at Mekerk's Rush, in the South African diamond fields, was sold on the spot for $35,000. The same "digger," to whose lot this rare find fell, unearthed about the same time a fine stone of 26 carats, and another at 19½ carats, besides several smaller gems.

—SAN ANTONIO, TEXAS, has a flourishing woolen mill which turns out excellent cassimere cloths at exceedingly low prices, as the wool is clipped from herds of sheep feeding in the immediate neighborhood. Texas is also rapidly putting up cotton factories in order to utilize her superabundant cotton crops.

—MAINE'S business prospects are brightening. Lewiston's Continental Mills are shipping cottons to China; the Worumbo Company of Lisbon will erect another large mill, equipped with the best machinery; the Portland Packing Company have shops in six towns, with a daily capacity at each of 20,000 to 24,000 cans of corn.

—THE canned-goods trade is experiencing a noticeable revival. Last year the business was much contracted in consequence of the general depression then prevailing, but the situation now is greatly improved. A curious feature of the trade on the Pacific Coast is its gradual absorption by the Chinese, whose cheap labor gives them commercial and industrial advantages which set competition at defiance.

—AT least five hundred manufacturing establishments in the State of Pennsylvania are now engaged in manufacturing for export in proportions varying from a small share to nine-tenths the production of each, and of the three millions of tons of pig iron produced in the last year probably fifty thousand tons have been exported, not as pig iron, but in the thousand forms of ultimate manufacture, worth from one hundred to one thousand dollars per ton.

—THE dock yards at Milford Haven, England, are to be completed by March next, three shifts working day and night, using the electric light. They will admit ironclads with all the beam Mr. Froude asks for, their extreme breadth being seventy-five feet. They will be the largest and deepest dry-docks in the world, the largest of them taking the *Great Eastern*, and being 720 feet long, 93 feet wide, with an average depth of 30 feet over the sill, 25 feet at high-water neap tides, and 36 feet at high-water springs.

—BORN in Norway and Sweden the women preponderate in number over the men. At the last census of Norway, in 1875, the total population was 1,817,000, of which 886,000 were males and 931,000 females, being at the rate of 488 males and 512 females to every 1,000 of the population. In Sweden the proportion of births is at the rate of 511 boys to 489 girls out of the 1,000; but the mortality is in favor of the females, for the census returns of 1876 showed 486 men to 514 women out of every 1,000 of the population.

—MEXICO has a mining excitement which rivals the Leadville (Col.) craze. The bonanza is at Fraves, 720 miles west of Matamoras, and so close to the boundary line between Durango, Coahuila and Chihuahua that all those States are contending for the prize. The General Government has taken possession of it until it can be decided by actual survey in which State it is. The mines are called Mejado and yield both gold and silver in such profusion that laborers are deserting the crops to dig for them, and the fever has extended as far as Matamoras.

—THE treasurer's report at the annual meeting of the American Board of Commissioners for Foreign Missions, held in Syracuse, N. Y., last week, showed that the Board has received and expended from the beginning about $17,000,000; has organized not far from 350 native churches, with about 83,000 communicants; has sent out 550 ordained missionaries and about 250 unmarried lady missionaries; has reduced to writing twenty-six languages; has issued in forty-six languages upwards of 2,300 different educational and religious publications and has had under instruction more than 400,000 pupils. About 1,000,000 of the unevangelized are reckoned as falling to the care of the American Board.

LOVE'S LAUGHTER.

I.—HER LAUGH.

No hollow, heartless sound wherein the light
That fills with sheer glad heartedness glad eyes
Is lacking, but the mocking laugh gold boys
To cheer the long-drawn watches of the night
And bar Fate's hungry beagles out of sight;
Nay, but the clear, full laugh of one who sighs
Anon when she recalls how laughter dies
In weeping, yet laughs now in wrong's despite.

Thus laughed my lady, and the flushing red
Leaped to her kissed mouth, lighting up her throat
And softly molded chin, and all o'erspread
Her low sweet brow, round which Love's fancies float.
I think the tresses of Madonna's head,
Shook at God's heaven to no happier note.

II.—HIS LAUGH.

My lady asked me why I laughed one night,
Her soft, round arms engirdling me the while,
Her gray eyes gleaming with love's gracious guile,
And all her fragrant fairness, red and white,
Distilling heart's ease, heart's hope, heart's delight.
What marvel if, thus basking in her smile,
My heart should seek to voice in fittest style
The gladness that is holiest in Love's sight?

And, for all answer, I but laughed again,
Since words to speak my inmost thought were vain;
The precious fragrance that her love distils,
The joy's completeness that her love fulfills
Deep in my soul's remote recess couch
To make my laughter but the breath of her!

JOHN MORAN.

QUEEN LILY AND ROSE IN ONE."

CHAPTER II.—(CONTINUED).

PROUD? Maud was not proud. Only that morning she had smiled up into his eyes and said, "Thank you, Frank!" If Maud would only not be angry! Father would give him Avonbank House and farm when the lease was out in two years; he had spoken of it before. And the house was a good one when nicely furnished; a gentleman might bring his wife to live at Avonbank. She seemed to like the place; she might be happy there—Maud might: and he would try—heaven knows how he would try to make her happy! And he would work night and day and strive to make money that he might have it to give to Maud—to his beautiful Maud—Maud his own—his very own—money enough to make Maud's life pleasant, to buy her white dresses and her dainty gloves and her feathered hats, to keep her from all trouble or care, so that not even the winds of heaven should light too roughly on her golden hair. Could he dare to think of it?

In his agitation he had forgotten his purpose of concealment, and was pacing on slowly on the grass-grown path. He remembered it now, and knew that, as Maud had left her seat at the sycamore-tree, she was coming this way—knew that, just beyond him, a little way in the dewy gloom of the primrose-scented lane, Maud—his Maud—was coming to meet him.

"Maud, my love, my darling!"—made his by the despotism of his young strong passionate devotion, made his by the right of the love he bore her from the first hour, the first moment he saw her and felt in the wordless depths of his heart the emotion of which another sang:

"Haunted by the starry head
Of her whose gentle will has changed my fate."

"Maud, my own love! Maud, my pride, my treasure, my darling!"

Almost aloud he had uttered it, when he saw through a screen of hawthorn-boughs the glimmer of Maud's white dress. He saw Maud's white dress, and beside it the outline of another figure—a man's figure—a man who was walking beside Maud, a man whose voice he heard, whose face he knew ere he had seen it.

To get out of their way, out of their sight, was his first blind impulse, and in another moment he had sprung over the hedge, through the fierce resistance of dog-rose and hawthorn-branches, and, holding fast to the tangled clumps of meadow-sweet and great burdock plants which grew in rank luxuriance in the slimy depth of the dyke-water beneath, he looked and saw Maud—his Maud, his idolized first love—passing by, not seeing him, not thanking of him; for all her thoughts, her words, her looks, the smiles of her sweet mouth, and the light of her pure eyes were for him who walked beside her, on whose arm she leaned, whose head was bent low to the level of her wind ruffled shining hair—that soldierly man, with his bold eyes, his gallant bearing, his white hands, his low, refined voice, his handsome well set figure, adorned—not disfigured—by his dress, every inch a soldier and a gentleman—Sir George Canonbury.

* * * * * *

"Hasn't Frank come in yet, Julia?" Mary asked, with bated breath, fearing her father might overhear, it being one of the many peculiarities of the redoubtable sire's household tyranny that no one member of the family should be absent at any time whatsoever unless by his express permission or desire. "My goodness, father'll be as mad as a March hare!" she went on, confidentially. "For he wants him to go over to Derrybane to ask Mr. Parnell for the loan of three of his horses for next week. There's top-dressing to be done for the meadows after the hay; and father says if we don't bespeak 'em in time, that may be—— Here he is!" And, foreseeing the impending cross questioning as the formidable "he" came in, Mary prudently went out to the dairy.

"Where's Frank?" growled Mr. O'Hara, sitting down with a lowering brow.

"I don't know indeed, sir," Anastasia replied, briskly. "I've been ironing the whole evening, and was too busy to mind anything else."

Anastasia was smiling, and the smartness of her tone and air attracted even her father's notice. He knit his heavy iron-gray brows as he looked at her.

"Do none of ye know where he is?" he demanded, turning round in his chair, and surveying the other occupants of the room threateningly.

Mary heard the angry tone, and, being—for private reasons of her own—extremely nervous at the idea of incurring her father's anger, staid outside the door in the dark entry and confided her fears to a quarter-cheese which she was carrying, in these words, the obscure meaning of which was best known to Miss Molly O'Hara herself:

"I know he'll come and tell father one of these days, and what'll I do then? I'd run into a *rubeen* from father, if he goes and tells him anything!"

A circumstance had occurred that afternoon which might possibly tend to elucidation. Miss Molly O'Hara had been down at one of the drapers' shops in the town, and, on her way home, Doctor Tom Clarke, workhouse medical attendant and second dispensary doctor of Rathmore, had met her, had talked to her for the space of twenty minutes, and had parted from her with the injunction:

"Take care of yourself, Molly, or I'll have to go up and tell your father that I won't allow you to work so hard."

Well, but that was an ordinary professional friendly assurance, was it not? Molly O'Hara had no need to have walked home so fast afterwards, with an absent-minded air and such a pair of fiery-red cheeks!

Therefore Molly, listening timidly in the dark, quaked at her father's angry tone, although not addressed to her.

"I don't know where he is," Julia said, with a peevish moan at having to speak at all. "I saw him after tea, but not since."

The father muttered growlingly again, and then there was silence in the room for a minute, when, from the far end of the long oaken table, Maud looked up and spoke.

"I think Frank is in the house, sir. I think he is up-stairs in his bedroom."

"You think?" O'Hara repeated, roughly. "I don't want to think things—I want to be sure of them. Did you see him?"

"Yes; I saw him just now on the stairs."

Anastasia turned and stared at her in surprise; Mary's breath came quick and hard; even Julia's face lit up with a faint curiosity.

Maud's pale face was deadly white; there were traces of tears around her damp eyelashes, her eyes sank before theirs in a confused, troubled manner, and her clear, low voice trembled and failed twice whilst she spoke.

"The deuce!" roared the head of the family. "What's taken him to bed without leave or license at this hour, I'd like to know? By Jove, this is what I call free and easy! Go up this minute"—to Mary—"and see what's this about!"

In a few minutes Mary returned, looking puzzled.

"He says he has a dreadful headache, sir, and feels ill," she said, in a frightened apologetic tone, "and he has gone to bed, as he couldn't stay up any longer; but he'll go over to Derrybane in the morning, if he's able."

"I don't want him to go if he's not able," the father replied, less gruffly. "You'd better take him up a basin of hot whey. He's got a cold—that's what it is."

Obedient Mary made the basin of hot whey, and carried it to her brother's room, who took it from her hand, but bade her leave her light outside, as it hurt his eyes, and the twilight was enough for him.

Honest, slow-witted Molly was greatly puzzled at this, and, but for the pre-occupation of her mind with the puzzle concerning Doctor Tom Clarke, would have been more so; but, this greater difficulty having driven all lesser ones out of her head, she went to bed and fell at once into her sound labor-earned sleep, and dreamed that Doctor Clarke had come to pay her father a visit, and that she tried to get out of the room, but could not find the door.

Whilst Maud St. Crewe, after tossing in fevered sleeplessness all through the dark hours, waited only until the pearly gray dawn-light stole into her room, when she rose, and, wrapping herself in dressing-gown and shawl, opened her door to go down to the garden, the fresh scents of which came in through her open window.

There was no one stirring at this hour surely? But, as she stepped out noiselessly into the corridor, she saw Frank's door at the farther end of the passage open likewise. With white lips and fast-throbbing heart Maud sprang back instantly, and saw him come out, carrying something in his hand; and, after listening and watching for a few moments, he went softly down-stairs. At sight of his face Maud had trembled and grown faint. It was only a pallid, haggard likeness of Frank's fresh, manly, spirited face. The features were set like those of one with a deep and vengeful purpose; they were dark with sullen misery, and across his brow and cheek there was a horrible mark—livid, swollen, and lacerated—like a brand.

As he stealthily passed her door, Maud saw that the bundle he carried in his hand consisted of some articles of clothing and a pair of boots. The boots and trousers were all wet, and begrimed with mud and traces of slimy weeds, and the collar of the coat—the light-gray coat he wore on the previous day—and a handkerchief, were all stained with blood.

CHAPTER III.

"IT'S powerful hot this morning, for so early in the year," Mr. O'Hara remarked, taking his place at the breakfast-table, around which all the members of the family, with one exception, were seated. "It's splendid weather for the wheat; if it only keeps up like this, in three weeks more that long field will be ripe. That ham looks first-rate—Stasia, cut me some, and some for Maud, too. You're ten times the girl you were, Maud, since I made you eat ham and wholemeal bread. Any one would be a fool," Mr. O'Hara continued, candidly, "to refuse ham like this and Molly's fresh whole-meal bread."

The autocrat was evidently in a most genial mood. It may have been partly the influences of the dewy, sparkling May morning, so full of smiling life and beauty, the budding orchard-blossoms, the ripening fruit, the yellowing waves of the wheat-fields, the busy humming of the bees, the rose-petals fluttering over the white gravel, the fresh honey-fragrance of the new-mown clover in the "haggart." And it may have been in part the influences of the breakfast-table—the aroma of freshly-made coffee, the vision of newly-cut ham, pale coral-hued as to its lean, firm rose-white as to its fat—the crispness of newly-baked bread, brown, crusty and sweet as a toasted ear of barley.

"Frank not back from Derrybane yet? Maud, why don't you eat your breakfast?"

"I cannot, sir," the girl answered, faintly, "I do not feel well."

"Not feel well! What's the matter with you?"

"I don't know," she said, with a kind of desperation, pushing away the untasted food before her and rising to her feet with an involuntary impulse.

"What's the matter with you, I say?" Mr. O'Hara said, rising also in some perturbation and forcing her back into her chair. "What the deuce is come to you all? Frank ill last night, and wouldn't eat his supper—you ill this morning, and won't eat your breakfast!"

Maud sat silent. She could not have uttered a word unless she had given way to a sobbing outcry. Her limbs were trembling, her throat was swelling with hysterical emotion, and the prescience of some boding terror and danger possessed her mind.

Some one was coming with news! Some one was coming to the house to tell something dreadful! Some one was coming—coming—coming up the back lane—coming nearer—nearer to tell something!

"You won't say what's the matter with you, then? Very well, miss!"

Old O'Hara was chuckling excessively, his blue eyes full of mischievous glee, and Anastasia drew her head up with a contemptuous sniff as she watched her father stooping down to peer into Maud's white face, and softly slapping her shoulders whilst he shook with suppressed mirth at his own thoughts.

"It's very queer, Maud—very queer. It's the queerest thing I've heard of this long time—you and Frank to both fall ill in this way! I hope it isn't anything infectious, eh, Maud?"

Still Maud made no reply, whilst Mr. O'Hara, with unabated mirth, persisted in his suggestions.

"You were out walking too late last night, Maud. Frank's caught cold, and you caught cold—or maybe you had a quarrel?"

Visibly before them all Maud started and shrank at the question, and across her pained white face there swept a crimson flush.

"Aha, young lady—aha," the father said, laughing still, but his voice changing, "I've run you to earth at last, have I? Oh, bless you, child, don't bother about that! Quarrel and make it up again—fall out and fall in again—kiss and be friends twenty times over—all sweethearts do that!"

"My gracious me!" Miss Anastasia muttered through her teeth, and she bestowed a glare of ineffable contempt on the back of her father's head, which was turned to her.

But in her father's uproarious outburst of laughter Molly joined most heartily. Father was in such a pleasant humor this morning! And he was so dreadfully clever at finding out things.

But Maud rose to her feet again, and spoke firmly and haughtily, although her voice trembled audibly and her hands clasped and unclasped themselves in convulsive nervousness.

"You quite mistake, sir; I do not understand your allusions to your son. I was not out with him yesterday evening. I never spoke to him for the whole afternoon until I met him on the stairs——" She stopped abruptly, her face flushing again.

"Well, Miss Maud, and what did you say to him on the stairs?" O'Hara went on, bantteringly, but his good temper fast giving way. "We shall have it all out soon, in spite of your denials. A little chit like you giving yourself such airs! I won't allow that, my young lady. I'll soon make my son clear up my mistake if you don't."

"If he dare!"

The girl's face was almost transformed in a blaze of passionate scorn, and her soft violet eyes flashed with defiant light.

"By Jove!" O'Hara commenced, in astonishment, "one would think that——" when he suddenly stopped at hearing his own name pronounced in tones of distress in the kitchen—in the kitchen, from which sounded the tramp and shuffle of feet and a confused hum of voices in low tones, broken by ejaculations of horror and distress.

"What's the matter? What's wrong?" the father said, looking around at his daughters, not noisily and angrily, as was his wont, when puzzled and alarmed, but in a low, hoarse voice, his ruddy cheeks fading to sickly wanness.

No one answered, stirred, or scarcely breathed. There was a dead, awful pause for a few seconds in the kitchen, and then footsteps came slowly across the passage, the parlor door opened, and Doctor Clarke entered the room.

"How are you, Mr. O'Hara? I am glad to see you looking so well. I suppose you are surprised to see me at this hour?" he said, cordially and cheerfully, so that Molly for an instant distractedly thought he must be coming "to say something" to father concerning her, there and then, before them all.

"I am surprised to see you," the father said, huskily, staring at the young doctor, threateningly. "You've come to tell me something; out with it—out with it, doctor, this minute! My son——"

"Well, it's just about him. I came for fear any one else should run in with a big story and frighten you all," the young doctor said, nervously, in spite of his struggles to control himself.

"He's not—not dead?" O'Hara said, slowly. "You wouldn't dare to come in like—this—if you came to tell me—my boy was dead?"

"Heaven forbid!" replied the doctor, earnestly. "He's alive and well, Mr. O'Hara; but—but there's been an awful piece of work. I wouldn't tell it before the young ladies," he said, with an apologetic glance at Mary, "only I know there will be others to tell them. A man has been found dead—murdered—in Avonbank Lane, and—and Frank said something or did something foolish; and they have taken up the notion that he had something to tell about it. Of course it's the greatest nonsense ever was heard of?" the young surgeon cried, earnestly. "I'd as soon suspect my own brother, or my sister for that matter, as an honest, kind-hearted fellow like Frank, and I said so to every one!' Upon my word, I think that old Parnell must be doting to grant a warrant——"

"A warrant to arrest my son for—for murder?" O'Hara shouted, the veins in his forehead and temples swelling up like whip-cord in his rage. "Who's dared to it? Who's dared, I say? Clarke, is it that gouty old hare-brained fool of a Parnell? He'll repent it to his dying day if he has!"

"Hush, sir! There's no use in giving way to one's feelings," Tom Clarke said, shutting the parlor door; "he could not well help it, I suppose. Frank got so mixed up in the affair, and, like a fool, in his excitement, poor fellow, kept saying things, though Sutton the constable told him not. Besides, a man saw him doing something with some clothes. It'll all come out on the trial—there will have to be a trial of course. The poor fellow was brutally murdered—there's no doubt about that."

O'Hara turned suddenly on finding his arm clutched with a vise-like grasp, and saw that Maud was clinging to him for support, her limbs swaying under her, her wild, white face and frenzied eyes fixed on Doctor Clarke.

"Who was he? Who is the murdered man?" he said, hurriedly.

Every eye in the room was fixed on Maud, and the surgeon's voice sounded in her ears like a death-warrant.

"The guest of Parnell, of Derrybane, Sir George Canonbury."

And Maud St. Crewe fell to the floor insensible.

* * * * * *

Where the primroses bloomed their sweetest, where the rabbits frisked merrily in the dewy shade and cropped the pale-green deer-grass, where the fallen snow of hawthorn blossoms yet sprinkled the mossy sod beneath, there they had found the murdered man, with just one flicker of amber sunshine, which had found its way through the interlacing boughs overhead, playing over his dead upturned face, his nerveless limbs, his white outstretched hand, his dark hair all dank with the night-dews, and with something else darker and more awful than the mists of heaven—the life-blood of a human heart whose tide the spirit had ebbed away.

There it lay, the prone, disfigured, helpless form, on which the previous day's sun had shone in the bloom of manly prime and the gallant grace of a highborn young soldier.

Through the dewy sunlit lane, beneath the swaying boughs and the joyous singing birds, they had carried it home, that heavy burden that lay so still in its awfully suggestive outlines beneath the coarse rug covering. They had held an inquest; and the jurors, after they had each one stolen back softly from the silent room where the blinds were drawn and heard the evidence of the witnesses, pronounced their verdict—"Willful murder."

"Willful murder"—and Frank O'Hara was committed to prison until the Summer assizes should commence—in about three weeks—when he should stand to take his trial for the murder of Sir George Canonbury.

For, in the face of the overwhelming evidence which implicated him, there was no second course to be pursued; and the activity shown by Mr. Parnell in granting the warrant for Frank's arrest, which had so enraged the father's feelings against his neighbor, was due in part only to his having an old grudge against O'Hara, which, being a cautious man, he forbore to gratify until he could do so with a show of right on his side. Besides, the murdered man had been a valued guest—later on it was discovered that he had been a hoped-for son-in-law. But John Parnell of Derrybane's ready acquiescence in granting the power which branded O'Hara's only son as a suspected felon at the best, and sent him to a prison cell, was due in part only to embittered feelings; for Frank O'Hara had by his own acts, his own words almost, plainly showed a guilty knowledge concerning the dark deed of that May evening.

Nothing could be more conclusive, people said—people who were Frank's acquaintances, neighbors, friends nearly. It was awful; they could not have believed it if they had not heard what they had. They were afraid it looked bad, very bad. Every one knew the O'Haras had dreadful tempers. Why, old Robert O'Hara would do anything when his blood was up—and Frank was the image of him! And then the cause—jealousy! There was a whisper first, coming no one knew whence, which swelled into a roar of rumor's thousand tongues; and far and wide, with a score of lying additions, the story spread that it was for love of that white faced, yellow-haired, half-foreign girl who had come to live at the Castle that young O'Hara had incurred

Digitized by Google

the scaffold's doom. He had loved her—and the old, old story—she had played him false for the sake of a richer lover, the titled man. It was an evil day for poor old Robert O'Hara, they said, when he was first befooled by that proud pale-faced young widow he had married. Like mother, like daughter, sure enough; and now he would rue to his dying day the hour he had brought this French coquette into his house to ruin his son and disgrace his name. Wonderful tales, indeed, became rife as to the evil propensities and peculiarities of the fair stately girl of whom no one knew anything, save that she dressed, as the good ladies of the town of Rathmore said, "like a play-actress," and spoke with a foreign accent, which they were pleased to consider was "pride."

And she? None save heaven could ever tell what those dreadful days wrought in that pure, proud, gentle heart, when Frank O'Hara lay in prison under the ban of murder, and she was looked upon by every one as his temptress, the fair witch by whose glamour a soul was blood stained and two lives were lost.

They were merciless to her—poor, fair, friendless Maud.

Those who liked Frank O'Hara and did not wish to believe him guilty without good cause were eager to affix the cause to her; those who hated him said he had but done what scores of other hot headed, fiery young criminals had done before—murder a rival in hot blood or cold blood, as the case might be; those who loved Frank O'Hara were most merciless of all.

The gray-headed father, who was crushed with shame and misery, cursed the girl whose vanity and ambition had been his son's undoing; the sister, who strove from her kind heart to pity the hapless young creature who was alone amongst enemies, but hated her, too, for Frank's woe and disgrace.

And so the time wore on, and the day of trial came; and in the dock of the crowded court Frank O'Hara stood, haggard and pale, but erect, looking his fellow-men in the face with quiet eyes; and in the witness-box, to bear her fatal testimony against his life, was Maud St. Crowe. A clever lawyer, retained for the defense, had instructed her what to say and what to leave unsaid. The witnesses who had gone before her had given the cross-examining lawyer for the other side very little information, and been as clever as shrewd Irish witnesses generally are in totally evading the point of the question and turning it against their questioner; but yet Maud felt in an agony that parched her lips and made her very heart ache with fear, that, say as little as she might, it would be too much.

A murmur ran through the whole court as she stood up in her soft black dress, with her golden hair pushed back feverishly off her brow, where the blue veins mapped themselves so plainly, and beneath which her large eyes shone like stars as she glanced around, and a frightened, flush tinged all her delicate face like a June rose.

Once only she looked on the prisoner at the bar, and then turned quickly away; and the lawyer for the defense frowned as she looked, for she had seen poor Frank's sunken eyes filled with passionate love, his mouth tremulous with pity for her, and it had quite overthrown what resolution and calmness she was striving to retain.

When at length they relieved her from the torture of her protracted examination, and she was carried fainting out of the court by Doctor Clarke and Mary, the unhappy girl felt in the depths of her agonized consciousness that the testimony which the inquisitorial genius of the lawyer had wrung from her in that three-quarters of an hour had already, in the minds of the jury, sent Frank to the condemned cell and the felon's grave.

(To be concluded in our next.)

BENEATH THE FALLS OF NIAGARA.

IT was a lovely day in September as the artist and I lounged in a superb palace-car, rolling over the road that leads the expectant tourist to the Falls of Niagara, via the charming Erie route. There were two brand-new brides and a pair of brand-new bridegrooms, full of honey and moonshine, seated as far from us and as near to one another as circumstances would by any human possibility permit. They had no eyes for the enchanting scenery of the Susquehanna! What were the glories of the Delaware to *them?* One bride wore a blue plush hat surmounted by a yellow bird of forbidding and vulture-like aspect, and a gray costume, an eruption of silken rosettes; while the other was dustered up to her chin, her bonnet—or was it a bonnet?—being all angles, which constantly poked themselves into her Edwin's amorous eyes. How they gushed and spooned, and gazed idiotically! How seldom they spoke! How hand met hand, and, as the shades of night fell upon the earth, how the arm of Edwin stole round the waist of Angelina, and I know that the owner of the dustered lady found the material of which her overall was composed remarkably unclutchable. The blue-hatted bride ate like an ancient Briton, demanding fresh relays while her mouth was yet full, and ordering about the waitresses in a manner that indicated to me what a time the meek-looking little man at her side, who put pepper in his tea instead of sugar, and timidly tapped on the top of his egg with a runaway knock, was likely to have of it in the near future. The dustered lady turned up her nose at everything, and ate a solitary pickled cucumber with an air of disdain, while her *caro sposo*, who was of a frugal turn of mind, pocketed a clumsily-made sandwich, and drove a hard bargain for a couple of flea-bitten-looking apples.

At Buffalo, the quartet followed us into the drawing-room car, and as the light was of the dimmest, we lost sight of them—their whereabouts being only ascertainable through the medium of hushed whispers and the chirping sounds with which the fond mother rewards her smiling babe—until the train reached Niagara, when Blue Hat sharply demanded of the stage-driver if supper would be served at the hotel, and Duster announced her disgust at being compelled to ride in a public vehicle. We put up at the Spencer House, so did the "set of spoons," and the last thing I heard, as I ascended bedwards, was Blue Hat denouncing the sleepy clerk for not having a meal for travelers arriving by the night train.

The artist and I rose betimes, and, having breakfasted to the music of the roar of the Falls, proceeded to visit Goat Island and the Three Sisters Islands. Lord! what a sensation it is to stand on the low-lying bridge, between the first and second Sisters, and watch the Rapids flash past in great sheets of plate-glass, frosted with myriads of glittering diamonds! One feels as if one had found a resort of Nature. From Goat Island we took a turn amongst the Indian antiquities and curiosities manufactured in—New York. Here we espied Blue Hat investing in feather-fans, in cameos, in kholios, in snowshoes, in Lacrosse bats, in moccasins, and fifty other knick-knacks of an equally valuable nature, while the expression on the face of her husband was that of sullen despair. We entered Prospect Park, and after taking a "deep deep draught" of "the antithesis of Nature"—for Niagara is all contrasted charms, in the Titanic strength and majesty of the cataract, and the soft young tendrils that bathe their verdure in its spray; in the wild, distracted, maniac surge, and the delicate rainbow shining in its embrace; in the whirlwind roar of falling floods, and the braided lullaby of lapsing streams—we took our seats in the Inclined Railway, and in a few seconds sped down 160 feet to the edge of the strangely green waters that seethe and boil and foam and whirl as they rush into the awful jaws of the Whirlpool Rapids.

Having been invited by a stalwart guide to pass beneath the Shadow of the Rock, in other words, to go under the Falls, and having somewhat hesitatingly responded in the affirmative, as the spray was dashing over the roof of the building and rising before us from the green waters like a bridal vail, we were each ushered into a sort of cell, containing a round stool, a rack to hang clothes upon, a very blurred, very small mirror, a brush of moldy appearance, a comb of disreputable contour, and a tin box to contain one's valuables. Presently the guide returned, bearing with him a flannel shirt, a pair of flannel continuations, and flannel shoes built very much after the fashion of the buskins worn by Robinson Crusoe. Having undressed and entered these uninviting-looking garments, I was handed a pair of oilskin overalls, and an oilskin pea-jacket with a hood to it. This the guide fastened by a running cord tight round my face, leaving nothing visible but my nose. The artist, similarly equipped, presented the appearance of an Esquimaux who had been considerably oiled, and a *pas de deux* performed by us did not bring down the house; but how could it when last Winter 750 tons of ice failed to do so? We now awaited two couples who were preparing their toilets in their respective cells, and when they emerged, arrayed *à la* Boyton, I could scarcely refrain from an exclamation! They were the "set of spoons" with whom we had traveled from New York. Such guys as they looked, especially the menkind, for somehow or other, no matter what a woman puts on, she can make it coquettish, and I doubt if Blue Hat did not appear more *piquante* in her oilskin hood than in that plush abomination with the orange bird-of-prey perched on top. Duster was rather coy on the subject of coming out of her cell, but as everybody had a good stare at her while she was yet within its walls, she at length consented to take her husband's arm and "tempt the dangerous gloom." How we did cringe as we stepped on the sharp, biting stones, the whole party doubling up as if by magic. What a relief it was to get on the slippery gangway, and despite the blending spray and deafening roar of the cataract, to gaze at the rainbow. How lovingly the Edwins clung to their Angelinas—these Edwins had been suffering from new and tight boots, and locomotion was not only painful but difficult—and how tenderly they hugged the partners of their joys! How pretty the faces of the brides looked as, washed with spray, "they smiled through their tears like the sunbeam in showers." The Edwins were for remaining on the platform, but the Angelinas, by vigorous pantomimes, decided otherwise, and again we passed over the grinding stones, doubled up like bootjacks, till we reached another platform, slippery as greased ice. The thunder of the Falls now was deafening, while the water came over us in bucketfuls. Here the guide intimated to us—we could not hear one word that he said—that we were to walk backwards, so I caught the artist by the hips, the artist caught a foreign gentleman who joined the party at the last moment, and like crabs we crossed the treacherous boards to a set of steps, the "set of spoons" in advance and in the same ungraceful position. A few strides placed us beneath the Falls, and all became suddenly darkened, while the water played upon us with ten thousand shower-bath power, taking away every breath in our respective bodies. Suddenly we came to a halt, the guide having by a dexterous twist turned the entire party into a sort of niche in the rock, where we were enabled at least to breathe, though we were huddled together like so many sheep. The Edwins now clung frantically to their Angelinas, their lips moving, but no sound could be heard. After a delay of a few seconds—they seemed an age—we moved into deeper darkness and into deeper water; then, having received a very direct impetus from behind, retraced our steps, and after a slippery journey, panting, breathless, palpitating, shivering and wet to the skin, we reached the blistering shingle and our respective dressing-rooms.

SCIENTIFIC INTELLIGENCE.

Dr. Otto Funke, Professor of Physiology at the University of Freiburg in Baden, has just died at the comparatively early age of fifty-one years.

It is Said that the juice of the carica, a vegetable product of Brazil, will dissolve the false membranes which obstruct the throat of a patient suffering from croup. This substance is used in Brazil in the curing of meat, and also to destroy intestinal worms.

Latest Advices from the west coast of Africa state that Henry M. Stanley, the explorer, and his followers had arrived at Sierra Leone from Zanzibar. It is the evident intention of Stanley to complete the explorations of the Congo River from this coast, and steam launches and machinery for hauling boats up the rapids are being prepared for the purpose.

The Wine-growers of France have just held a convention at which the chief topic of interest was the much-ventilated phylloxera question. The German viticulturists have also met at Coblenz, and the impending destruction of the vine was also seriously considered. In both countries the only remedy suggested was the introduction of an entirely new seedling from the United States.

The Stearate of Soda, in the proportion of about fifty grammes of the soap to one thousand of alcohol of specific gravity 40, when mixed with paint renders the penetration of fluids impossible, and prevents the formation of fungi—the paint thus treated can be washed down with boiling water, without injury. For sick wards of hospitals or in cattle sheds disinfecting materials can be added.

The International Society for the prevention of the pollution of rivers, the soil and the atmosphere, held its third meeting at Baden-Baden, September 16th and 17th. The society aims to interest sanitary engineers in all countries in a systematic plan for the protection of the people against the encroachments of manufacturers and the dangers of imperfect drainage and sewage. It is a large subject to handle, and needs the prefix "international" to help it along.

M. Galtier has been making some studies on hydrophobia, and for the purpose of investigation employs the rabbit. True hydrophobia can be transmitted to this animal, causing paralysis and convulsions. Salicylic acid administered by hypodermic injection daily did not prevent development of the disorder in the rabbit. The saliva of a mad dog, obtained from the living animal, and preserved in water, is virulent, in some cases, even twenty-four hours afterwards.

The Artificial Culture of the muscle or limpet is extensively practiced in the Department of Charente, in the Bay of Aiguillon, France, where the industry was founded eight centuries ago by Walton, a shipwrecked Irishman. By closely observing what took place in nature, he was enabled to make his discovery. He found that the stakes driven in to hold nets were soon covered with muscles, and was led by this to invent the system of bardies which is still employed. The bardies of Walton have been somewhat modified by having only one wing at an angle to the sea instead of two. There are at Aiguillon 1,600 or 1,800 bardies, which bring in an annual income of 800,000 francs.

The Treatment of cutaneous diseases by balsam of Peru or storax has been thoroughly tried in the hospitals and army practice of Europe and found to be most efficacious. The first of these remedies has the advantage of an agreeable odor, but the price is very high. It was first recommended in the German army by Dr. Busch in 1853. A single application well made is sufficient to destroy the itch insect. The quantity to be employed is minute, a few drops being sufficient for the whole body. The ointment must be applied with great care, avoiding all friction. Storax can be substituted for the balsam in the following proportions: Storax 4 parts, alcohol 2 parts, olive oil 1 part—15 grammes at an application. The operation of this remedy is less rapid but equally certain.

The Identity of Light and Heat.—Both phenomena are identical in character but different in degree. A solid body when highly heated throws out rays of light. The strength of this light is proportional to the height of temperature, and it is a remarkable circumstance that nearly all solids begin to glow at the same degree, which is given by Daniell at about 980°C., by Wedgwood at 947°, by Draper at 977°. The intensity of the light increases in greater proportion than the temperature. For example, platinum at 2,000° gives out forty times more light than at 1,900°. When we heat metals to glowing they assume all the colors of the spectrum, and with higher temperature the dispersion of the rays increase. At 1,000° we have the red, at 1,200° the orange, at 1,300° the yellow, at 1,500° the blue, at 1,700° the violet rays. There are now new elements to be studied since the discovery by Edison of the behavior of metals when heated by the electric current in vacuo. The temperature at which metals treated in this way begin to glow and to give the colors of the spectrum remains to be studied.

Action of Anesthetics on Plants.—Chloral does not act as an anesthetic on the sensitive plant; ether and chloroform behave in the same way towards plants that they do to animals, and it is all the same whether these reagents penetrate by the leaves or the roots. The petioles fall suddenly and successively from below upwards as chloroform absorbed by the roots reaches their insertion. Hence the rate of absorption can easily be calculated. The velocity increases from the base to the top, and is one and a half times to twice as great in the petioles as in the stem. Thus plant life and animal life closely approach each other. Not only do vegetables seize upon insects and devour them, but they are also subject to the action of anesthetics the same as animals. The question is, where does consciousness come in? What we call life is found far down in the series until we reach protoplasm, but where is the starting-point of conscious existence?

> "From life to consciousness the chasm
> Cannot be bridged by protoplasm,
> All flesh is grass, but chlorophyll
> Can all man's duties not fulfill."

The Hanover Polytechnic School.—The new building for the use of the Polytechnic Institute at Hanover was inaugurated October 6th. Deputations from the principal similar institutions of Germany took part in the proceedings. There was a farewell meeting in the deserted halls of the old building, and a procession from thence through the main street to the Royal Palace, which has been filled up at great expense for the uses of the school. It is probable that no scientific institution in the world is lodged in such regal style, and for all practical purposes the architectural display of towers and minarets which adorn the building could be dispensed with. The professors would be glad at any time to exchange some of their extravagant carvings for a moderate increase of salary and more money to spend on their collections. Several million dollars were spent on the building when it was intended for a palace, and a million or more has been devoted to adapting the edifice to the purposes of a school. An entirely new structure vastly better suited to the wants of the institution could have been built for less money than the repairs have cost.

PERSONAL GOSSIP.

Mr. Holman Hunt has accepted the Vice-Presidency of a British society organized to prevent the destruction of precious historical edifices and sites.

President and Mrs. Hayes have been visiting the tomb of President Lincoln, at Springfield, Ill. The sarcophagus was decorated with quantities of flowers and with a portrait of Lincoln.

Our credit in the last issue of this paper for the admirable photographs of General Grant and his parlors in the Palace Hotel, San Francisco, should have been given to J. W. Taber, instead of Faber.

A committee of clergymen and laymen, including Dissenters, are making an effort to secure the means for erecting a statue to William Tyndall on the Thames Embankment. As projected, it will cost about $20,000.

Miss Lily Ayer, only daughter of the late Dr. Ayer, is said to be engaged to Don Philippe de Bourbon, son of the Count of Aquila, uncle to the ex-King Francis II. of Naples, and grandson of Dom Pedro I., Emperor of Brazil.

Bismarck has suggested to Andrassy—as a means of further cementing the alliance between the two Powers—the marriage of the eldest son of the Crown Prince of Germany and Princess Valerie, daughter of the Empress of Austria.

Isham G. Harris, United States Senator of Tennessee, is largely interested in sheep-raising in Texas, whence he has just returned well pleased with his success, notwithstanding heavy losses caused by deaths from the extreme cold last Winter.

The Ministry of Instruction at Rome having been petitioned by Professor Cogo, of Padua, to appoint instructors to the homeopathic theories in the universities of the country, has declined to do so, saying that homeopathy is the negation of all positive science.

Governor William Claflin, of Boston, has presented to the Freedman's Aid Society of the Methodist Episcopal Church, by Dr. Rust, the deed of the League property, adjoining the Claflin University, consisting of thirty one acres and buildings, valued at $8,000.

A proclamation recently issued by the King of Siam declared that hereafter every man shall be allowed to worship God unmolested and according to the dictates of his own conscience. This means that converts to Christianity will not be forced to worship spirits or to work on Sunday.

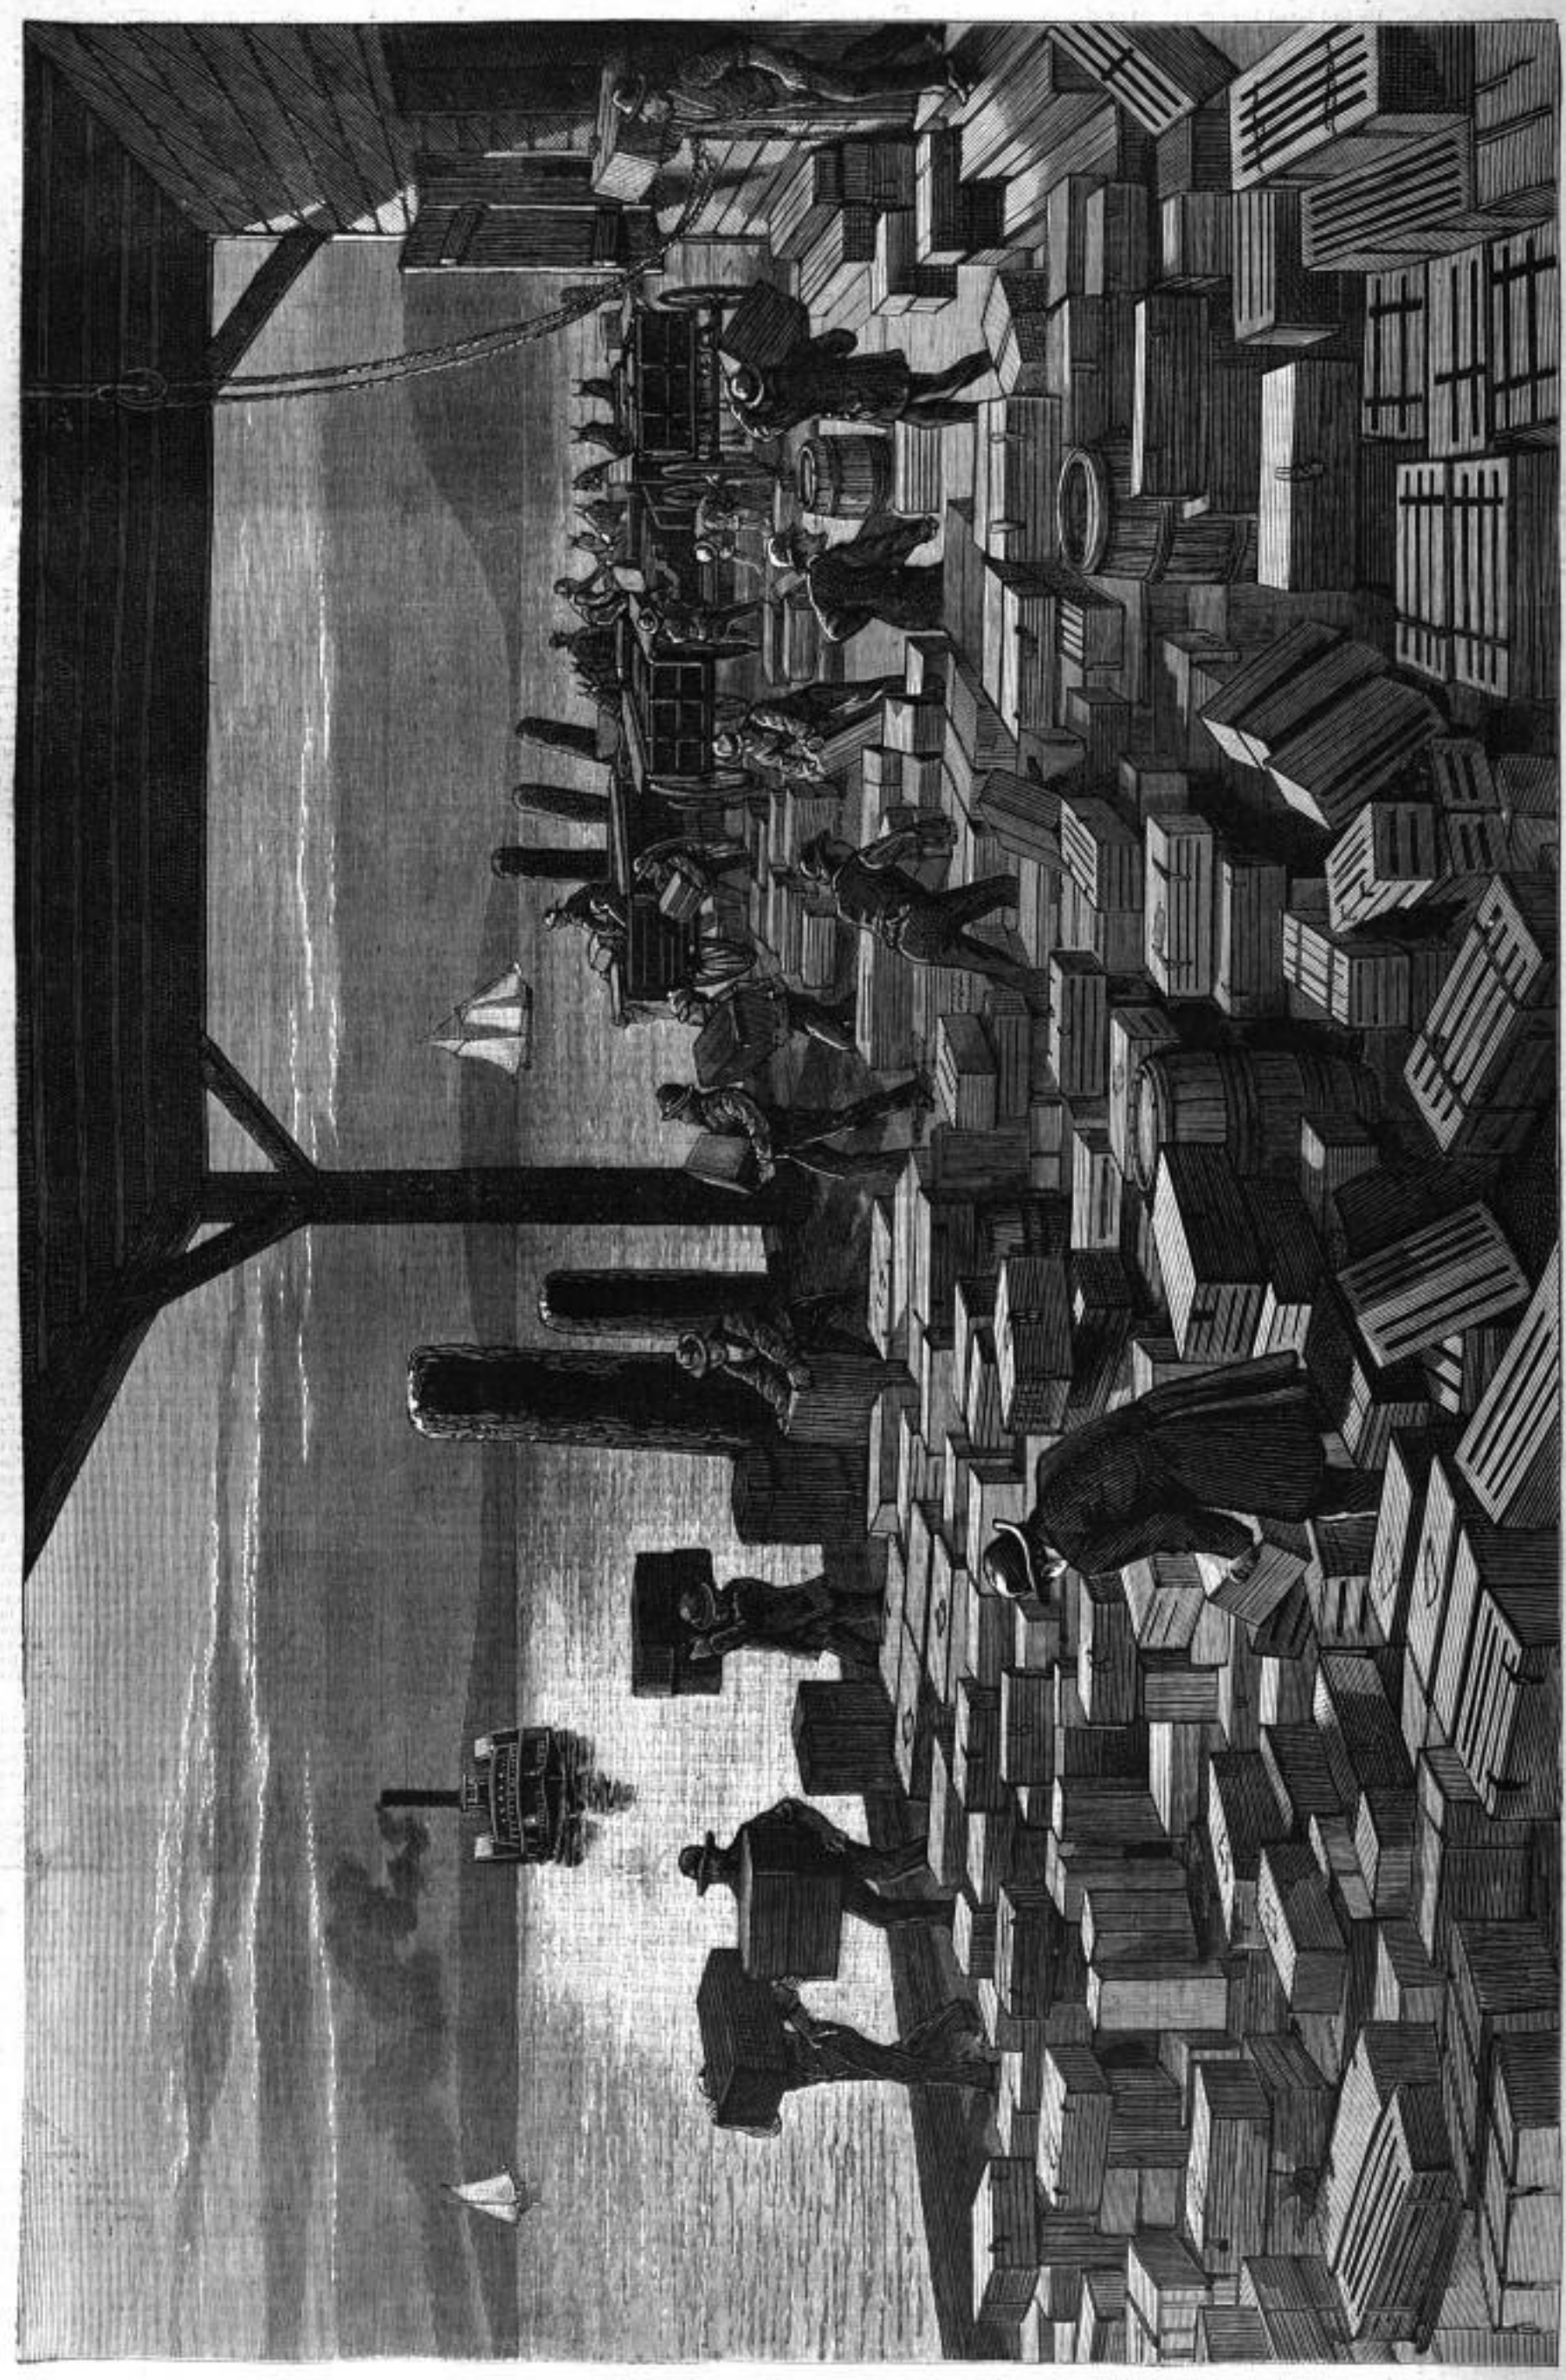
An American newspaper seems to be running King Alfonso's courtship, and announces that he kissed his betrothed on the forehead, whereupon bells were rung and cannon fired. When he gets to her lips the least that can be done will be to blow up the Escorial with nitro-glycerine.

Miss Jennie Flood, who, according to report, is betrothed to U. S. Grant, Jr., is the only daughter of Mr. James C. Flood, the head of the Bank of Nevada, and, next to Mr. Mackey, the richest man on the Pacific Slope. Miss Flood is about twenty-four years old, has dark-brown, luxuriant hair, blue eyes, full face, beautiful teeth, and a tall, handsome form.

Count Henri de Castiglione, of Hartford, forty nine years old, is dead. He came of a distinguished family in Italy, entered the service of Victor Emmanuel as a page, and continued for years as his confidential companion. He served in the Crimea. He came to this country in the interest of the Zoological Garden near Turin, and married a Miss Porter, of Hartford.

Professor Edward S. Morse, of Salem, has returned home after some years' residence in Japan as professor of natural history in one of the universities there. He spent two years in Satsuma and the southern provinces, dredging, examining the caves, and investigating evidences of pre-historic races. The last year was spent in Yesso, and he returned overland to Tokio, a distance of six hundred miles.

The ex-Empress Eugénie has, it is asserted, declared her intention to live in absolute retirement, so that a settlement of her fortune will be necessary. Her son's will is not exactly valid according to English law, not having been signed by the testator in the presence of two witnesses, but as the Empress alone could test the validity of it, no opposition will be raised on this point. The property to be sold to pay the legacies not being been indicated, the executors will have to choose those portions which can be sold to the best advantage.



Prince Bismarck was accompanied to Vienna by the Princess and his son, Count William Bismarck. The latter is physically very much like his father, and is very popular in Berlin. He is a member of the German Reichstag, and is frequently on the special committees of that assembly. "Count Bill," as he is called in Berlin, distinguished himself during the Franco-German War as a common soldier in the ranks, and his fate was often a cause of anxiety for Prince Bismarck. He is now constantly with his father, and is a chip of the old block.

Mr. George Arthur Gardiner, a nephew by marriage of Prescott, the historian, died in Brooklyn on the 27th ultimo of what is said by his physician to have been arsenical poisoning, caused by the filling in a decayed tooth designed to kill an aching nerve. On the 11th of September he had the tooth filled by a dentist of Boston. Soon after he began to show symptoms of poisoning, and before he died, two weeks later, every connection between the head and body, except the spine, had been eaten through. This is the first case of the kind on record, although arsenic is frequently used by dentists to kill sensitive nerves.

The obituary record of the past week contains the names of William H. Powell, the historical painter, who died suddenly October 6th, aged 56; General Francis L. Vinton, military and mining engineer, October 6th; Rev. Dr. F. J. Pabisch, President of Mount St. Mary's Seminary, near Cincinnati, Ohio; John W. Keene, inventor of the Remington-Keene magazine gun, aged 53; Rev. Dr. Thomas Shepard, of Bristol, R. I., October 6th, aged 87; Edward Seguin, the opera singer, October 9th, aged 44; General George Vickers, ex-United States Senator from Maryland, October 8th, aged 71; Hon. Horatio Ballard, ex-Secretary of State of New York, October 9th, aged 77; the Princess Caroline Bonaparte, at Rome, October 9th.

What is reputed to be the largest and handsomest collection of postage-stamps in existence has just been purchased by Edward Wolfer, a dealer in *papeterie* and postage-stamps of Frankfort on the Main, for $2,000. Von Volpi, a leading physician in the Bavarian army in 1866, and now a journalist of Trieste, took ten years to get the collection together. It contains specimens that are among the rarest and handsomest to be found, some of them having a market value with collectors of $15 to $20 each. The total number of stamps in the collection is about 12,000. English and French collectors are traveling to Frankfort to examine it. Before he began this collection Von Volpi had made another which, though not equally fine and extensive with the one now sold, was the best in existence then. It was purchased by the British Museum.

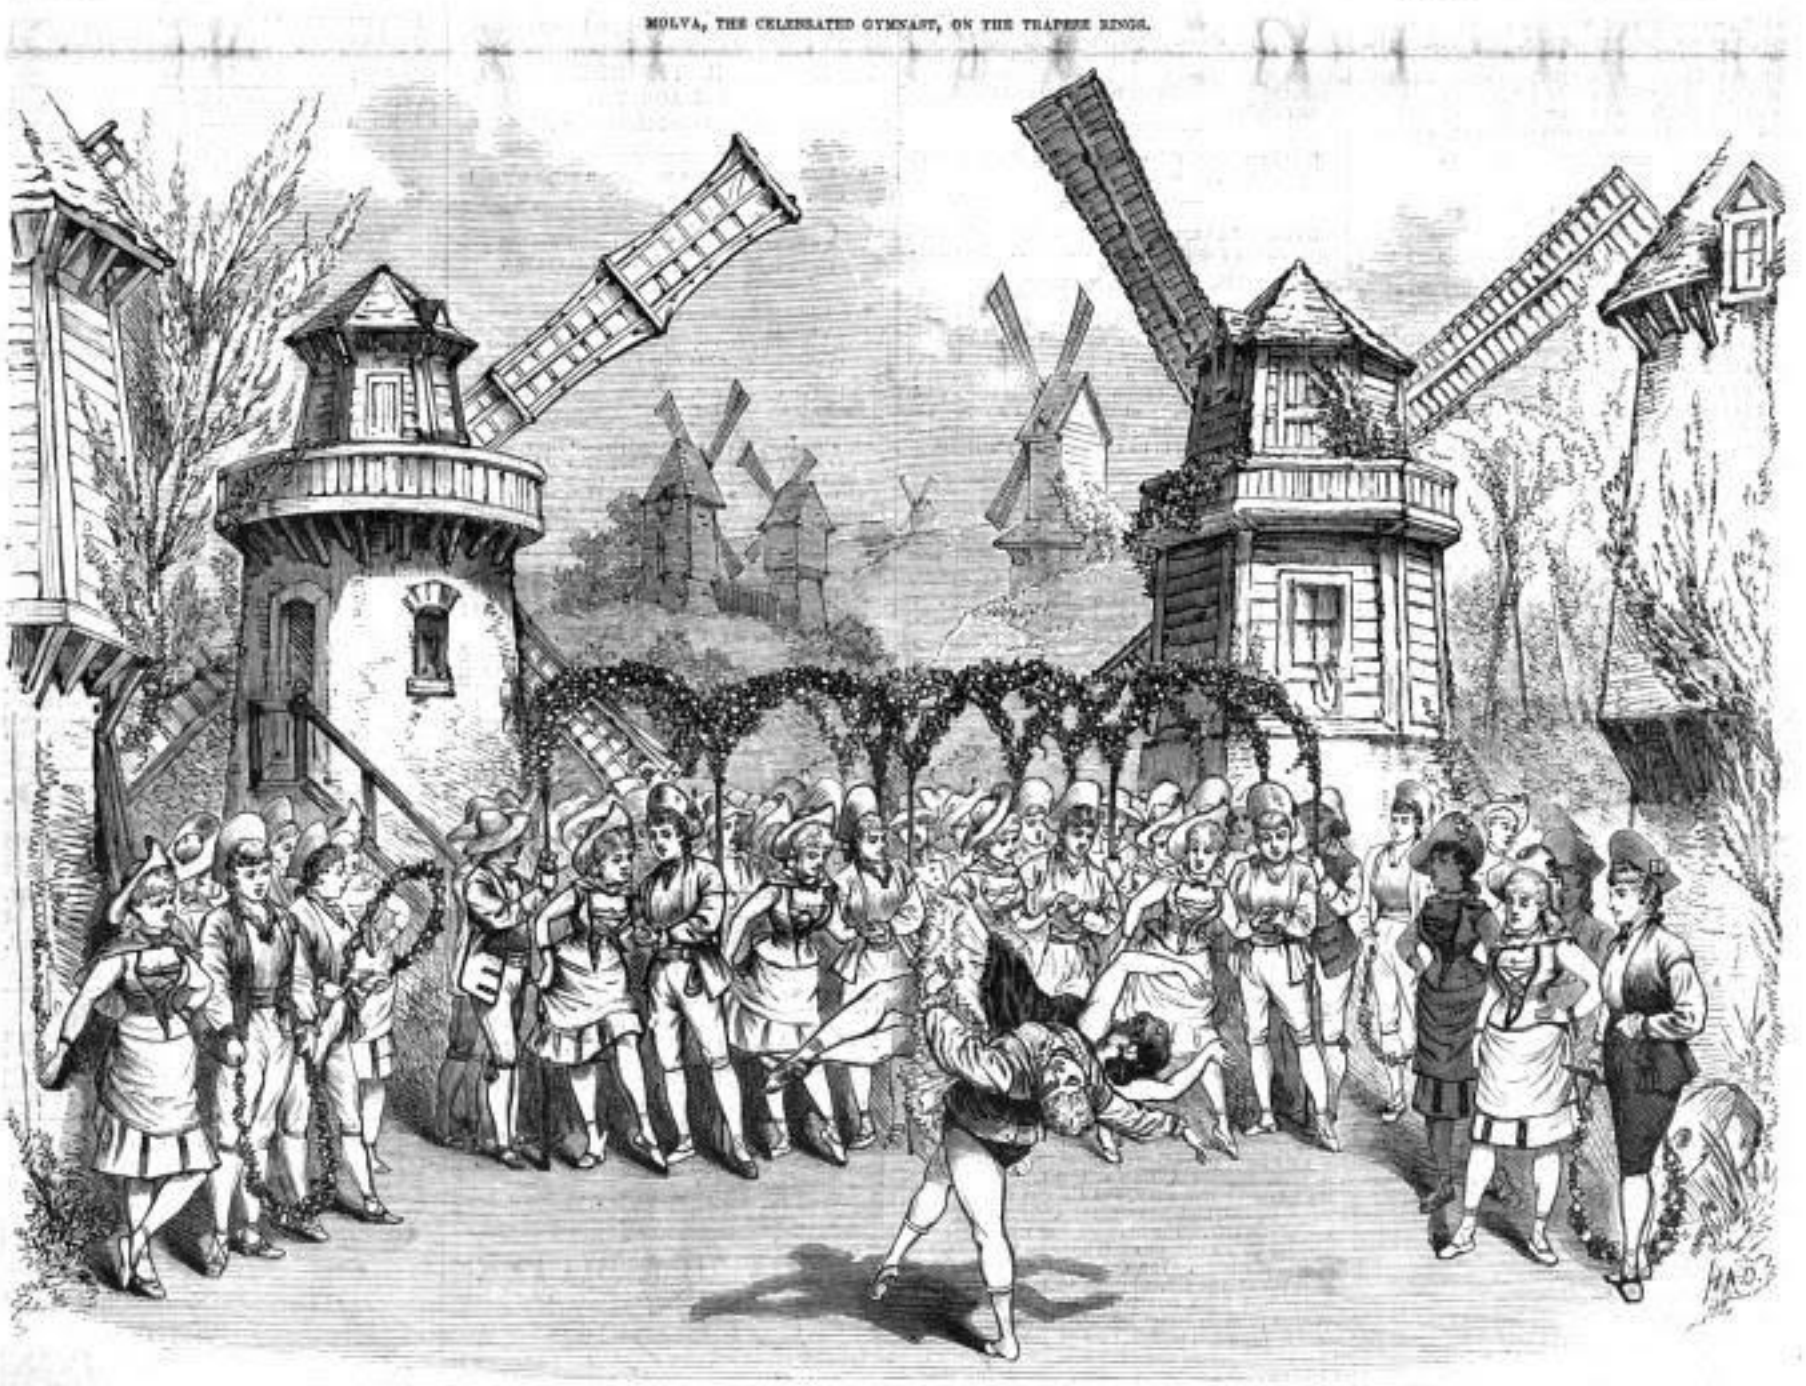
"ENCHANTMENT."

"ENCHANTMENT" is one of the most gorgeous spectacles that has ever been placed on any stage. It glitters, it sparkles, it dazzles. It is full of bewildering surprises and marvelous effects. It glows with the wondrous combinations of vivid and varied coloring. It excites, interests, amuses, enchants. In one act we have the "Arabian Nights' Entertainments" retold, and told as Scheherezade never *could* tell them. In the second, we are splitting our sides over the most *outré* of burlesques. In a third, the sense of vision is banqueted upon *spectacle*, such as would puzzle the Châtelet in Paris or the Alhambra in London to equal. We have knights and paladins, we have goblins and fairies, we have horses and monkeys. We see life as Old Time must behold it, melting away like the baseless fabric of a vision. We behold giants reaching to the skies, and dwarfs that scarcely "cumber Mother Earth." We have processions under lights that never were seen on sea or land. We have ballets which for glitter and magnificence surpass the Nautch festivals gotten up for the Prince of Wales while in India. Never were such delicious harmonies of tint, never more elaborate and superb costumes, while the *coryphées* are graceful, elegantly formed, and *chic* to the last degree.

The *premières danseuses* are the living exponents of the poetry of motion, and to witness their giddy, yet graceful, gyrations is one of the greatest treats in this admirable spectacle. The humorous side of "Enchantment" is as vivid in its way as is the sensuously picturesque. The scene in the bridal chamber, between the ardent bridegroom and his eccentric bride, *alias* a monkey, which has usurped the bridal veil and stolen into the room, is one of the best bits of screaming farce ever witnessed, while the subtler humor in the scene, in the land where people live but a day, enjoying all the sweets and bitters of life, from the cradle to the final "snuff out of the brief candle," is worthy of the fancy of Gilbert. The entrance of the horse that in a few minutes turns from a fat, well-kept, well-groomed charger to a steed such as even Don Quixote would have spurned with contempt, is productive of the most exhaustive mirth.

The puppets, too, are so horribly natural, the deception of the living head so perfect, that even the knowing ones are for the nonce puzzled as to the *modus operandi*. The vocal performance is quite on a par with the remainder of the piece, many of the songs insuring double encores. The French Davene family; Molva, the wondrous gymnast, who lifts five men all in a row, while he, or she, clings, by the legs only, to a trapeze; the funny Rajade troupe, and the Ocarinistes, are also among the special attractions of this special piece. Our illustrations represent the gorgeous ballet of Windmills, and Molva performing two of his, or *her*—some declare in favor of the gentler sex—remarkable feats of strength. One must see Molva in order to realize the extraordinary strength with which he, or she, is endowed. She—giving *her* the benefit of the doubt—inserts her lower limbs in two loops of rope attached to a trapeze bar. Then, leaning downwards, she grasps two loops connected with a long pole, to which five men cling by their hands. At a given signal she lifts pole and men from the ground, the men dangling their legs in the air while she remains motionless above them. Again she seizes hold of a ring attached to a swinging rope, and by sheer muscular force draws herself upwards in a horizontal position until on a level with the ring, and apparently reclining in the air. "Enchantment" is bound to have the phenomenal run to which its gorgeous and varied programme so eminently entitles it.



MOLVA, THE CELEBRATED GYMNAST, ON THE TRAPEZE RINGS.

THE DEVELOPMENT OF CENTRAL AFRICA.

THE determination of Gordon Pasha to quit the Egyptian service will be most unfortunate for that country. During the last five years he has devoted himself, with scarcely a moment's respite and with but little European aid, to opening up the vast mines of wealth which he declares lie hidden in those little-known provinces. A few instances will suffice to show what a gigantic and apparently endless task this is. Since 1874 a tract of country larger than the Southern States of America has been mapped with tolerable accuracy. Over 3,000 miles of telegraph-lines has been constructed and are now working efficiently. The slave-trade has been suppressed, which alone has involved campaigns of months' duration and revolts of entire provinces. The postal service has been introduced, and a letter put in the New York Post Office, with a five-cent stamp and addressed to the remotest station on the Bahr-el-Gazal or Darfour, will reach its destination as surely as if addressed to Washington. The navigable rivers have been kept free from the "sud" or masses of vegetable matter which clog up all free passage and which formerly stopped up the Nile nearly as far north as Berber. The natives have been taught the use of money, so that provisions and goods can be purchased where but a short time before raids had to be made to procure food. A system of military stations has been established, and by the aid of imported Indian elephants the native African elephants have in several instances been trained to serve as beasts of burden, thus greatly diminishing the cost of transportation. Telephones have also been introduced at all available points in the Soudan and are of the most inconceivable service in quickly dispatching business. Plans for a station and light-

THE BALLET A LA WATTEAU IN THE PLAIN OF WINDMILLS.

NEW YORK.—THE FALL AMUSEMENT SEASON—NEW GRAND SPECTACLE, "ENCHANTMENT," NOW BEING PERFORMED AT NIBLO'S GARDEN.

Digitized by Google

house on Cape Gardafui, where so many steamers entering the Red Sea from India have lately been wrecked, have been carefully prepared. These are but a few of the achievements which are to be credited to Gordon Pasha's rule in the Soodan. But the completion of his work will require a great deal of money, and this Egypt cannot supply. He strongly urges that private enterprise should step in and carry out the projects he has commenced. In a recent interview he said: "An English company should establish their trading-posts from Zanzibar, and an American company should do the same, proceeding up the Congo. In the use of thoroughly experienced hands an outlay of £10,000 would lead to the most surprising results, and more could be most advantageously placed afterwards."

An Experiment in Opium-smoking.

OPIUM-SMOKING, it seems, falls far short, after all, of those many delights which it is popularly supposed to afford. One Herr Maclay, in the course of a stay at Hong-kong, has made an experiment upon his own body which should be considered pretty conclusive. After fasting 18 hours, he smoked 22 pipes, holding in all 107 grains of the opium used by the Chinese. It is interesting to know that after the third pipe he ceased to feel hungry; that the fifth left him unable to walk about comfortably; the seventh brought his pulse down from 80 to 70; the twelfth caused singing in the ears, and the thirteenth a hearty fit of laughter. Twenty-five pipes affected his hearing, but within an hour after the trial, which had only lasted about 100 minutes, he was able to walk home and go to bed, where he slept so soundly as to wake up fairly fresh and hungry next morning. The point especially to be noted is that during the whole experiment he had no dreams or hallucinations of any sort whatever. Opium-smoking is, accordingly, a failure in this respect. It does not even equal the study of politics as a producer of illusions.

The Russian Peasantry.

IN an article on the Russian peasantry, the *Moleo* observes that the chief peasant in a village sometimes has more power than any man in the empire except the Czar. He has the power, for instance, of ordering a culprit to be flogged—a right which is denied by law to any other public functionary or citizen in the empire. Further, a majority of the peasants in a commune can sentence one of their number to be beaten with sticks, and there is no appeal against the sentence. It is true that women may no longer be flogged, and that a maximum number of blows which may be inflicted on a man is twenty, while formerly men were sometimes beaten to death by order of the commune; but the commune can still sentence a man to banishment to Siberia for life. This sentence has been passed for such petty offenses as stealing a handkerchief or a little honey, or opening a brandy shop without the permission of the commune. In the Government of Samara a man was sentenced to be banished, together with his family. Shortly after, however, the Senate, to whom the case was referred, decided that the man should be permitted to remain in his village, on the ground that his health would not permit of his going to Siberia. The case of the man's wife, however, was not considered, and the sentence was carried out so far as she was concerned, though she was innocent of any crime, and had been directed to go to Siberia merely in order that she should not be separated from her husband.

FUN.

SURE of their crops—Hens.

THERE are several kings in Europe who are total rex.

VELOCIPEDISTS resemble the ages—they roll along by-cycles.

THERE is an epidemic among the Afghans. They continue to break out.

SUSPENDED animation—The small boy with his first pair of "galluses."

IT is no sign because a farmer is growing sage that he is becoming wise.

"HIS profession! What is his profession?"—"Madam, he pedals music."

WE presume the axle-trees of railroad-car wheels are called journals because of their rapid circulation.

IT is rather forcing the season, but a young lady remarks that the ring of skates upon the frozen lake is time ice for anything.

"WHEN did the human race begin?" The chances are that it got a start when Adam and Eve were walked out of the garden.

A DETROIT restaurant keeper hangs out a sign of "Free Chops," and when old loafers come around he shows them an ax and a woodpile.

THE words, "majolica jar," are pronounced "ma-yol-ika yar," by persons of culchar, and with such an accent as would be given by a mouth talking while holding hot mush.

"THE melancholy days have come"—beg pardon, "the saw-dust of the year"—to the schoolboy who has to tackle the woodpile when all the rest of the fellows are playing marbles—"for keeps."

"OUT OF SIGHT AND OUT OF MIND."—*Distracted Mother:* "If you children make such a noise I shall go out of my mind." *Young Rip:* "Go on, mother; I'll mind the young 'uns while you're gone."

Z., THE painter, is drunk from night until morning. He drinks everywhere and everything. "Poor boy," says the tender-hearted Monsieur, "he was disappointed in love. It was a great blow to him, and he drinks to drown his grief." "It seems, then," says some one, "that his grief knows how to swim!"

"IS THERE a letter here in a scented envelope for my wife?" he asked the postmaster, while the green fire from his eyes made the office look like a leafy forest. "Yes, sir" answered the P. M., as he handed it out. The jealous man tore it open at once when lo and behold! it was the milliner's bill for $90. The end.

A CONTEMPORARY asks: "How shall woman carry their purses so frustrate the thieves?" Why, carry them empty. Nothing frustrates a thief more than to snatch a woman's purse, after following her half a mile, and then find that it contains nothing but a recipe for spiced peaches and a faded photograph of her grandmother.

A SCHOOL of poor children, having read in the Bible the denunciations against hypocrites who "strain at a gnat and swallow a camel," were afterwards examined by a benevolent patroness as to their recollections of the chapter. "What, in particular, was the sin of the Pharisees, children?" said the lady. "Aiting camels, my lady," was the prompt reply.

THESE are the days when the old gray-headed farmer comes into the printing-office with a corn stalk spliced until it measures eighteen feet in height, and then swears it was one of the smallest stalks in the field.

COACHMAN (to Minister of Finance, whom he has driven to the Treasury Department on the first day of that functionary's incumbency): "When does your Excellency desire to leave the Treasury?" *Minister of Finance* (abstractedly): "Never!"

AN Irishman applied to a lady, who had taken a cottage at Saratoga for the Summer, for employment. "But, my good man," replied the lady, "I have brought my servants with me. I have nothing for you to do." "Ah, thin, ma'am, if ye only knew how little work it'd take to occupy me!"

OPENING THE NEW LINE.

A LARGE party of city and railroad officials from Philadelphia visited New York on Wednesday, October 8th, traveling via the new Bound Brook line, and occupied the day in sightseeing in and around the metropolis and its harbor. Among the excursionists were President Gowen, of the Philadelphia and Reading Railroad, General Fitz John Porter, F. A. Comly, J. E. Wootten, C. S. Hancock and many other prominent railroad officials. Following the banquet on the New Jersey Central's new steamer *Kill von Kull*, were several notable speeches, among others that of E. C. Knight, of the Bound Brook Road, who said that the two great roads now connecting New York and Philadelphia were fixed institutions, and should come together and assist in building up the country. There are twenty trains daily between the two cities, and where the traveler used to pay $4 he can now have all the luxuries of travel for $2. The business of the new line since the opening of its Ninth and Green streets station in Philadelphia has increased very rapidly.

DR. PIERCE'S EXTRACT OF SMART-WEED is a compound fluid extract of smart-weed, or water-pepper, Jamaica ginger and other ingredients known to be efficacious in curing colic, diarrhœa, dysentery, blood-flux, and kindred affections. It also breaks up colds, fevers and inflammatory attacks. Sold by druggists.

HEALTH is often impaired by the excessive use of tea or coffee. The strengthening qualities of BROMA or COCOA are known to the student, the invalid and to the hard worker the world over. To secure such in its greatest purity, ask your grocer for WALTER BAKER & Co.'s. This house has the highest reputation for its goods, dating back to 1780.

CUTICURA REMEDIES

Have done for me what hundreds of dollars spent on other remedies have failed to do, and I do not hesitate to recommend them as first-class articles.
Yours truly, MARK BRANNAN.
CARBONDALE, Pa., Dec. 20th, 1878.

MONEY MAKING.

MONEY.—For simplicity in money making in Wall Street, write CHAS. FOREELL & Co., Bankers and Brokers, 115 BROADWAY, NEW YORK. By their new system it gives the $10 to $100 operator the same advantages as heretofore the $1,000 or $10,000 purchaser enjoyed.

HOP BITTERS purifies the blood, and removes all pimples and eruptions.

HALFORD LEICESTERSHIRE TABLE SAUCE.—No gentleman's table should be set without it. A genuine relish.

FOREMOST among great hotels is New York's prime favorite, the ST. NICHOLAS, veteran in years and experience. In every department it is managed with consummate taste and care, and the guest is treated with an attention very noticeable, compared with the laxity of many of its rivals. The consequences of its unequaled accommodations and low rates are found in its crowded daily arrivals.

PREMATURE Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of BURNETT'S COCOAINE. No other Compound possesses the peculiar properties which so exactly suit the various conditions of the human hair. *It softens the hair when harsh and dry. It soothes the irritated scalp. It affords the richest lustre. It prevents the hair from falling off. It promotes its healthy, vigorous growth. It is not greasy nor sticky. It leaves no disagreeable odor. It kills dandruff.*

THE most durable and economical protective coating in the world for tin roofs, exposed brick walls, etc., is the ASBESTOS ROOF PAINT. H. W. JOHNS MANUFACTURING CO., 87 Maiden Lane, New York, sole manufacturers.

A KENTUCKY WHEEL OF FORTUNE.

THE WEST AND SOUTHWEST RECEIVE FORTY THOUSAND DOLLARS' WORTH OF PRIZES.

[FROM A SPECIAL CORRESPONDENT OF THE WORLD.]

LOUISVILLE, KY., September 30th.—Notwithstanding the recent shooting of Colonel Clarke, President of the Louisville Jockey Club, on the last day of the races, which still continues one of the uppermost topics here, the chief subject of interest was the twelfth popular drawing of the Commonwealth Distribution Company, which took place here to-day at Macauley's Theatre in the presence of over 3,000 persons, and under the supervision of General Thomas A. Harris, Assistant Secretary of the State of Kentucky, and Colonel George E. H. Gray, an old, highly-respected and influential citizen of this city. The drawing was conducted in a manner that satisfied everybody as to its fairness and impartiality. The capital prizes were drawn as follows: The $30,000 prize by ticket No. 21,555, which had been sold in Lawrenceburg, Ind.; the $10,000 prize by ticket No. 28,434, which had been sold in Brownsville, Tex.; the $5,000 prize by ticket No. 16,752, which had been sold in St. Louis. The ticket which drew the $30,000 prize was purchased by letter only on the 25th inst., and in a batch of twenty-four tickets, through J. B. Stevens, of Lawrenceburg, Ind.

A PURE NATIVE WINE.

DR. R. T. UNDERHILL, who died in 1871, attained a national reputation as a viniculturist and wine maker. The finest varieties of foreign wines were imported, together with a skilled vintner, and the vineyards and cellars at Croton Point, on the Hudson, became the model for all American wine-makers. While sparing no pains nor expense in availing himself of the knowledge and experience of other wine-producing countries, Dr. Underhill aimed to produce a characteristic American wine, and his particular hobby was the production of a *perfectly natural wine—the pure juice of the grape—neither drugged, liquored nor watered*, which would commend itself to the medical profession and all others to whom perfect purity was of more importance than the gratification of a palate which might have been educated to the flavor and characteristics of some particular variety of imported wine. How well he succeeded many of the older residents of New York know, and at the time of his death, in 1871, he had established a large business, and had accumulated in the three spacious vaults at Croton Point a large reserve stock of wine from the vintages of 1860 to 1870.

In addition to being generally known to the medical profession, many of whom prescribe this wine where a pure, natural stimulant of moderate alcoholic strength is required, we respectfully submit the following extracts from among the many flattering press notices which have been received:

From the Evening Post.

"Dr. Underhill made a study of the subject of vineyards, and aimed to produce a wine which should be the pure juice of the grape—neither drugged, liquored nor watered—and which could be depended upon where purity was requisite."

From the Journal of Commerce.

"There can be no question in regard to the absolute purity of these products of the vine; and those who wish to purchase, either for the sick room or for sacramental purposes, may be sure of obtaining the unadulterated juice of the grape."

From the New York Tribune.

"Its purity, age and mellowness are remarkable, and both physicians and wine fanciers have a special interest in it as the oldest native wine now accessible in any considerable quantity. The whole stock is in the hands of the well-known wholesale grocery house of the Thurbers."

From the New Yorker.

"If there is an invalid or connoisseur who desires to test the capabilities of American wine at its best, we would respectfully commend to him a bottle, or bottles, of Dr. Richard T. Underhill's pure Port. He will find it has body and soul (but no evil 'spirit')."

From the Eclectic Magazine.

"The pure wine, so needful for medicinal and communion purposes, is furnished by Dr. Underhill, perfectly free from all foreign substances, and of mature age, and can be relied on by the careful physician for the purposes for which he needs it."

From the Christian Advocate.

"We accordingly specially commend his wines for medical and sacramental uses. None purer or more suitable for such—the only legitimate uses of wine—can probably be anywhere found."

The above wine is sold by most leading Druggists and Grocers, but in case consumers do not find it at their retail dealers', a line by post to the undersigned will receive attention. Respectfully,

H. K. & F. B. THURBER & CO.,
SOLE AGENTS,
West Broadway, Reade and Hudson Sts., New York.

WE know that there is nothing on earth equal to HOP BITTERS as a family medicine.

WHETHER you travel or not, insure against general accidents by a policy in THE TRAVELERS.

THE Asbestos Roofing (with white or gray fireproof coating), now in use in all parts of the world, is the only reliable substitute for tin. It is adapted for steep or flat roofs to all climates, costs only half as much as tin, and is easily applied by any one. Samples and descriptive price-lists sent free by H. W. Johns' Manufacturing Co., 87 Maiden Lane, New York.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

NO MORE **RHEUMATISM**
GOUT OR GRAVEL.

The harmless, infallible French Salicylates relieve at once. Cure within four days. Box $1.00, mailed free. L. A. Paris, 294 6th Ave., New York, Sole Agent for the U. S. of the only Patentee in France. Beware of the so called imported (home made) impure and dangerous Salicylic Frauds. Ask for SCHLUMBERGER'S SALICYLATE. Red Seal trade-mark. No other genuine.

EDIFYING, ENTERTAINING, AND CHEAP READING FOR EVERYBODY.

Frank Leslie's

SUNDAY MAGAZINE.

Conducted by Rev. Charles Force Deems, D.D., LL.D.

THE BEST AND CHEAPEST SUNDAY MAGAZINE PUBLISHED.

"This large and profusely illustrated Magazine, as conducted by Charles Force Deems, D. D., is one of the most attractive and justly popular journals of the day, containing attractive, useful and interesting reading for everybody. One hundred and thirty large pages, and every one full of interesting reading and illustrations."—*Illustrated (St. Louis) Magazine.*

"FRANK LESLIE'S SUNDAY MAGAZINE, the Rev. Dr. Deems, editor, is to hand, but not on our table, for its go-polarity is such that it does not lie anywhere until it has gone the rounds of our home circle. The 'Home Sermons,' by the editor, is worth a year's subscription."—*Christian Advocate, Nashville, Tenn.*

"Like wine it improves with age. It strikes us the best is the best number thus far issued. We commend it to every father. It is indeed a capital family publication—just the thing needed in every household where God is reverenced, and pure, healthful literature is enjoyed. It is an educator, a friend, a companion that will not disappoint, weary or betray you. Get it. It is of extra size, each number contains 128 pages, and is very copiously illustrated."—*The Morning Star, Wilmington, N. C.*

"We have always thought this a good magazine, but we think the present number exceeds, in fine articles and papers, many of the preceding ones."—*Baltimore (Md.) Presbyterian.*

THE NOVEMBER NUMBER NOW READY.

"Won at Last,"
By the author of "MARGARET AND HER BRIDESMAIDS," "THE VALLEY OF A HUNDRED FIRES," etc., etc.,

Will be commenced in No.

754 754 754 754

OF

Frank Leslie's
CHIMNEY CORNER,
Issued Monday, Oct. 27th.

"THE WAGES OF SIN"

Is a story full of movement and life; with scenes of great pathos and tenderness. It is sensational, but is altogether free from the stale tricks of sensationalism. It is sensational as real life is, with its tragedies, its temptations, its sins, its struggles, and its love "stronger than death."

"WON AT LAST"

Is a novel appealing to the sympathies and interest of every young reader. The trials of a wife, under circumstances of peculiar difficulty, are here depicted in a way that cannot fail to enchain the reader from the first line to the last.

The Rev. Dr. CUMMINGS, President of Wesleyan University, writes:

WESLEYAN UNIVERSITY, Middletown, Conn. November 20th, 1868.

The piano purchased of your house has given entire satisfaction. My family are delighted with it; and their belief in its superior merits has been confirmed by excellent pianists and good judges, who have tested and pronounced it, in all respects, a very superior instrument. *I would not exchange it for a piano from any other house.*

Yours truly, JOSEPH CUMMINGS.

METHODIST BOOK CONCERN, 200 Mulberry St., New York, Dec. 15th, 1868.

Dear Sirs—It is with pleasure I inform you that the "American Piano" purchased of you has given the highest satisfaction to my family. In the judgment of friends who have examined it, it is in every respect a first-class instrument. Of several pianos used in my family at different times, it is the *only* one that has given entire satisfaction. Yours truly, JOHN LANAHAN.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,257—VOL. XLIX.] NEW YORK, NOVEMBER 1, 1879. [PRICE, WITH SUPPLEMENT, 10 CENTS. $1.00 YEARLY. $1.00 WEEKLY.

NO. 1.—OUR ARTISTIC CORRESPONDENT INTERVIEWING HON. CARL SCHURZ, SECRETARY OF THE INTERIOR, ON THE INDIAN SITUATION AND HIS LATE VISIT TO THE RED MEN.

ILLUSTRATED INTERVIEWS WITH EMINENT PUBLIC MEN ON LEADING TOPICS OF THE DAY.—SEE PAGE 149.

Digitized by Google

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, NOVEMBER 1, 1879.

CAUTION.

Subscribers, in sending subscriptions for any of our publications, should be careful to direct their letters plainly to FRANK LESLIE, *53, 55 and 57 Park Place, New York, in order to insure their safe delivery.*

We give in the present issue the first of a series of illustrated interviews with our eminent public men, which it is proposed to continue as a special feature of FRANK LESLIE'S ILLUSTRATED NEWSPAPER. *These interviews will in all cases relate to topics of immediate public interest, and will constitute a really valuable contribution to the current history of the times. The initial interview, with Hon. Carl Schurz, Secretary of the Interior, relates to the present state of the Indian question and his recent experiences among the Sioux. The views of the distinguished Secretary, who, in point of scholarship, intellectual ability, and integrity of character, deservedly ranks among our foremost public men, are expressed with characteristic clearness and force, and will be generally commended, as we believe, as both statesmanlike and humane. If the Indian question is ever satisfactorily solved, it must be substantially on the basis of the policy which Secretary Schurz has initiated and maintained with inflexible determination in the face of a most formidable opposition.*

THE OHIO ELECTION.

THE success of the Republicans in Ohio will not be a matter of surprise to intelligent observers who have watched the drift of events and the current of public opinion in the country during the last few months. Just as little will the triumphant election of Mr. Foster as Governor of the State, and the signal defeat of General Ewing, deserve to be regarded as a matter of regret to any with whom the rise and fall of parties are considered as means to ends, rather than as ends in themselves. To consistent Democrats it should indeed be a cause of just regret that their party in Ohio, since the first appearance of Mr. Senator Pendleton as the champion of the greenback which he had discredited in the hour of its birth, has been caught in the meshes of an evil destiny which has led it on from defeat to defeat in every critical conjuncture. But to consistent Democrats, who believe that adherence to sound principle is better than a temporary triumph purchased at the expense of truth and righteousness, it should be a cause of gratulation rather than of repining that the ineptitude of the Democratic leaders in Ohio has been set in such a clear light as to make them a warning to the rest of their political confederates.

It must be confessed that the Democrats of Ohio have been slow to profit by the school of experience through which they have passed during the last few years. Where the discipline has been so harsh nothing but a strange fatheadedness or a surprising indocility of temper can account for such stolidity of political understanding. When in 1875 the late Governor Allen led his party under the Caudine Forks of a most humiliating defeat, by betraying them into the camp of the soft-money fanatics, we had hoped that the road to political disaster had been sufficiently "blazed" by that eccentric movement, to guard against the repetition of it by the Democrats who should come after him. For the lesson taught by that adventure was emphasized by the result of the Presidential election at the following year, when the man who had become the Governor of Ohio through the defection of the Democrats from their hereditary principles on the currency question was selected to be the standard-bearer of his party throughout the whole country.

It, therefore, seems to us little less than a sign of political infatuation on the part of the Democratic managers in Ohio that in this year of grace, when the resumption of specie payments "is in the full tide of successful experiment," a Greenback politician like General Ewing should have been chosen to lead the Democratic forces in the Gubernatorial campaign. To bid for votes at the sacrifice of principle is always as hazardous in point of expediency as it is questionable in point of public morality; and while we do not doubt the honorable character or impugn the political sincerity of General Ewing, who honestly believes in the Greenback doctrines he preaches, it seems difficult to conceive that old-time Democrats like Senator Thurman should have lent themselves to the support of these heresies without liability to the charge of a blameworthy recreancy.

It is not pleasant to point these trite moralities at the expense of a statesman so able, learned and enlightened as the distinguished Senator who, before the advent of Mr. Pendleton and of "Pendletonism," was the acknowledged leader of the Ohio Democrats. For long years Mr. Thurman has been the Ajax Telamon of the Democrats in the United States Senate. "In all assaults he was their surest signal"—until the evil day when he began to speak smooth things and prophecy deceits at the instance of the Greenback element in the Democratic ranks. Before that evil day he had set his face like a flint against the popular delusions which prevailed on this subject, delusions which at that time were more rife in the Republican than in the Democratic Party.

There is something inexorable in the political justice which is no respecter of persons. No length of valued service on the part of a tried and trusted public leader can purchase immunity from the consequences of a grave political blunder. The vulgar maxim, that "Republics are ungrateful," has this element of truth in it, that the people, under representative institutions, can never allow their gratitude for past services to stand in the way of an enlightened regard for the public interest of the present or the future. It is the duty of the statesman to keep his eye perpetually fixed on what Canning called "the line of safe change," and to walk on that line with an eye that never blenches, or that turns to the right hand or the left in search of "the thrift that follows fawning."

When the Democratic leaders have been so slow to learn the lesson of wisdom as they have proved themselves to be in Ohio, it would be idle to predict the effect which the late Ohio election will have on party formations in that State. But it is pretty safe, we imagine, to predict that the Eastern or Hard-money wing of the Democracy will now regain its ancient ascendency in the national councils of the party. The "Greenback craze" has nearly spent its force, let us hope, in the bosom of the Democratic organization, as it has nearly spent its force in the Republican organization. There was a day when the Republicans claimed to be the true, original, Simon-pure Greenbackers of the country, and when they challenged public approbation by that omen. It is a source of regret to us that this Greenback leaven has not, even yet, been *entirely* purged from the Republican body, as it is still more a source of regret that it should have leavened the whole Democratic lump during the late Ohio canvass. If it was not pleasant to see a strong man like Senator Thurman grinding as a blind Samson in the mills of the Greenback Philistines, it was also far from edifying to listen to a Republican statesman like Secretary Sherman claiming before the people of Ohio "to be a better Greenbacker than the best of them all." To defend the resumption of specie payments (as Mr. Sherman did in the late Ohio canvass) on the ground of the "inflation" to which it has led—an inflation in paper, an inflation in silver, and an inflation in gold, is to defend resumption on the ground of its perils and not of its safeties. It is to purchase a temporary increase of votes at the cost of that provident and sagacious statesmanship which looks *before* as well as after; it is to commit for the *future* the fatal mistake which the Democrats of Ohio have committed for the *present*. It remains to be seen, then, whether the Democrats will be able to reform their shattered battalions within the lines of their old hard-money intrenchments; and it remains, too, to be seen whether the Republicans, with the prestige of their victory in Ohio, will now advance to that higher ground on which alone they can maintain the position they hold.

THE BUTLER SOUP-STONE.

IT is proverbial that the idle and vicious often waste as much time and exhibit as much ingenuity as, if rightly applied, would enable them to earn an honorable competence. Two professional wanderers—one in Michigan and one in Massachusetts—furnish a pair of examples in point. The Michigan wanderer, unwashed, ill-clad and constitutionally tired, awoke from his siesta by the roadside and approached a thrifty farmhouse, where he hoped to obtain his evening repast. "I don't work none, ma'am," he said to the woman, who answered his sturdy knock, "but I don't beg neither. I'd scorn to beg. I fetch my own food—in this here soup-stun." And he took a small, smooth white stone from his pocket. "All I ask for, ma'am, is a pot of bilin' water—and 'tain't much." Surprised at this novel variety of tramp, the woman put on the fire a pot of water, in which he carefully placed the stone and watched it anxiously. "I ken see the soup-stun oozin' !" he said, glancing into the aqueous depths. And, as it came to a boil, he added, "now a little salt, jest to fetch out the flavor of the stun." Salt was furnished. "Now a pinch of pepper—jest a pinch!" Pepper was brought, and the woman was much interested in the result. "A onion, now—that's all." The onion was forthcoming. "Except a leetle mite of pork," he added, "'bout ez big ez a match." A good slice of pork went down to visit the mysterious soup-stone. "Ha'n't a pertater in the house, hev' you?" he asked, thoughtfully, as he stirred the broth. A potato was found. "Ef I had just one leetle sprig of summer-savory!" he murmured, sadly; and the sweet herb was added to the whole. "A soup-stone allus tumbles to them ingredienciest" he exclaimed, with admiration. "I s'pose I've had a hundred soups outer that one stun. It's just ez soft ez dough down there now, the juices oozin' from it like anything; but it turns hard agin the minute you lift it out." Then he ladled his soup and ate it with a relish. "Thar!" he said, rising, with a satisfied air, "I'll give you that stun for the use of your pot; I can git another. Allus keep it in a red woolen bag; you can bile it and git soup any time. But don't forgit the little mite of pork, ma'am, for the soup-stun tumbles to pork;" and as he walked out the front gate he slyly called: "An' the more pork you put in the more it tumbles!"

The professional wanderer of Massachusetts moves around quite as confidently as he of Michigan. Impudence is his magical soup-stone. He exhibits it to all the State Conventions, and declares that he needs nothing except a trifle of seasoning "to bring out the flavor." The wanderer has secured a badly damaged pot in which to try his experiment, and the question is whether Massachusetts contains gullible people enough willing to furnish the "ingredienciea."

IRISH LANDLORDS AND TENANTS.

THE agitation going on in Ireland on the grave subject of the tenure of Irish land grows every day more formidable. Mr. Charles Stuart Parnell, a Member of Parliament, a Protestant, a scholar and an orator, who seems to have succeeded to Dr. Butt's place as the chief of the Irish Nationals, is everywhere instigating his countrymen to combine, and to resist—by unusual methods, to say the least—the legal authority of the land-owners. Mr. Parnell has been received everywhere with unmistakable demonstrations of enthusiasm; thousands have gathered to hear and applaud him—thousands of distressed and oppressed tenant-farmers and peasants; bishops and priests have sanctioned these revolutionary meetings by their presence and eloquence; and thus the Irish heart seems to have been thoroughly fired. The situation, it needs but a glance to see, is full of gravity and peril. The grievances which have caused it are real and almost desperate. Mr. Parnell is able to point to poverty and privation all around him to justify his appeal, and thrust it home to the hearts of his hearers. Bad crops and American competition combined have served to make this year a most disastrous one to the poor Irish farmer. He has found it impossible to make both ends meet. His earnings have been scarcely enough to feed and clothe his brood. But there stands the great landlord—or, worse still, the great landlord's inexorable agent—at the door, demanding the rent with unfailing regularity. The tenant has been well taught by hard experience to perceive that this rent must be paid before the Winter's supply of potatoes is secured, the patches on the wretched roof of his cot repaired, or the ragged breeches of his boys are replaced. The alternative is—eviction. The tenant-farmer has seen his neighbors, now and then, turned into the muddy road on bleak Autumn or Winter days, with a resting-place nowhere on the round earth. He knows what eviction means, and the mere thought of it strikes the poor wretch to the soul with terror. No matter whether his father and his grandfather before him tilled this petty patch from which he himself has forced a living (God knows how scantily miserable) ever since he could put hands to spade or plow, the rent must be wrung from the pitiful quarterly earning or he and his must go.

It is not now, perhaps, as bad as it was with the Irish small farmer twenty years ago. Then, he may have scraped together enough in the years to build a little barn, to inclose his fields with modest fences, to construct a pigsty, or to erect hay-covers; and yet, if he failed in a single quarter's rent, he might be thrust into the road without notice, and these results of his own expenditure would revert to and become the property of the landlord. Mr. Gladstone did much to abate this evil when he extended "Ulster tenant right" to the whole of Ireland, so that an evicted tenant might claim compensation for the unexhausted improvements he had made on his farm.

But the difficulty of securing this compensation remained, and still remains. It is easy to imagine that a penniless farmer, turned off his land, is scarcely able to go to law for it; law costs money, and here is a penniless man pitted in the law against a magnate rolling in riches. If he succeeds in getting his case before a jury, it is before a jury picked by a county sheriff, and the county sheriff is a typical representative of "property." The evil, therefore, to a very large degree, remains. Irish tenants are still evicted, and often get no pay for their unexhausted improvements. Moreover, that which was just barely sufferable in prosperous times has become absolutely insufferable in times like the present.

Mr. Parnell's remedy is nothing less than revolutionary. Let the tenant-farmers combine throughout Ireland, he says, and refuse to pay rent; then we will see if the absentee landlords can draw up an indictment against a nation; we will see if Ireland can be evicted from herself. Such a combination is quite possible, and, if made, will present perhaps the most serious of all the serious Irish questions with which successive British administrations have had to deal. Many propositions of compromise are already made. One suggested plan is to apply the surplus of the funds derived from the disestablishment of the Irish Protestant Church to the purchase of the waste-lands of Ireland, which are to be parceled out by the Government to evicted farmers at nominal rates. Another is, that the land should be owned in partnership by the landlord and farmers, or peasants, and that the Government should make loans to the latter by which they might gradually pay for their share of the landed property. A third is that the landlords should be thus entirely bought out and a peasant proprietary, like that in France, created in Ireland. The difficulties in the way of each proposition are enormous. The first would be but a limited and temporary relief; the landlords might refuse to sell their land under the second and third; while the British taxpayer would surely grumble at the expensiveness of either of these schemes.

The fact that something must be done is about as far as British statesmanship has got. Meantime, the agitation is a fast-rising tide, which may become a storm or revolt. Then there will be nothing for it but the old hard remedy of martial law and the suspension of the *habeas corpus*. But the Irish question must still be deeply and anxiously studied by English rulers. After all, it is more threatening and more chronic than the fate of Afghanistan, or even the Russian hankering after Constantinople, and is more full of seeds of evil for the future of the British Empire.

AN ARCTIC ARCADIA.

THE story of Nordenskjöld's Arctic expedition as told by himself to a correspondent of the New York *Herald*, in Japan, is a most valuable contribution to our knowledge of the regions traversed by the daring explorer. It is especially interesting in its descriptions of the race of men who were found in the eastern division of Siberia, and who carry on a considerable commerce with the American Continent. These people are known as the Tschuktschi, and, while paying a sort of tribute to Russia, admit no allegiance to any Power. They have no government, no laws, and practically no religion, and are said to be so well disposed that the need of a ruling authority is never felt. "The foreigners of Nordenskjöld's expedition were on terms of intimacy with thousands of them and never saw or heard of a single case of quarreling among them. Perfect harmony prevailed in the villages and families. Women have great influence and are treated by the men in all respects as their equals and with much politeness and deference." The language spoken by this tribe is peculiar, and, as far as has been yet determined, shows no affinity to others. Their features are less Mongolian in type than those of the Esquimaux; the hair is generally black and the complexion light; the young women are often fair, handsome, and of symmetrical proportions, while the men are taller than the average height attained by full-grown males. They subsist chiefly on the meat of reindeer, bears and seals, and fish and vegetables. During their brief Summer they collect a quantity of vegetable food and store it for Winter use. A dainty with them is the stomach of a reindeer, killed when the beast has fed to repletion. The belly and the herbage it contains are cooked together and eaten with great relish. "They possess a few guns, are familiar with gunpowder, and have in use some American axes, knives and pots. Very little foreign clothing is employed by them, their garments being almost exclusively of skin. The nation probably numbers ten thousand souls, of whom one-half inhabit the littoral between Techaun Bay and

Digitized by Google

Behring Strait, and the other half dwell in the interior of the country." In every respect, they appear to be an Arcadian people, and the correspondent who supplies these particulars does them no more than justice when he says: "A people without chiefs and without criminals, experiencing no difficulty in the distribution of the product of their joint exertions in fishing or hunting, whose sole sign of pride of wealth or fancy is the possession of a boat a little larger than ordinary, may well deserve the respect they have earned from Nordenskjold and his party, and prove fitting subjects for further ethnological study."

EVENTS ABROAD.

GENERAL ROBERTS'S triumphal entry into Cabul, which took place October 12th, was apparently a very tame affair. The enemy appear to have been effectually dispersed in the pursuit which followed the engagement of the 6th, and the British force entered the city gates without molestation of any sort, most of the influential residents making haste to pay their respects to the victor immediately upon the completion of the occupation. The Ameer is under close surveillance, owing to the growing suspicion that he has been playing a treacherous part throughout. This suspicion seems to have been strengthened by the discovery that the leaders of the mutineers included many of his most trusted friends. General Roberts, in an address to the populace, announced that the city will be severely punished, that a heavy fine will be imposed on the citizens, and all buildings interfering with proper military occupation destroyed. General Hill has been made military governor over the city and country within a radius of ten miles. All the inhabitants under his jurisdiction were required to surrender their arms within a week on pain of death. A late dispatch says that Bala-Hissar, the citadel of Cabul, has been blown up, with a loss of twenty-seven British and a number of Afghan lives. Some of the tribes still show violent hostility, and a number of Afghan regiments were, at last accounts, moving against the British.

The relations between England and Russia seem to be approaching a crisis. It is reported that at a recent interview between Count Schouvaloff, the Russian Ambassador, and Lord Salisbury, a proposition of the former that Russia shall have the jurisdiction of the western part of Afghanistan, while England shall take possession of the eastern part as far as the Hindoo Koosh, was declined by Salisbury in the most emphatic terms. Lord Salisbury is stated to have declared that England would not allow Russia to meddle in any way whatsoever in the matter, and that the future of Afghanistan will be settled by England exclusively. Count Schouvaloff then proposed various other plans of settling the Central Asiatic difficulty, but all to no purpose, Salisbury refusing to consider any of them. It is possible that this account of the interview may exaggerate the real facts of the case, but there is no doubt that the feeling of mutual distrust and jealousy between the Powers has been greatly strengthened by recent events. In a speech at Manchester, October 17th, Lord Salisbury spoke of Russia as "a Power whose aggressions threaten the happiness and independence of the world." Later accounts as to the Russian expedition against the Tekke Turcomans, indicate that it sustained a serious check at Geok-Tepe, and is likely to prove a failure for the present; and it is suspected that a knowledge of this fact has had a good deal to do in determining the decisive attitude of the British Government. It is also rumored that assurances have been received from Persia that in the event of a war with Russia, the Shah will not take active sides against England.

We have commented elsewhere upon the anti-rent disorders in Ireland. Five hundred tenants of the Marquis of Sligo and the Earl of Lucan have pledged themselves to pay no rent until a reduction should be granted proportionate to the great fall of prices of all kinds of agricultural produce. At a great Home Rule meeting at Belfast, Mr. Parnell made an inflammatory address, and resolutions were passed declaring that the establishment of a peasant proprietary was the only practical and final solution of the land question. Mr. Parnell will visit America next November.

The Communists who owe their lives and presence in Paris to the clemency of the Republic are, with characteristic effrontery, abusing the privileges accorded them in stirring up tumult and disaffection. At a recent Communist funeral the red-handed leaders of the Commune were spoken of as the "heroes who saved France," and the sentiment was applauded to the echo. It is intimated that on the reassembling of the Chambers a proposal for plenary amnesty will be presented, but it is not believed that it will have any chance of passing. The Cabinet has decided to issue an order directing the local authorities to suppress all Communist and other illegal demonstrations. In a recent interview with the new Papal Nuncio, President Grévy stated that the maintenance and strengthening of the good relations existing between France and the Holy See was the object of constant solicitude to the French Government.

The Boers, who have vigorously demanded independence, have been informed by Sir Garnet Wolseley that the annexation of the Transvaal is irrevocable. They still persist in their demand, but they have lost their opportunity and will be compelled to submit. Had they struck in co-operation with Cetewayo, instead of standing neutral, they would probably have secured concessions which are now out of the question.

Fresh evidence of the good relations existing between France and Germany is furnished by the fact that the German Emperor had a protracted private interview with the French Ambassador at Baden-Baden a few days since.—Field-Marshal Von Moltke has reported to the Emperor, as the result of his recent inspection in Alsace-Lorraine, that a considerable increase of the military defenses will be necessary.—The suffering among all classes in Constantinople in consequence of the political and financial crisis in Turkish affairs still continues. Robbery and murder are deplorably prevalent, and grave apprehensions are felt that the coming Winter will be marked by the worst evils of destitution and anarchy.—The condition of Asia-Minor is still unsatisfactory, in consequence of disagreement between the European inspectors and the Turkish officials and bad administration of justice.—A conference of representatives of the peace associations of America, England, Germany and other countries will be held at Naples October 26th, to advocate a simultaneous partial disarmament throughout the world.—Recent floods in Andalusia, Malaga, and other sections of Spain, did great damage. Several villages are in ruins, railways are destroyed and crops devastated. From Murcia the Governor reports that the loss of life will exceed three hundred.—Lord Derby will hereafter, it is said, openly affiliate with the Liberal Party.—Mrs. Langtry, the "Jersey Lily," has vindicated her reputation against the sneers and libels of *Town Talk*, a so-called society paper, by causing the arrest of the editor, who, upon being brought into court, made an abject apology, and confessed that he had no ground for his scandalous statements. His charge was that Mr. Langtry was about endeavoring to obtain a divorce suit from his wife, and that his Royal Highness the Prince of Wales and other individuals were mentioned as co-respondents. The prisoner is still in jail awaiting trial.

THE latest "Ohio Idea"—twenty thousand majority against the Greenback heresy—will prove a very important factor in the politics of 1880.

A NATIONAL emigration scheme, looking to the diminution of competition among miners, has been agreed upon at a conference representing 140,000 miners of Great Britain. The scheme consists of a system of small weekly subscriptions; subscribers after a certain time to ballot for chances to emigrate. Those coming to America will receive $30 and passage money; those going to Australia or New Zealand, $60 and passage money.

The Republicans of the Tenth District of this city have nominated Mr. Wm. W. Astor for the State Senate. Mr. Astor served with marked credit in the Assembly, and would, no doubt, add to his reputation in the higher capacity for which he is now named. If both parties would in all cases put forward their best and worthiest men, as in this instance, the character of the public service would soon cease to challenge the unfavorable criticism to which it is now so widely exposed.

THE school statistics of New York for the month of September show a registry in the Grammar and Primary schools of 127,480 pupils, with an average attendance of 115,377, the largest monthly attendance ever reported. The evening schools for the week ending October 10th show an enrolment of 11,688 scholars, with 269 teachers and 31 principals. These evening schools are attended mainly by children who are employed during the day and who have no opportunity to acquire an education other than these schools afford.

THE result of the Ohio and Iowa elections has given a marked impulse to the Republican canvass in New York State and Massachusetts. It has obviously weakened the bolt against Mr. Cornell, and the leaders in the disaffection will find it difficult to hold their own against the natural inclination of the mass of the party to drift with the tide. Some of them, by their course, have already destroyed and lost their standing and influence in the party; and whatever may be the result of the contest, there will be in both parties a good many "dead ducks" among those heretofore prominent in leadership.

A FORTNIGHT since fifteen persons were killed and two hundred injured by the fall of a stand at an agricultural fair at Adrian, Michigan. An investigation showed that the owner of the premises had employed incompetent architects and builders, and had neglected entirely to assure himself of the safety of the building before opening it to the public, and the coroner's jury having, in view of the facts, recommended that these persons be held on criminal charges, they have been arrested and will be tried for manslaughter. This is as it should be. The reckless indifference to ordinary precautions of safety manifested by managers of places of entertainment and recreation, is an evil of such wide extent and grave proportions that nothing short of the imposition of the very severest penalties can extinguish it or properly express the public disapprobation of those who are responsible for its existence.

THE subject of technical schools and their relation to the industries of the country is attracting increased attention among the more thoughtful friends of education. The *Tribune*, in a recent article, says of it:

"It is not unlikely that the solution of the much-discussed problem of industrial education lies in the establishment of well-equipped and thoroughly-taught free technical schools in every city and large town. The cutting off of the superfluities which now only lead to "veneer and sham" would save large sums which could be put to no better use. To those schools could be sent those children who by natural bent would belong therein. There is no danger but that sufficient time could be found both for an improved public-school course and a technical school course. That changes are on the way to be made is very evident in nearly every State.

SOME time since an attempt was made to assassinate the colored Postmaster at Blackville, South Carolina. An investigation of the facts of the case shows that the outrage had its origin in partisan mendacity, the Postmaster being obnoxious on account of his politics, and that the local authorities apparently sympathized with the perpetrator of the assault. These authorities having done nothing to bring the offender to justice, the Postmaster-General proposed to arraign him in the United States Court, but an examination by judicial experts reveals the fact that no law exists by which crimes against the persons of postal officials can be tried in these courts. This, to say the least of it, is a curious condition of affairs. No matter what outrages may be perpetrated upon postal officers anywhere in the Union, the perpetrators—if the local authorities choose to remain indifferent—cannot be brought to justice. If this isn't offering a premium to crime and violence, it is stupid impotence, and in either case, the situation is a disgraceful one to a law-abiding and order-loving people.

THE Sherman Presidential "boom" appears to have exhausted its force. Even in Ohio its momentum is gradually diminishing. Senator Blaine is apparently in the Secretary's own State the more popular man of the two. In his recent campaigning tour, the progress of the "gentleman from Maine" among the Buckeyes was marked by continuous ovations, tens of thousands of people assembling to hear him wherever he was announced to speak. In Iowa his reception was marked by the same demonstrations of enthusiasm. At Chariton, every street had arches and decorations in his honor, and the number present at the meeting which he addressed was estimated at 40,000, covering two acres of ground. Mr. Sherman has nowhere elicited demonstrations of enthusiasm at all approaching these popular manifestations in honor of Mr. Blaine, and yet the former is credited with being diligently at work as a Presidential candidate, while the latter has done nothing whatever in that direction. Indeed, Senator Blaine refuses utterly to discuss the subject of the Presidency in connection with himself, and there is some reason to believe that he proposes to maintain this attitude—leaving events to take their course without any attempts whatever to manipulate them in his interest. There is no doubt, however, that he is the most popular of all the Republican leaders, and should the effort to force General Grant into the field fail or be abandoned, no candidate in the next National Republican Convention will have greater national strength than the stalwart Senator from Maine.

THE foreign trade returns of New York for the month of September show the largest aggregate of both imports and exports in the history of the port. The total importations for the month amounted to $57,745,971, being $32,479,148 over last year, and $32,934,769 over 1877. The exports for the month amounted to $36,712,231, being $4,237,188 over 1878, and $6,074,800 over the previous year. Specie and bullion figure most prominently in the heavy gain in importations and amount to within $2,781,613 of the total value of the merchandise entries of all kinds; while in exports, grain shows the heaviest increase. The total importations from January 1st to the close of September, amounting to $278,001,719, show a gain of $20,232,833 as compared with the corresponding period of 1877. In the total value of merchandise and specie exported we have an increase of $32,778,856 compared with the same period of 1877, while compared with last year there is a decrease of $7,278,444. This falling off from last year occurred during the first six months, the total for the last quarter showing an excess of $4,444,615. The outward movement of merchandise promises to be very large henceforward, and the exports for the year will probably reach as high a table as those of 1878. The importation for the nine months just closed are $10,129,109 in excess of the exports, whereas for the corresponding period last year, the exports exceeded the imports by $45,100,000. The specie import for the month amounted to $27,482,179, of which $18,206,501 comes from Germany and France, $6,968,092 from England, and $2,307,796 from the West Indies and South America. In the importations for the nine months of the year, drygoods show an increase of $7,475,944 over 1877.

NEWS OF THE WEEK.

Domestic.

IT is reported that James Redpath, the Lyceum manager, is at Jamaica, W. I.

FOREST-FIRES have done great damage in Ontario, New Hampshire and Massachusetts.

THERE has been a reduction of $1,780,259 in the debt of Philadelphia during the past year.

GENERAL GRANT last week visited Portland and other points in Oregon, being everywhere warmly received.

FREDERICK DOUGLASS has advised the colored voters of Virginia not to give their support to the debt repudiators.

THE trial of the Rev. Mr. Hayden for the murder of Mary Stannard, was commenced at New Haven, October 15th.

OF the entire number of refunding certificates issued, $26,898,700 have been converted into four per cent. bonds.

MANY of the striking spinners at Fall River, Mass., have returned to work, but many others have not yet been able to do so.

HENRY L. GUNN, suspected of having murdered his father at Bridgewater, Mass., last month, has been arrested in Boston and has confessed the crime.

A MEDICAL student named Nelson was shot dead at Front Street Theatre, Baltimore, October 14th, by a musket shot fired from the stage during a tableaux scene.

GENERAL WALKER, the Superintendent of the Census, has issued a circular for the purpose of interesting farmers in the compilation of agricultural statistics.

THE yellow fever deaths in Memphis still average three or four daily. There have been several deaths at Forest City, Ark.; business is suspended and the town deserted.

REV. WILLIAM R. WHITTINGHAM, Episcopal Bishop of Maryland, died at his Summer home in Orange, N. J., October 17th. He had been confined to to his house for nearly a year. He was 74 years of age.

MR. GEORGE PATTERSON, ex-Lieutenant-Governor of the State of New York, and ex-member of Congress for the Thirty-third District, died at his home at Westfield, October 14th, in the eightieth year of his age.

THE Apaches in the southern part of New Mexico are said to be committing serious depredations. Forty settlers are said to have been killed, and at last accounts the citizens at several points were still under arms.

ACTS of lawlessness are becoming common in the old Molly Maguire region of Pennsylvania. Last week a railroad train was attacked by roughs, and there have been frequent acts of incendiarism and personal violence.

THE quarterly circular of Messrs. Dun, Barlow & Co. shows that, as compared with the corresponding period of 1878, the third quarter of 1879 exhibits a decrease of 1,591 in the number of business failures in the United States, and of $41,000,000 in the amount of liabilities.

THE estimated expenditures for the Post Office Department for the next fiscal year are $39,920,000. The revenues will be $32,210,000, leaving a deficiency to be provided for out of the general treasury of $7,710,000. The amount so provided for the current year was $5,451,376.10.

THE Treasurer of Evansville, Ind., denies that the city has abandoned its municipal organization in order to escape the payment of a judgment against it. He says the city credit is unimpaired, the municipal bonds commanding a premium, and that the city has never been more prosperous than now.

THE bodies of all or nearly all the white men employed at the White River Agency were found about the burned buildings by General Merritt's forces. It is believed that the women and children are safe, and that the influence of Chief Ouray will prevent any further fighting. General Merritt has scouted the country for fifty miles without finding any hostile Utes, and he believes they have distributed themselves among the various agencies. He has been ordered to withdraw his troops.

JOHN KELLY is addressing meetings of disaffected Democrats in the interior of New York. A State convention of colored men, held at Elmira, October 15th, indorsed the Republican State ticket.—Republican and Democratic meetings are held in this city nightly, and the canvass is hourly gaining in warmth and vigor.—The Massachusetts Greenback State Committee have placed the name of A. C. Woodworth on their ticket for Lieutenant-Governor, Wendell Phillips having declined to accept their nomination. Mr. Woodworth is also a candidate on the Butler ticket.

Foreign.

RUSSIA has reduced her force of sailors in the Black Sea to barely a thousand men.

SEVERAL French Mayors and Deputy-Mayors have been removed for attending Legitimist banquets.

PRINCESS LOUISE sailed from Quebec for England, October 17th, and will remain abroad until January.

NEGOTIATIONS on the Greek frontier question have been renewed under somewhat favorable indications.

IT is stated that Sir Garnet Wolseley will shortly receive the decoration of the Grand Cross of the Bath.

MADRID dispatches report an effort to build up a Liberal-Reform party with a programme as near as possible to the Constitution of 1869.

A DISPATCH from Berlin asserts that the Austro-Germany treaty of defensive alliance was signed by the Emperor of Austria and the Emperor of Germany last week.

A VIENNA dispatch says that snow fell there thickly, October 17th, to the depth of six inches. At Gratz, it was several feet deep. Such weather is unprecedented at this time of the year.

THE Spanish Minister of the Colonies has ordered the formation of a commission to examine into the causes of the insalubrity of the port of Havana and ascertain means to ameliorate the condition of the bay.

A NEW Ottoman Ministry has been formed, with Said Pasha as Grand Vizier and Mahmoud Nedim Pasha as Minister of the Interior. Meanwhile the Sultan remains stubbornly opposed to reforms such as would give Christians the same civil rights as Mohammedans enjoy.

IT is stated that the Belgian bishops have given supplementary instructions to the clergy not only to refuse absolution to teachers in the Communal schools, but also to publically refuse them sacraments. Not only are teachers excommunicated, but children receiving religious instruction from them are excluded from Lord communion.

0795.

"EVERY man to his profession." Jammers believes in that sentiment now. There was a time when he did not believe in it, and a time also when he declared that a man was never too old to learn. But his game with "0795" taught him differently. It happened in this way:

After a sultry July night, not many years ago, Mr. Richard Jammers arose at dusky dawn for a tramp down the streets and through the park. As an elderly gentleman of fifty years, with money enough nicely invested to keep him in comfort for the rest of his life, he thought he could afford the luxury of fresh air and sunrise. To most people in cities these two items are luxuries; they are known to them only by legends, by hearsay testimony, and by stories written for good boys.

Jammers had forgotten this morning to put on his eyeglasses, and, consequently, as he crept gingerly down the broad stone steps of his house he failed to see, until he stepped upon it, the dead body of a man lying, face upwards, at the bottom of the steps. The arms of the deceased were stretched above his head, which lay against the stone edge of the bottom step.

"Bless my soul!" muttered Mr. Jammers. "What is this? What does it mean?"

At the first glance he saw only a shadow; but he knew that a shadow was not a material and soft and yielding to the feet. He was not alarmed, and kneeling down, saw in the dim light that the body was decently clothed, and that the face was not a bad one in features, though showing signs of dissipation. He also found that every pocket in the apparel of the deceased was turned inside out.

Did Mr Jammers, discovering these things, begin to shout for the police and thoughtlessly wake up everybody in the neighborhood, as most men would have done? Not at all. Apart from a philosophical composure which enhanced the dignity of his demeanor, he had, for several years, possessed the ambition of operating as an amateur detective. He really thought he had more analytical ability than was to be found in nine out of ten of policemen and detectives, and this faith in himself was strengthened by the adoption by the police authorities of theories he had advanced in several cases of mysterious crimes. It was a harmless if not a useful whim of the old gentleman, and one in which he could afford to indulge.

When he regained his composure after the first shock of his unpleasant discovery, Jammers felt a hilarity of spirits hard to describe. He regarded the unfortunate corpse before him as a bonanza, if the expression may be allowed. It was one of the grandest and happiest discoveries, professionally speaking, of his life. He recognized the possibilities of this mystery at his door-step and, resolving to utilize them, very calmly and quietly studied his subject.

The pockets turned out certainly meant robbery. Then he carefully and delicately manipulated the head. At the back of it he felt a soft spot, and a yielding of the skull to the touch. There was the cause of death. Robbery and murder, was his verdict. Of course the man was dragged there because there was no sign of a struggle on the walk or in the street, and there had been no outcry in the night, else he, awake nearly all the hours, would have heard it. Jammers lifted one of the hands to see whether it had been used to hard labor, but it was clinched. He tried to bend back the stiffened fingers, and discovered, pressed deeply into the palm by the long nails, a small, triangular piece of woolen goods, green in color, and about two inches in length, on each side. Extracting this after much effort, he found that two edges of the fragment were selvage and the third badly frayed, as if violently severed from the main piece. He saw the material was woolen and with a ribbed surface loosely woven. Putting these points together, he made up his mind that the fragment had been torn from a shawl worn by a woman, and that that woman had something to do with the violent death of the man.

"Very good!" said Mr. Jammers, to himself. "The question now is, who is the woman? Also, who is the man?"

The mystery was a captivating one, possessing all the elements of crime calculated to confuse the mind and baffle skill. In his hand Mr. Jammers held the only apparent clew to the perpetrator of the deed. He resolved to keep that clew, and to undertake the pursuit of the criminal. This determination being made, Mr. Jammers reported his discovery to the police and calmly proceeded upon his walk, refusing to permit his nerves to be unstrung by even so solemn an affair as a dead man at his door.

The little choristers of the city trees and roads twittered and caroled in the quaint and dainty way that marks the metropolitan birds; the dawn was filmed with smoke; the sun uprose with a face as tawny as a Moor's, and the droning hum of life made the air quake with its heavy volume of sound; but Jammers walked like one in a dream, his head bent down and his brain quickening with plans for the tracing out of the crime, the victim of which had been placed at his own door. He felt that Jammers, in his ordinary character, was not a man to be despised; but, better yet, Jammers, in the rôle of a triumphant detective, would become the admiration of a city, if not of a continent.

There was a clear field left for the amateur detective. The post-mortem examination revealed a fractured skull, which was fatal, and a complication of diseases of the vital organs which might also have produced death. It was also discovered, without trouble, that the man had no friends; that he was, apparently, one of those "unknown" beings who are born and die without any one being made the gladder and few the sadder thereby. His body, when the jury were done with it, was bundled off to a medical college, and had the fate accorded to the generality of dead unknowns. The police dismissed the case with celerity, as they were not stimulated by that professional zeal which principally depends on offers of rewards. Thus it came about, with no exertion on his part, that Mr. Jammers was left to prosecute his inquiries without fear of interference on the part of those whose legal duty it was to secure retribution for the dead as much as it was to protect the living.

But Mr. Jammers discovered, in the course of a few days, the radical difference between theory and execution. He had nothing upon which to base operations save a rag, and a small rag at that. In a city of a million souls, where could he begin to unravel a mystery to which the clew was so insignificant? How should he find a shawl or scarf into which his fragment should fit and bring conviction to the criminal? He kept a vigilant watch, but his efforts availed him nothing. His powers of analysis were ridiculously fruitless in everything but disappointments. Mrs. Jammers ridiculed his waste of time on a matter of no earthly interest to any living person, and certainly of no consequence to the dead. Finally, three weeks after the discovery, he pinned his heretofore carefully cherished cloth to his bookcase and abandoned the search.

A week passed. Early one afternoon Jammers came home. A strange housemaid was rubbing down, in a chary manner, with soap and water, the woodwork of his library. An involuntary glance at the spot where the rag had been pinned showed that it was gone. He sought his wife.

"Mrs. Jammers," he spurted out, "my snuggery is being interfered with."

"Yes—washed. It needed it badly," observed his wife, sententiously.

"It's against my orders and wishes," said the husband.

"Men don't appreciate cleanliness as much as they ought," remarked the lady. "The room was very dirty, Richard."

"I don't care if it was," and his voice began to be sharp in tone. "This new girl doesn't understand matters. The rag which I took from that dead man's hand is missing. The careless thing has probably thrown it away. I want it," and he stamped the floor with a vehemence that showed he was thoroughly enraged.

Mrs Jammers quietly rolled up the stocking she had been mending and went down-stairs. In a second she returned with the cherished bit of cloth rolled up until it was but little larger than a good-sized pen. Jammers unrolled it. From green it had been changed to a dingy white color.

"Pure idiocy!" growled the man. "It is utterly spoiled. How can such a thing ever be fitted to the piece from which it was torn? It can't. If I were to put my hand this minute upon the shawl—but what is this?" he exclaimed, with a sudden change of subject and tone of voice, and nervously mounting his eye-glasses upon his nose. "See here, Jane! Look! What is that?"

Jane put on her glasses and gazed.

"0-7-9-5—0795. What is there remarkable about those figures?" she asked.

"What is there remarkable about them?" he inquired, in an absent-minded way. "Why, the fact that they're there." He sat down and studied them in silence for fully five minutes. "Jane," he cried, "I believe I have a clew."

She laughed, and he put the remnant in his pocket. There was not another word spoken about the matter that evening. His wife thought she understood him, and he was sure he understood her, and, as a result, each concluded that silence upon the matter would be wisdom.

"We never number our jobs in that way," said De Long, the dyer and cleaner, the next morning, to Mr. Jammers. "We tag our goods. Old Ferriott, on Washington Street, is the only man I ever knew that did it. But he's old fogyish. No trouble at all, Mr. Jammers, not a bit. Good-morning."

Mr. Ferriott is a crotchety, surly old man. He treats Mr. Jammers, at first, very churlishly, and says—perhaps he does and perhaps he doesn't mark his goods with figures. Mr. Jammers puts down a five-dollar bill on the counter, and says the information will be worth that much to him. Whereupon Ferriott thaws out and becomes communicative, and remarks that up to within a few months he has numbered his jobs.

"Will you be so kind, then, Mr. Ferriott, as to tell me what sort of a job was number 0795, and who it was done for?" inquired Jammers.

Mr. Ferriott brings out several ragged volumes of order books, and hunting through them finds, at last, the following, which, as he reads it aloud, is taken down by Mr. Jammers.

"0795—Mrs Alvord, 611 Johnson Place. Light-red shawl to be dyed dark green as per sample. To be ready by November 2d. Date of receipt, October 25th. Delivered, November 8th."

"That was last year," said the dyer. "Mrs. Alvord is the wife of a rich commission merchant. I've done lots of work for her in the last three years."

Jammers tumbled in his pocketbook and brought forth his cherished fragment.

"Were those figures made by you?" he asked, pointing to the numerals on the cloth.

After a long study Ferriott raises his head.

"They are mine. I will swear to them," he says. "No one ever made a 7 like mine."

"Then that rag there is a piece of the shawl you dyed for Mrs. Alvord last November? You believe it to be that?"

"I do. It is scarcely possible that I am mistaken."

"Good!" observes Jammers. "That is information worth all it cost me. Good-day!" and tucking his cloth in his portemonnaie, he passed out of the shop just as Ferriott was getting ready to interrogate him as to his reasons for wanting to know these various things.

It being early in the afternoon, Mr. Jammers, elated with his discoveries, began the journey to the house of Mrs. Alvord. It would be difficult to express his feelings as he walked briskly along the street. He was confident that he had found the trail to the murderer; and it seemed to him, in the flush of this revelation, as if Mrs. Alvord were the criminal. If so, there was, of course, a scandal; and if a scandal, so much the better for the reputation of Richard Jammers, for nothing explosive makes a louder or a longer report than one of these huge pieces of the artillery of society. Jammers's imagination was a lively one, and he had become badly entangled in a maze of suppositions, of which the lady was always the central figure, when, raising his eyes he saw that he had reached his destination. The house was a handsome, three-story brick dwelling, with every indication of being occupied by people of wealth and culture; and the would-be detective suddenly felt ashamed of the errand which had brought him there. It did not seem probable that such people would be guilty of so vulgar an affair as the murder, in a distant part of the city, of a vulgar-appearing man. And when Mrs. Alvord came into the elegant parlor he was sure he had committed a grievous error. She was fat and jolly; and what murderess was ever possessed of those attributes of person? Jammers metaphorically "threw up his hands" and surrendered. Still he managed to blunder along so as to state that he had called to inquire about a shawl, describing it as Ferriott had reported it to him.

"A green shawl, you say, formerly light-red? Dyed at Ferriott's?" Mrs. Alvord inquired, after brief meditation.

"Yes, ma'am."

"And you want to know what I did with it?"

"If you please."

"Yes? Well, sir, I never had such a shawl."

"But Ferriott said you had it dyed there," remarked Jammers, excitedly. "His books show it had been there."

"Then both are mistaken." She began to laugh, however, in a way that made Mr. Jammers feel uncomfortable, it had such a tone of tormenting triumph about it. "My little boy, Georgie, though," she continued, "had a neck-scarf of the color you mention, and Ferriott dyed it. Of course, that is not what you want."

"I am sure it is," exclaimed Jammers; "and if you'll let me see it for a moment, I can——"

Mrs. Alvord held up her pudgy hands as if to command silence.

"That is impossible," she said; "I gave it to our second girl, Hannah Stevens, last Spring."

"But she would show it to me if you asked her," he suggested.

"Undoubtedly; but she left me last July, and I haven't the remotest idea where she has gone."

Mr. Jammers was speechless with rage at the idea of being so near and yet so far from the object of his search. He did not dare to even look at Mrs. Alvord, for fear his face would reveal his feelings. She arose from her seat.

"If there is nothing more," she said, "I must beg you to excuse me."

"Just a question or two more, madam. Was this girl married?"

"I believe not. I never knew that she was."

"And you don't know where I can find her?"

"No, sir."

"Will you describe her to me?"

"Certainly. She was of medium height, spare, and with black hair and eyes; her nose was broken, her mouth large; there was a mole on her right cheek; she walked with a slight limp; and, most marked peculiarity of all, she had a habit of quickly turning her head and looking backward over her left shoulder; she is about twenty-eight years old. There! You ought to recognize her from that description."

"I am sure I can," said Jammers, "and I'm greatly obliged to you."

"One moment, please," the woman remarked. "Let me do some asking! Why have you asked me those questions? Why have you come to me?"

"Well, there's been a—that is, somebody is wanted—I mean to say that I guess there's a little fortune awaiting for this girl, and I'm sent out to trace her up."

"By that scarf?"

"By that scarf," echoed the man.

"I believe you are telling me a falsehood," said Mrs. Alvord, in a tone of voice that showed anger. "Janet, show this gentleman to the door. I regret that you have not been as frank with me as I was with you." With that the ordinarily good-natured woman turned away, stopping to send after him the hope that he would not be able to find the girl.

Mr. Jammers wended his way home with feelings of chagrin. An hour before he had been certain that he was on the way to success. It did not seem possible to him, then, that he could fail of securing definite knowledge of the criminal for whom he was looking. Yet here he was, walking gloomily away and more confused than ever as to plans for pursuit. The old gentleman was, in his self-conceit, unsparing in his denunciations of his bad luck. Everything seemed against him; and by the time he turned the corner to his house he had about made up his mind to abandon the case as one without chance of profit or of renown.

But what was this? As he arrived within two hundred feet of his home a woman, neatly dressed, came out of the basement-door and went down the pavement ahead of him. He saw that it was not his wife. He knew that none of her acquaintances would leave the house by that door. Who was she, then? Scarcely had the question been formed in his mind when the woman, with a quick, nervous turn of her head, looked backward over her shoulder. Instantly he recalled the description given by Mrs. Alvord of Hannah Stevens. Another look, and he saw that she walked with a slight limp. That made him sure of his game. He increased his pace to overtake her, and, in his near-sightedness, almost walked over his wife who had descended the steps to meet him.

"Jane, Jane!" he cried, catching her arm and his breath at the same time, "who is that woman, there, just this side of the corner? See? She came out of the house not a minute ago."

Mrs. Jammers regarded her husband with a look of indignant surprise.

"Are you crazy, Richard Jammers?" she cried, catching him by the arm. "What do you mean by all this nonsense? That woman you're racing after, why—it's Nora, our servant-girl! Ain't you ashamed of yourself, Jammers, running after her? I'm ashamed of you."

Mr. Jammers sat down on the lower step, just where the dead man had fallen, and held his head dolorously in his hands.

"You're foolish, Jane," he said, "to think I was skylarking after that girl. I was pursuing her, but because I think she killed the man who was found here at this very spot where my feet rest."

Mrs. Jammers moved away; the reminiscence was unpleasant. Her husband continued:

"I've been on the trail all day," he said, "and have made discoveries. I say that woman knows something about that dead man. You can prove it, Jane. Go to her room, search it, and, as I sit here, I believe you will find a neckscarf of a green color, with one of the corners missing. That corner is in my pocket."

"Oh, Richard! This business has turned your mind," cried his wife.

"Go!" was all he replied.

"What will become of me, with you in an insane asylum?" she moaned.

"Bosh! I will go if you are afraid," and he began to ascend the steps.

"Wait," she said. "I will humor you. I will make the search."

In less than three minutes she was back again. She had in her hand a dirty-looking green rag.

"It was behind her trunk," said Mrs. Jammers. "She used it as a duster, I think. Poor girl!"

Jammers whipped out his fragment. It matched the missing corner.

"It is the scarf," was his verdict. "There can be but one conclusion—that the girl knows about this murder."

"Hadn't we better talk it over with her before you go any further in the matter?" asked Mrs. Jammers. "Perhaps there's a mistake or an explanation. Don't be hasty with her, Richard."

Richard agreed with her on this, and when Nora returned she was summoned before this tribunal of two. At a glance Mr. Jammers saw how accurately her face corresponded with Mrs. Alvord's sketch. He did not know how to begin the trial. At last he said:

"Is this your scarf, Nora?"

She answered "Yes" promptly, remarking that she had used it as a dusting-cloth, and did not know that she had left it lying around.

"Tell me," continued Jammers, "just how the corner of it was torn off one night last July."

He rather expected something startling would follow this question; that the girl would faint, or deny knowledge of any violence; but she did nothing of the kind. She looked him squarely in the face and said:

"My husband tore it off when he was drunk—one night last July."

"Hum! Ha! And where is your husband, Nora?" he continued.

"I don't know, sir. I have not seen him since that time, and I don't want to see him again." There were shifting lines of weakness about her mouth, and her breath came and went a little faster than usual.

"Mrs. Alvord said your name was Hannah—Hannah Stevens."

"So it is, by rights."

"And that you were not married," said Jammers, his voice growing more and more kindly.

"I didn't. I couldn't tell her the truth, sir. We poor folks, like the rich, have our shames and our sorrows that we keep to ourselves. I daren't tell Mrs. Alvord how foolish I'd been. I've told nobody the secret." The tears were welling up into her eyes, and rolling down her cheeks.

"Tell us about it Nora, or Hannah. It may save you trouble," said Mrs. Jammers. "Besides it will be a relief to you."

"It isn't much of a story, ma'am. I'd known the man for years and thought him a steady, fair-hearted fellow. We just went off and got married, saying nothing about it, so as to keep our places a little while longer. But I made a mistake—I made a mistake. He was a hard drinker, and, almost before I knew it, had got all my savings on one excuse or another, and drank or gambled them away. Then I told him I'd have nothing more to do with him. And I didn't, that is, until that July night I've spoken of. I was at my cousin's, then, in the next block. I don't know how he found me, but he came there at midnight, when we were all sitting on the steps for fresh air, and got me to walk around the block with him. He kept teasing me all the time to go live with him. And I said I wouldn't. Then all of a sudden he struck me, and grabbed at my breastpin and tried to pull it off. As I broke away from him he caught the scarf on my head and took a bit of it off in his hand, the corner of it, ma'am. I ran away. I looked around once, when I was two hundred feet away."

There was a silence. The girl had closed

Digitized by Google

her eyes. Jammers, his hands in his pockets, was studying the sole of one of his boots as the leg rested across his knee. Mrs. Jammers was watching the woman.

"And what did you see—anything terrible?" asked the man, getting upon his feet.

"No, nothing terrible. I only saw him throw up his arms and fall down. He must have been in front of this house, I think. He was drunk, and I didn't love him enough to dare to go back. I was only too glad to get away and stay away. As I said, I haven't seen him since that night, and I hope he'll leave me alone for ever."

She spoke the last words as if it were a prayer to heaven.

"Have no fears, Hannah," said Mr. Jammers. "He will leave you alone for ever. Jane, you can explain the rest." With that he walked out of the room.

"I'll take her word for it all. The woman does not lie," he remarked to himself, rolling the scrap of cloth into a little ball and tossing it out of the window. "I'll drop the matter right here and now. It promised a great deal, but I'm glad it ends in this innocent way. The secret is with Jane and me, and I guess we can keep it. It's odd, though, how I traced out that '0795.' I was born for a detective, but I've had enough of it. Hannah is safe."

COURTNEY-HANLAN.

HANLAN, SCULLING ALONE, MAKES THE BEST TIME ON RECORD.

GREAT were the expectations raised in advance of the sculling-race arranged, after much difficulty, between the famous oarsmen Courtney and Hanlan, and most intense was the disappointment at the result. The time set was Thursday, October 16th; the pecuniary consideration was a purse of $6,000. Chautauqua Lake was the spot, two and a half miles and return the distance. For two days sportsmen poured into Mayaville, overflowing its accommodations and raising the price of board to twelve dollars per day.

At early morn on the 16th everything was favorable for a grand contest, as far as the public was aware. But an occurrence had been discovered that was well calculated to create a sensation and spread it from one end of the world to the other. At eight o'clock on Wednesday night, Bob Larmon, Courtney's nephew, and Burt Brown, returned to the boathouse after a stroll in the village, intending to keep guard over the racing-shells during the night. They found that the river door had been forced open, and that both boats had been cut beyond repair with a saw. The working-shell was cut entirely through, six feet four inches from the stern, while the one in which the race was to be made was cut two-thirds through, twelve feet ten inches from the bow. It was noticed in each case that the gashes were cut in sections of the boat exactly opposite to cracks in the side walls of the building. These cracks were so large that through them a saw might have easily been introduced and worked. The discovery was kept a secret from Courtney until the morning of the race. As soon as it was made public, the wildest excitement ensued, though for a time no one seemed to believe the report. Both Courtney's boathouse and his boarding-house were surrounded by frantic crowds. Mr. Blakie, the referee, hastened to Courtney to see what could be done. Courtney, after a long and earnest conversation with James Brister, his backer, empowered that gentleman to make certain proposals to Hanlan.

The meeting was arranged to take place within an hour in Hanlan's quarters in the village. Here Mr. Blakie, Mr. Brister, and one of the judges were met by Hanlan and his backers, Messrs. Ward and Davis, and his trainer, Sam Coulson. Davis expressed the utmost concern at hearing of the mishap to Courtney's boats, and immediately offered to allow him his choice of the three in Hanlan's boathouse, but Brister would not accept this offer. Brister then asked that the race be postponed for two weeks, but Davis refused to entertain that proposition. Then Brister asked if they would agree to a postponement till Saturday following, and Blakie asked them as a favor to him to name Monday instead. Davis said that he would agree to either of these propositions if Brister would make them unconditionally and agree that his man should certainly row on either of those days, weather permitting. Brister said his man would row if he could get a boat in that time, and Davis said that he certainly could do so, either from his home or from Troy. But Brister answered that he would not bind himself to anything for any date short of one or two weeks distant. Davis replied, very decisively: "Then the race must be rowed to-day. Our man will be at the starting line on time, and if yours is not, so much the worse for him."

Failing to induce Courtney to use another boat, the referee, judges, timekeepers, and members of the press went out to Hanlan's boathouse, where the Canadian was found all rigged out and ready for the start. At 5:16 P. M., after clearing the course, the word was given. Hanlan started alone amid cheers, rowing at the rate of thirty-two strokes to the minute, which was only slightly varied throughout the race. He rowed the five miles in 32min. 56½sec. On the boat Mr. Blakie requested Mr. Charles M. Calvin to act as judge for Courtney, which he assented to, and at the close of the race declared Hanlan the winner of the race and purse. The time made by Hanlan is the best by 1min. 14½sec. ever made in a five-mile sculling match.

On the 17th Hanlan, accompanied by Mr. Davis, called on the referee and received from him an order for $6,000, the amount of the prize. Mr. Soule will contest its payment, having openly declared that he will spend $10,000 contesting it before it shall be paid, unless rowed for by the two men, according to the agreement.

THE ELEVATED RAILROAD EXTENSION.

THE extension of the system of elevated railroad to High Bridge will inevitably entirely change, in a few years, the appearance of the upper portion of New York City. It was only a few years ago when the prospects for rapid transit looked dull enough, but to-day there are three lines in active operation, and the fourth will soon be finished.

It required great faith on the part of the promoters of this enterprise, and their faith had to be backed up with their money—but they solved the problem, and the fast trains that now run from the Battery into the fields above Central Park carry millions of passengers during the year.

The road passes in full view of Central Park on the one side and the elegant residences that skirt the shore of the Hudson on the other, and occasionally a glimpse of the noble river itself is caught. Amongst the buildings thus passed are the Convent of the Sacred Heart, the Leak and Watts Orphan Asylum, the De Puyster mansion, Elm Park, the Lion Park Brewery, and other points of interest. Our present illustration is on Eighth Avenue, looking north from One Hundred and Tenth Street, at a point where the rails have been laid at the highest altitude on the entire route.

Great difficulties have been overcome in building the upper portion of the road, both on the west and east sides. The foundations for the columns were designed originally by the civil engineers to be eight feet square and to consist of brick and cement at the bottom, afterwards a capping of blue stone, and finally an iron socket at the surface of the ground, into which the upright iron column should be fitted. But in digging the holes for the foundations, two classes of obstacles were found. The first was low and marshy ground and sometimes hidden springs, and the second was the sewers, the gas pipes, and the Croton mains.

When marshy grounds, or those containing quicksands, were found, then the laborers had to dig until they found a solid foundation. The deepest hole dug was in Third Avenue, just below the old Bull's Head Hotel, at One Hundred and Second Street. In digging far below the surface there it was seen that the water that is found almost ebbs and flows with the tide. A dozen holes that the workmen dug for the foundations were so deep that they were boarded up like wells, in order that the workmen might safely dig deeper. In one of the excavations a spring was found running from the heart of the hill above. A steam pump was employed, and the spring water was pumped out, while the laborers delved deeper. The water of the spring was finally conducted into a sewer across Third Avenue. Gravel and cement were filled in, piles were driven, and the finishing brickwork was laid.

On the Second Avenue road, at Ninety-eighth Street, and also at One Hundred and Eighth Street, the column was to be built exactly over the middle of a large sewer. The sewer could not be turned aside, and the place for the column could not be changed; so the engineer invented a plan whereby the cement should be laid underneath the sewer, while the sewer itself should run through the brick foundation by means of an arch at One Hundred and Eighth Street, and at Ninety-eighth Street by the use of iron beams in the shape of a letter I.

One of the most difficult problems for the engineer to solve was how to establish a solid foundation for a column in the centre of One Hundred and Eighth Street, on the west side of Second Avenue. In the excavation was a network of pipes. There were three sewers, one being the main sewer of the avenue and the others house-sewers emptying into the main sewer at the exact spot where the place for the column had been pointed out; and, in addition to these, a thirty-inch gas pipe had been raised at that point to pass over the sewers, and a twelve-inch and an eight-inch Croton water-pipe united in complicating the tangle. The pipes and sewers could not be moved. The ground was marshy. First, sixty-two piles were driven, and then the whole cavity was filled to the top with cement, making the whole a solid mass. On this was laid brickwork and thereon the foundation was made. The iron base-casting was made to cover the entire surface of the foundation, in order that the pressure above might be equally distributed. The casting is 21 feet long and 19 feet wide.

The following facts will be interesting: The Manhattan Elevated Railroad Company was organized under the Rapid Transit Law, and now operates both elevated roads; the leasing of the Metropolitan and the New York Elevated Railroads actually took place on January 31st last, but the leases were not signed until May 20th, which date the documents bear; prior to that the Manhattan Company had no road; it had some paid-in capital at the time of the leasing of the roads; the amount called for by the terms of the lease was $13,000,000, equally divided between the Metropolitan and the New York Companies. The capital stock of the New York Elevated Railroad Company is $6,500,000, and its bonded indebtedness $8,500,000. It has yet the right to build north of the Harlem River, and in the event of that being determined upon, the New York Elevated Railroad Company will furnish the money to the Manhattan Elevated Railroad Company. Under a similar arrangement the Manhattan Company is extending the line of the Metropolitan. The Manhattan Company has not issued any bonds, nor does it contemplate the issue of any; under the original articles of the association its capital stock was to be $2,000,000; it was increased last Spring; the amount paid in, as called for by the Rapid Transit Act, is five per cent., or $100,000. The whole capital stock of the Metropolitan is represented now by $15,000,000 of built road; the actual cost per mile was $600,000; the cars cost $3,400 each, and the engines an average of $5,000 or $5,200; the road has 50 engines and 150 cars.

The following is a comparative statement of the traffic and average fares on the three lines for the quarter ending September 30th:

	Passengers.	Revenue.	Average Fares.
Third Avenue.....	6,030,924	$513,854 65	7.41
Ninth Avenue.....	919,487	64,833.10	7.15
Sixth Avenue.....	4,156,845	327,305 45	7.88
Total.....	12,012,956	$906,992.60	7.55

When all the different lines are completed, then will the full benefit of the Elevated Road system become apparent. But, even now, it is a wonderful thing for a man living in One Hundred and Twenty-fifth Street to get to his office in Wall Street in less than three-quarters of an hour at a cost of ten cents.

Improvements in Rome.

DURING the past ten years the improvements in the streets and buildings of ancient Rome have been very great. New arrangements have recently been made or other important changes, and the State will contribute towards them the sum of 40,000,000 francs. A palace of justice will cost, it is said, 6,000,000, an academy of science and certain museums 3,000,000, while 7,000,000 are assigned for a "policlinico," and barracks are to be built for two infantry regiments and two regiments of cavalry and artillery at a total cost of 4,000,000 francs. Among other reports is one that the vast Capuchin Convent, near the famous Capuchin Cemetery, in the Piazzi Barberini, will be converted into a military hospital. Then it is said that the ancient Flaminian Way, lately ruined for pedestrians by the street cars, will be widened into a promenade. Two new bridges are to be built over the Tiber—and these are certainly much needed—at a cost of 1,500,000 francs. The work on the Tiber embankment goes on, and the present ugly opera house will be removed to make way for it. Three millions are set apart for a palace in which shall be given exhibitions of the fine arts. Schools, streets and theatres will be opened in the Prati del Pisatello. A correspondent of the *Globe* of London, who gives these facts, adds that the projected improvements are not mere projects, but will soon be realities. When they are completed Rome, he adds, "will be one of the most magnificent capitals in Europe."

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Austrians in Novi-Bazar.

On the 8th of September last the first detachment of the army of occupation, which, by the Treaty of Berlin, Austria was obliged to send into Bosnia, entered Novi-Bazar, under the command of the Duke of Wurtemburg. Six days later a body of 17,000 men followed, the Mohammedan populace keeping quiet in consequence of orders from the Sultan, who is still the sovereign of Bosnia but not allowed to keep soldiers in that province. The Austrians fortify all the places occupied by them, on account of the bitter hatred of the Mohammedan Bosnians.

New Viaduct over the Lyse Valley.

On the 24th of June the railroad between Göteborg and Christiania, in Norway, was opened, just five years after the first rail was laid. The bridge over the Lyse Valley, near the Fortress Frederickshald, where, on November 30th, 1718, King Charles XII of Sweden was killed, is one of the finest railroad bridges in the United Kingdom of Sweden and Norway. It is 750 feet long and 100 feet above the little river flowing underneath. At the opening of the railroad, King Oscar of Sweden and Norway was present with all his family and delivered a very patriotic speech.

Surrender of Zulu Chiefs to Sir Garnet Wolseley.

On August 14th a very important meeting took place. The King's Prime Minister, Mnyamana, Cetewayo's two brothers, Sukani and Umgalana, together with Tshingwayo, a great friend of the King, and a brave and able general of the Zulu army, together with 150 smaller chiefs, presented themselves at the headquarter camp to surrender and sue for peace with Sir Garnet Wolseley. At first they hesitated to come in, but after some persuasion from John Dunn, who went out a considerable distance unarmed to meet them, they were induced to do so, and moreover brought 600 head of cattle with them. The Zulus seated themselves on the ground, while Mr. John Dunn, Mr. Shepstone, General Colley, Colonel Brackenbury, and Bishop Shroeder, the Norwegian missionary, and others sat opposite to them. Sir Garnet Wolseley and his two aides-de-camp taking up their position close to the flagstaff between the captured guns. They were told that they must bring more cattle, and that the King must be given up, but that they should meet with consideration and protection provided that the five principal chiefs remained in camp as a guarantee of good faith, the others meanwhile being allowed to return to their kraals. To these terms they consented, and took up their quarters at John Dunn's camp, and the meeting terminated.

New Insane Asylum near Sydney, Australia.

This fine structure, located at Callan Park, near Sydney, will, when completed, be a durable monument to the sympathy and compassionate regard of the people of New South Wales for their afflicted brethren. The Callan Park estate includes an area of a little more than 100 acres. The site of the hospital is about three and a half miles from Sydney, and is approached from the Parramatta and Balmain roads, to which latter it has a considerable frontage, as also to Iron Cove Creek, an arm of the harbor of Port Jackson. It commands magnificent panoramic views of the Parramatta River, which is dotted with Spectacle, Cockatoo and Goat Islands, and of the reaches of water which run up between the indentations of the northern shore of the river. Hunter's Hill and other suburbs give variety to a very charming landscape, in which forest and water views are so happily combined; and the western horizon is bounded by the Blue Mountains. The accommodation for patients is in two divisions—one for males and one for females—separated by the central and administrative offices. An equal number of each sex is provided for, and the arrangements for each are similar in all essential points.

New Deep-water Quay at Queenstown.

The ceremony of lowering the first block of concrete for the new deep-water quay at Queenstown was performed on September 4th, by the Mayor of Cork, in the name of the Cork Harbor Commissioners. The quay will be 600 feet long and 40 feet wide, and the cost is estimated at £30,000. The Mayor and his attendant officials went down the river in a steamer, and on reaching the harbor went on board the "sheers," and having given orders for the block to be lowered, smashed a bottle of brandy upon it just before its disappearance below the surface, and asked all present to join with him in praying for God's blessing upon the undertaking. The steam machinery worked very smoothly, and notwithstanding its great weight, the block was quickly and safely lowered to its destination, and placed in its position by divers.

Royalty at Sea.

H.M.S. *Bacchante*, which was commissioned in July last for the round-the-world cruise of the two sons of the Prince of Wales, sailed from Portland Harbor on September 5th, under command of Captain Lord Charles Scott, a son of the Duke of Buccleuch. Her horse-power is 5,250 indicated; and her weight, now that she is fully equipped, is 4,100 tons. The extreme length between perpendiculars is 280 feet, extreme breadth, 45 feet; depth in hold, 15 feet 7 inches; draft of water forward, 20 feet 7 inches, and draft of water aft, 23 feet 3 inches. Her first stoppages on the present cruise will be at the leading Mediterranean ports.

Review of German Troops by the Emperor.

During his stay in East Prussia, in the beginning of September, the German Emperor held, as usual, a review of the troops occupying that part of Germany, and attended at a splendid manœuvre of three days' duration in the neighborhood of Konigsberg. By special invitation of the Emperor, distinguished officers of the different armies of the Continent were invited to this manœuvre, which turned out to be a very splendid military affair. A grand dinner given in the palace at Konigsberg by His Majesty to the invited guests and to the officers of the regiments who form the garrison of Konigsberg ended the military festivities.

Manœuvres of the Italian Army.

During the past Summer there have been a series of grand manœuvres and reviews of the Italian Army by King Humbert and his staff, with the double object of making a fine military display and fully making known the precise degree of strength of the armies of United Italy. The Summer manœuvres were of the first corps only. During this Autumn additional manœuvres and reviews have been held. The time extended from the 27th of August to the 11th of September, and it was divided into three periods—August 27th to 30th, August 31st to September 7th, and September 7th to 11th. Each of these periods were occupied by different manœuvres and under the command of different officers. The King was present on the 2d, 4th and 6th of September, accompanied by his Cabinet. The first period was occupied by marching manœuvres, by brigades and by divisions, mock battles, etc. The corps was divided into two divisions, one commanded by General Dezza, the other by General Quaglia. In the second period, the two divisions represented two armies, General Dezza commanding that of the North, and General Quaglia that of the South. In the third period, every variety of exercise and evolution left unused in the two previous periods was gone through with, in infantry, cavalry and artillery, each against the other and combined in various ways. Many foreign generals and commanders witnessed the reviews, which were eminently successful in every respect.

AT HOME AND ABROAD.

—THE Sultan of Turkey has ordered the disbandment of 90,000 of his regular troops.

—SEVERAL shocks of earthquake have occurred recently in Southern Hungary and Servia.

—THE St. Gothard tunnel will be finished by the beginning of December. Its length will be 14,920 metres.

—IT is estimated that over 150,000 miles of wire fence have been constructed since its first use for this purpose.

—THE committee of the volunteer fleet has ordered a fifth cruiser to be constructed at Marseilles at the cost of £150,000.

—THE latest estimate of practical statisticians is that there are in the United States 35,000,000 cattle valued at $1,200,000,000.

—THE Swiss colony, numbering some 700 souls, that settled in Tennessee, is devoting its energies entirely to cheese-making.

—THE strike of colliers at Charleroi, Belgium, which commenced a few days ago, is extending and assuming a threatening aspect.

—THE builder, architect and owner of the stand which fell at Adrian, Mich., have been charged by the coroner's jury with manslaughter.

—THE *Railroad Gazette* says that 1,476 miles of railroad have been made in the United States thus far this year, against 614 in 1878.

—CABUL was occupied by General Roberts on Sunday, October 12th, and the Afghans who were assembling to fight have gone home again.

—A PROPOSITION is to be made to enlarge the jurisdiction of the United States Court of Claims with the view of disposing of the cotton funds.

—A NEW bridge over the Neva, named after the Czar, and constructed at a cost of 6,000,000 roubles, was opened on October 12th with great ceremony.

—ACCORDING to positive assurances from St. Petersburg, the men to be raised for the military and naval service for the coming year will not exceed the usual number, 280,000.

—A BERLIN correspondent confirms, on trustworthy authority, the report that a defensive treaty was concluded between Germany and Austria during Prince Bismarck's visit to Vienna.

—WHEAT in the Walla Walla Valley, Washington Territory, costs only for raising and selling twenty-four cents per bushel, and the yield ranges from twenty-five to sixty bushels per acre.

—FIFTY-EIGHT Roumanian deputies being opposed to the Government's Bill for the emancipation of the Jews, it is thought it will not obtain the two-thirds majority requisite to its passage.

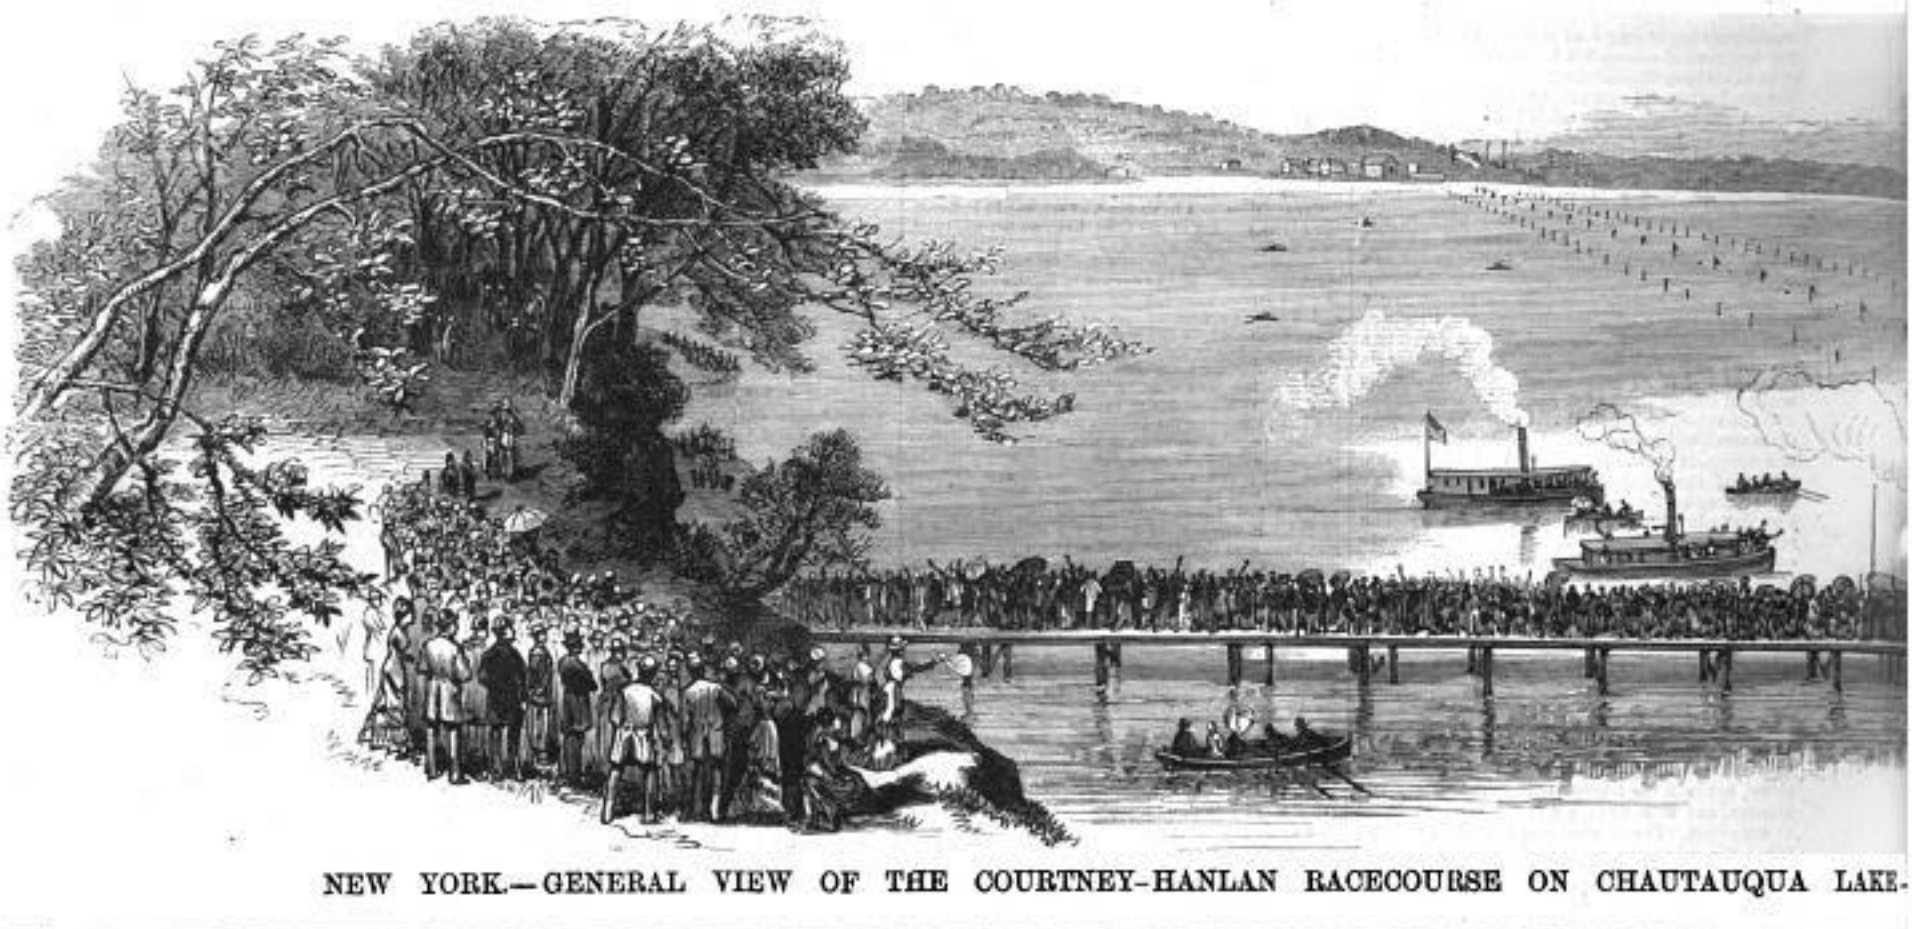
—THE Spanish Minister of the Colonies has ordered the formation of a commission to examine into the causes of the insalubrity of the port of Havana, and ascertain means to ameliorate the condition of the bay.

—THE cigar trade of the Lancaster (Pa.) district seems unusually active at the present time. The stamps sold in September indicate the sales of the 1,148 factories now in operation to have been about 15,000,000 cigars during the past month.

—LARGE public meetings on Vancouver's Island and on the mainland of British Columbia have adopted petitions to Sir John A. Macdonald, protesting against the employment of Chinese labor in the construction of the Canada Pacific Railway.

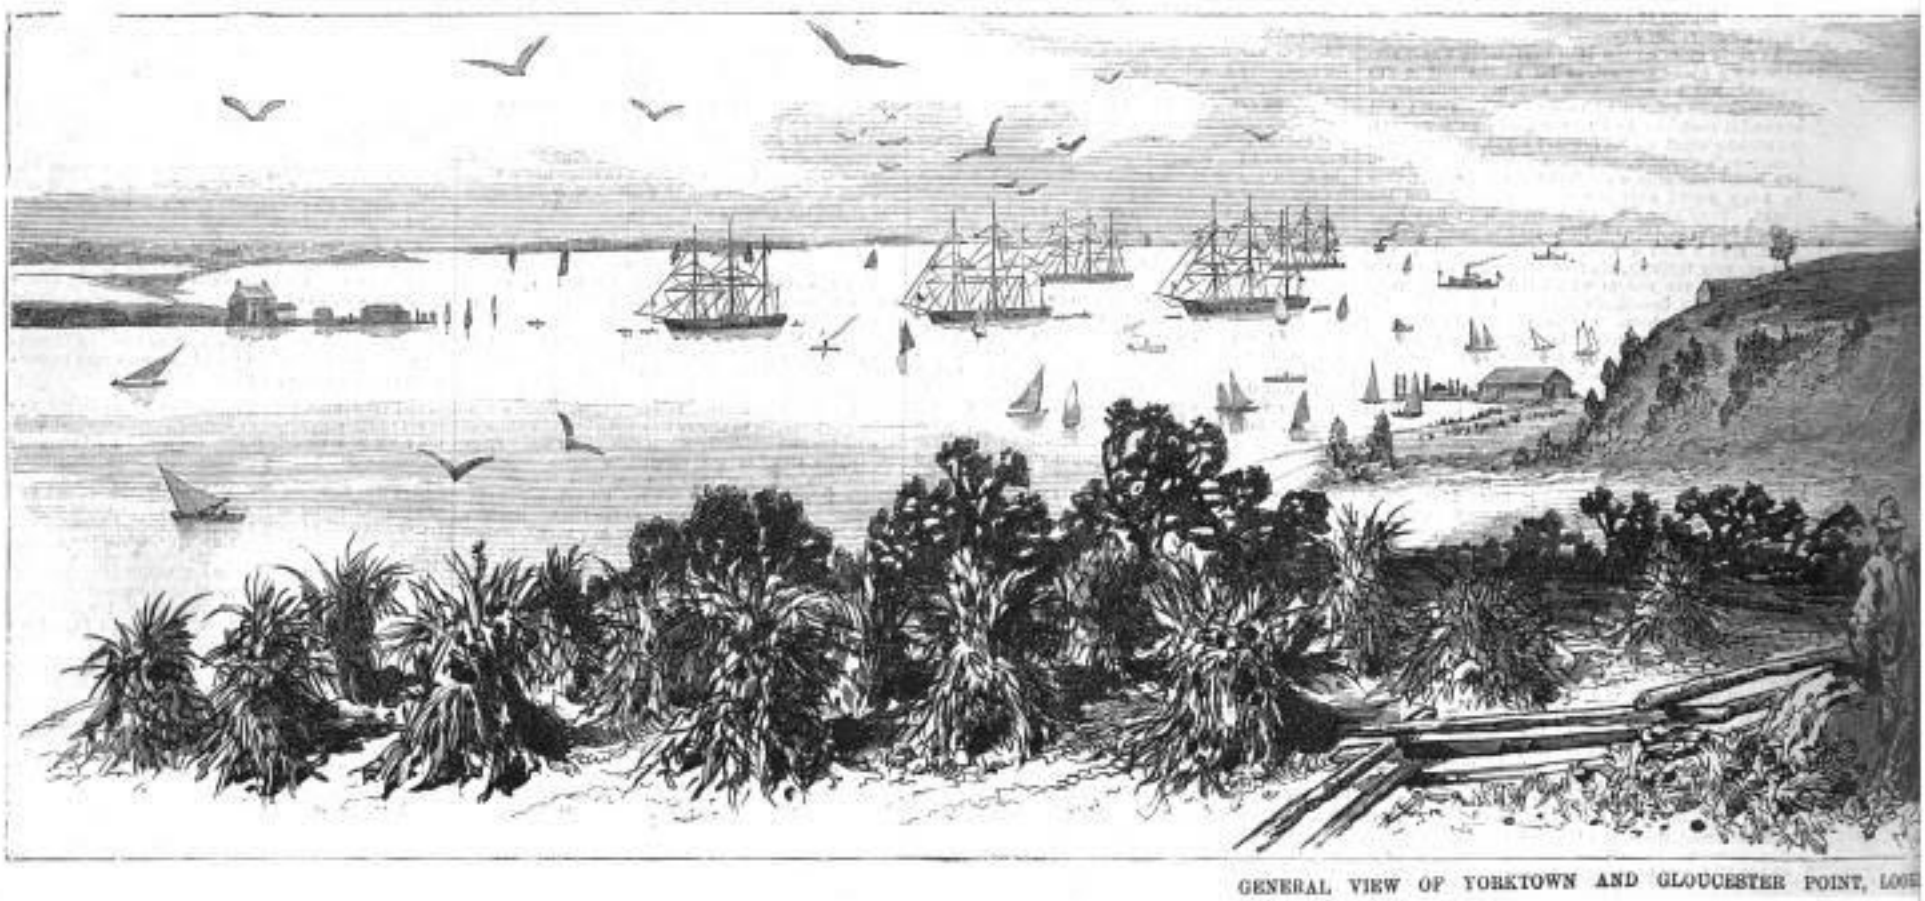
—THE Smithsonian Institution reports that Professor Peters, of Clinton, announces the discovery by himself of a planet of the eleventh magnitude in one hour, no minutes, right ascension; 1 degree 20 seconds north declination, with a daily motion of five minutes south.

—FIVE hundred tenants of the Marquis of Sligo and the Earl of Lucan met near Westport, in the County of Mayo, Connaught, October 14th, and solemnly pledged themselves to pay no rent until a reduction should be granted proportionate to the great fall of prices of all kinds of agricultural produce.



—IN our issue dated October 18th, there was published a statement that the city of Evansville, Ind., had abandoned its municipal organization in order to escape paying a debt of $65,000. We are assured that the city, with a population of from 45,000 to 50,000, is in a most prosperous condition, enjoying its full share of the widespread revival of business; and we regret having been led into a misstatement of facts.

—GREAT excitement prevails in the vicinity of Fort McKinney, Wyoming, on account of the recent rich discoveries of gold-bearing quartz in the Big Horn Mountains, about seventy-five miles northwest of that post, at the head of the Tongue River. Large numbers of miners are passing through that place on the way to the mines. Nearly all the citizens of that region are starting for the mountains. Ore has been assayed with the following results: Lowest, $4; highest, $70 per ton.



—THE mercantile fleet of the kingdom of Norway is second only to that of Great Britain, comprising last year 8,054 vessels, of nearly one and a half million tons burden. Of these 4,771 vessels were owned by cities and the larger shipping and fishing places, while 3,283 were owned by country districts. The large number of vessels owned in the country is explained by the fact that in Norway ship-building is the most common, if not the only, form of investment, and instead of putting their money into banks, the inhabitants of a village or county pool their savings and build a brig or ship.

—THE latest novelty in the way of improved suburban dwellings is the Bedford Park estate, a few miles from London (Eng.). The houses are built in the Queen Anne style, and are wonderfully quaint and pretty, especially where the roads wind, and the dwellings are overshadowed by guarled and twisted old trees, or embowered in groups of magnificent willows. Almost every house, while agreeing perfectly in general character and appearance with the others, presents a different aspect and varying outlines very pleasing to the eye. In the midst of the park is an elegant club-house for the use of the residents and their friends, in which there are billiard, reading, card, dining, dancing and lecture rooms, and a special drawing-room for ladies. All the dwellings were leased before completion, the occupants in the main being artists and people connected with art education.

PLAYING WITH FIRE.

IDLY she stirred the ashes at her feet,
The burnt-out embers of a bygone day,
Thinking how bright that fire had burned—what heat
Glowed once where now she found all cold and gray.
Then, idly still, scarce knowing what she did,
Fanned the pale ashes with her gentle breath,
Nor thought of fire within the embers hid,
Nor dreamed of him where all lay cold as death.
Sudden a light, where all before was dark,
Shone in her dazzled eyes and dimmed her sight—
A tongue of flame that, kindled from some spark
Undreamed of, made a noonday of the night.
She stood one moment stunned, then in amaze
She fled, for all her world was in a blaze!

"QUEEN LILY AND ROSE IN ONE."

CHAPTER III.—(CONTINUED).

MAUD had been compelled to admit that she had met the murdered man on the evening of his death, had walked with him through the lane where his body was found, had conversed with him a short time, and then, walking slowly back to the Castle, had gone to her own room, where she had remained looking over a portfolio of drawings for about half an hour; that she had then left her room to go down-stairs, and on her way through the corridor was startled by the sight of Frank O'Hara standing silently in the dusk at the head of the stairs; that she had asked him if he were ill, and that he had replied in a low tone that if he were that was nothing to her, that it would not trouble her if he were going to be hanged; that she had attempted to soothe him, but that he had flung her hand off his arm, and said it was a black day for him he had ever seen her, and that it would be blacker still—that she had ruined him soul and body with her cursed beauty; that she had asked him—"the prisoner," as she was admonished to call him—what she had done, or how dare he to speak to her in such a tone and in such language, and that he had replied that it did not matter much what he said or did after that night, that she need not mind him—he was not the fine titled lover she had been walking with in Avonbank Lane; that she had addressed the prisoner very angrily, and bade him take care how he insulted her and her friend Sir George Canonbury, and that the prisoner seemed irritated at her sharp rebuke.

Her lips had faltered, her voice failed over the latter part of this statement, and the lawyer's eyes had detected every pause, every quiver.

"Your strong reluctance to give your evidence tells rather badly," he said, dryly. "The prisoner was irritated and made use of threatening expressions relating to the man he regarded as his successful rival—very naturally of course. Well?"

And the poor distracted girl, dreading to tell a lie, dreading yet more to tell the truth, little by little was made to confess that the prisoner had retorted, in reply to her words, that Sir George Canonbury would have enough to do to take care of himself if he came in his way.

"Do you recognize this, Miss St. Crewe?" the lawyer asked, suddenly, holding up a tiny ivory-backed pocket-book.

"Yes," she faltered.

"Are the date and inscription correct?"

"Yes," she replied, glancing piteously at her own counsel, who for his part had a faint shade of discomfiture in his eyes.

The pocket-book was a species of dainty little calendar, and was interleaved with small beautifully-executed groups of the flowers of each month, several of which bore in the corner the initials "M. St. C.," and on the first leaf, beneath a forget-me-not, was written, "Maud to George, on his birthday," and bore the date of June two years before.

This pocket-book had been found in the prisoner's possession when he was arrested. It was as the seal of the testimony of the many witnesses whose evidence so conclusively proved the prisoner's guilt.

Then came the steward of the Parnells of Derrybane, where Frank had gone very early on the morning after the murder, who deposed to his strange, absent manner, his wild, haggard look, and the bruised, disfigured state of his face, which he said had been caused by a splintered branch of a tree striking him on the day before—and the jurymen, as he spoke, glanced from the prisoner's face, where the livid mark yet staid, to the knotted holly-stick which had belonged to the murdered man and been found in the lane hedge a little way beyond the body. The steward added that he had walked a little way back with the prisoner, who refused to go by way of the lane, muttering an excuse, and had parted with him at the foot of the Castle hill, where he saw the prisoner, only a little way up the hill, deliberately quit the road, and get into what was called the mill-field as it ran down to the river, and which was under wheat this year; that, some suspicion from his odd manner arising in his mind, he had stood watching the prisoner before he turned into the Derrybane road, when he heard a man shouting something, and, on looking up, he saw Patrick Byrne, Kelly's ostler, leaping off the hedge of Avonbank Lane, and running down across the hay-meadow to him, who told him that the gentleman who was staying at Mr Parnell's was lying dead, murdered, in the lane; that they had both run into the wheat-field after the prisoner to tell him, and to get additional help, and that, on coming suddenly upon the prisoner, they had found him in a very startled manner trying to hide a bundle of clothes that lay at his feet; that, at the first word of their news, the prisoner had seemed powerfully affected, and had gasped out, "Oh, heaven, is he dead! It cannot be! He cannot be dead!" and then "Oh, poor Maud! Oh, poor fellow, I wish I had not——" Witness was positive as to those words, which the prisoner had repeated over and over again; and when, on the arrival of others, the constables, and the surgeon, and on his being informed that he would be arrested on suspicion resulting from his confused way of accounting for his time on the previous evening, the presence of the muddy, blood-stained clothes, and his strange appearance that morning, he, although very angry at first, gave way rather quietly in the end, saying, "Heaven knows I never shed his blood, though I might have wished to do it!" The prisoner seemed terribly excited, and, although repeatedly cautioned, persisted in speaking; and about two hours later, the warrant for his arrest having been signed, he had been taken by the constables to the county prison, making only one request, that they would break the news carefully to his father and Miss St. Crewe.

In the prison the counsel for the defense had obtained from the prisoner the circumstantial account he had been so reluctant to give of his proceedings on the evening of the murder and on the following morning, of where he had been watching concealed whilst Maud St. Crewe and George Canonbury walked and conversed together, and how, in his agitation, he had missed his hold of a branch, and, slipping, had fallen into the deep, muddy dike beneath, and struck his head against a jagged thorn root, which hurt him so badly that, on crawling out of the dike, he had lain half-stunned and bleeding for nearly half an hour. Then, on going home and encountering Maud, and gathering from her indignant words what he took to be a confirmation of the worst fears suggested by his jealous misery, he determined if possible to conceal from her and from every one the knowledge of how he had met with his accident; and, with confused, half-formed ideas on the subject, he had risen very early, and taken his wet, muddy clothes with him, with the intention of putting them on as he returned from Derrybane, and then, through purpose or accident, incur some mishap which should serve to explain his appearance on reaching home.

The marks of a fall amongst the brushwood and slimy weeds of the dike and Maud's corroborative evidence of what she had seen in that early morning hour certainly bore testimony to the truth of this assertion; but the weight of the opposing testimony still bore down the balance against him.

So now he had stood to take his trial; and, whilst Maud St. Crewe, his sister Mary and Doctor Clarke sat in one of the bare outer rooms of the court, the jury retired to consider their verdict.

They were but twenty minutes absent; and to the last moment of her life Maud St. Crewe could recall as vividly as then the echoes of their tramping feet as they returned from the jury-room, the dead breathless pause in the court, whither Doctor Clarke had gone, and then the opening door, the slow, single returning footstep, the young surgeon's face, so full of grief and pain, and Mary's sobbing scream, and one single awful word:

"Guilty!"

CHAPTER IV., AND LAST.

THE glory of the long July day was fading fast, but over the lofty prison walls the ruddy western sunlight yet shone on the highest range of cell windows, which were all aflame with lurid brightness, and through the close-barred gratings cast golden checkers of light on the stone floors of the long bare corridors, so silent and spotlessly clean, with their whitewashed walls and rows of black-painted doors, and into the cell interiors, almost as bare, as silent, as drearily clean and desolate.

"Visitors for No. 16." And the turnkey, waking up a legion of loud echoes at each step, preceded the visitors, softly clinking his bunch of huge silvery-bright keys as he went.

The visitors were two women, darkly clad and closely vailed, of whom the taller and slighter seemed to cling to the other and walked very slowly with down-bent head.

"Oh, Mary, Mary," came the beseeching whisper from beneath her vail, "let me go first—I shall not be able if I have to wait! Mary, I won't keep you long—only let me see him first!"

"Let her go in first," Mary said, turning her head away as she saw the turnkey lift the little trap-door to peer in for a moment, and almost stifling herself in her efforts to keep from sobbing aloud.

The great key clashed loudly in the bolts of the lock, and the cell door swung back.

"Visitors for you," the official said, in a lower, more kindly tone than he had yet used when addressing the prisoner, as he ushered in the tall, slight, dark-draped figure with bright golden hair showing beneath her thick vail.

The pale quiet prisoner, sitting with his hands clasped on his knee, gazing at one gliding fleck of amber sunlight on the cold dark-gray stone floor, rose to his feet, and his face flushed suddenly, and then as suddenly grew ashy pale.

"Maud! You here! Oh, Maud, this is no place for you!"

"It is as much my place as it is yours—you know that," she answered, in low, strangely-quiet tones; "it is more my place than yours. Only for me you would never have come here—every one says that—those who believe you guilty, those who know you are innocent."

"But you must try not to let that distress you," he said, his voice trembling with tenderness, and his hand seeking timidly to touch hers soothingly; "you did nothing to send me here. You are as innocent of that as I am of what they lay to my charge, heaven knows!"

"Oh, Frank, I am, I am!"

Her unnatural composure gave way before his tenderness. In a passion of grief and despair she flung herself down upon her knees beside the seat where he would fain have placed her, and her tears fell like rain on his hands which she held clasped in hers.

"Oh, Frank, forgive me—forgive me! I have been in some degree the cause of your trouble, though I was innocent! Forgive me, Frank, though I cannot forgive myself; but I was innocent of—of—I mean I did not know I was doing anything to displease you!"

Even through her grief her brow crimsoned in maidenly shame, and, as Frank's trembling hands raised her reluctant form to the seat beside him, he felt the rising of a new emotion that thrilled through his very soul with passionate delight and sadness intermingled.

"Why, Maud, Maud—my love—my darling," he whispered, as his head rested amongst the disordered golden ripples above her little ear, "why, Maud, you care for me—you care a little for me, my darling!"

"I do," she said, answering the almost inaudible faltering whisper—"I always did—a little—always! And that night, if I had not been wicked, and proud, and angry with you, I might have said something to tell you—that—that you needn't have been jealous of poor George—we were only like brother and sister, or cousins—I never cared for him nor he for me. We liked each other very well, though, and George was very kind to me; but he was attached this long time to a beautiful girl he met in London three years ago. He often told me about her, poor fellow! But, Frank, you needn't have been jealous—indeed you needn't! I liked you best—in a different way." And Maud's fair lily-face became like a rose as her quivering lips uttered the confession of her innocent hidden love.

Her confession of love, poor child, in a prison-cell, and to the condemned prisoner, her lover!

"Why, then," Frank said, suddenly standing erect and straining her to his heart, whilst his whole face and form seemed to glow and strengthen as if with new life, "heaven's blessing on my darling! She has taken away the bitterness of death from me! I'd have died any day to have heard you say that, Maud! If it be heaven's will, I feel ready to die now. Heaven bless my darling, and keep her, while she lives, as happy as I would have tried to make her!"

A little time longer they stood silently together—the hapless pair of lovers—her head resting just where it reached above his heart, his lips pressed to her fair upturned cheek; and then she drew herself away, and moved slowly, like one blinded with pain, towards the door

"Poor Mary is waiting," she said

* * * * * *

No reprieve or commutation of the sentence had yet arrived; still, remembering the petition which had been so largely signed, hundreds confidently predicted its coming each hour—less confidently, however, as morning after morning dawned without hope to the anguished hearts in tortures of suspense, and the date originally fixed stood unaltered—the twenty-second of July, and it was now the sixteenth—the day fixed for the execution of Frank O'Hara for the murder of Sir George Canonbury.

The weary morning had passed away, the weary, sultry afternoon was come. In the stricken household of the O'Haras, after the bare mechanical duties of the day had been performed, there was at this hour neither sound, nor indication of employment, nor intercourse, the members of the family seeming to avoid each other silently, except when the two elder sisters shut themselves up in their bedrooms to bewail the family woe, and lay it all at the door of their father's infatuation for that girl Maud, with her wicked arts and her vile vanity.

Poor Mary, with eyes so swollen and tear-dimmed from weeping and sleeplessness that she could scarcely see where she was going, was coming down-stairs softly from Maud's room, when she saw through the staircase-window a familiar figure on horseback galloping up the hill to the Castle.

"Tom!" thought Mary, with an involuntary smile of pleasure, succeeded by a bitter sigh. "Can he be coming here again? He said yesterday evening that Maud was no worse, and that he need not come till to-morrow. Here he is, though!"

And poor Mary, with a little throb of gladness at her sad heart, hurried down quickly, and, as she ran, rushed right into Doctor Tom Clarke's arms—which proceeding, instead of evoking a polite apology, drew from the worthy young surgeon a warm embrace, and three kisses so loud and hearty that Mary had only breath enough left to say, faintly:

"Tom, you mustn't!"

"But I must," persisted Tom—then, more gravely, "How is your patient, Mary?"

"No worse, Tom, I think, but very weak," the girl replied, her honest eyes filling again for the twentieth time that day with burning tears; "she won't eat, nor speak, nor do anything but lie there staring at the wall. Even when father went in to see her this morning and spoke so kind to her, she never spoke—only shed a few tears and lay there still, without a stir!"

"Ah, well," said the young doctor, drawing a long breath and smiling all over his face, "we'll soon cure that, Mary, and all our other troubles, please heaven! I've good news, Mary—the best of good news, my dear!"

"About Frank? Oh, father, father, come here!" Mary cried, forgetting all her life-long timidity and deference towards her stern father as she rushed into the little room where old Robert O'Hara sat with his open account-book before him, on the page of which, however, the ink had dried, and his bowed head buried in his hands.

"Oh, father, come and hear! Tom—Doctor Clarke's brought good news! Come and tell it, Tom!"

"The best of good news, sir!" the young surgeon said, grasping the old man's hands. "I was afraid to tell it to Mary—to Miss O'Hara, too suddenly. Frank's safe, sir—safe! The man that murdered Sir George has confessed, and the magistrates have the confession in their hands, and the warrant for Frank's release will come in the morning, or at noon to-morrow, and we'll have him home to-morrow evening, please heaven! Keep up, sir. Get your father a glass of wine, Mary."

"I don't want anything to keep me up!" the old man said, fiercely, in his excitement. "I want vengeance for my son—vengeance, I tell you! And I mean to have it! My son made a felon of, and put in a prison dock, and condemned to be hanged! To be hanged like a dog, sir, my only son—as honest and handsome a young fellow as there is in the county! They were going to hang him—to hang him for murder—my boy that all the county knew wouldn't hurt a hair of a man's head, unless he did it in an honest, fair fight!" and for the very first time during those weeks of bitter shame and suffering the father's grim composure was seen to give way. At the mention of his son's good and lovable qualities his voice was broken by a hoarse sob, and again and again he dashed away the tears from his eyes as he went on, excitedly, "I'll have vengeance, I tell you! I'll make every one that had a hand in shaming my son suffer for it! I've near killed that little girl up stairs, too!" he cried, remorsefully. "I thought she drove my boy mad with her pretty face, and then played him false; and I cursed her for a jilt, and said Frank's blood was on her head, I did! Poor little Maud! Poor Madeline's child—heaven forgive me!"

"Oh, do tell us, Tom dear, how it happened!" Mary interposed imploringly, squeezing the doctor's arm affectionately right before her much-dreaded parent's eyes.

"The murderer was a miserable tramp," replied Tom, "a man who had been a convict some years ago; and, on his return, finding no chance of employment at his old trade—he had been a butcher—in the town where he had lived, he, as so many of those poor wretches do, got into the only society that would receive him—the very worst—and, managing to evade the police from time to time, subsisted in some precarious manner by chance jobs in haymaking-time and so forth. He had been hanging around here, and noticed Sir George several times—so he says—and on the evening of the murder saw him out walking, but had no evil intentions towards him. But, later on, as he was coming up the lane from Avonbank, he met the gentleman and begged sixpence from him. Sir George bade him be off very roughly; and, as he was quite penniless and very hungry, he said he felt enraged, and asked him again in a threatening manner would he give him sixpence or would he not. Sir George turned and struck at him with his walking-stick, and said, if there were a constable within sight of him, he should have several nights' lodgings free of cost. The man said he had a stout ash stick with a thick nob in his own hand, and as Sir George spoke and aimed the blow at him, he aimed one in return—and not one, but three or four. At the second blow on the side of his head Sir George staggered; at the last blow, which caught his temple, he fell like a stone. The man said he never meant to kill him, and when he saw him fall the first thing he did was to drop his stick and run; then, remembering that he was penniless still, he turned back and snatched at the baronet's watch-chain and the purse from his breast-pocket. The watch-guard was too strong to be easily broken, and, the swivel being fastened to the button-hole in an intricate manner, he actually, in his fear and haste, left the watch where it was found, lying beside the body. He never attempted to take the ring or valuable studs either, which, of course, gave the murder the appearance of being one which was committed for anything but the sake of plunder; and, as he fled along in the direction of the Castle here, he opened the purse, put its contents, which were five sovereigns and some silver, into his pocket, and, as he ran through the mill-field by the river, threw the purse into the water. As he emptied the purse, he said, something white like a little book dropped out, but he did not stay to look. He just dropped the ivory pocket-book where poor Frank found it next morning and picked it up, thinking it was Miss St. Crewe's."

"And where's this fellow—this murderer—now?" Mr. O'Hara asked, clinching his hands. "He's got to answer for something!"

"He has gone to answer for all his sins," Doctor Clarke said, solemnly. "He died four hours ago in the infirmary in Carlow. I have been with him since daybreak. He was badly mangled—his right arm and shoulder crushed in a steam mowing-machine on the day before yesterday, and, when they told him he was dying, he sent for me and confessed all, and said he hoped young Mr. O'Hara would forgive him. A poor craven wretch, a miserable outcast, Mr. O'Hara, try to forgive him—he has to stand before another tribunal."

* * * * * *

There had not been for years, there never has been since, in Rathmore, anything to equal the excitement of that day when Frank O'Hara, in an open carriage, with his father on one side of him and Doctor Clarke on the other, and Parnell of Derrybane and a brother-magistrate sitting facing them, drove back from the county prison through Rathmore; every one turned out to look and to cheer, and to welcome and to huzza, and to shake hands.

But the gazers and gossip-mongers had had one excessive disappointment that day. They had neither seen nor heard anything of the golden-haired girl for love of whom Frank O'Hara had so nearly forfeited his life.

Keen beyond words was the disappointment to him who looked so anxiously for her.

"Maud—where is Maud?" he said, hurriedly, scanning the group of welcoming faces on the doorstep; and, detecting instantly the momentary hesitation to reply, he reiterated feverishly, "Where is Maud—Mary, father, where is Maud?"

"She's not very well, Frank—she's not very

Digitized by Google

well," his father said, reluctantly; "she's been fretting so about you, poor thing! But you can go up and see her—can't he, Mary? You've told her, Molly, haven't you? Very well then—go up and let her know.'

Frank had never, since the day of Maud's coming, caught a glimpse of the room which had been appointed to her, and although he had heard many grumbling accounts from Anastasia and Julia of "that girl's ideas and nonsense," and Mary had said that she had "never saw anything like the elegant way" in which Maud did things, he had known nothing further, and fairly stared when his father opened the door and motioned him in.

For Maud, with her artistic perceptions, her dainty tastes, and her clever fingers, had, with such simple aids as she could command, transformed the large, cold, barely-furnished chamber into quite an elegant-looking apartment. She had replaced the hideous skimpy dimity and knitted lace window-drapery with ample sweeping curtains of soft pure white muslin, looped back with broad pale-green ribbon; a large square of deep-green carpet covered the middle of the floor, her easel stood in one window, and on either side the dressing-table and its white muslin and green-ribboned folds stood two tall snowy wicker *jardinières* with bouquets of white roses. There were brackets in ebony and white woods, there were numerous well-bound books, and the walls were hung with half a dozen simply-framed water color sketches; and on the little chintz-covered couch by the window, where the easel, with its green silk cover, stood, lay the fairest picture of all—Maud, in her white dressing-gown, her golden hair tossed back and curling over the pillow, a hectic flush burning through the delicate transparence of her complexion, her eyes fever-bright, her little thin hands clasped tightly over her breast to try to quell its tumultuous throbbing.

But when Frank went over, and, kneeling down, laid his head there, they unclasped themselves, and were folded around his neck instead.

"Oh, my darling," he said, looking at her in a kind of terror, and raising her from her pillow in his arms, "you have been very ill, and no one told me!"

"I have been ill for few days, Frank; I am better now," she whispered faintly; and, as he released her, she fell back helpless.

"Father, Maud's been very ill! Mary, why didn't you tell me?" Frank cried, looking round and addressing his father and sister, who, with their backs scrupulously turned, were gazing out of the opposite window, admiring the scenery and conversing politely like utter strangers.

"Well, we didn't want to give you trouble, Frank," Mary began. "and Doctor Clarke's been attending her every day; and he says it is only a kind of nervous fever, and what he calls 'depression of the vital forces'," said Mary, bringing out the scientific phrase with unconcealable pride in her young surgeon's knowledge.

To Frank, strong in his own vigorous manhood, the sound of those ominous words, the sight of the fevered, beautiful face and the nerveless, wasted form, was simply like a flat of death.

"Why, it has nearly killed her!" he said, slowly, with quivering lips, stooping down to look at her.

"Nonsense—nonsense, Frank!" his father said, coughing and using his handkerchief rather suspiciously. "It hasn't nearly killed her, nor anything like it! She'll live to plague you yet; won't you, Maud? She was upset and near fretted to death; weren't you, Maud? But she'll be all right in less than no time now; won't you, Maud? Listen to me now, little girl. You just get well as fast as ever you can, and we'll get the prettiest wedding-dress that can be made in Dublin, and you and Frank get married. And then he's to take you off to the South of France, to that pretty place you were talking about a while ago, where all the grapes and chestnuts are, you know. Ah, she likes that! She'll marry you for the sake of going off where the grapes and chestnuts grow, Frank. And you are to stay there until you are as well as ever."

He kissed her fondly and left the room.

"Maud, my darling, why are you crying? Don't you like what my father said?" Frank whispered.

"Ah, dear Frank," Maud said, earnestly, "that will never be! Neither long life nor earthly happiness is for me, any more than it was for my mother, or my mother's mother. We have all loved well and truly, Frank; but our love has always brought sorrow with it. My grandmother was happy a little while, my mother told me; she herself was happy just one year—from her marriage to my father's death—and so I may be."

* * * * * *

Not quite the one year of happiness was vouchsafed to fair Maud—Frank O'Hara's beloved young wife, as she was then. The scorching blast of the adversity of those fatal weeks had withered up the fragile blossom of a life whose existence had never at any time taken deep strong root.

The sunshine of the pleasant South where she loved to be, the freshness of the rippling waves of the blue Mediterranean, the ceaseless care and tenderness of her lover-husband—their united influences kept sweet Maud O'Hara month after month lingering amongst those who loved her so on earth; but the time came when they all failed, and when Frank brought her home to fulfill her last wish—not to leave her "amongst strangers."

"I have been living all my life amongst strangers, Frank," she said. "I want to die and be buried near the only one that ever loved me except my poor mother—I want to be buried near you, Frank."

And so they buried Maud in Avonbank churchyard, within sight of the home that was to have been hers, but where her widowed young husband lived alone with his sister Mary and her husband for a few years, and then he met his beloved Maud again, to part no more.

"Poor dear Uncle Frank did not live quite eight years after his wife's death, mother often told me." Doctor Clarke's eldest daughter said to me the other day, as she concluded this tale of thirty years ago, when I had asked her how the last of the name of O'Hara had died.

The State Elections.

THE election in Ohio, October 14th, resulted in the election of the Republican State ticket by about 20,000 majority. The same party elected 21 out of 37 Senators and 70 out of 114 Representatives—giving them a majority of 33 on joint-ballot in the Legislature. Nearly all the business and manufacturing centres of the State give Republican gains.

In Iowa the victory was equally decisive. The Republican plurality over the Democratic candidate for Governor is 75,000; over the Greenback candidate, 100,000; majority over all, 25,000. There was a Republican gain of thirty-four members of the Legislature, and the Greenback representation in the Lower House was reduced to one member. The Tenth and Sixth Congressional Districts, which last year elected Greenbackers, this year go largely Republican. The Seventh, which last Fall gave 200 Greenback majority, now gives 3,800 Republican majority. In the Fifth District the Republican candidate, nominated to fill a vacancy, is elected by 5,000 majority.

The Late Henry C. Carey.

THE foremost American political economist, Henry C. Carey, died in Philadelphia, October 13th, aged eighty-six years. No modern author was more widely known or excited a greater influence upon the thought of the world as to the subject which he specially treated. He was the son of Matthew Carey, a bookseller, and was born in Philadelphia December 15th, 1793. When only eight years of age he entered his father's store to learn the business, and he combined study with business until 1814, when he became a partner in the firm. His father retired in 1821, when he became the head of the firm of Carey & Lea, afterwards Carey, Lea & Carey. The system of trade sales, as a medium of exchange between booksellers, was established by him in 1824. In 1835 he withdrew from business and devoted himself to the study of political economy, and in 1836 he published an essay on the "Rate of Wages," which attracted wide attention. A year or two later the essay was expanded into his book on the "Principles of Political Economy," which was esteemed so highly by Frederic Bastiat, the noted French economist, that he adopted all its leading ideas and promulgated them as his own in his "Harmonie Economiques." This treatise, like the earlier one of Mr. Carey, was an attempt to demonstrate that the laws of economy all tend harmoniously to the progressive amelioration of human life; that there is, therefore, no real antagonism in society, but that the interests of all classes and individuals are essentially congruous and dependent. The publication was the occasion of a prolonged controversy between the friends of the two economists, Mr. Carey being soon credited with precedence, and his work was translated into Italian and Swedish, and noticed in leading politico-economical journals in Europe.

Originally a zealous advocate of free trade, Mr. Carey became convinced that free trade with foreign countries was impossible in the existing state of American industry; that a period of protection must first be gone through with, and that while free trade was an ideal to which the nation should tend, protection was the indispensable means of arriving at it. He was recognized as the founder of a new school of political economy, opposed to the rent doctrine of Ricardo and the Malthusian theory of population. The leading principles of his system are, briefly, that in the weakness of savage isolation man is subject to nature, and that his moral and social progress are dependent on his subjecting nature to himself; that the land gains all its value from human labor; that primitive man, without tools and without science, begins upon light soils and advances to the subjugation of more fertile and difficult regions; that the interests of classes and individuals are harmonious; that there is a constant tendency to increase in the wages of labor, and to diminution in the rate, though to increase in the aggregate, of the profits of capital. In 1838 Mr. Carey published "The Credit System in France, Great Britain, and the United States," a work of profound erudition; in 1848, "The Past, the Present, and the Future," a production that was accepted as one marked by great vigor and originality of thought, written to controvert the doctrines of Ricardo, Malthus, and others. Succeeding works were those on "The Slave Trade," 1853; "Letters on International Copyright," "French and American Tariffs," "The Harmony of Interest," and several others. He was also a contributor to many newspapers, writing almost exclusively on subjects connected with political economy. His "Miscellaneous Works" were published in one volume in 1869.

In his old age he still enjoyed excellent health until very recently, his latest work, "The Unity of Law," having been written in 1873, when he was in his eightieth year. He lived to see his principal writings translated into German, Russian, French, Italian and Spanish. His eighty-third birthday was celebrated in Philadelphia by a feast, at which a number of friends who had attained a high rank in different fields of labor congratulated the veteran student, thinker, and writer upon the honor which he had achieved, and the hosts of friends and admirers he had secured in many countries of the world.

Personally Mr. Carey was a man of most prepossessing manners and appearance. His benevolent face, his piercing black eyes and silver-white hair made a welcome picture for years in the most enlightened society of Philadelphia. His house has received many men of letters and distinguished painters. He was an amateur in fine arts, and possessed an interesting collection of paintings. His library, too, was large and contained almost every known work of value on subjects connected with political economy.

SCIENTIFIC INTELLIGENCE.

The Speed of Carrier-Pigeons appears to depend as much on the clearness of their sight as on the strength of their wings. In an experiment recently made with some Berlin pigeons, on a clear day, a distance of over 300 miles, from Cologne to Berlin, was accomplished in five hours and a half, or at the rate of nearly sixty miles an hour, while the most expeditious of a group let loose on a cloudy day took twelve hours to reach Berlin. It is not instinct, but sight, by which the carrier pigeon guides its flight.

The Small Nut Tomatoes are much used in Mexico in the form of syrup as a remedy in diseases of the respiratory organs and in bronchitis. The ripe fruit is carefully plucked and about twenty are cut up and thrown into a quart of water and are boiled to half the volume. The juice is expressed through linen, and about 500 grammes (one pound) of sugar is added and the whole boiled to a syrup. The result is a slightly acid syrup, agreeable to the taste and valuable for the purposes indicated above.

In Exploring the hulk of the *Vanguard* which was run into and sank off the coast of Ireland, dynamite and electricity were employed. Immediately after the explosion the surface of the water was covered with the floating bodies of vast numbers of fish, so numerous that the vessel performing the operation could not gather half of them. It is proposed to make use of this method to capture shoals of herring, relying upon the telegraph to announce the approach of the fish, so that the dynamite may be ready to be discharged at the proper time.

The Authorities of New Zealand have caused a comparison to be made in the intelligence of five children of natives and five of English parentage. The examination was in arithmetic, geography, writing, spelling and reading. In dictation the whites triumphed, but in arithmetic it was another affair; out of thirty problems, the natives solved twenty-two and the English fourteen. In grammar, a slight advantage in favor of the natives; in reading, the English ahead; in writing, the natives excelled. On the whole, the competition was about equal.

The Tshudis of Siberia.—One of the assistants on Professor Nordenskjöld's expedition has described in a Swedish journal a peculiar race, called the Tschudi, inhabiting the northeastern part of Siberia. They closely resemble the Greenlanders, are small, active, have a yellow skin, with coal-black eyes and hair and a stolid expression of face. Their women are tattooed in the face. On their intercourse with the crew of the *Vega* they were a little shy, but curious, like penguins, and willing to help. Their language is a great puzzle to philologists, and on this account was closely studied by Professor Nordenskjöld, and a collection of 300 words was made.

Two Englishmen, Henry F. Tozer and T. M. Crowder, have recently ascended Mount Argæus, the highest peak in Asia Minor. At a height of nearly 10,000 feet they reached the base of the final peak, which rose fifty feet higher, and was perpendicular and wholly inaccessible. The view was magnificent, but the most remarkable feature was the mountain itself, for the lofty pinnacles of porphyry which rose around and beneath them, veritable needles, were as wonderful a sight as could well be conceived. They found rock dwellings excavated close to the summit, and these chambers were clearly artificial, for the marks of the chisel were evident along the roof and walls, and there were niches cut in the sides.

New Use of Glass.—Dr. F. Siemens, of Dresden, has invented a new kind of glass produced by subjecting the molten mass to high pressure during the operation of annealing. The product differs from the De la Bastie glass in not being explosive, while it equals that article in resisting the action of heat and cold and concussion. Some of the English tramways have been experimenting with this glass by casting sleepers three feet long, four inches wide and six inches deep, which are molded to fit accurately the rail. Bearing plates are placed under the joints, and the rails are attached to them. Such a sleeper, resting on supports thirty inches apart, breaks with a weight of five tons. Glass, unlike wood, is practically indestructible by moisture, and is, of course, not so heavy as cast-iron. The glass sleepers cost about the same as iron ones.

Chlorine Decomposed.—Professor Victor Meyer, in association with his assistant, Karl Meyer, has been for some time occupied with the behavior of elementary substances, at very high temperatures, in the laboratory at Zurich. The elements oxygen, nitrogen, sulphur and quicksilver were exposed to the temperature of 1570°C in a peculiar apparatus invented by Professor Meyer, but they withstood the test, and disclosed no properties differing from theory. Very different results, however, were arrived at with chlorine. This gas was so split up that out of two molecules of the supposed element three new molecules were produced. One molecule was supposed to be oxygen, according to tests applied to it, and the other two Professor Meyer proposes to call murium. According to this experiment chlorine is really murium oxide and not an element. Similar results were obtained with iodine and bromine, two bodies very analogous to chlorine in all their chemical properties.

Curare as an Anæsthetic.—At the last meeting of the Boston Microscopic Society, Dr. A. N. Blodgett read an interesting paper on curare, the South American arrow poison, which is now used to render lower animals unconscious during surgical operations. Curare produces insensibility without interfering with the functions essential to life, and supplies a need that the medical profession have long felt, in that it does not require watching when administered, as do ether and chloroform. The exact derivation of curare does not seem to be definitely known, but it is said to be prepared by scraping the young bark of two plants of the same species so that from which strychnine and Indian hemp are derived. The bark is exhausted in water, mixed with other vegetable substances, and evaporated until it forms a thick paste. It is much more energetic in its action on some classes of animals than on others. Birds are more profoundly affected than quadrupeds, and reptiles much larger than birds. It is generally administered hypodermically in exceedingly minute doses. It is said to be a remedy for hydrophobia when given in heroic doses.

The French Association for the Advancement of Science.—The French Association for the Advancement of Science met at Montpelier on August 28th. The President this year is M. Bardoux, the late Minister for Public Instruction. He devoted his opening address entirely to generalities on the necessity of providing a good education for the young, but made no allusion to the School Bill proposed by his successor, M. Ferry, which so much agitates the public mind at the present time. There were no addresses of the chairmen of sections, so that it is difficult to have an idea of the opinions of the members on the topics of the day. The most elaborate experiments on electric lighting were shown, together with a display of the apparatus employed in research and bearing upon the history of the subject. The telephone in all its forms was also exhibited and commented upon. The local botany was expounded by M. Charles Martins, a brilliant writer and the director of the Montpelier Botanical Garden. M. de Quatrefages, the opponent of Darwin and Haeckel, gave an interesting account of the Congress of Anthropology recently held at Moscow. Montpelier was the birthplace of Auguste Comte and the scene of the discovery of bromine by Ballard.

PERSONAL GOSSIP.

CANON SPARKE, of Ely Cathedral, England, lately deceased, leaves $800,000 to his heirs.

ALDERMAN SIR FRANCIS WYATT TRUSCOTT has been unanimously elected Lord Mayor of London for the ensuing year.

THE alumni of Trinity College have erected a headstone at the grave of "Professor Jim" Williams, janitor of the college for over forty years.

THE Count de Paris has written a letter to the Count de Chambord declaring that he remains faithful to the fusion between the Orleanists and the Bourbons.

C. W. STEVENS, a Dartmouth Scientific School graduate of 1877, is assistant astronomer at the national observatory of the Argentine Republic of South America.

THE executors of the estate of Oakes Ames have filed a petition to the Bristol County Probate Court to sell $1,300,850 worth of real estate of deceased, to pay the charges and drafts.

IN JANUARY next a postage-stamp of a new design is to be issued in Great Britain. It will bear a portrait of the Queen as she appears in mature age, and not, as now, a likeness of Her Majesty when she had just entered womanhood.

THE death is announced of the Rev. Gideon H. Perry, D.D., LL.D., at Hopkinsville, Ky. He was the last surviving kinsman contemporary of Commodore Perry, and was born under the same roof at Kingston, R. I., October 12th, 1800.

MOSES WILLIAMS, who was present at the unveiling of the "Quincy Statue," at Boston, is the only living member of the City Council under Quincy's administration as Mayor, and also the only living man who bought original lots each side of Quincy Market.

M. VIOLLET-LE-DUC was a man of nerve, and showed it even in the last great extremity of life. Apoplexy caused his death, and when the first blow fell he drew out his penknife and attempted to cut a vein; his brain and hand were still before he could accomplish his purpose.

HENRY H. FARNUM, President of the National Bank of Port Jervis, N. Y., and one of the wealthiest men in Orange County, died October 14th, after a short illness. He was 71 years of age, and leaves a fortune estimated at $1,000,000 to his widow, to whom he was married but six days.

THE Unitarians of Hungary, who number about 60,000 souls, have just commemorated the martyr death of their founder, Francis David, which occurred three hundred years ago. Delegates were in attendance from England. Bishop Ferencz, the ecclesiastical head of the church, delivered an address on Francis David.

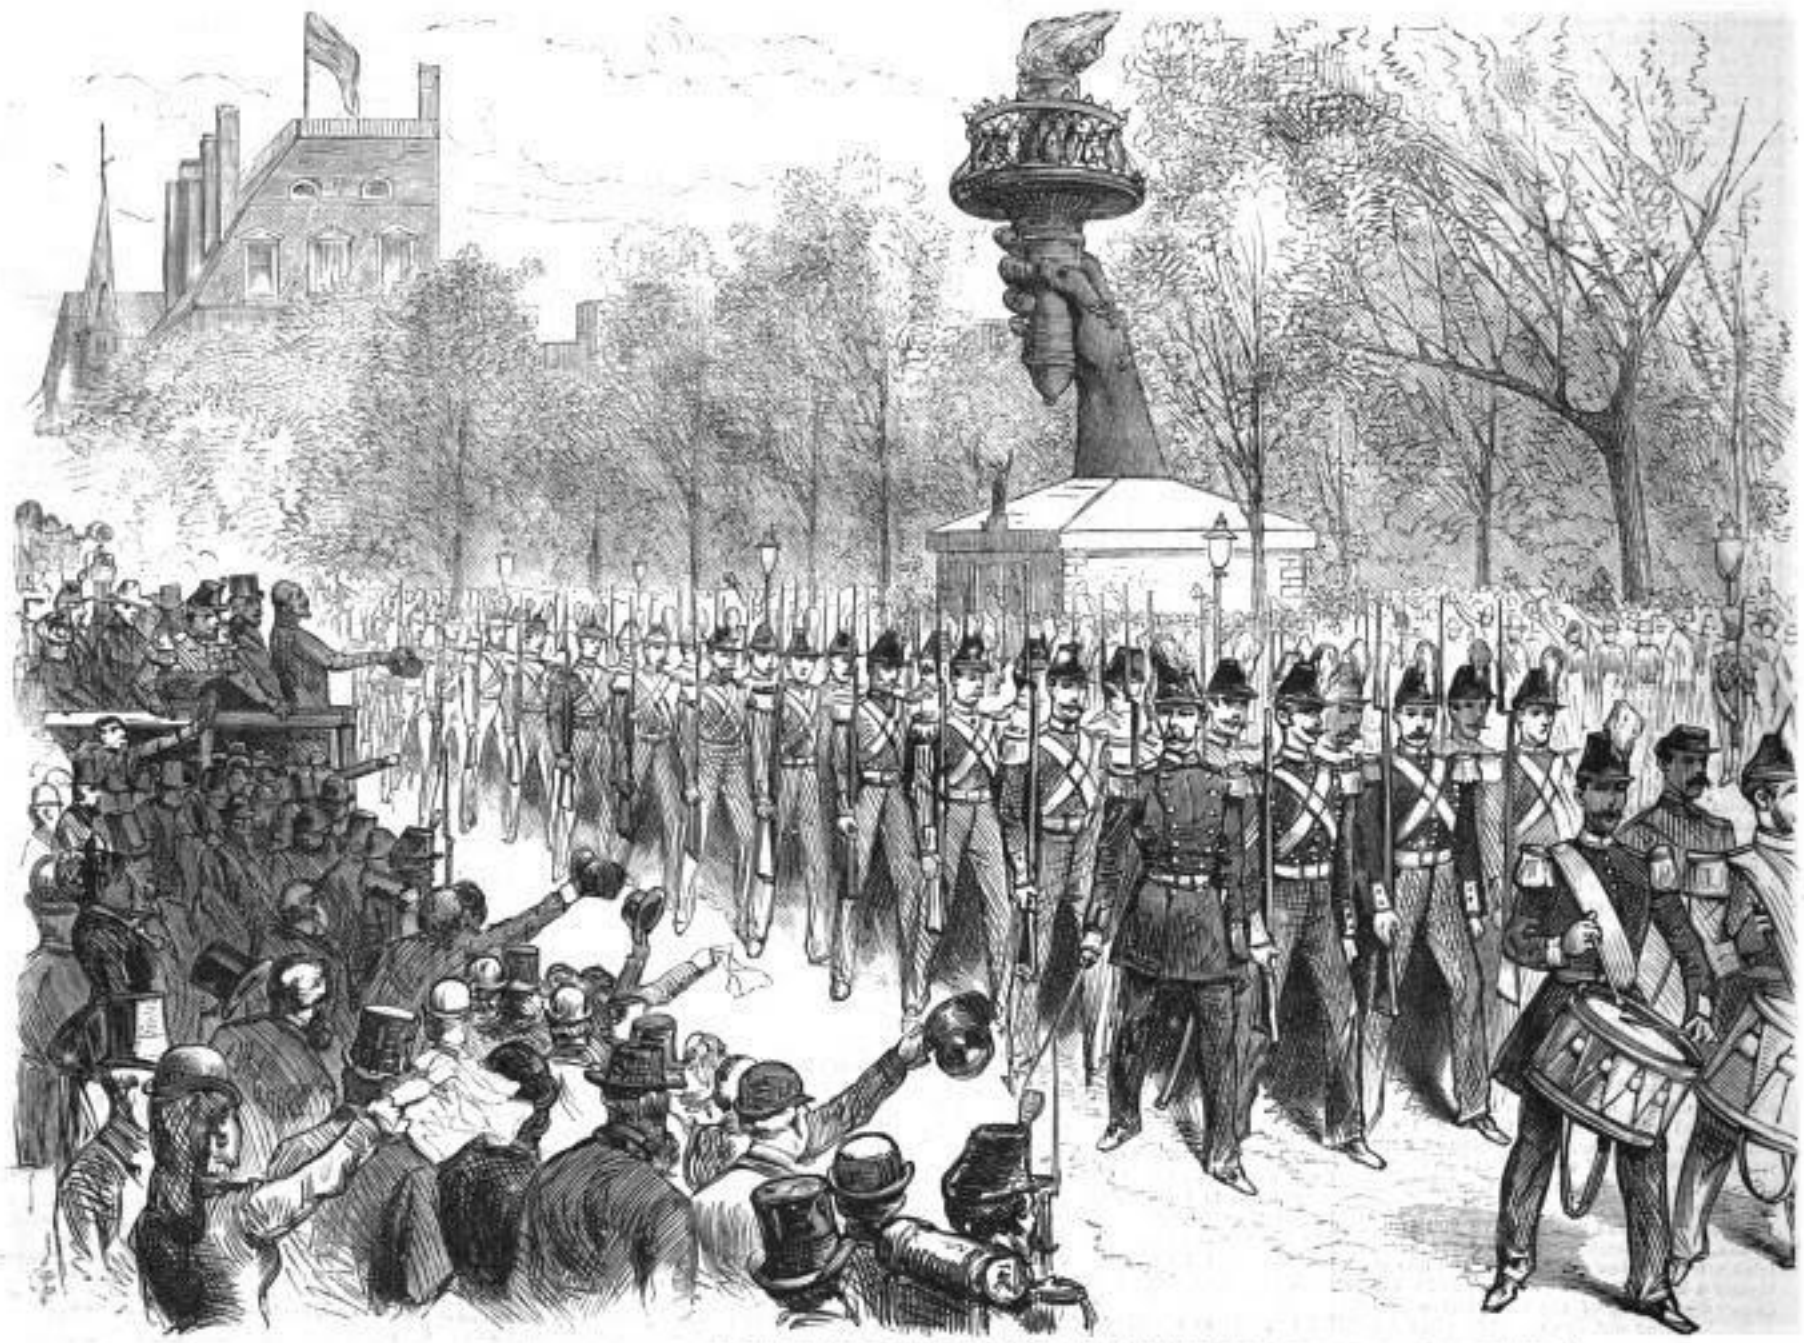
DR. F. JULIUS LE MOYNE, one of the oldest citizens of Washington County, Pa., a physician well known throughout Western Pennsylvania, and somewhat famous for his efforts to have cremation take the place of burial in the ground, died at his home in Washington, Pa., October 14th, in the eighty-second year of his age.

ST. GEORGE'S CHAPEL, Windsor Castle, has been reopened for renovation. A beautiful memorial of the late King of the Belgians has been placed in the chapel by the Queen, bearing the inscription, "Erected by Her Majesty Queen Victoria, in loving memory of Leopold, the first King of the Belgians, who was as a father to her, as she was to him a daughter."

FRIEDRICH BEMBERTTI, who took a prominent part in the 1848 revolution in Austria, and at whose instance the Jesuits were then expelled from Gratz, has committed suicide at the age of seventy-four. He suffered eight years' imprisonment after 1848, was a disciple of Ronge, and had latterly been absorbed in the study of the revolutionary history of all countries.

ONE of the veterans of the New York Post Office, Julius Meirs, died October 13th. Mr. Meirs was over ninety years old, yet his mental faculties were unimpaired. He knew most of the modern languages, and had served in Napoleon's army, participating in the retreat from Moscow. He was Professor of Modern Languages at the Annapolis Naval Academy before he became connected with the New York Post Office in 1862.

THE King of Siam, appreciating the results of the English education of his childhood, is giving the same advantages to his own children. Princess Cevili, his bright, clever little ten-year-old daughter, receives from an accomplished English lady regular instruction in French, English and German, music, dancing and drawing. The Queen, her mother, takes great interest in the lessons, and is so pleased with foreign ways that she talks of adopting the European dress.



ON October 13th, His Grace the Most Rev. John Baptist Purcell, D.D., Archbishop of Cincinnati, celebrated the forty-sixth anniversary of his elevation to the episcopacy of the Roman Catholic Church, having been appointed by the late Pope Gregory XVI. to succeed Bishop Fenwick as Bishop of Cincinnati, and consecrated to that high office on the 13th of October, 1833. It is only a few months ago—the 21st of May last—that the venerable archbishop celebrated the fifty-third anniversary of his ordination to the priesthood.

SOME accounts allege that there were 30,000 persons present at the great anti-rent meeting at Navan, Ireland, on October 12th, in honor of Mr. Charles S. Parnell. Mr. Parnell was most enthusiastically received. Scores of triumphal arches spanned the streets. During Mr. Parnell's speech there were shouts in favor of shooting landlords. Messrs. Sullivan, O'Connor, Power, and O'Sullivan also spoke. The last named declared that shooting landlords could do no good in the future, whatever it might have done in the past.

THE Archduchess Christina is to wear a bridal veil of Brussels point-lace worked with the arms of the different kingdoms into which Spain was once divided. It is the gift of her aunt, the Queen of the Belgians. The young lady's bridal dress is of silver cloth embroidered in garlands with sparkling white jet. Many of her new costumes are copies of the fashions of the time of Louis XIII. One of them is of blue embossed velvet and opal-colored satin trimmed with fringes of small pearls intermingled with silver lace. Her cambric handkerchiefs are worked with the arms of Spain and Austria in gold thread.

MR. PARNELL, the present leader of the Irish people, is English by descent, his family having settled in Ireland in the reign of Charles II. The celebrated poet, Parnell, Archdeacon of Clogher, the friend of Pope, Addison and Swift, was an ancestor of his, as were also Sir John Parnell, Bart., M.P. for Queen's County and Chancellor of the Exchequer, and Sir Henry, M.P. for Rathleague, the celebrated commentator on the penal laws. Mr. Parnell's mother is an American, the daughter of one of our naval officers, and resides now with her daughters in New Jersey, passing the Summer usually at Newport. He was educated at Cambridge University, is only thirty-three years old, of very gentlemanly appearance and manners, and, though not eloquent in the usual sense, is vigorous and clear in speech. Though his landed estate yields only £1,400 a year, he is rich in American and other securities.

NEW YORK CITY.—FALL REVIEW OF THE FIRST DIVISION OF THE NATIONAL GUARD, OCTOBER 15TH.—THE OVATION TO THE GATE CITY GUARDS OF ATLANTA, GA.

FALL REVIEW OF THE NATIONAL GUARD, S. N. Y.

THE regular Fall review of the First Division of the National Guard, State of New York, by the Governor, took place on Wednesday afternoon, October 15th, at the Worth Monument on Fifth Avenue. A large stand was erected near the monument for Governor Robinson and staff, and guarded by a detachment of the Seventh Regiment. It was estimated that there must have been at least 30,000 men, women, and children packed in the square surrounding the stand. Travel in the streets was obstructed, and it was a difficult matter for the police and the sentinels on duty to keep clear a passageway wide enough for the march of the troops.

The Gate City Guards of Atlanta, Georgia, occupied a position in advance of the division. In a column of fours, twenty-file strong, they moved down the avenue. To avoid the wagons, which at this time had not been removed from the west side of the park, they moved to the right and left oblique, and changed from column of fours to double-file with such military precision as to call forth consisting of the Seventh Regiment, 10 companies of 24 files; Sixty-ninth Regiment, 10 companies of 16 files; the Eighth Regiment, 8 companies of 16 files, wearing the new gray overcoats issued by the State, and Battery B. The First Brigade, General Ward, followed, consisting of the Twenty-second Regiment, 10 companies of 20 files; Fifth Regiment, 8 companies of 12 files, whose band and bugles played different tunes at the same time; Twelfth Regiment, 8 companies of 16 files, also with the new overcoats, and Battery K. General Vilmar came next with the Second Brigade, which comprised the Seventy-first Regiment, 8 companies of 16 files, whose drum corps was the only one to salute the colors in passing; Eleventh Regiment, 9 companies of 16 files, wearing helmet hats with cavalry plumes; Ninth Regiment, 10 companies of 20 files, and the Third Regiment of cavalry.

In the evening Governor Robinson was serenaded at his hotel by a political club, and in a brief speech he complimented the National Guard for its excellent appearance and efficiency.

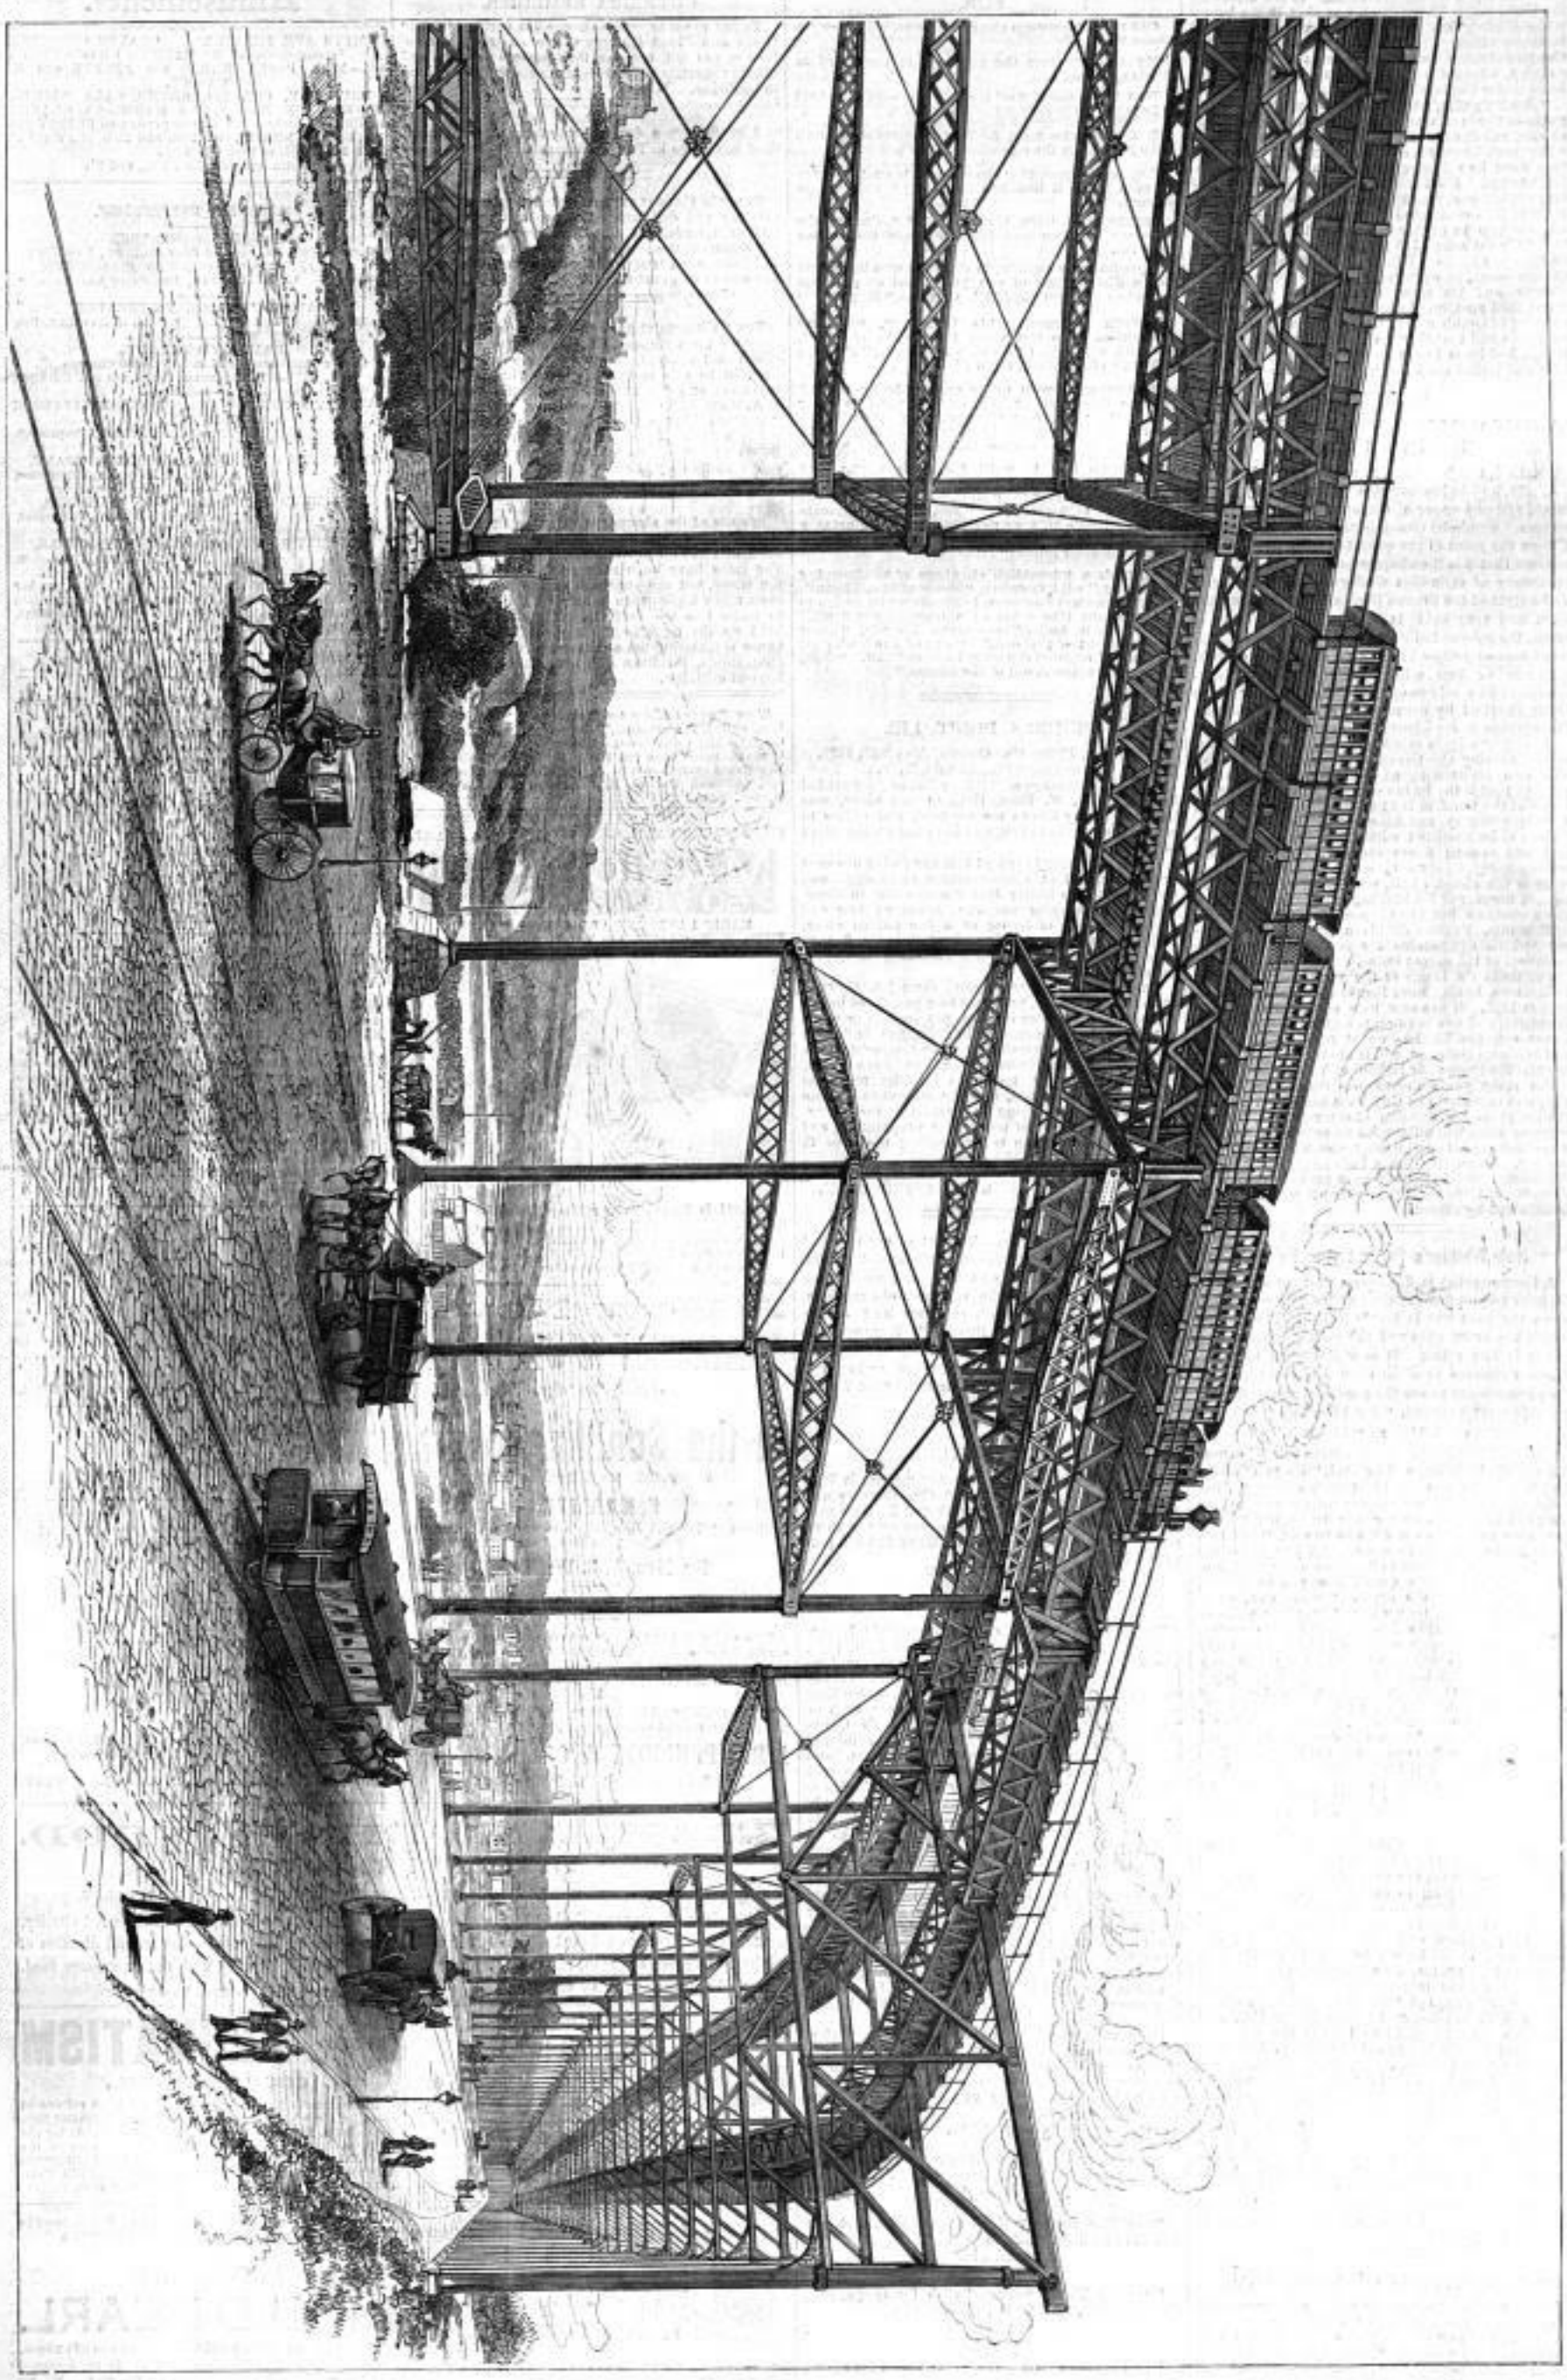
repeated bursts of applause from the spectators. Even the tall white plumes upon their caps seemed to sway from side to side in unison. They were given a position in front of the grand stand.

The military procession was preceded by a squad of mounted police. General Shaler, commanding the Division, followed, his staff taking position, mounted, next that of the Governor, while he rode at the Governor's side. After the Separate Troop of Cavalry and the Gatling Battery came the Third Brigade, General Varian,

JOSEPH RANKIN, THE COURIER WHO BROUGHT THE NEWS OF THE MILK RIVER DISASTER.

NEW YORK CITY.—NEW HALL OF THE DELTA PSI FRATERNITY ON TWENTY-EIGHTH STREET.—SEE PAGE 146.

THE UTE MASSACRE.



MAJOR THOMAS T. THORNBURGH, of the Fourth United States Infantry, who was killed by the Ute Indians, at Milk Creek, Col., on Monday, September 29th, was appointed to the Military Academy from his native State, Tennessee, July 1st, 1863.

THE LATE MAJOR THOMAS T. THORNBURGH, U. S. A.—FROM A PHOTOGRAPH BY FULLMAN.

In 1867 he graduated and entered the army as second lieutenant in the Second Artillery; three years later he was commissioned first lieutenant, and in 1875 he was transferred to the Pay Department of the Army as major. After serving some time upon the staff of General Crook, he was permitted to make an exchange with Major G. B. Thomas, of the Fourth Infantry, and was given the command of Fort Fred Steele, Wyoming Territory. He was a very active and powerful man, fully six feet two inches in height, a magnificent

Digitized by Google

rifle shot and a daring horseman. In the attack by the Utes, Major Thornburgh was shot in the breast while leading his men in a counter-charge, and instantly killed. His body lay where it fell until Captain Dodge, with his company of colored cavalry, effected a union with the remnant of the band under Captain Payne.

"Joe" Rankin, who acted as Major Thornburgh's guide in the fatal march, is about thirty-five years of age, and five feet eight inches in height. He has a thorough knowledge of the country. After the first fight he volunteered to go in search of reinforcements. His favorite horse, a beautiful and large black one, was killed during the engagement. He was thus compelled to take a strange animal. On the trip he exchanged horses three times, and made the distance—165 miles—in a little less than twenty-four hours. When General Crook heard of the massacre, he engaged "Joe" to guide General Merritt and his relief command to the hastily intrenched position of Captain Payne. Early in the evening of October 5th, Merritt reached the little camp, to find that Captain Dodge and his colored troops had literally cut their way through the hostiles and joined the beleaguered Payne.

A NEW COLLEGE ENTERPRISE—THE DELTA PSI HALL.

AMONG the buildings recently erected in this city, an odd-looking structure in Twenty-eighth Street attracts especial attention from curious observers. Symbolic Greek letters and a large letter T upon the point of the quaint-looking peaked roof indicate that it is the chapter-house of the Delta Psi Fraternity of Columbia College. The building is in the style of the French Renaissance, three stories high, and very bold in design. It is entirely of brick, the substantial parts being of red and all the trimmings of yellow brick, after a pattern seen in only one or two other buildings in New York. There are no windows on the third story, their place being supplied by ornamental brick-work. Upon the cornice is a pediment supported on pilasters and bearing a large stone owl, and underneath is a shield bearing the Greek symbols for Delta Psi. The sign referred to as the letter Tau upon the pointed roof is the badge of the fraternity. The interior of the building is fitted for all the purposes of a college society, and none but members of Delta Psi are to be admitted within its portals. On the first and second floors are four handsome club-rooms, finely finished in wood, and on the third story is the chapter-hall, with an open rafter ceiling. In the rear of the building are symbolic stained-glass windows, but the chapter-hall is lighted only from within. Further details in regard to the building and its equipments are made known only to members of the secret order.

The Delta Psi is one of the youngest of college fraternities, having been founded at Columbia College in 1847. It has now nine chapters and 1,800 members, and has been represented in eighteen different colleges. It has chapter-houses at Trinity and Williams Colleges, and is about to build one at the Sheffield Scientific School at Yale.

For many years the various fraternities having chapters in New York City have had under consideration plans for building chapter-houses, but the expense attendant upon such an enterprise has always deterred them from undertaking anything definite. Should the Delta Psi's experiment prove successful, Psi Upsilon will soon provide itself with a similar building, and the example will no doubt be followed by others.

How Whittier's Portrait was Painted.

A Boston artist is finishing a portrait of John G. Whittier from a fine picture painted four years ago, when the poet was in feeble health. The way by which the artist obtained the poet's consent to a sitting is interesting. It is well known that Mr. Whittier dislikes to sit for even a photograph, but the painter went to see the poet, telling him frankly the object of his errand. "But I don't want a picture of myself," said Whittier. "I know it," answered the artist, "but 300,000 people want it." This nonplussed Mr. Whittier, and he said, "Do you believe it? Why, I never thought of such a thing." The artist wished to appoint the day for a sitting, asking the poet to suit his own convenience, but the repugnance was again stirred, and he said, "But I do not want to sit. There are enough pictures of me now, and who will care to preserve any painting of me?" "That's not a question for you to decide, Mr. Whittier," said the artist. "Some day, when it will be too late, they will get together some of these old photographs floating about the country, which you now despise, and they will patch together a painting which they will hand down to posterity as Whittier, something that will not look any more like you than a crow. And you ought not to allow it." This presentation of the case staggered Mr. Whittier, and he said: "Why, I never looked at it in that light before." So the day was appointed for a sitting. The day came, but not Whittier. Two months after the artist answered the studio bell, and Mr. Whittier stepped in with the salutation: "Well, are you ready for me?" Fortunately, the artist had a canvas prepared, and he answered: "Yes; sit right down." Mr. Whittier was restless and silent and remained about three-quarters of an hour. The next time he staid longer, but, as he is not communicative, the man of the brush worked silently, not wishing to annoy the sitter. At the next sitting Whittier was interested in the work, and left his chair frequently to inspect it. This time he remained contentedly three hours, and talked freely. Although he always avoids any mention of his poems, the conversation drifted that way, and, among much interesting conversation, he gave the origin of "Maud Muller." He was driving with his sister through York, Me., and stopped at a harvest-field to inquire the way. A young girl raking hay near the stone-wall stopped to answer their inquiries. Whittier noticed, as she talked, that she bashfully raked the hay around and over her bare feet, and she was fresh and fair. The little incident left its impression, and he wrote out the poem that very evening. "But if I had had any idea," he said, "that the plaguy little thing would have been so liked, I should have taken more pains with it." Yes, and probably robbed it of its tender beauty, and spoiled it. To the inquiry as to the title, "Maud Muller," he said it was suggested to him, and not a selection. It came as the poem came.

THE TORTURES OF NEURALGIA.

These are being mitigated, and in a large number of cases wholly removed, by the use of "Compound Oxygen," the new revitalizing agent which is now attracting such wide attention. Our "Treatise on Compound Oxygen" sent free. Drs. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

FUN.

CAN rivalry between churches be called a steeple-chase?

MY son, emulate the mule; it is backward in deeds of violence.

WHY is the vowel "o" the only one ever sounded?—Because all the others are inaudible.

THE man who most feelingly recognizes that all flesh is grass is the one who has the hay fever.

YOU never know that the country is on the verge of ruin until it becomes necessary to choose new officers.

STOVES that have been cared for during the summer vacation now begin to show themselves grateful.

MOTHER (very sweetly, to children who have just had a distribution of candy)—"What do children say when they get candy?" Chorus—"More!"

FATHER (addressing his little boy, who has brought home a bad mark from school): "Now, Johnnie, what shall I do with this stick?" *Johnnie:* "Why, go for a walk, papa?"

DIALOGUE between uncle and nephew: "But I tell you, dear uncle, this woman is not like other women." "Tut, tut, nephew, they are all precisely alike—as a general thing; and as for particular cases, they are worse still."

LIVERPAD had been ill for some weeks, and Jones, meeting Smith, asks, "How's Liverpad, Jones? Any better?" "Well," says Smith, "his physician is hopeful?" "Yes, yes," responds Jones; "that's all very well; but is his undertaker hopeful? That's more to the purpose! Jones is such a peculiar fellow."

"HERE'S a tollerablish chaalnge o' weather fur the better," said Corydon, "come at last. Notwi'standun the wet Zummer, I expects we be gwion to ha' zummut like a bit of a harvest after all." "Don't thee holler," answered Thyrsis, "afoor thee bist out o' the' ood." "Out of the 'ood, dost thee say?" retorted the other husbandman. "Naa, mate: thee mane'st out o' the waaster."

FIGURES DON'T LIE.

SPARTA, Union Co., Oregon, May 30th, 1879.
BUTTER IMPROVEMENT CO., Buffalo, N. Y.:

Sirs—The package of "Butter Maker" forwarded by you to W. W. Ross, Esq., of this place, was handed over by him to me for trial, and orders to report the results to you, as I have the management of his dairy.

I have the honor to report that one gallon of sweet cream churned at a temperature of 55 deg., and treated with the Butter Maker according to directions accompanying package, produced four and one-half pounds of butter of a fine golden color, and firm, waxy texture, and of delicate flavor; time occupied in churning and gathering the butter, twenty minutes.

One gallon of sweet cream, same lot, churned without the powder, produced four pounds of butter several shades lighter in color, not so firm or waxy in texture, but no perceptible difference in flavor; time occupied in churning, at same temperature as above, forty-five minutes. The fine, even grain, rich, golden color, increased quantity from the same amount of cream, and the difference of time occupied in the churning and gathering the butter, are greatly in favor of using your preparation, and I have no hesitation in recommending the same to my friends and the public generally.

Very respectfully, your obedient servant,
GEO. W. EASTERBROOK.

BURNETT'S KALLISTON.—No part of our physical organization is more worthy of careful attention than the skin. Its delicate structure and mechanism render it sensitive to the slightest obstructions, whether arising from sunburn, from dust, or the changing air and wind. BURNETT'S KALLISTON is prepared expressly to remove all these; and the result of its use is a perfectly healthful action, and a softness and loveliness of texture that health alone will induce.

MONEY MAKING.

MONEY.—For simplicity in money making in Wall Street, write CHAS. FOXWELL & CO., Bankers and Brokers, 115 BROADWAY, NEW YORK. By their new system it gives the $10 to $100 operator the same advantages as heretofore the $1,000 or $10,000 purchaser enjoyed.

BEWARE OF A SWINDLE.

THE dry process of copying, JACOBS'S LITHOGRAM, was patented in Canada, July 16th, 1879. The records of the patent enabled unscrupulous parties, formerly employed by Mr. Jacobs, to make imperfect imitations of the Lithogram, which they advertise under a dozen different names, such as "Hektograph," "Centregraph," "Gans's Copygraph," "Transcript," "Ziebers's Multiplying Slate," "Nixon's Chevrograph," "Copygram," and various "grams" and "graphs," all being direct infringements on "JACOBS'S LITHOGRAM." These impostors claim no rights, or patent, but simply make every possible effort to sell their counterfeits before the United States patent, about to be issued to Mr. Jacobs, is out, and prosecution commenced.

The public is warned that time and money will be spent freely in finding out every person owning one of these infringements, and they will be vigorously prosecuted under the patent law. Besides being liable to penalty of infringement, all these imitations are much inferior to the genuine JACOBS'S LITHOGRAM, which has been greatly improved by continued and costly experiments. JACOBS'S LITHOGRAM is now in use by the United States and Canadian Governments, and for sale by reputable houses throughout the United States.

Its universal use by department officials, professional and business men, corporation offices, institutions, colleges, schools, etc., in both the United States and Canada, is proof sufficient of its remarkable merits. For further caution see New York *Herald*, September 23d. J. M. JACOBS,
Patentee and Manufacturer, Montreal, Canada,
Headquarters for United States—31 Milk Street and 3 Arch Street, Boston, Mass.
See advertisement on outside page of this issue.

TAKE HOP BITTERS three times a day, and you will have no doctor bills to pay.

HALFORD TABLE SAUCE—Relish for soups, fish, steaks, chops, cold meats, gravies, etc.

HOP BITTERS is a preventive and cure for ague; it is your own fault if you have it.

CUTICURA REMEDIES.

THESE great remedies succeed in curing all Skin, Scalp and Blood Humors where all others heretofore in use fail, because they possess new and original properties never before successfully combined in medicine.

A FEW CENTS a day will pay for a policy of accident insurance in THE TRAVELERS.

BAKER'S CHOCOLATE, so noted for its nutritive, salutary and delicious qualities, hardly needs any further indorsement after the awards given for its excellence at the leading expositions in this country and Europe. A trial is all that is needed to convince any one of its great merit.

THE California vintage this season is estimated at twelve million gallons. The choicest of all the Pacific Coast wines, those of the Sonoma Valley, are brought to this market and distributed both as sparkling and still wines by the well-known house of A. WERNER & Co., 308 Broadway. Werner & Co.'s "AMERICA" Extra Dry Champagne has given the house a national reputation, which is worthily sustained by the other standard brands of pure native wines which they are now offering.

IN spite of the sharpest rivalry the ST. NICHOLAS Hotel, of New York, has retained its pristine importance, and has the most powerful hold on the public. The rates have been reduced in accordance with the times, but the standard of the hotel has been even made higher than before. A restless ambition to make this the perfection of modern hotels has kept up the rank to the highest, and no public house is more quoted at home and abroad. Table, apartments, furniture and attendance are simply beyond criticism.

EDIFYING, ENTERTAINING, AND CHEAP READING FOR EVERYBOD.

Frank Leslie's

SUNDAY MAGAZINE.

THE BEST AND CHEAPEST SUNDAY MAGAZINE PUBLISHED

"This large and profusely illustrated Magazine, as conducted by Charles Force Deems, D. D., is one of the most attractive and justly popular journals of the day, containing attractive, useful and interesting reading for everybody. One hundred and thirty large pages, and every one full of interesting reading and illustrations."—*Illustrated (St. Louis) Magazine.*

"FRANK LESLIE'S SUNDAY MAGAZINE, the Rev. Dr. Deems, editor, is to hand, but not on our table, for its popularity is such that it does not lie anywhere until it has gone the rounds of our home-circle. The 'Home Sermons,' by the editor, is worth a year's subscription."—*Christian Advocate, Nashville, Tenn.*

"Like wine it improves with age. It strikes us the best number thus far issued. We commend it to every father. It is indeed a capital family publication—just the thing needed in every household where God is reverenced, and pure, healthful literature is enjoyed. It is an educator, a friend, a companion that will not disappoint, weary or betray you. Get it. It is of extra size, each number contains 128 pages, and is very copiously illustrated."—*The Morning Star, Wilmington, N. C.*

"We have always thought this a good magazine, but we think the present number exceeds, in fine articles and papers, many of the preceding ones."—*Baltimore (Md.) Presbyterian.*

THE NOVEMBER NUMBER NOW READY.

OF

Frank Leslie's

CHIMNEY CORNER,

Issued Monday, Oct. 27th.

"THE WAGES OF SIN"

Is a story full of movement and life; with scenes of great pathos and tenderness. It is sensational, but is altogether free from the stale tricks of sensationalism. It is sensational as real life is, with its tragedies, its temptations, its sins, its struggles, and its love "stronger than death."

"WON AT LAST"

is a novel appealing to the sympathies and interest of every young reader. The trials of a wife, under circumstances of peculiar difficulty, are here depicted in a way that cannot fail to enchain the reader from the first line to the last.

ISSUED MONDAY, OCTOBER 27TH.

For sale by all newsdealers. Price **10** cents. Annual subscription, **$4**, postpaid.

Horsford's

SELF-RAISING

Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

Dr. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahnemann Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

If your grocer has not got it send a three cent stamp to the manufacturers for a sample.

TALKS ON TIMELY TOPICS.

ILLUSTRATED INTERVIEWS WITH EMINENT PUBLIC MEN.

SECRETARY SCHURZ ON THE INDIAN QUESTION.

His Recent Experiences among the Brule Sioux.

What he Says of the Indian Police.

"The Wagon Experiment has Proved Successful."

Result of the Land-allotment Scheme.

THE SECRETARY PREPARING A REPORT ON THE UTE TROUBLE.

THE Department of the Interior at Washington, over which Mr. Carl Schurz presides with such signal and successful ability, is a very imposing edifice, modeled after the Parthenon at Athens, and is of the same dimensions. It is pure Grecian Doric, and measures 453 feet from east to west, and 331 feet from north to south, while it has an elevation of 75 feet, surmounted by an *acroteria*. The building contains 191 rooms, and cost $2,700,000. Ascending a grand flight of steps, and entering by the chief portico, I found myself in a corridor which runs entirely round the main floor, and upon which open the various offices of the department. In the eastern wing is the bureau of the Secretary of the Interior, a fact that announces itself in white letters on a blue ground, after the fashion of the notice boards of the Western Union Telegraph Company. A very obliging attendant took my card into Mr. Schurz, and without a moment's delay I was ushered into a large, bright, lofty-ceilinged apartment, bearing all the evidences of being the workshop of an official in high authority. To the right are two doors leading to an inner sanctum, wherein the Secretary holds special conference with special visitors; to the left, a door giving upon the offices of the first secretary and the host of minor officials to whom the details of the management of our Indian Territory are relegated—Mr. E. P. Hanna, the private secretary, has a desk in the bureau of his chief. I sank into a caressing morocco-upholstered chair, and, while waiting for Mr. Schurz, who was engaged with the Indian Commissioner in the adjoining sanctum, took a survey of the apartment. The carpet is Brussels of a bright pattern, and the furniture black walnut, relieved by gilded lines, the lounges and chairs being upholstered in claret-colored morocco. The Secretary's table-desk stands in the centre of the floor, its broad surface covered with telegrams, reports and papers. Four flat baskets, all in a row, face his blotting-pad. Number one sternly confronts him with the inscription "Attention, Current Business!" Number two is the recipient of communications through the chief clerk. Number three is devoted to his first secretary, and number four to Miscellaneous.

"He is the most rapid worker," observed Mr. Hanna. "He never leaves anything undone, and makes a clean sweep of these baskets three and four times a day. He replies to every letter addressed to him."

Mr. Schurz writes with a pen constructed from the quill of an eagle. The walls are adorned with a collection of photographs of the Secretaries of the Interior, and with oil portraits by Stanley of Thomas Ewing, and Caleb B. Smith. An original portrait of Washington, by Wertmüller, hangs opposite the entrance-door, the flesh tints rosy and ruddy, fresh as though laid on in 1876. A very conspicuous object is a war bonnet, presented to Mr. Schurz during his late visit to the Southern Cheyennes by Crazy Mule.

"I am now civilized," said the chief, as he handed the Secretary this relic of many a bloody foray, "and have no further use for it."

The bonnet is composed of four yards of blood-red flannel, thirty inches broad, bedecked with one hundred eagles' feathers, each feather plucked from a particular place in the bird's wing, and each being valued at one dollar.

"I have a rarer and more valuable gift than this," observed Mr. Schurz. "I have the war-shirt that belonged to Old-Man Afraid-of-His-Horses. It is a royal robe, handed down for four generations, and it is decorated with one hundred weasels' tails. The traders have been after this shirt for years, but the chief would not part with it, and a higher compliment he could not have possibly paid me than when he presented it to me."

A photograph of Moses, chief of the tribes of Washington Territory, stands upon the mantelpiece. This man, phrenologically speaking, has a most superbly developed head, and is accounted the Talleyrand of the tribes. Bookcases filled with Acts of Congress and reports occupy special corners, and while every available space is occupied by the *impedimenta* of official work, there is no litter. Everything would seem to be constantly in use, and everything would seem to have its own place, and—to keep it. A splendid map of the Indian Territory hangs upon the southern wall, and in the sanctum a water-color portrait of White Eagle, the Chief of the Poncas, in his war-dress, but who now wears the blue uniform of a captain of Indian police, the service recently organized with such signal success by Mr. Schurz. A clock, a barometer, a mantel mirror, and a handsome wash-fountain complete the furniture of the Secretary's bureau.

BIG FOOT MENDING THE ROOF OF HIS HOUSE.

Mr. Schurz, having disposed of the Indian Commissioner, received me most graciously, and, flinging himself into his swivel chair, plunged without hesitation *in medias res*. He is fully six feet high, broad-shouldered, pigeon-breasted and slim-waisted. His hair is brown, and it has pretty much its own way; his beard is reddish and bushy; his eyes are dark-brown, and full of lively earnestness, if not of merriment; his hands and feet are small and "chiseled on the best lines." He ripples with fun, and, when narrating some of his experiences amongst the Indians, his vivid smile was as good as the heartiest laugh of many an ordinary man. He wore the whitest of vests, the blackest of coats and the grayest of pantaloons.

"Do you see these?" exclaimed the Secretary, presenting me with two sheets of parchment, emblazoned with huge red seals, from which many ribands of red and blue fluttered coquettishly. "They are two commissions in the Indian Police: one is for Lieutenant Big Heart, and the other for Captain Gray Bird. We are very proud of our Indian Police."

"It is a new service, is it not?" I asked.

BRULE SIOUX WAGON TRAIN.

"It was only organized last year on the Sioux Reservation. They are volunteers selected by our agents and the aristocrats, the best-blooded young Indians. The chiefs are jealous of them, because they are selected without their intervention."

"What is the strength of this force?"

"One thousand. Congress only allows us $5 a month for each man. It is not enough; we should pay them $15. We give them their uniform which stands us in $7 a suit, including hat. They use their own mounts, saddles and bridles. The uniform is a gray tunic with a single row of brass buttons; gray pants with a red stripe, and a soft black hat, with the words 'Indian Police' on the band. They also have shields on their breasts. The officers wear blue. We recently had a petition from them," laughed the Secretary, "urging that the uniform be changed to blue, as they wanted to look like the soldiers of the 'Great Father,' and less like horse thieves."

"What are their duties, Mr. Secretary?"

"They are used against horse-thieves and for quelling disturbances amongst their own people. Also for capturing Indians of other tribes, who may turn up for the purpose of fomenting agitations. For instance, the other day two Indians were snapped up who came to the reservation in the hostile interests of Sitting Bull; and we have another instance of the capture of hostile Indians who were stealing ponies. When I lately visited the Brulé Sioux three of these police rode ninety miles with me in the one day, having but one relay of horses. General Sherman asked me yesterday if, during my visit, I had any military escort, and when I told him that I had no escort of any description, he said that four years ago this would have been simply an impossibility. Why," added the Secretary, with a burst of enthusiasm, "I was as safe with the Sioux as if I was in this office."

"What about Sitting Bull?" I asked.

"Sitting Bull has the Bohemians, the *ronliens*, with him, the Indians who want venison without working for it. It is quite a mistake to say that the Sioux are as well armed as our soldiers."

"Cannot the Indians purchase arms?"

"They can, outside the reservation, but not a weapon, not a cartridge, is sold inside. We have *absolutely* no power to interfere outside the reservation," and here the Secretary read the section of the Act of Congress.

CRAZY MULE PRESENTING HIS WAR BONNET TO SECRETARY SCHURZ.

"Are you in favor of appointing army officers as agents, as recently suggested, Mr. Secretary?"

"I do not care to express an opinion on that subject. When we had the land-surveys made, a detachment of troops was sent with the surveyors. No sooner did the military appear than a band of Indians, 250 strong, and all riding white horses, waited upon the agent and gravely demanded what the military demonstration meant, adding that they (the Indians) would protect the surveyors. During my recent visit, knowing the feeling of the Indians on this subject, I requested that no escort be sent with me."

The Attorney-General here demanded "word of speech" with the Secretary, and in a few moments Mr. Schurz returned, resuming the thread of his discourse.

"Our wagon experiment has proved immensely successful. We found the carrier-system unsatisfactory, and we resolved upon making the Indians their own carriers. We gave them wagons, and, although we were ridiculed on all sides, still persevered, with the result that 1,500 wagons are now running on the Indian reservations—500 in the Sioux."

"What is your opinion of the Indians as traders?"

"They are the best, the most economical and the most honest people we have to deal with. For instance, they have run short of provisions on more than one occasion, and there is not a single instance of their having broken open a package to satisfy their hunger. We have never lost a pound of freight. When a vessel arrives at Rosebud Landing, the agent announces that he will require a certain number of wagons, and these are forthcoming in a trice. The great pride of the Sioux is in his whip, and he will pay as high as ten dollars for it. To demonstrate to you how highly the Sioux value our efforts on their behalf, I may mention that they stamped last year in the calendar with a wagon in commemoration of the new system, as they stamp the most remarkable occurrence of the year to mark the year."

"Had you any complaints from the Sioux when you met them in council, Mr. Secretary?"

"Just one, and that was that the school-teachers talked Dakota, and I was requested to urge upon them to confine themselves to English. I will give you one instance which will show you what confidence these people have in us. They have placed eighty of their children at school in Carlisle Barracks, Pennsylvania, four of these being sons of Spotted Tail. There are no people on the face of the earth fonder of their offspring than the Indians, and the scene at the parting was of the most heart-rending description—the women in an agony of grief, the men actually weeping."

The Secretary here mentioned several instances of the devotion of Indian parents to their children. We now turned to the land-allotment question.

"You will see claim stakes by the dozen on the land," said Mr. Schurz, "and every respect is paid to the survey. As soon as the survey is approved, each head of a family gets his land. Then the houses begin. We give them sashes for windows, door-hinges, planks, shingles and a stove; they do the rough work themselves. I saw Big Foot seated triumphantly astride his roof, engaged in shingling it. The houses are 12 feet by 18, with sloping roofs, and contain two rooms. You would be astonished to find so many farms, and so well laid out with corn, pumpkins, squashes, etc. We have a Bill before Congress that we consider of the highest importance. It is a Land Bill, and it proposes to give the land to the Indians in fee simple, to be inalienable for twenty-five years."

"How many Indians are there in the Indian Territory?"

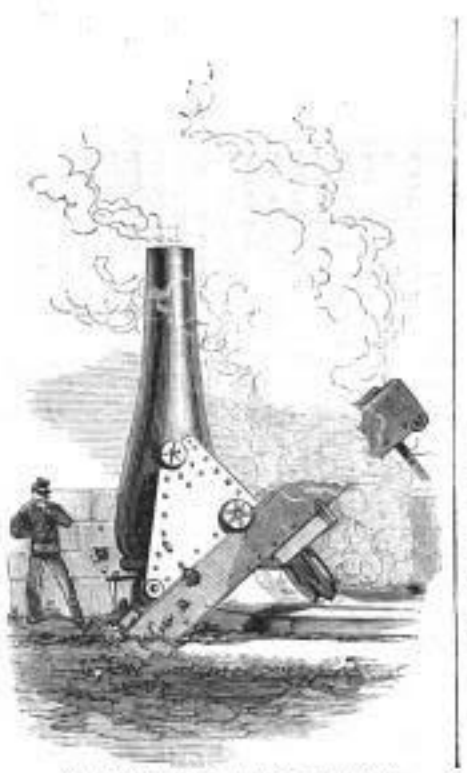
"Only 50,000 in the Territory. The whole number is 75,000. It will be very difficult to say what is Indian and what is not, by and by," laughed Mr. Schurz; "*par exemple*, I met an Indian whose father was a Scotchman and his mother a half-breed. His wife is a German and still his children are members of the Cherokee tribe. The present chief of the Cherokee Nation is a man named Thompson, who doesn't understand a word of English. I also encountered a full-blooded Sioux who spoke the purest French, and who referred to the Sioux as *ces sauvages*, 'These savages.'"

"In your experience, Mr. Secretary, have you met any Indian capable of distinguishing himself in the intellectual field?"

"Well, no. What would appear extra ordinary in an Indian would be very ordinary with one of us. Perhaps if Sitting Bull had received a university education, he might have achieved something. No," added Mr. Schurz, after some deliberation, "we can never make anything of an Indian but a policeman or a second-rate farmer. By the system which we have so successfully inaugurated we may confidently look forward to absorbing the Indians until they will totally disappear in the great white family."

Mr. Schurz described some of the places he visited during his recent tour, especially the Council House, at Okmulgee, for the five nations—the Cherokees, the Choctaws, Chickasaws, Seminoles and Creeks—which cost $13,000. He also quoted newspapers published by the Indians, partly in Indian and partly in Cherokee. The amount annually appropriated by Congress for supplying food, raiment, etc., to the Indian Territory is $4,710,000, and the Trust Fund arising out of the sale of lands, etc., to credit of the Indians is $4,000,000. The Treasury pays the civilized Indians in money; the uncivilized, in food and clothes. He also dwelt upon the stringent efforts being made by the Government to dissuade the Indians from polygamy.

Having asked Mr. Schurz to tell me something about himself, he laughingly replied:



"That's exactly what I cannot do. My life is a very busy one. I rise late, and I go to bed very late. I get here at nine o'clock. I dine at five. I ride on horseback for one hour, and then to work till all hours," adding, with a bright laugh, "but somehow or other I am always cheerful. I have a lot of conflicting interests in my Department work. For instance, I have to deal with the Indian Office, the Land Office, the Pension Office, the Patent Office, the Railroad Office, the Geological Survey and the Bureau of Education; this, too, every day."

On the question of the Ute difficulty Mr. Schurz excused himself from speaking, as he was preparing a report on the subject for the information of the President, pending the presentation of which official etiquette imperatively demanded silence. To Mr. Schurz this Indian question is a problem which he feels himself bound to solve and one into which he has thrown himself *con amore*. The results of his policy already speak for themselves, and in selecting Mr. Schurz for the Secretaryship of the Interior, it is pretty evident that we have the right man in the right place. His action during the forthcoming session, when the question of handing over the government of the Indian Territory to the War Department comes to be debated, will be watched with eager interest by those who in their lone wild homes have come already to regard him as their champion and their friend.

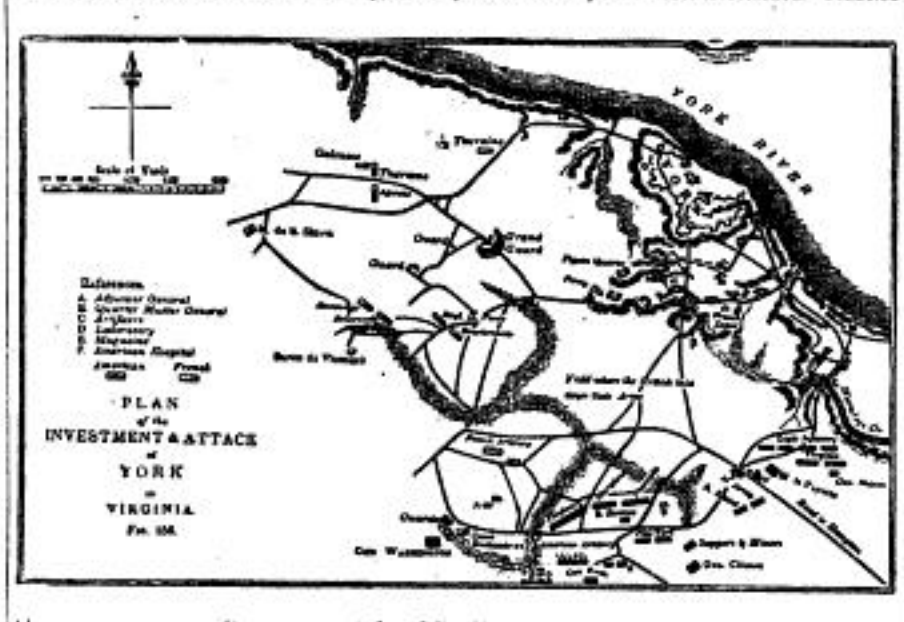
STORMING PARTY FROM THE FLEET LANDING ON THE BEACH AT FORTRESS MONROE.

CENTENNIAL OF YORKTOWN, VA.



THE TOWN AS IT APPEARS NINETY-EIGHT YEARS AFTER CORNWALLIS'S SURRENDER.

YORKTOWN when it surrendered Lord Cornwallis to George Washington would seem to have given up the ghost. It is dead and buried, and its sand is as the ashes of Herculaneum or Pompeii. It is pulseless. Twice has it been galvanized into spasmodic vitality since the memorable 19th of October, 1781. Once during the war of 1812, when the British ventured up the York River and captured a revenue cutter, and again in the late civil war, when one-half of the town was blown into the air by the explosion of a powder magazine. The Yorktownites—there are only two hundred and fifty all told—are eager for recognition, so eager that they have continued to anticipate the centenary of the surrender of the British troops by two years, and the excitement in this out-of-the-way, shrunken, decayed town over the coming celebration has reached fever and frantic heat. Yorktown is 127 miles from Baltimore, seventy-two from Richmond, and forty-five from Norfolk. There is no railway nearer than twenty-five miles, and the telegraphic wire keeps at the same respectful distance. True, the Chesapeake and Ohio Railroad Company have purchased 8,000 acres, with a view to extending their line to the York River, but, like the statue of Washington, which was promised to the town by Congress some seventy years ago, and which is as yet unchiseled or unmolded, the wary management of the Chesapeake and Ohio maintains a masterly inactivity, at which the Yorktownites, as is within their right, are exceeding wroth. Before I describe this historical ruin, the great event in its history, and indeed in the history of the nation, demands a special mention.

Lord Cornwallis, after his celebrated march through Virginia, fortified himself in Yorktown, situated on the southern bank of the River York. Opposite Yorktown is Gloucester Point, projecting considerably into the river, the breadth of which at that place does not exceed a mile. Gloucester Point, was also fortified by the doomed English general, and the communication between it and Yorktown commanded by ships of war that lay in the river under cover of his guns. The main body of his army was encamped near Yorktown, beyond some outer redoubts and field works, visible traces of which are still distinctly to be seen, and which were sketched by the artist, while Gloucester Point was occupied by some seven hundred men. Washington saw that if he could grapple with Cornwallis before the arrival of the English fleet in Chesapeake Bay—which might heave in sight at any moment—that he had him on the hip, and despite the remonstrances of Count de Grasse, in command of the French ships of war in the river, proceeded to march upon Yorktown upon the morning of the 28th of September, his combined forces amounting to 11,000 men, exclusive of the Virginia militia. About midday the heads of the columns reached the ground assigned to them, and, after driving in the outposts and some cavalry, encamped for the night. At the same time that the combined army encamped before Yorktown the French fleet anchored at the mouth of the river, and completely prevented the British from escaping by water, as well as from receiving supplies or reinforcements in that way. Gloucester Point was watched by the legion of Lauzun and a brigade of militia. On the 30th Yorktown was invested. The French troops formed the left wing of the combined army, the Americans the right. The artist made his sketch from the French position in a spot called Frenchman's Field. On the night of the 6th of October the first parallel was begun, on the 9th the batteries were completed, and from that moment the town was incessantly "stormed at by shot and shell." On the night of the 11th the besiegers began their second parallel, and after dark on the 14th two English redoubts were carried by assault, one by the Americans, the other by the French. Cornwallis seeing himself hemmed in as though by a wall of steel, and his troops withering under a rain of fire, formed the desperate resolution of crossing the river during the night, and attempting his escape northward with his available forces *via* Maryland, Pennsylvania, the Jerseys, to New York. In prosecution of this perilous enterprise, the light infantry, most of the guards, and a part of the Twenty-third Regiment embarked in boats, passed the river, and landed at Gloucester Point before midnight. A storm then arose, which rendered the return of the boats, and the transportation of the rest of the troops equally impracticable. In that divided state of the British forces the morning of the 17th dawned. At ten o'clock on the forenoon of that day, Lord Cornwallis, seeing that every ray of hope had been extinguished, and that it would be nothing short of madness to attempt to defend the post, sent out a flag of truce, with a letter to General Washington, proposing a cessation of hostilities for twenty-four hours, in order to give time to adjust the terms for the surrender of the forts of Yorktown and Gloucester Point; but Washington, still fearing the momentary appearance of the British fleet, replied that, while most ardently anxious to spare the further effusion of blood, he could not consent to lose time in fruitless negotiations, and desired that, previous to the meeting of the commissioners, his lordship's proposal should be transmitted in writing, for which purpose a suspension of hostilities for two hours should be granted. Meantime, General Washington, in order to avoid delay in useless discussions, drew up and submitted to Cornwallis such articles as he was willing to grant, informing his lordship that, if he approved of them, commissioners might be immediately appointed to reduce them to form. Accordingly, Viscount Noailles and Lieutenant-Colonel Laurens, on the 18th, met Major Ross, of the British Army, at Moore's House—still standing, and sketched by the artist—in the rear of the first parallel. Here they prepared a rough draft, but were unable definitely to arrange the terms of capitulation. The draft was to be submitted to Cornwallis, but General Washington, resolved to admit of no delay, directed the articles to be transcribed, and on the morning of the 19th sent them to his lordship, with a letter expressing his expectation that they would be signed by eleven, and that the garrison would march out at two in the afternoon.

Finding that no better terms could be obtained, Cornwallis, on the 19th of October, surrendered the posts of Yorktown and Gloucester Point. The army, artillery, arms, accoutrements, military chest and public stores of every description were surrendered to General Washington; the ships in the harbor and the seamen, to Count de Grasse. The garrison marched out of the town with colors cased and drums beating. Exclusive of the seamen, nearly 7,000 persons surrendered, about 4,000 of whom were fit for duty. During the siege the garrison lost in killed, wounded, and prisoners, 552 men. By the surrender of the posts of Yorktown and Gloucester Point, the Americans gained possession of a large train of artillery, consisting of seventy-five brass, and sixty-nine iron cannon, howitzers and mortars, with a considerable quantity of arms, ammunition, military stores and provisions. One frigate, two ships of twenty guns each, a number of transports and other vessels, and about 1,500 seamen, surrendered to Count de Grasse. The combined army at Yorktown may be estimated at 16,000 men, consisting of 7,000 French, 5,000 Continentals, and 3,500 militia. Their loss during the siege amounted to 300 killed and wounded. On the day that Cornwallis surrendered, the English fleet sailed to his relief from Sandy Hook. It consisted of twenty-five ships of the line, two vessels of fifty guns each, and eight frigates, and arrived off the Chesapeake on the 24th, just five days too late.

The convention at Saratoga was a severe blow to the British arms; but the surrender of Cornwallis at Yorktown was still more decisive. It produced the most cheering sensation in the American Congress; the State Government, and all classes of people exulted with joy. "A new impulse was given to the public mind; but, above all, the ray of peace which now seemed to burst through the gloom of war was grateful to their souls." In England, the news was received with amazement and dismay, as the

blow was as severe as it was unexpected, and it was now realized that a country may be overrun, but cannot be easily subdued, while the minds of the people continue hostile. Those who before disapproved of the war now spoke of it in terms of the strongest reprobation, and many who had formally given it their zealous support began to express a desire for peace. All classes became weary of the protracted struggle; the House of Commons began to waver, and on the 27th of February the Opposition carried an address against the prolongation of the war in America.

It is, then, to commemorate this all-important event in the history of our country that the Yorktownites have roused themselves, and that the corpse of the dead little town has been galvanized with a week's vitality. The artist and I struck this out-of-the-way region, *via* Baltimore and Fortress Monroe, and from thence by a small steamer, which, after electrifying two landings in East River, proceeded to the scene of Cornwallis's humiliation. Yorktown is situated on a low sandy bluff, and consists of a single street broken into fragments. The Yorktown Hotel—a red brick building two hundred years of age, and "run" by a cheery old warrior, who bears no less than seventeen wounds, all in front—stands in bold relief on one side of the street, while the original Custom House of this county and the Nelson mansion occupy the other. There are five pre-revolutionary buildings in the town, the remainder of the dwellings being made up, with two or three exceptions, of wooden shanties, occupied by the colored population, which stands at eighty per cent. The Custom House is a square building of the Queen Anne period, constructed of yellow bricks, still yellow, but clotted here and there with white dabs. Its roof is high, the shingles moss-covered. Its windows are long and narrow, and some of the remaining glass allowed in the light of that October morning ninety-eight years ago. The original door on the south side, "a brave bit of oak," still stands, and the cellars are now occupied by pigs. It is difficult to anchor the imagination on the fact that through this small dingy dwelling all the entries for New York, Boston, Baltimore and Philadelphia passed, that this was the Custom House of this enormous continent! The Nelson mansion is a superb specimen of its style of architecture, that of the First George. It is built of yellow imported brick, the string courses and architraves being of blood-red brick. A brick wall surrounds the garden, which is overgrown with huge box hedges, once thread-like and delicate borders. The oaken entrance-door has been coarsely replaced; but the walls are paneled in hard wood from cellar to garret. This house was the headquarters of Lord Cornwallis, and tradition asserts that a deep indentation in the southern chimney is the mark made by the ball of a nine-pounder, the gun having been fired by General Nelson, the owner of the house, who was compelled to evacuate upon the incoming of the British. Lafayette stopped here in 1824, and Mr. Nathaniel Taylor, the oldest inhabitant, informed me that he remembers having seen him at a review of the troops held outside the town shaking hands with every soldier as the warriors filed past. *Apropos* of the oldest inhabitant of the town, I was presented to a venerable darkey, who stated that he recollected the surrender of Cornwallis perfectly well. "How old are you?" I demanded. "Near a hundred," was the reply. "You couldn't recollect what occurred when you were but two years of age." "I do, sah, an' dis is all about it. Massa Washington came up to Massa Cornwallis, an' Massa Cornwallis was ridin' a cream-colored hoss. Says Massa Washington to Massa Cornwallis, 'Git out ob dat! Git down, I tell you!' an' den, sah, Massa Washington drew Massa Cornwallis's sword, an' stuck it in the groun'. Dat's exactly what happened." This is *verbatim*—the old colored gentleman's story. *Si non e vero, e ben trovato.*

Through the courtesy of Mr. Henry Halstead, the owner of Temple Farm, upon which Moore House—the scene of the meeting between the commissioners respectively appointed by Washington and Cornwallis, to consider the terms of the capitulation—stands, we were afforded an opportunity of visiting this historical mansion. The house is of timber, oblong in shape, with a Mansard roof, the shingles of which are coated in the green velvet of moss. There are five windows in the roof and four on the façade, with the hall-door. The brick chimneys stick up like great red ears at either side, and both bear traces of "hard iron."

The room in which the capitulation was signed is up-stairs on the left. It was also Washington's apartment. It is low-ceilinged, with two windows, one at either side of the great open fireplace, looking east, and two deeply embrasured windows giving north, commanding a superb view of the river out to the bay. A closet is attached. I fancied this apartment on the 19th of October, 1781—the commissioners engaged in their grave deliberations, the old oak staircase lined with officers, silent and flushed with earnest expectation; the troopers picketed on the grassy slope, in front, but a mile off; the beleaguered town, its dented earthworks swarming with red-coats, and away on the blue waters of the river the white sails of the French men-of-war. To-day, Moore House is used as a store for Mr. Halstead's agricultural implements; but he assured me that it is his intention to "fix it up" for the great commemoration in 1881. On the lands of Temple Farm formally stood a village founded by Captain John Smith, of Pocahontas fame, the farm deriving its name from a church, or temple, of which nothing now remains but the outlines of foundation-walls and a tomb, the slab actually imbedded in the roots and trunk of a venerable catalpa-tree. The inscription, which is partly defaced, runs:

> "Major William Gooch, of His ——
> —— Dyed October 20th, 1683
> Within this tomb there doth remain
> No shape but substance true
> Itself though young in years but ——
> Yet grac'd with virtuous morall and ——
> The church from him did good pa
> In counsel rare fit to adorn a ——"

A coat-of-arms and a helmet surmounted by a dor are very distinct.

Mr. Halstead drove us along the line of earthworks thrown up by "Little Mac" during the civil war, lines in parallel with those formed by the besiegers in 1781. How history repeats itself! He also exhibited to us some nine-pounders plowed up by him—all records of a century ago.

In the Court House, the clerk, Mr. Hodgins, showed us a very quaint will, being dated 1631, in which the testator bequeaths pigs down to the fourth generation of the existing stock in the stye. The National Cemetery at Yorktown is admirably kept by Mr. Schievan, an ex-federal, who was horribly wounded during the war, and who has built a small church, and presented it to the inhabitants in return for the Samaritan services rendered to him by a Confederate soldier on the field at Gettysburgh. There are 2,182 graves in the cemetery, 1,434 of unknown and 748 of known persons. Close to the cemetery is the spot where it is alleged that Cornwallis surrendered to Washington. Formally a trophy stood there, but it has disappeared; there poplars were planted, until they, too, went, twig by twig. Now nothing remains to mark the site, and writers of history fail to agree on the subject. We were shown a cave on the bluff commonly known as Cornwallis's Cave, the owner whereof was busily engaged in removing the débris of sand from the entrance. How the name of the unlucky British commander became associated with it, since he was neither a bandit or a smuggler, I leave to the historian.

GRAND NAVAL REVIEW AT FORTRESS MONROE.

THE event of last week in naval circles was the grand review in Hampton Roads of the vessels of the North Atlantic and training squadrons assembled there for that purpose. Secretary Thompson, accompanied by a number of naval dignitaries, reached Fortress Monroe in the *Tallapoosa* on the morning of October 14th, and was at once waited upon by the commander-in-chief, Rear-Admiral Robert H. Wyman and staff, and the captains of the fleet. The remainder of the day was devoted to an inspection of the armament and gunnery of the vessels, the *Saratoga*, Commander R. D. Evans, being the first visited. Immediately upon the arrival of the Secretary on board, the call to general quarters was sounded, the battery cast loose and every preparation made to attack an imaginary enemy. While the Secretary was inspecting the drill at great guns a target was towed 900 yards off the port beam, and as soon as it was in position fire was opened upon it with shell, shot and grape. The shooting was excellent, the target being struck three times, and almost every shot being effective. We give an illustration of the scene. On the *Portsmouth*, Lieutenant-Commander Crowninshield, which was next visited, an exhibition was given of "all hands abandon ship," in which, the vessel being supposed in a sinking condition, all hands take to the boats and life-rafts and desert her. On board the *Minnesota*, Captain S. B. Luce, a specialty was made of repelling an attack by torpedo boats, by Gatling guns and riflemen, composed of both sailors and marines. The frigate has about 350 boys on board; many of whom are from the West. The drill and examination of the boys was to decide who should wear a number of handsome medals that had been presented by friends as prizes. The first prize for seamanship, a handsome silver medal, was won by Thomas M. Johnson, who also secured two others. A beautiful medal, presented by Mrs. Admiral Dahlgren, was awarded to D. J. Donovan.

After an inspection of the *Constitution*, "Old Ironsides," Commander O. F. Stanton, the *Kearsarge*, Commander H. F. Picking, was visited, and from her a torpedo was fired, throwing an immense column of water into the air and showing how effective this weapon is at close quarters. From her the party went to the *Marion*, Commander F. M. Bunce; thence to the flagship, where the party were entertained by Admiral Wyman.

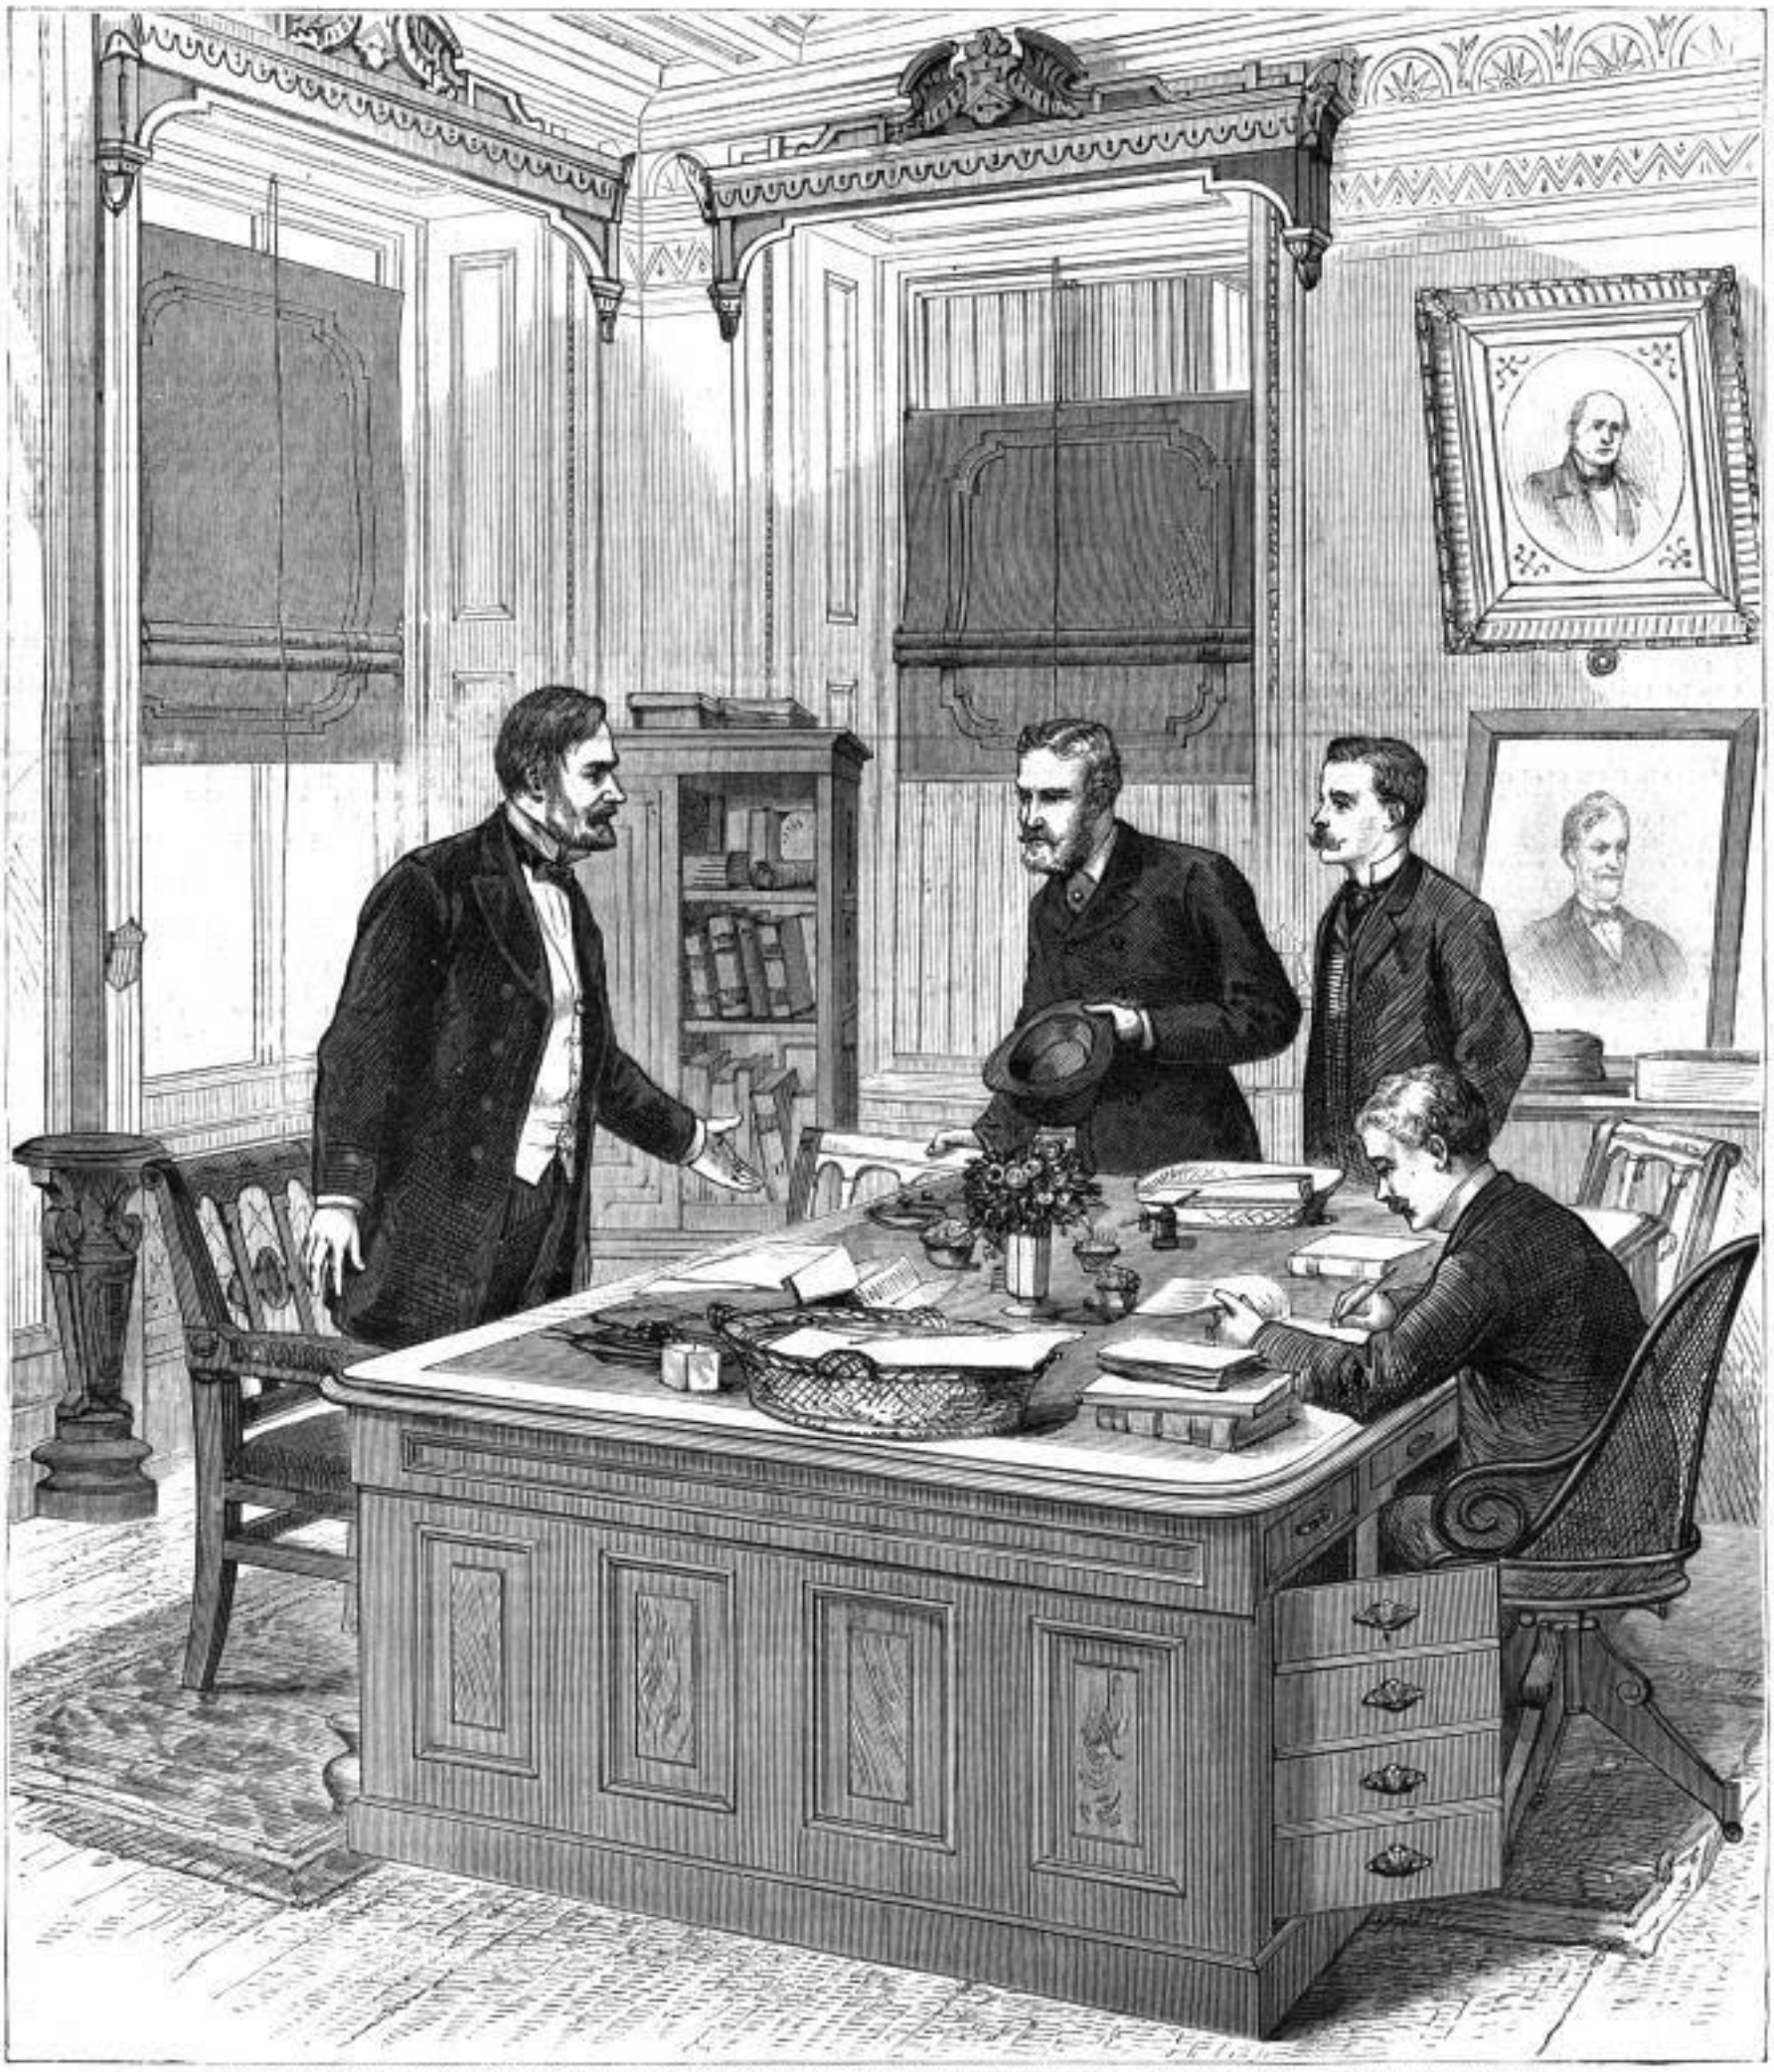
On the following day, the 15th, the forenoon was devoted to competitive evolutions and exercises, and the afternoon to landing the naval brigade and boat exercise. At nine o'clock the flagship made signal for the *Saratoga* and *Portsmouth* to get under way and stand out to sea. Both these vessels are sailing sloops-of-war of the same class and tonnage, and both are manned by naval apprentices. When the signal was made they were lying to single anchors, with thirty fathoms of chain. As they ran out, the *Tallapoosa*, with the Secretary and party on board, got under way and followed them out of the harbor, signaling the vessels to proceed at will. Upon this the *Portsmouth* hauled her wind and beat back into the roads. The *Saratoga* set port stunsails and stood out. She was soon, however, signaled to return, the Secretary having seen enough, and gone back to view the evolutions of the vessels remaining at anchor.

These were exercised by signal from the flagship in the following: "Make on plain sail," "Clew up topgallant sails and royals," "Furl royals and send royal yards down," "Single reef topsails and set them with topgallant sails over them," "Clew up and furl topgallant sails," "Double reef topsails," "Single reef courses and set top-sails and courses thus reefed down topgallant yards," "Close reef topsails and courses," "Down jib and set foretopmast staysail," "Down topgallant masts and staysail," which terminated the exercises.

At noon the Secretary, having transferred his flag to the *Powhatan*, that vessel went to general quarters, exploded a torpedo from her starboard boom, fired at a target with great guns and used her Gatlings from the tops as would be done in an action at close quarters to clear an enemy's decks.

One of the most interesting incidents of the review was the landing of the naval brigade on the beach, under the walls of Fortress Monroe. Each ship sent a battalion of infantry, and the marines of the fleet formed an additional one. There were also two batteries of artillery, composed of howitzers and Gatling guns, a field hospital and all the equipments of a landing party, including signal men, pioneers, etc., all told, about one thousand strong. While the brigade was forming the Secretary's party left the *Powhatan* and entered the fort, on the parade-ground of which the force on shore were to be reviewed. The Secretary was met by General G. W. Getty and staff, and received a salute of seventeen guns from the fort. At a quarter to four o'clock the line of march was taken up, Captain S. B. Luce, of the *Minnesota*, being in command of the brigade. Entering by the main entrance of the fort, the troops were formed in line on the parade, and were then inspected by the Secretary and staff, and General Getty and staff, the party walking the whole length of the line, after which they took up a position in front of the brigade, which was marched in review by the commanding officer. The troops then marched back to their boats and re-embarked. The review was in every way a great success, and was witnessed by crowds of visitors from Washington, Norfolk, Portsmouth, and other towns. On the evening of the 13th a ball was given at the Hygeia Hotel, in honor of Secretary Thompson's visit.

Mortality in India from Snake-bites.



READERS will be startled to learn that, according to a return published in January, 1878, no fewer than 22,000 human beings lost their lives in India during the previous year by snake-bites. This lamentable sacrifice of life is occasioned not only by the cobra and krait, but by other deadly species, and notably by a snake barely a foot long, the *Echis carinata*, known also by the name of Kupper or Poorsa. The effects produced by snake-bite vary according to the species. Thus, the bite of the cobra produces coma and speedy death, whereas the poison of others, such as Russell's viper, produces excessive pain, convulsions, and usually death. The bite of *Echis carinata* causes blood to ooze from the pores of the victim, who, after lingering for a week or more, succumbs to the fatal poison. The number of harmless snakes is enormously in excess of the venomous species, else the mortality would unquestionably be greater even than it is.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, NOVEMBER 8, 1879.

CAUTION.

Subscribers, in sending subscriptions for any of our publications, should be careful to direct their letters plainly to FRANK LESLIE, *53, 55 and 57 Park Place, New York, in order to insure their safe delivery.*

We give in the present issue the second of a series of illustrated interviews with our eminent public men, which it is proposed to continue as a special feature of FRANK LESLIE'S ILLUSTRATED NEWSPAPER. *These interviews will in all cases relate to topics of immediate public interest, and will constitute a really valuable contribution to the current history of the times. The present interview, with Hon. John Sherman, Secretary of the Treasury, refers to the financial question, the results of resumption, the business outlook, and the working organization of the Treasury Department. The article has a direct present interest to all who are concerned in the public prosperity.*

SOME FINANCIAL FALLACIES.

LOOKING at the results of the recent State elections from a financial standpoint, we find great cause for satisfaction and rejoicing. The verdict of the great popular jury, inspired by resumption and its attendant evidences of reviving national prosperity, extinguishes the last hope of political Greenbackism, and gives a death-blow to the wild vagaries of "flatism." But while this is true, it is also true that many advocates of "honest money," gentlemen who consider their opinions entitled to consideration, have much to learn and unlearn. For instance, there are men holding prominent positions as writers, and others aspiring to eminence in public affairs, who have yet to learn that the progress of civilization has made as great changes in the uses of money as in the employment of labor-saving machinery. They have yet to learn that this is not an age of slow going barter and trade, but an age of active exchanges, such exchanges being carried on through the operation of financial systems calculated to reduce the use of money to a minimum. Such writers and statesmen hold to sound money principles, that is to say, they profess to believe that all money should possess an intrinsic value, and that all representatives of money should be redeemable in the precious metals. Up to this point they are wholly sound. But they go a point beyond, and insist that a vast volume of money is actually necessary to the purposes of production and trade and the upbuilding of national prosperity. Even the Secretary of the Treasury, Mr. Sherman, seems to take special pride in showing that the country possesses a sum of money equivalent to something more than twenty-one dollars per capita for a population of fifty millions, and couples this with the revival of industry and trade. It would be interesting to have the Secretary point out the advantages for the present acquisition of national wealth over those of 1860, at which period the total circulation, including gold, silver and bank-notes, only equaled $11.49 per head for a free population of twenty-seven and one-half millions.

Touching this matter of an exorbitant volume of money, Roswag, an eminent foreign writer on finance, says: "The circulation varies in different countries with the importance of their affairs and of their commerce, as well as with the activity of their dealings, the same pieces of money performing a given number of exchanges in a longer or shorter time, according as the nation is more or less active." He then adds: "In this respect England and the United States, for example, exhibit a rapidity of circulation altogether greater than that of France." That Roswag is correct, and that the acquisition of national wealth depends upon production and trade quickening a moderate circulation, rather than upon an increase of population, or vast additions to the volume of money, cannot reasonably be disputed. Great Britain affords a fair illustration of these views. In November, 1844, the bank circulation of that country amounted to $198,352,985. In August, 1868, after a lapse of twenty-four years, the total circulation was $196,000,000, a decline of something more than two millions of dollars. Yet in that period, as the facts show, the material wealth of Great Britain more than doubled and the volume of her domestic and foreign commerce more than trebled.

Now what are the facts exhibited in the actual experience of our own country? The history of twenty years will serve to answer this question fully. According to the census returns for 1850, the population, all told, numbered 23,191,876. The bank circulation, as officially reported, amounted to $155,012,911, and the national wealth to $7,135,780,228. In 1860 the population was found to be 31,443,321, the bank circulation $207,102,447, and the material wealth of the country $16,151,616,068. From all this we learn that in ten years the population increased 35.11 per cent., bank circulation 33.6 per cent., and the national wealth 126.4 per cent. In the course of the decade ending with 1870 the population grew to 38,558,371, bank circulation increased to $236,205,446, and the national wealth to $30,068,518,507. According to these figures, all official, population increased 26.65 per cent., bank circulation 43 per cent., and the aggregate wealth 86.2 per cent. It must be understood, however, for the real purposes of comparison, that the average purchasing power of paper currency in 1870 was only eighty-seven cents to the dollar. If, then, the paper currency of that year be reckoned in real dollars, as in 1850 and 1860, the bank circulation can only show an increase of 27.3 per cent. over that of 1860. Comparing this with increased wealth for 1870, the respective per centages would be 27.3 and 86.2.

For the purpose of making the facts here stated more fully intelligible, we present the following tabulated statements relating to the increase of population, bank circulation and national wealth for the twenty years ending with 1870:

Year.	Population.	Increase. Number.	Increase. Per Cent.
1850	23,191,876	.....	.....
1860	31,443,321	8,251,445	35.11
1870	38,558,371	7,115,050	22.63

Year.	Bank Circulation.	Increase. Per Capita.	Increase. Per Cent.
1850	$155,012,911	$6.68	.....
1860	207,102,447	6.58	33.6
1870	236,200,446	7.68	43.0

Year.	National Wealth.	Increase. Per Capita.	Increase. Per Cent.
1850	$7,135,780,228	$307.68	.....
1860	16,151,616,068	513.67	126.4
1870	30,068,518,507	781.06	86.2

It will be noted that the bank circulation of 1850 amounted to $6.68 per capita, while the national wealth, proportioned to population, gave an average per head of $307.68. In 1860 the per capita of bank circulation was $6.57, or ten cents less per head than in 1850, yet the national wealth increased 126.4 per cent., and exhibited a per capita of $513.67. Here we have the direct evidence that while bank circulation as compared with population really decreased from 1850 to 1860, the national wealth actually increased $205.99 per capita.

Recurring to the decade ending with 1870 it will be seen that the per capita of bank circulation amounts to $7.68, an increase over 1860 of $1.10 for each person in population. The per capita of wealth is found to be $781.06, an increase over 1860 of $267.37, and $61.40 in excess of the per capita increase of the previous decade. But this argues nothing in favor of the beneficial influence of the increased volume of paper currency. The whole volume of paper in 1870, in fact, including Government issues, was $683,878,000, and gave a per capita of $17.73, thus making the paper currency of that year 230.2 per cent. greater than that of 1860. But while the per capita of wealth, owing to a falling off in the gain to population from 1860 to 1870, is evidently greater for the second decade under consideration, the aggregate growth of wealth was really 40.2 per cent. less than that shown by the decade ending with 1860. In the latter year the total circulation, gold and silver coin included, equaled $11.49 per head of population, slaves excluded. The gain to wealth was 126.4 per cent. In 1870 paper circulation amounted to $17.73 per capita, the ex-slaves being included in the enumeration of population. The gain to national wealth was only 86.2 per cent. for the decade.

These figures are marked and full of positive instruction. They teach the highly important lesson that there is no wealth-producing power in money or in the paper representative of money, and that wealth actually accumulates less slowly during times of inflation, and the consequent use of poor money, than at other periods.

POLITICAL ASPECT OF EUROPE.

THE Treaty of Berlin is a long way from having been fulfilled, either in the spirit or the letter; yet within eighteen months of its promulgation Europe has once more become profoundly disturbed. The present aspect on that continent is one of mutual distrust, of sustained armament, of hurried diplomatic conferences, mysterious movements of chancellors, and gloomy public utterances. No one believes that Prince Bismarck made the journey to Vienna for nothing, nor that the mutually recriminatory attitude of the German and Russian Press is void of significance. All signs point to the probability that the Triple Alliance of the Emperors is at an end; that the relations of Germany with Russia have become strained; that Germany and Austria have drawn together; that Russia has been feeling her way with France; and that the Beaconsfield Government hails with deep satisfaction the apparent isolation of Russia from her late allies. The feud between Bismarck and Gortschakoff is no longer concealed; the friendship between Bismarck and Andrassy, and with his successor, Baron Haymerlé, has become closer. There is a general search for more enduring alliances, founded upon more solid mutual interests, than those which have hitherto existed. Lord Salisbury, at Manchester, broke through all ministerial reserve and plainly betrayed the delight he felt at the new arrangements between Germany and Austria. In imagination he no doubt foresaw a new Triple Alliance, with England substituted for Russia, and Russia forced to seek aid from France and Italy.

The Afghan imbroglio adds an element not to be overlooked in the present complications of Europe, for these complications may be said to arise chiefly from the ambition of Russia on the one side and of England on the other. Lord Salisbury has curtly rejected the overtures of Russia for a division of the Afghan territory between the two empires; nor can we doubt that the confidence with which this was done was inspired by the visit of Bismarck to Berlin and its result. It would be a very different thing to face Russia alone and to face her with the colossal power of Germany at her back. The Russian proposition to England bristled with presumption. It drew a line in Afghanistan which would give Russia the immensely important stronghold of Herat, and would practically make her also the mistress of Merv. Considering that the English are at this moment in the very act of conquering Afghanistan, and could, with little doubt, reach Herat first, if occasion required, Count Schouvaloff's plan was at best a laughable blunder.

The supposed alliance between Germany and Austria, if not already an accomplished fact, is very likely to become so in no long time. It has probably been arranged, if not actually concluded. It may well be that the Emperor William, bound by close ties of blood and lifelong friendship to the Czar, has refused to alienate himself from Russian interests; but we may remember that the Emperor has more than once been overruled by the iron will of Bismarck. Besides, he is eighty-four years old, and when he dies almost the only tie which still binds Russia and Germany will have been broken. The Crown-Prince is known to be anti-Russian, the masses of the German people are so, and the State policy of Bismarck is fast becoming so. On the other hand, the interests of Germany and Austria in Europe are, to a very large extent, compatible with each other. Austria has ceased to be a German Power; her territorial ambitions lie to the eastward. Germany has more reason to fear the Czar's designs in the East than those of Austria, and her ambitions lie to the northeastward. It will be of little moment to Germany if Austria acquires Bosnia, Novi-Bazar and Salonica; of little moment to Austria if Germany acquires Holland and Belgium. Allied, these two Empires will present, in the centre of Europe, a solid front to every side. They will fortify each other against Russia on one side and against France on the other.

The enormous armaments still maintained—Germany with her million and a half of men, Austro-Hungary with her million, France with nearly two millions, Russia with her million and a half, and Italy with her half a million, to say nothing of the English naval armament—mark a perpetual peril to the peace of Europe, as well as a grievous burden on her people. The outlook is gloomy and foreboding. The uneasiness of courts, the sundering of old ties, the feuds of statesmen, the internal troubles of every state, foreshadow the possibility of not distant conflicts. From the present outlook, it would appear not unlikely that a collision may soon occur between Russia and England in Asia. Such a collision might set the vast armaments of all Europe in motion. With Germany, Austria, and England on one side, Russia, France, Italy, and perhaps Turkey on the other, no prophet, however reckless, would dare to foretell the issue. We would fain hope that France should keep out of the embroilments that are to ensue. The young Republic appeals to our most anxious sympathies. It would be far better to build it on adamant foundations than to risk the fruit of all the struggles of the past nine years in a crusade of revenge. But the temper and nature of the French being what they are, such a hope would be a feeble one, in case the rest of Europe were involved in conflict.

THE LAXITY OF LAW.

THE famous saying of the unfortunate John Rogers that "hanging was played out"—a saying which had the talismanic effect of forcing the authorities for once to do their duty by hanging the sententious murderer—seems to have been a prophecy as well as an apothegm, if we may judge from the present state of criminal society. The paralysis of justice, and the consequent immunity from punishment, seems to have been followed by a saturnalia of crime.

This alarming state is the natural result of the present system of dispensing justice, or, rather, we should say, of administering the law. A glance at some of the more recent cases will convince the most skeptical that, until the present deceptive machinery of the law is altered, no man's life or property will be secure.

A policeman was murdered in his bed by the side of his wife. She had a lover—a fact which naturally threw suspicion on both. Owing to the judge's injudicious ruling out of evidence which the prisoners' counsel declared might have thrown light upon what everybody regarded as a very mysterious murder, and the injudicious prejudice against the prisoners he displayed throughout the trial, which he followed up by a one-sided charge to the jury, the sympathy of the public was aroused for the alleged criminals, and a new trial was granted, which has yet to come off, being recently postponed to the next year.

Another murder was committed of a lady, also in her bed, and, although the murderer confessed the deed and the confession was corroborated by the most convincing evidence, a new trial has been granted, which has also yet to come off, and which, perhaps, may result in another new trial, since, being of the colored persuasion, the accused may find some philanthropist on the jury who, reversing the decision of Judge Taney, may think that a white person has no rights which a colored one is bound to respect.

The case of Greenfield for wife-murder is another instance. The trial just ended is the third, and it is doubtful even now whether he would have been found guilty had not the additional facts come out that he had previously choked his child to death to stop its crying. It is, however, not impossible that he may yet live to enjoy the expensive luxury of a fourth trial.

We need not advert to the undiscovered murders of Nathan, Lutener, Rogers and others. These rest with the police. We have now mainly to deal with the law as represented by the judge and jury—parts of the machinery—and these, we maintain, are direct obstacles in the way of justice.

This settled reluctance to carry out the law when the verdict involves hanging must either lead to the abolition of capital punishment or to the restriction of the means of procuring new trials. The facility with which these are granted is a great encouragement to crime, for, as the matter now stands, it seems to be quite optional whether the criminal will abide by the decision of a jury or not! It is certainly natural that a murderer should object to be hanged, as it is natural that the community should object to hold their lives at the mercy of those criminal classes whose "emotional insanity," or undue wish to possess the property of others, may at any time tempt them to rob and murder.

Practically, under existing methods, the laws are inoperative so far as the punishment of crime is concerned, and any criminal, if he has money, can set society at defiance. This helpless condition of the public has in some of our wilder States led to lynch law, just as one extreme begets another. Such an alternative, however, is out of the question here, and it becomes the duty of our law-abiding citizens to force the Legislature to correct the evil by such an alteration of our statutes as will give the community an equal chance with the criminal.

LIGHTNING.

THERE has always prevailed a prejudice against lightning. Dr. Franklin pretended to like it, but his object in so doing was clearly to cloak his fondness for the frivolous and unphilosophic sport of kite-flying. Now and then we meet with a person who professes to greatly admire the magnificence of a thunder-storm, but he always takes care that he is under the protection of a lightning-rod before he expresses his enthusiasm. So long as people dislike to be suddenly struck by wholly unprovoked thunderbolts, and to have their houses and barns surreptitiously set on fire by vagrant electricity, we must expect that lightning will continue to be extremely unpopular.

In point of fact, lightning strikes very few persons. There are thousands of men in every country with whom, in the opinion of their neighbors, lightning might advantageously concern itself, but of this class of people, only one solitary man—who was

Digitized by Google

at the time engaged in the revolting act of playing the accordeon—has been struck by lightning within the last twenty-five years. It was in view of this fact that not a single book-agent, professional pedestrian, or student of brass instruments has ever been slain by a thunderbolt, that Professor Wheatstone wrote his famous essay on "The Apparent Waste of Electric Force." The danger that any given man at any specified time or place will ever be struck by lightning is really infinitesimally small. Of course, bad boys who go fishing on Sunday and seek refuge from a thunder-storm under an elm-tree are the sure prey of the avenging electricity, but this is a matter that concerns boys only, and no thoughtful student of political economy will find fault with any contraction, however slight, of the enormously inflated volume of boys which hampers our apple-growing and melon-raising industries.

However unfounded the fear of lightning may be, it nevertheless is almost universal. From the earliest ages mankind has sought for means of protection against lightning-strokes. Prior to the invention of the lightning-rod the methods of protection in common use were avowedly unscientific, and in addition to this grave fault they were entirely useless. In regard to them it may be truthfully said that protection did not protect, and they rapidly went out of fashion when lightning-rods came in. Of late years there has been a painful decay of faith in these latter devices; and as a result, there are several new methods of protection which have latterly come into partial use. As befits an intensely scientific age, these methods are purely scientific. It is claimed that, inasmuch as glass is a non-conductor of electricity, a person can secure absolute safety during a thunder-storm by putting himself into a large glass bottle with a tightly fitting glass stopper. This was tested by a scientific man residing in Germany some years ago, by placing six boys in as many bottles during a thunder-storm which lasted two hours. Not one of the boys was struck by lightning, but they were all found to have died from suffocation when the bottles were uncorked. The method, however successful it may be as far as lightning is concerned, must be conceded to be open to improvement in some of its details. It has also been asserted that if a person seats himself on a chair having glass legs he will be so thoroughly isolated as to be safe from the determined attacks of the most vicious lightning. There is, however, a school of electricians who stoutly deny this assertion. They admit that a man while seated on a chair with glass legs will not be struck by lightning, but they insist that he will gradually become charged with electricity, until he becomes more dangerous than a large-sized thunder-cloud, and that the moment he leaves his chair he will explode with sufficient force to blow the house to fragments. Of course, an experiment of this kind may prove to be very dangerous, and it is difficult to induce the right sort of person to become the subject of it.

But by far the most popular plan for securing safety in thunder-storms is one which is both simple and easy. It is based upon the theory that the electricity of the sexes is of two opposing kinds, and that one or the other must neutralize the effects of the lightning. Thus if a young man and a young woman are together during a thunder-storm, they will be perfectly safe if they occupy the same chair. So generally is this believed that thousands of our youth never fail to hasten to protect themselves in this manner as soon as the low mutterings of thunder are heard in the distance. It is only fair to say, however, that a learned New England professor claims to have demonstrated that this plan is not to be relied upon. He relates in an able paper ("Transactions of the West-Brewsterville Scientific Society," volume I., page 97) that, being at the house of a friend on the 18th of July, 1878, a violent thunder-storm arose. Desirous of trying the method of protection in question, he selected his friend's sister, a young lady of much moral worth and personal attractions, and with her took possession of a rocking-chair (here the professor gives a diagram of the chair and the position of the occupants, which we are unavoidably compelled to omit). The storm had reached its height when the electric fluid suddenly struck him so violently on the back of the neck that he was lifted from his seat and impelled to the door, where a second blow struck him somewhat lower down, prostrating him on the front gravel-walk. He says that he felt the effects of the lightning for fully forty-eight hours, and that the figure of a human hand, printed on the back of his neck by the mysterious agency of the electric fluid, was faintly visible for several days.

After this, we cannot safely put any confidence in the chair theory. In fact, there does not seem to be any way by which we can give ourselves the feeling of entire security from lightning. Perhaps, after all, the method practiced by the ladies of the last century—that of rolling a bed-quilt tightly around the head and shrieking at intervals—is as efficacious as the most skillful arrangement of lightning-rods and the most elaborate combinations of rocking-chairs and young persons of diverse sexes.

EVENTS ABROAD.

WHILE the conquest of Afghanistan is not yet complete, and the subjugation of the hostile tribes may involve a good deal of trouble and expense, the British Government seems to have definitely taken up the subject of organizing a form of government, or administrative system, for the country. The idea of annexation has apparently been abandoned, and it is now proposed to recognize some member of the Ameer's family as ruler, under certain restrictions; to place a British Resident at Cabul, and through him exercise an immediate influence over the policy of the State; and, by way of securing tranquility, to maintain a strong contingent of native and English troops at various fortified posts under command exclusively of British officers. It is understood that the revenue will be collected by native officials, under the direction of British superintendents. The details of the new administration have not yet, of course, been finally arranged; but all the indications favor the belief that the country will be held as a semi-independent State, tributary to the British Crown. Meanwhile the disarmament of Cabul and the surrounding district is going forward; the fortress has been abandoned, owing to the frequent explosions, which are thought to have been caused by mines prepared under direction of Russian engineers; and the Ameer is kept under close surveillance, awaiting the result of the inquiry into the massacre of Major Cavagnari and his associates.

The speech of Lord Salisbury at Manchester, which is elsewhere referred to, has produced a good deal of irritation in Russia, and it is reported that unless the speech of Lord Beaconsfield at the coming Lord Mayor's banquet, November 9th, shall exhibit a less hostile feeling, Count Schouvaloff may be recalled from London. The language of Salisbury was certainly extraordinary, embodying, as it did, a pretty distinct menace to the Russian Government, and it is not at all surprising that the Russian Press and Government officials should resent it with indignant emphasis. The *Golos*, commenting on the situation, says that, in view of the rumored Austro-German alliance, "Russia must secure to herself allies to act in the rear of the enemy in case of an emergency. Lord Salisbury's speech not only opens Russia's eyes, but gives her freedom of action." Mr. Gladstone, in a recent interview in Paris, strongly deprecated any further contention with Russia as to Afghanistan, and generally condemned the foreign policy of the British Government.

The Irish land agitation is taking definite and practical shape. At a conference, last week, of tenant-farmers representing thirty-two counties, a land-league was organized, with Mr. Parnell as president, which proposes to consolidate the interests of the tenantry, and especially to defend the farmers against all attempts at eviction. The meeting declared that the day when landlords could be asked to reduce their rents had passed for ever; that the people who tilled the soil had the right to live on it, and that even if a general abatement of rents should now be made it would avail little without security of tenure. Mr. Parnell's visit to this country will be in the interest of this movement for the emancipation of the tenantry, whose grievances certainly entitle them to the sympathy of their countrymen.

King Alfonso has expressed a desire that all moneys which individuals or public bodies propose to contribute towards the celebration of his marriage, which will take place late in November, may be applied to the relief of the sufferers by the recent floods. Over two thousand persons are reported to have been drowned in four districts, and the loss of property was immense. Three thousand five hundred persons and one hundred and twenty mills were destroyed, and the total damage is estimated at $10,000,000.

It is intimated that the political relations between Germany and Russia are somewhat more cordial. The Czar, in response to a private note from Emperor William, will pay a visit to the latter at Berlin in November, and it is said that while there is perfect harmony of views and a general understanding between Austria and Germany, Emperor William refused his assent to any policy which might place Germany in direct antagonism to Russia. It is somewhat significant that the German Government has it in contemplation to add seventy-two new batteries to its field-artillery and place an additional army corps on a permanent footing, while Russia has given enormous orders for steel cannon and other implements of war.

The situation in South Africa still has some perils for the British. A proclamation has been issued declaring that the annexation of the Transvaal is irrevocable, and this has been followed by the appointment of an Executive Council for the province. The Boers resent both the policy and the language of the proclamation, and great patience and prudence will be required to allay their exasperated feelings.

The head constable of Liverpool, in view of the proselyting efforts of Mormon agents at that port and elsewhere, has issued a warning that polygamy is prohibited by American law, and that those who practice it are liable to heavy penalties. This is the first response, so far as we know, to the circular of Secretary Evarts on this subject.—Doubts are expressed as to the permanence of the new Turkish Cabinet.—London was startled last week by an unfounded rumor of the capture of Merv by the Russians. Leading Russians regard the conquest of that city as improbable before next year, owing to the scarcity of camels and provisions. The Russian troops, which were defeated at Okok-Tepe will Winter on the shore of the Caspian Sea. The expedition to explore the ancient bed of the Oxus River, with a view to connecting it with the Caspian Sea, has been abandoned the difficulties in the way of such connection being found practically insurmountable.—The successor of Herr Von Bülow, late German Secretary of State for Foreign Affairs, will not be appointed for some weeks.—The Minister of Japan at Berlin has been recalled.—Two thousand striking operatives at Bristol, England, and the striking miners of Charlerol, Belgium, have returned to work at reduced wages. The business outlook in some branches of British industry is more encouraging.

It is not likely that the movement to compel Mr. Bayard's retirement from the chairmanship of the Senate Finance Committee will be renewed at the approaching session of Congress. The Ohio election has settled that matter, as well as a good many others, effectually and finally. Senator Bayard has for years resisted the tendencies of his party on the financial question, and his honorable and consistent course has its full vindication both in the result of the recent elections and the complete restoration of business prosperity on the basis of specie resumption.

During the last six months 6,311 colored emigrants have settled in Kansas and other Western States. The exodus still continues, the arrivals at St. Louis averaging from twenty to thirty families a week. The movement is no longer confined to Mississippi and Louisiana, but is spreading to other States, the bulk of the more recent immigration having come from Alabama and Tennessee. It is believed that the exodus will next Spring assume larger proportions than ever, owing to the more systematic methods now employed to promote it and secure homes and employment for those who participate in it.

Our commerce with Japan is steadily increasing. Our Minister to that country reports that during the past year the imports from the United States amounted to $3,500,000, and the exports to the United States, 7,500,000. The tonnage of American shipping is greater than that of all the European countries combined, excepting Great Britain. As an evidence of the march of progress in Japan, it is stated that the telegraph system is being rapidly expanded. Last year nearly 2,000 miles of wire were put up, and over 3,000,000 messages were transmitted. A school has been established, in which native scholars are taught the art of telegraphing in all its branches.

The immense increase in the grain receipts of New York during the last ten years is strikingly illustrated in some statistics presented to the Legislative Investigating Committee by Mr. Blanchard, of the Erie Railway. In 1872, the receipts of grain in bushels, by canal and rail, amounted to 75,025,915; last year they amounted to 126,613,771 bushels. This city increased, in 1878, 78 per cent. on the total of rail and canal deliveries over the previous year; while Philadelphia, Baltimore and Boston, combined, increased 53½ per cent. The percentages of grain received at different ports last year were as follows: New York, 50.7; Boston, 7.4; Portland, 0.7; Montreal, 5.2; Philadelphia, 15.4; Baltimore, 14.1; New Orleans, 4.5

The political canvass in this State has been marked to a greater extent than usual by rancorous personalities. If we were to believe everything that is said by the partisan voters and newspapers, we would be compelled to regard all the candidates for Governor as monsters of depravity, and the election of either of them as a frightful misfortune to the State and its varied interests. It may be that voters can be influenced by this style of canvass—which appeals only to prejudice and passion—but if such is the fact, it is, to say the least, discreditable to the popular intelligence. The right course for the individual voter is to regard each of these candidates in his relation to principles and questions of public policy. Men have no sort of importance except as they represent principles and ideas, and the suffrage is dishonored whenever and wherever its exercise is governed by mere personal considerations in a contest involving such grave issues as are now in debate before the people.

NEWS OF THE WEEK.

Domestic.

The Labrador herring fishery is reported to be a comparative failure.

The Republicans have thirty-one majority in the Ohio Legislature.

The President has returned to Washington greatly invigorated by his Western trip.

All the proposed amendments to the Ohio Constitution, voted on at the late election, were rejected.

The Postmaster-General refuses to rescind his order directing the withholding of lottery correspondence.

The Montauk Steam Cotton Mills at Sag Harbor, L. I., were destroyed by fire October 22d; loss, $200,000.

It is rumored that the mission to England has been tendered to Secretary Evarts, but the report lacks confirmation.

Mr. Dion Boucicault has been ordered by his physicians to take a long vacation, under penalty of a serious illness.

The yellow fever epidemic at Memphis has been declared at an end, and Absentees will be allowed to return to the city.

The municipal election in Baltimore, October 22d, resulted in the success of the Democratic ticket by a majority of 6,602.

The San Francisco Chamber of Commerce has adopted a report adverse to Léon Chotteau's Franco-American reciprocity treaty.

Frederick Bernsch, the most notorious counterfeiter in the West, was captured at St. Louis, October 23d, by United States detectives.

An emigration has set in from Maine and Vermont towards the West, 500 persons having started last week from those States for Western homes.

The Republicans of Louisiana have nominated Judge Taylor Beattie, a lawyer and planter, for Governor, and James M. Gillespie, another planter, for Lieutenant Governor.

General Grant was last week received at Sacramento and other points in California with great enthusiasm. He left for Virginia City, October 25th, on his way eastward.

The Presbyterian Synod of Long Island, which had before it the appeal in the case of Mr. Talmage, last week ordered the testimony to be printed and voted to meet again early in December.

Several of the Yorkshire farmers who went to Texas a few weeks ago, have returned and give a bad account of the colony. Agricultural immigrants will hereafter, probably, go West.

There were slight snow-storms, last week, at various points in Michigan, Pennsylvania, New York and Canada. At Toronto and St. Thomas, in Ontario, the snow reached a depth of several inches.

The Spanish steamer *Fajaro del Oceano* was burned at sea in the Bahama Channel, W. I., October 16th, and of the sixty passengers and crew on board but seventeen are known to have been saved.

Hanlan, in a published letter, says he is willing to row Courtney if Courtney will promise to start, and intimates that Courtney is afraid to meet him. The latter replies that he is not, and will row the race.

The Chief of Ordnance, in his annual report, recommends the passage of such laws as will create an efficient national militia of about 200,000 men, to be maintained at the expense of the National Government.

A dispatch reports the finding of the body of a man on the lake shore near Tolleston, Indiana, upon whose clothes and sleeve-buttons were the initials of Webb, who accompanied Professor Wise in his balloon ascension from St. Louis.

Continued depredations by the Indians are reported from New Mexico, and the people are arming against them. Some of the Sitting Bulls have come from Canada to the Red Cloud Agency, where they will be treated as prisoners of war.

The trial of Rev. Mr. Hayden for the murder of Mary Stannard was continued at New Haven last week. The testimony was mainly confined to showing the presence of a large quantity of arsenic in the stomach of the murdered woman, and to dissertations on the properties and effects of arsenic.

The official count of the vote for Governor of Ohio is as follows: Foster (Rep.), 336,261; Ewing (Dem.), 319,132; Platt (Greenback), 9,129; Stewart (Prohibition), 4,145; total, 668,667. Foster over Ewing, 17,129. The total vote was 10,694 greater than in the Presidential election of 1876.

Montauk, the great Indian reservation and peninsula at the southeastern extremity of Long Island, was sold by public auction, October 22d, for the sum of $151,000. The tract is from nine to ten miles in length, and in width varies from about a mile and a half to three miles. Including land under water, there are about 11,500 acres in the tract. The entire peninsula was originally the property of the Montauk tribe of Indians, whence the name. Of this once powerful tribe there are only a few persons left.

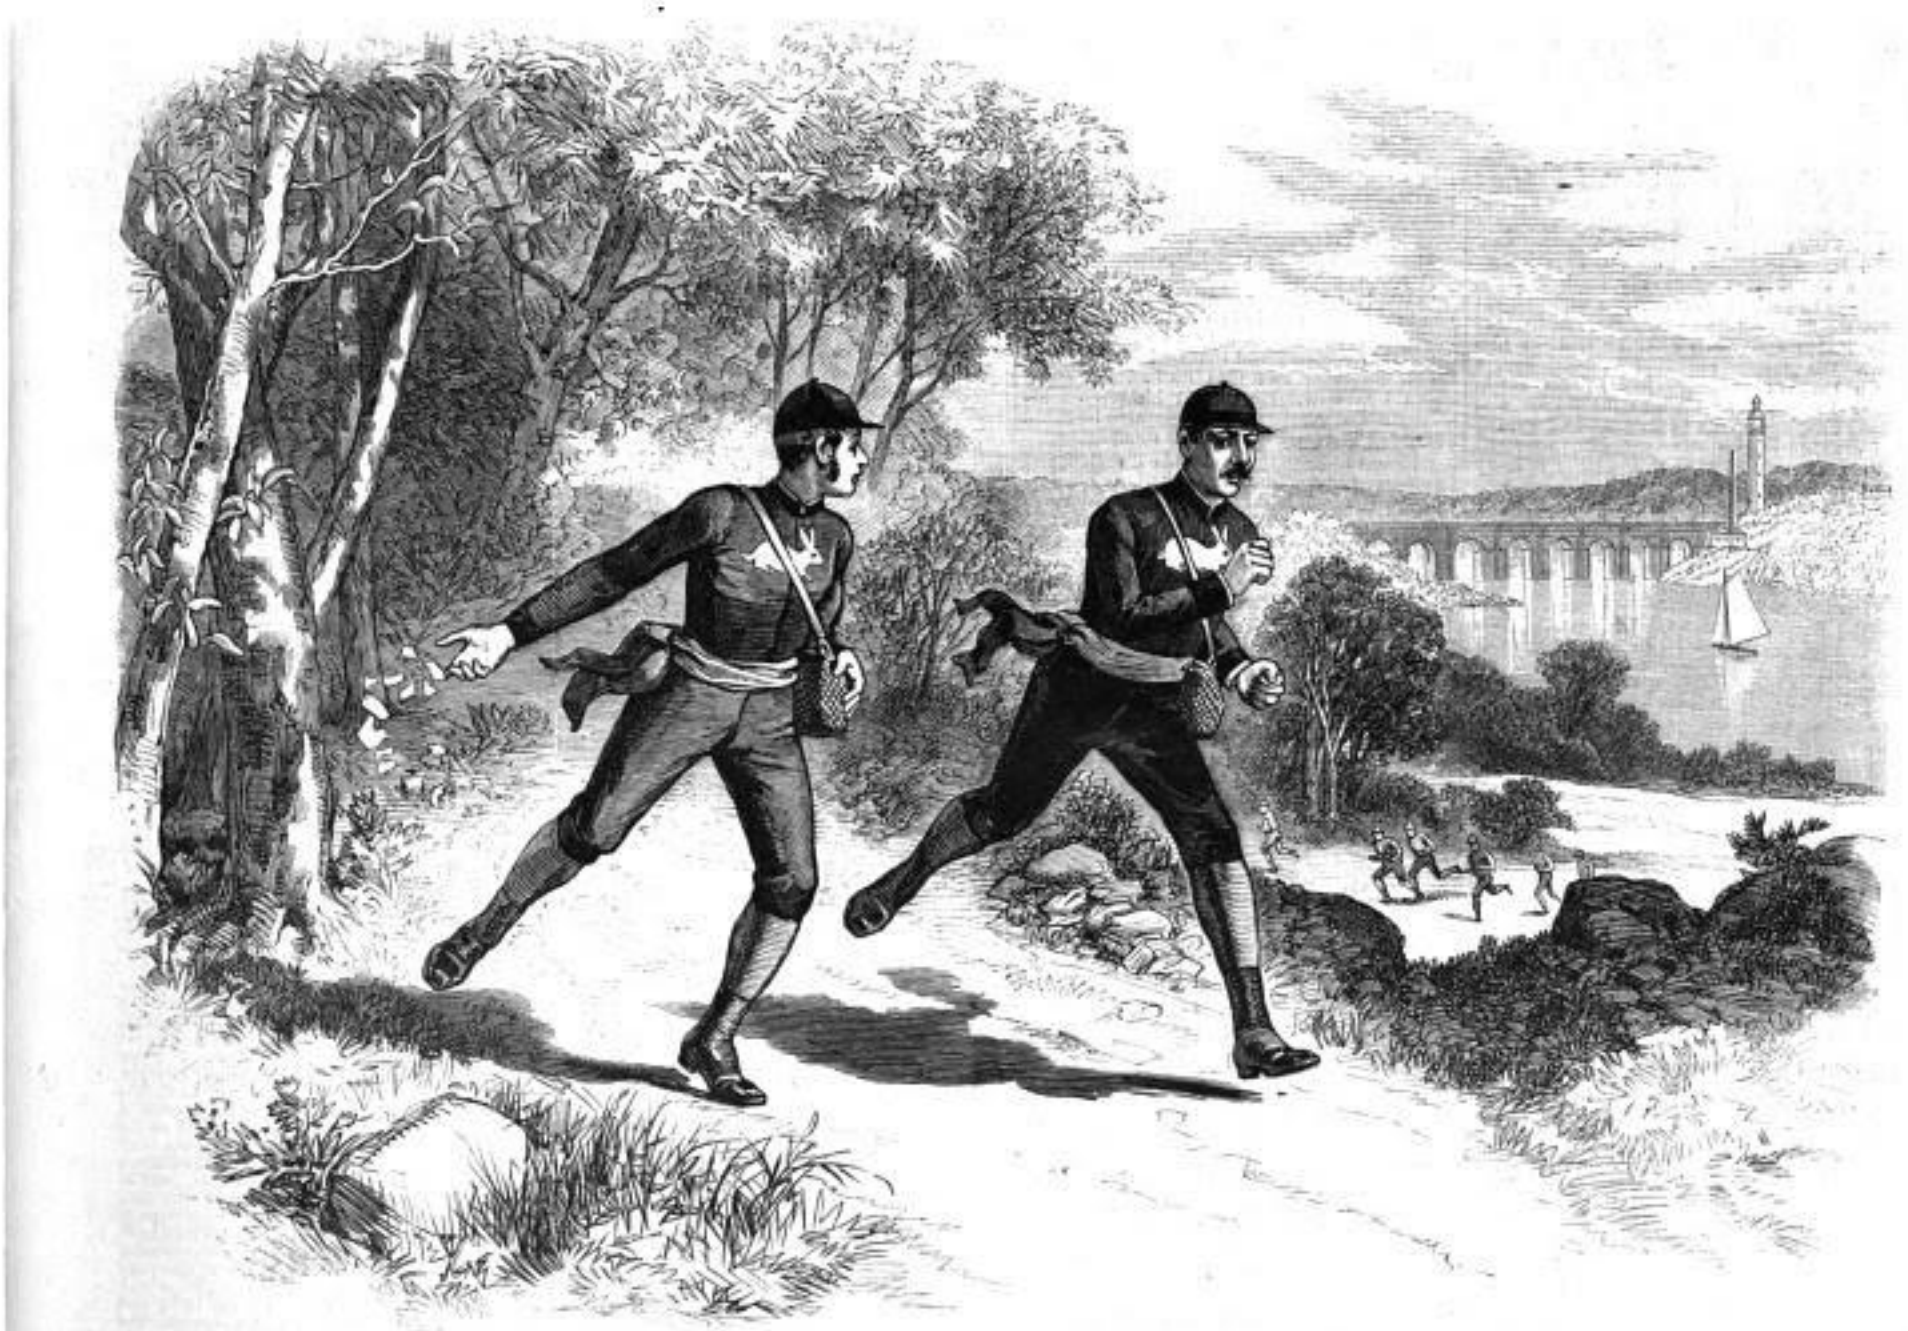
A PAPER CHASE OF HARES AND HOUNDS.



NO more invigorating and health-giving pastime has ever been introduced in this country than that of which the Westchester Hare and Hounds Club is now giving weekly examples. A "paper-chase" of "hares" and "hounds" is an ingenious combination of an outdoor foot-race and the old boys' game of "follow your leader." Two members of the club, selected for their fleetness of foot and their knowledge of the country, are selected as "hares." Their dress consists of a black undershirt and trunks, white tights, and a cricket or jockey-cap. On the breast of each one's shirt is embroidered a hare in red worsted. One of them carries, slung over his shoulder, a bag containing the "scent," which consists of a large quantity of little scraps of paper. In Summer the "scent" is of white paper, and in the Winter it is either blue or black paper, so as to show better on the snowy ground. The rest of the members constitute the pack of "hounds," and are dressed in

suitable running costume. At the beginning of the chase, a start, usually of fifteen minutes, is given to the "hares," who run ahead in any direction they may choose—one of them marking the course while the other scatters the "scent," dropping little pieces of paper here and there, just close enough together to be traced, but not in such quantities as to form a plain line, which would make it altogether too easy for the "hounds." When the stipulated time has elapsed, the latter start off in pursuit of the "hares," following the paper trail up hill and down dale, across roads and ditches and over fences, twisting and turning as their little tell-tale guides on the ground mark out their course, and frequently losing the trail altogether. Then they deploy irregularly, with their eyes fixed on the ground, and all industriously search for the last connection until some one finds it, when, with a loud cry, they all rush forward again upon the right track. At last the "View hallos" is sounded, and if the "pussies" can only be kept in sight, it simply becomes a foot-race—the speed of the "hares" being pitted against that of the fastest of the "hounds." But a stern chase is proverbially a long chase, and, moreover, the chances are that the hares will again and again get behind cover, and turn and double on their pursuers, so that to "first catch your hare" is by no means so easy as it might seem. When a "hare" is caught, the one catching him takes his place as "hare" in the next chase, and the original puss goes back to the field among the "hounds."

THE RED GULCH TRAGEDY.

THE road leading into Red Gulch was a desolate thoroughfare, and the lonely graves that marked its weary miles were the record of tragic endings to stormy lives. As you wound slowly up the dreary and glaring cañon, and saw these depressing mementoes of life's fickleness scattered at such startlingly short intervals, it was refreshing to hear the deep growl of Bandy Jim, the stage-driver, discourse of their occupants in a way that bespoke personal knowledge, and gave evidence that one of the earliest settlers had escaped the fate meted out to so many of his comrades.

"Yonder," said Jim, pointing to the first mound that greeted you, after the stage had rattled out from the straggling street of Sandy Bar, and begun the ascent of the rough valley, "is where they planted Long Maine, and he was a giant and no mistake, tall and straight, standing six foot six in his stockings, strong as an ox, and afraid of no man living or dead. He drifted along here early in '50, landed in 'Frisco from a Boston ship, and walked out because he hadn't the dust with which to buy a mule. Most of the men who came here then would have taken one, given a promise to pay and then forgot all about it, but Maine was a different sort, and always acted square. He came from Portland, or some other down-east town, and wouldn't look at whisky or stake an ounce on cards, though he played them for fun.

"At first the boys thought he was soft, but that was settled in a rather quick and exciting manner, and Maine showed the grit which says, 'I don't take any nonsense without giving payment in full.' There often was a lot of roughs in the Gulch, and one of these came along when Maine had been here about three months. He was a saucy and quarrelsome chap, and had shot once or twice during gambling scrapes, but nothing had been said about it. At last he began to pick on Maine, and one day when he was coming along the walk, this 'Frisco rough jumped in the path in front of him and wouldn't move. Maine stepped out into the road, and the fellow followed suit. Then Maine just lifted him out of the way with a shake that made his teeth chatter. The boys had seen the occurrence, and thought there would be a fuss, so they were on hand to help Maine, and when after he had set him down, the fellow pulled his Derringer, a dozen barkers were levelled at his head; Maine happened to turn as the fellow was taking aim, and quick as thought had sprang and grasped the pistol, a large sized shooter; with a wrench he tore it from the fellow's hand, and broke his arm with a blow that would have stunned a horse. The next morning the stage carried the cur down to the Bar, and from there he went to Marysville. We never saw him up this way again, and Maine was never called soft after this.

"His luck was astonishing. He was sure to hit the biggest pockets, and his pan always showed paying dirt. And he was not a stingy man, for if a fellow was sick, or in trouble from lack of dust, Maine was the first to offer his help, not in an ostentatious way that would freeze you, but he almost made you believe he owed you something, and was only paying you back. His hand was as tender and cool as a woman's, and its touch was better than medicine when the hot fever burnt into one's brain, and made his head feel like an oven.

"Maine was doing prime, and sent more dust East than any one in the camp, and the boys all thought he had a sweetheart there, and was fixing up things for a wedding. We often talked of the nugget we should send when the event took place, and as an ounce was the lowest any one volunteered, you can know it was to be a smasher.

"Well, there was a party of Indians came into the camp one day, and they had a young squaw they wanted to sell. Maine looked at her, and said:

"'Boys, that girl is stained. I think that she is white, and I'm going to buy her,' and he did.

"She hadn't opened her mouth up to this time, but when the bargain was settled and the Indians gone, she went up to Maine and thanked him in the sweetest Spanish I ever heard. Maine understood the language a little, as did I, and some other of the fellows, and we just had an ovation when we found out the girl's story.

"She was from Sonoma, and had been run off from a rancho by Comanches. They had sold her to the party Maine bought her from, and she had been with them, a slave and a drudge, for over three years.

"We built her a cabin, and furnished it with the only looking-glass, chair and table there was in the camp, and Maine sent to Marysville for clothes and crockery for her. He offered to send her home, but her folks had all been massacred by the savages, and she said she would rather stay in the Gulch.

"Her coming was the beginning of a new era for us. The Gulch had been playing out in pockets, and the dirt was growing poor: but the week after she was settled we struck quartz, and rich stuff, too. Maine was the first to find it, and took in with him as a partner a bright youngster who had just come into camp. His name was Harry Warner, and he came from near Maine's home. He was a handsome fellow and full of fun and life, and the camp was lively, I can tell you.

"But I forgot. As the coloring wore out, and the girl got rested and fixed up in the things Maine sent to 'Frisco for, we saw that she was a splendid creature, tall and supple as a panther, with great dark eyes, and a face like a ripe peach on the cheeks. Her hair was a changing radiance in the sun, and her mouth and chin were as near perfect as could be. She had a fine forehead, a clear-cut nose, white teeth, the sweetest lips and littlest feet and hands I ever saw. She was not an idle body, but mended and washed for the camp, though her great care was the cabin where Maine and Harry lived.

"Ah, what a merry voice she had, and how it would trill as she went singing about her work! The fellows all worshiped her, and began to spruce up when she came near, and boiled shirts and coats were no longer strangers in the camp.

"I don't doubt but that all the men in the camp would have fallen in love with Pepita, for this was her name, if they had not considered that Maine's buying her had somehow given him a claim that no one could go back of. But he didn't seem to think this, and if he saw any of the boys talking to her would shy away to give them a chance. I have had a bit of a love romance myself, and know something of the way a fellow acts, and I watched Maine pretty sharply and soon knew that he was badly hit.

"We had been out on the hills one day, he and I, and were coming down the Gulch from back of Bear Cañon, when we heard a short, plaintive cry as though some one was in danger. Cocking our rifles, for we had been after game, and did not know what was up, we sprang round a jutting rock that hid the path, and there saw a sight that made my heart shiver.

"The rock was crowned by a small plateau on which clustered some pines, and just below the edge of the cliff was a narrow ledge. A light soil had collected on this, and some trailing plants had taken root and nestled here. They bore a bright scarlet flower, and were in full bloom now, and we immediately guessed that they were the cause of the sight that met our gaze.

"Hanging some ten or twelve feet below this ledge, her hands clasping a little jutting piece of rock, was Pepita.

"Below her was a sheer descent of over a hundred feet, with loose masses of rock scattered where the shock of storms or earthquakes had hurled them.

"I glanced at Maine.

"For a moment he drew back, a fearful whiteness overspreading his face like a flash. Then he flung aside his rifle, and sprang up a path that led, steep and winding, along the face of the hills beyond the cliff, up to the plateau.

"'Hold on, Pepita, my girl, and I'll be with you in a moment. Jim, go close to the rock,' he shouted, as he bounded on.

"Then I remembered that he had learned to throw the lasso, and that he had his slung about him now. He prided himself on his strength, and carried the longest lasso he could get, and I instantly divined his thought.

"I went close to the rock as he directed, and immediately beneath the girl, and, as I looked up, saw the long bight of Maine's lasso come dangling over the cliff. I also saw that Pepita was growing weak, and each moment seemed an age, as I stood there waiting for Maine to show himself. He was not long in following the rope, and soon was swinging beside the almost senseless form. He clasped her in his strong grasp, and then slowly and painfully began working down the line, which was about fifteen feet short of the full length needed to reach the ground.

"It was a fearful descent, for as soon as he grasped her, Pepita fainted, and Maine could only use one hand, but he came down as carefully as though the rope was a stair, and showed an endurance and strength that was indeed remarkable. He had to stop with his load some little way above the end of the lasso, and then grasping Pepita by the arm, lowered her as far as he could, and told me to stand by and catch her.

"I did so, and then he let himself drop, and we carried the girl to the brook; water soon restored her, and leaning on Maine's arm she walked back to the camp.

"Maine never would take that lasso down, and it hung there till it rotted, or was carried off by the birds.

"But I knew very well how he felt towards Pepita after that, and was glad to think he had no rival. We never know anything, though, and a week had scarcely gone by when new light came to both Maine and me.

"We had been out on another expedition, for he and I generally did the hunting if there was any to be done, and had staid out pretty late. When we got back to the gulch it was thick dark, and as we had been scrambling downhill for some time, we seated ourselves for a rest just back from the path that led along the brook.

"We had scarcely been seated a minute when we heard voices coming towards us, and Maine's hand tightened on mine, and he whispered, 'Keep still as death, Jim.'

"The voices came nearer, and stopped right in front of us; we were in the shadow and could not be seen, and so could be listeners without being discovered.

"I soon recognized the tones as those of Pepita and Maine's partner, Harry Warner; and when they stopped in front of us I could hear every word they said, for their voices were sad and earnest and the night was still.

"'Don't, don't, Harry,' said Pepita.

"'And why not, darling? for you are my darling, and I love you, love you, love you!' he said, passionately. 'Why not tell you that I love you, even if a hundred other men feel towards you the same?'

"'Because—because—oh, Harry, don't you know how much I owe to Maine? He took me from the savages, he has cared for me ever since, and he loves me.'

"'How do you know? Has he told you so?'

"'No; and yet I know it. How did I know that you loved me—for I have known it for weeks?'

"'Well, what if he does love you? So do I. What if he has helped you? Any man would, or should, risk his life for a woman. I tell you that I, too, love you, and I have a right to know whether you love me or not. Don't try to put me off, but tell me truly—do you love me?'

"'Harry, Harry, please don't. Think what you owe Maine.'

"'Let Maine and me settle that. If he were in danger to-morrow my life should be at his call. But this is between you and me, Pepita, and I will know.'

"There was a terrible earnestness in his voice, and his strong passion swayed the girl's soul to do his will.

"'Oh, Harry, I do love—I do love you!' she said, and then fierce sobs shook her form.

"I could feel Maine shiver, but he neither moved nor spoke.

"'My own darling!' said Harry, as he drew the girl to him and quieted her sobbing.

"They stood so a little while longer, and then turned and went slowly down the gulch.

"When they had passed beyond hearing, Maine said: 'Jim, don't say anything about this in the camp. Let it work itself straight; it will, you know.' Then he gave my hand a clasp and we walked slowly home.

"Everything went on as usual for the next few days, and if I hadn't known just how things stood, I should have said that matters were about right. Pepita was the most restless one of the three, Harry was bright and happy, and Maine as steady as of old, though maybe a bit more quiet.

"He had run his shaft well into the hill, and come to a rich lead, so that he and Harry were pretty busy all the while. I did not see much of him except in the evening, and though he kept very still, he did not seem to fret about his trouble.

"In fact, he was a quiet man, one of those whose grief is harder than iron, and who yet make no sign.

"As for Harry, he, too, was one of your still sort, but I made up my mind that sooner or later he would have it out with Maine.

"Well, a week went by, and another began, and still all was quiet. Harry and Maine were driving their shaft right in among the richest kind of quartz, and the rest of us were doing nicely.

"Wednesday came, and the boys had just knocked off for dinner and were standing along the creek, when we heard a sound as though something had snapped, and Harry came rushing out of his shaft with a face as white as death.

"'Quick, quick!' he shouted, 'bring your shovels, the shaft has caved in on Maine,' and then Harry was back into the hole like a flash.

"A dozen men followed as quickly as they could get their shovels, and found Harry working like a giant.

"A hand was just visible, and that was all, and without any talk, the picks and shovels were plied and by careful work and changing when any one got tired, we had Maine's head clear in less than an hour, and by two o'clock he was in his cabin.

"He was senseless, though, and terribly bruised, and it was a long time before he became conscious again.

"Pepita and Harry were both by him, and when he saw them, a smile lit the kind eyes and made the rough face look beautiful.

"The girl had been nearly wild ever since she heard of the accident, and it was as much as we could do to keep her from throwing herself before the picks when we were getting him out.

"Now she quieted down, and when he smiled up at her, she bent and kissed the lips, so cold and colorless even then.

"After a little time, he spoke, and asked the boys to leave him alone with me, for he had kind of clung to me since the night I told you of. They went out, telling me to call if anything was needed. Pepita and Harry hung back, but he told the girl to kiss him, and gave Harry's hand a clasp, and then asked them to go, for a little time.

"When we were alone he turned to me and took my hand.

"'Jim, old fellow,' he said, 'I'm used up.'

"'No, no, Maine,' I answered, 'you're not hurt so bad as that. One of the boys has gone to the Bar, to send for a Marysville doctor.'

"'It won't be of any use, Jim. What I want now is to tell you about the affair, so that the boys will not blame Harry, for he is not in the wrong. You see, we had begun to branch off from our main shaft, and had got quite a hole dug. Both Harry and I were in there, and had just put up a prop when I saw that the roof was caving. I yelled to Harry to go out, for only one could pass through the entrance at a time; but he said, "Go yourself, Maine," and held back.

"'There was no time to waste words, Jim, and then I knew that she loved him: so I just grabbed him, and began to shove him out. He tried to do the same by me, but I whispered "You fool, don't you think I know she loves you?" Then the timber commenced to snap, and I just rammed him through the passage, and that is the last I remember. You see, Jim, he wanted me to come, and so the boys must not blame him for my hurt.

"'And now about my dust. I have quite a pile, and Harry knows where it is, and where my old mother lives. I want you and him to send it on to her. It will keep her safe and help the girls. That's all, Jim. Now let Pepita and Harry come in, and you tell the boys all about it.'

"He turned uneasily, and I called the girl and Harry and then went and told the boys.

"'Why not carry him to the Bar, to be nearer the doctor?' asked Tom Hardy.

"The plan was immediately voted good, and I went and told Maine of it.

"'It's no use, Jim, I'm going,' he said; 'but if the boys wish to do me a favor, tell them to make my grave on the hill just this side of the Bar. I found my first pocket there, and that was the money that bought Pepita and cleared the homestead for mother. That is all I ask.'

"'It shall be so,' said Harry; 'Jim and I will see to it.'

"Maine took Harry's hand

"I could see that he was growing weaker, and there was a faraway look in his eyes, as though he saw the old home and the dear ones he had been talking of.

"'God bless you, Harry, old boy. You've been a good partner and a square one. You couldn't help loving the girl, nor could I; but see that you make her happy, or I'll wish I had let you die in the hole yonder.'

"'I'll die to make her happy,' said Harry.

"Maine seemed to have been exerting all his energy to say this. When Harry answered, his eyes grew dim, and a chill whiteness spread over his face. He raised his hands as if to clasp some one.

"Then his eyes turned to the girl with a pleading light.

"'Pepita,' he whispered.

"In a second the girl was on her knees by his side, her lithe form in his clasp, her warm lips pressed to his, so rapidly growing cold.

"And so he died.

"We buried him where he wished, and Harry and I sent the money home, and Harry wrote to the old mother who would never see her boy again.

"Pepita and Harry were married in a month, and are living somewhere in Maine now. They come out here every year since the railroad came through, and then you will always see flowers on Maine's grave.

"And that is all the story, but I can tell you, you don't often meet with a better or squarer man than lies at the mouth of the gulch."

THE UTE MASSACRE.

THE narrative of the Ute massacre at the White River Agency, in the northwestern portion of Colorado, the fight with Major Thornburgh's men, and the relief of the beleaguered survivors by a company of colored cavalry is, in a few words, one of the most thrilling and romantic stories of Indian life. For quickness of action, baseness of motive and cruelty of execution, it far surpasses any of those episodes that were so graphically clothed in simple English by Fenimore Cooper.
